Pursuit of this course by our Government would appear to be inviting extremely serious trouble for this Nation. It seems to reflect a remarkable degree of irresponsibility on the part of those Government officials responsible for such policies and programs, and a failure on their part to understand that it is sound fiscal and monetary practices which induce gold to flow to, and remain with, a nation. The revival of an improved quality of fiscal and monetary management in West Germany, and more recently in France, provides illustrations of this elemental principle; and our Government should heed the very important lessons which should be obvious to competent and responsible people.

Recognizing the New France

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. REECE of Tennessee. Mr. Speaker, the news that the differences between the United States and France are increasing to a near alarming proportion is distressing to me. While few sovereign countries enjoy unmarred relations for so long a period, disagreement between ourselves and France is particularly disconcerting and attention commanding because of the need for interdependence and in light of our traditional 160-year alliance.

From the moment of his reappearance on the French political scene, I was among the first to hail the second era of General De Gaulle. Fortunately my not too cautious predictions of the success with which De Gaulle would meet France's problems have proved correct, and, if anything, are understatements. With amazing perceptiveness and boundless energy President De Gaulle turned his attention on every aspect of the French political, social and economic plight. In the political sphere France is now enjoying strong and imaginative leadership without sacrificing personal liberties, and on the economic scene there is a renewed confidence in the French economy and a resurgence of free competition. The people of France confident of their goals and means of achieving them enjoy renewed faith in the destiny and glory of France.

Although there were doubts in many American circles as to the policies which DeGaulle would devise, particularly in regard to her external affairs, this country realized early in his latest period of rule that we had everything to gain and nothing to lose by supporting and encouraging the reforms and programs which he instituted. Thus, we became active partners in the building of a revitalized France and in her restoration to the position of a world power. Having thus helped her achieve this position we cannot deny her the full prerogative of an equal partner in the safegurading of the free world. If we wish France to continue to be a party to the united front which which the Western Alliance meets the Russians we must treat her as at least a strong and close a friend as our British allies. Personally, I feel that we should share with France the secrets of the atom both for peaceful uses and military applications that we have so wisely made available to Great Britain. Such course will not only insure the preservation of our alliance but, in fact, might be the means of strengthening, if not saving, NATO.

Recognizing the new spirit of France, her vitality and her renewed national confidence, I suggest that an early summit meeting between the wartime comrades in arms, President Eisenhower and General de Gaulle, be held at the earliest possible date. In a spirit of humility and realization of the threat of Soviet power we should meet France under conditions which would respect the strength and sovereignty of both countries and their need for each other.

It has been 40 years since I was privileged to fight along side Frenchmen on French soil. I have never forgotten these experiences and still bask in the commendations bestowed upon me by the French Army. Ever since, I have cherished the friendship of many citizens of France and unceasingly worked in the cause of continuing our historic ties. But relations between countries are only as good and meaningful as the men who are responsible for them. Fortunately our countries are led by old friends who have successfully worked in the greatest cause of this century and to whom we look again for a continuation of the unity which is necessary if we are to meet what is probably our deadliest challenge.

France has just recently celebrated the 170th anniversary of the storming of the Bastille, and I would like to include in my remarks a speech delivered by his Excellency Herve Alphand, French Ambassador to the United States, on Bastille Day, 1959, and a very thoughtful editorial from the Christian Science Monitor of July 10, 1959.

SPEECH DELIVERED BY H. E. M. HERVE ALPHAND, FRENCH AMBASSADOR TO THE UNITED STATES, ON BASTILLE DAY, 1959

Last year, on this same day and in this same place, together we mentioned the hope for a new era.

I said then: "I believe that the French people, tired of so many crises and uncertainties and conscious of their weakening effects will say "Yes" to the reform offered to them. Thanks to this renovation, France will be in a better position to face the heavy tasks that will be hers tomorrow."

If we look back upon these last 12 months we can rejoice and see that these wishes have been granted to a large extent and that, at home as abroad, we have lived through one of the best filled years of our long history.

For many centuries, France had sought a difficult reconciliation between authority and liberty. At times the scales were tipping heavily in favor of one and dictatorships brought us disasters. At other times governmental power shared by hundreds of citizens could not assert itself anywhere and our country was made helpless.

New institutions, the wisdom and the audacity of a man have at last brought a solution approved by the overwhelming majority of the nation. In France today, the government governs, the Parliament controls and legislates; in case of conflict between the executive and the legislative, the head of state can appeal to the people, the supreme arbiter. At the same time, the constitution guarantees the fundamental liberties we celebrate today: freedom of elections, freedom of thought and of expression which remain the basis of our Republic.

This profound transformation of our institutions has made it possible for France to become herself again and to fully utilize the extraordinary resources she possesses. Last year's events give us the proof that it is so. Let me cite some of them. Our financial position has been redressed and inflation stopped. Our money has found stability and recovered its worth. Competition has been restored without which no progress is possible. We have abandoned our protectionist complex behind which our economy was starving. Our huge energy resources in France and in Africa are on the

point of changing the whole picture of our production and of our external financial position.

Without this metamorphosis of our economy, a direct result of the political changes, it would have been ludicrous to try to unify Europe. Europe cannot be built without France and a timid France without a currency worthy of her name and without a competitive industry could never have been able to apply the European treaties, however sincere the good will of her leaders. The common market which will multiply our resources and raise our standard of living to a degree that we cannot conceive as yet, has come into effect this year, it creates the framework for a political cooperation between France, Germany, and their partners.

In Africa a community of autonomous states has seen the day. It will assure for them freedom and equality within the republic. The trip of the President to Madagascar is one of its new and brilliant manifestations.

In Algeria the rebellion loses ground. Massive votes have given a proof that Algeria wants to continue living and working with France. Little by little and in spite of the difficulties of this task, the elected representatives of the people take their place in the municipalities and the assemblies.

Nothing can stop France from accomplishing her task which has no selfish aim but serves the interest of the whole free world.

These truths gradually sink into the minds. In this great country where we are living, our friends recognize with a sigh of relief this happy evolution of the French situation. They may not yet have drawn all its consequences.

In the most serious situation we both have to face, I mean the Berlin affair, France and the United States have positions very near each other and we act together in the interest of the Western World. It is a fact that very often we, together with Great Britain, hold consultations from which we draw common political points of view about many subjects. Finally it is true, contrary to what is sometimes said and written, that France, her government and the great majority of her people believe that in the face of the obvious ambitions of the Communist enterprise, the alliance of the free countries is more than ever indispensable.

But a few uncertainties still remain concerning this alliance and they will have to be eliminated if the foundations of our common civilization are to be preserved against the threats of a common peril.

First, anywhere in the world where this danger exists there must be a single strategy agreed upon and well defined. The world had known some long periods of peace. This peace was the result of an entente between the great powers upon essential problems. We must do everything necessary to accomplish that.

Second, it would seem to us normal to share between allies not only the responsibilities but also the means. It was the case in all our previous alliances as for example in 1776 and in 1917. Not only is it a question of confidence but one of efficiency in the common defense.

Finally we must practice aid and assistance to each other in every field including that of diplomacy, wherever our interests and those of the free world are at stake, in the Far East as well as in Africa and Europe. For instance we have both recognized that in Germany the true government is the one issued of free elections. Such is the golden rule of democracies. Why not apply this rule to Algeria? This is the aim of the French Government in its struggle with those who want to dictate by violence and terror. If this formula is a good one for Germany, a fortiori, it should be supported without equivocation in North Africa by all the allies of France and in all circumstances. Half measures or hesitations could be deadly for those who adhere to this same philosophy whose universal virtues we celebrate on this 14th of July as well as on the Fourth.

Too many interests, too many souvenirs, too many ideas unite us to imagine that these obstacles between France and the United States cannot be overcome. We do not have to look for compromises but to let ourselves be guided by the principles which were at the birth of our two Republics. We are sure they can only lead us to the same conclusions.

Once more and as I did it last year, I want to say that in this effort of renovation and understanding we expect much from you friends of France in the United States. Thanks to your action and your contacts, many misunderstandings can be eliminated and you will be able to show the true visage of France during this transformation and the capital interest that this evolution presents for the equilibrium of a world so dangerously threatened.

Allow me in conclusion to repeat some phrases by which General de Gaulle ended one of his speeches, more than 8 years ago, phrases which to me, seem to apply admirably to the present situation:

"The time for responsibilities has come," he said. "In the fight between darkness and light, which may bring to the weak war and catastrophe or to the strong life and peace, let America, Europe and France together accomplish their duty."

Vive la France. Vive la Republique.

[From the Christian Science Monitor, Boston, July 10, 1959]

RECOGNIZING THE NEW FRANCE

It is hoped that the United States will be able to make of the reconvening Geneva foreign ministers meeting an opportunity for more and closer talks between Secretary of State Herter and French Foreign Minister de Murville. Otherwise continuation of the conference could have some important disadvantages for the Western alliance.

Conflicts and uncertainties in American-French relations at the moment threaten the effectiveness of NATO on the one hand and the diplomacy of the Western Big Three vis-a-vis the Soviet Union at Geneva.

The conflicts concern global strategy, nuclear matters, stationing of American planes on French bases, the position of France in relation to the Anglo-American partnership in the Western defense system. The uncertainties concern American policy toward French-ruled but still rebellious Algeria, both within the United Nations and outside it.

Although specific causes of friction can thus be pinpointed, it does not follow that these must be removed before American-French relations can be improved. There is little doubt that improvement would begin the moment the United States took a notable initiative toward formal discussions with France—with a well-advertised view to according the French voice new importance in Western councils.

This would be in line with French actualities. American and British statesmen still seem to be laboring in something of the same fog that during World War II obscured from them the difference between the France of defeat and the France of De Gaulle.

This difference has now been accentuated by the enormous economic gains that France has made since the war, the new financial confidence and the revived national self-consciousness that de Gaulle's leadership has inspired under the Fifth Republic, the new outlook toward once-colonial territories which is reflected in the new voluntary French community of nations.

France is on the road indeed to becoming an "atomic power" in its own right; it is expected to explode a bomb this year. It is developing economic and political ties which assure it a new measure of leadership among European nations, and new ties with West Germany which promise to make both countries a new force for peace (witness de Gaulle's role in hastening the Saar settlement to German satisfaction).

So much for actualities. American diplomatic needs also urge a real effort by Washington to help promote the French ally.

At base the French demands on the United States represent a desire for recognition of French "grandeur," without which de Gaulle cannot conceive of France as a nation. So the handsomer the American gesture of appreciation the better.

It would be to the good if the administration—even though Mr. Herter will now be kept busy again at Geneva on projects of Soviet choosing—could set in motion discussions frankly intended to bring about a meeting of President Eisenhower with President de Gaulle. If the Geneva meeting seems to warrant an East-West summit, an American-French summit might well precede it, and become an American-British-French summit.

What is important now is that the French be convinced that their leading allies can distinguish at last between the France of Vichy and the France of the Resistance, that they can understand that de Gaulle's fight for a strong France is in line with their needs of a strong ally in a vital area of Europe.

To make real gains in this direction need not involve prescience as to just how the various problems will be solved. It does require that Washington show unmistakably an interest in their solution.

Why Does the Administration and the Federal Reserve Oppose the Metcalf Amendment?

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. REUSS. Mr. Speaker, it is gratifying, in the midst of all the editorial opposition and news stories giving the impression that the proposed Metcalf amendment to the administration's bill removing the 4¼-percent interest rate ceiling on long-term bonds is inflationary, subversive of the Fed's independence, and improper, to find at least one sane, balanced comment on this question. I commend to the Members the following editorial which appeared in the Washington Post on July 19, 1959:

LET CONGRESS SPEAK

We do not altogether understand the active opposition of the Federal Reserve Board and Treasury Secretary Anderson to the amendment of the interest rate bill pending in the House. This amendment would merely state that it is the sense of Congress that the Fed ought to consider some judicious purchases of long-term Government bonds, consistent with its overriding obligation to promote monetary stability. If the opponents of this mildly worded amendment persist in being too stiff-necked about it, they may well lose any chance to obtain the elimi-

nation of the interest rate ceiling, to which the House Banking Committee has agreed and which is vitally necessary if the heavy pressures on the short-term money market are to be eased.

After all, the Constitution gives Congress the power to coin money and set its value, and the Fed is a creature of Congress, set up to help discharge this important function. If Congress wishes merely to express its feelings on a vital issue of current monetary and debt management, without in any way diluting the full legal authority it has previously delegated to the Federal Reserve, the latter could well afford to let the advice be given, treat it respectfully and continue to steer by its own lights with appropriate explanations. Of course congressional advice cannot be ignored, and the Fed may feel some inhibition in even having to consider it. But perhaps this is the price the Board must pay for the basic independence which it values so highly and which we think it should have. Certainly that will not be compromised by letting Congress and other independent organs of Government have their say-so, too.

Class War From the Top

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the New York Post, July 15, 1959, by Max Lerner entitled "Class War From the Top":

CLASS WAR FROM THE TOP
(By Max Lerner)

Get ready for an onslaught of editorials from most of the papers, deploring the steel strike and hoping piously that each side will put the public interest ahead of its own. But this is one time when the formula makes precious little sense. If this strike proves costly to everyone, as it is bound to be, the responsibility must rest with the steel industry executives who sit in the seats of the mighty, and who feel secure enough to take on the Steelworkers Union in the kind of showdown fight the industry has had only once in more than a quarter-century.

Whatever else one may think about Dave McDonald and his outlook, I don't see how anyone can deny the earnestness with which he tried to get a settlement that would avoid a strike. The one thing he could not offer was unconditional surrender—yet that was exactly what the industry negotiators demanded when they insisted on a wage freeze. When finally the steel executives—under administration proddings that were too little and too late—did agree to discuss a wage increase, they tied it again to an impossible condition—unconditional union surrender on the question of local job practices.

All great strikes are greatly wasteful, and generally they end up with each side worse off than it was at the start. Most of them are avoidable. But some take place because one of the parties in effect wills it, by taking a position so rigid that the strike becomes inevitable. This was one.

I know, of course, that the steel companies have been playing up their position as one of anti-inflation statesmanship. The top negotiator for the corporations, R. Conrad Cooper, says they cannot "in good conscience be party to another round of the inflationary spiral." Usually when someone puts his hand on his heart, and swears "in good conscience," you suspect that he has not been on speaking terms with his conscience for some time. Cooper is in a good position, however, because the administration has been making such a palaver over the inflation danger for months, and a large section of the press has joined it.

Thus President Eisenhower and Vice President NIXON have created the perfect climate of opinion for the intransigence of Mr. Cooper and his corporate colleagues. There is some evidence that they may have felt very uncomfortable about it. They suggested (so the report goes) that the skies would not fall if the steel industry made a package wage offer which it could absorb out of its very substantial profits without passing it on to the buyers of steel. But all that Cooper needed to do was to look virtuous, talk of principle, and quote to them their own warnings about inflation disaster. They had built a gallows and strung a noose, to catch the Democrats—and now they were themselves caught in it, at least in their usefulness as mediators. It didn't do any good for NIXON and Labor Secretary Mitchell to say (through President Eisenhower) that agreement could be reached even at the last minute. McDonald, for the union, offered to sit on indefinitely at the negotiation table, but what use was his willingness when the corporate heads felt so sure?

They were sure of the inflation weapon, they were sure because they had built up a considerable steel reserve which should last them for some time, they were sure because they do not regard McDonald as a dangerous opponent. In a sense the steel barons are the bellwether for the rest of the industrial power elite, whose labor bargaining in the future will largely be shaped by what happens in steel. They would obviously rather have a showdown with McDonald than, for example, with Walter Reuther.

A book with an interesting theme has just been published—"Image of America," by a French Dominican priest, R. L. Bruckberger. He celebrates the whole American economy as an effective and clinging answer to the Marxist theories. What we have, he says, is not capitalism: In fact, it is anticapitalist, and he cites Henry Carey, Henry Ford, and Samuel Gompers as proof that we have shaped a third way answer to the problem of economic organization and economic justice.

He has a whole chapter on American labor, called, Samuel Gompers and Lenin, in which he shows that the American trade union movement cares far more about the workers than do the so-called proletarian leaders of the Communists.

The book is getting a big play, and Americans of substance are so busy patting themselves on the back for their wisdom and genius that they can't keep their eyes looking straightforwardly at the steel industry and what is happening there. The fact, if you read what has been happening with a cold eye, is that the steel corporation leaders are applying the Marxist principle to the class war to their workers. But this is not a class war from the bottom, forced on employers by revolutionary working-class leaders. It is class war from the top down.

If you read the history of the steel industry, you will find that from the first blast furnaces but a century ago, until 1936 and the CIO, the steel barons like Carnegie, Frick, and Gary, waged a class war. They broke the unions, they used spies and Pinkertons, they sewed up their company towns against union meetings, they kept a 12-hour day until 1923—20 years after other industries had abandoned it.

Since 1936, when Myron Taylor and John L. Lewis reached the first great steel agreement without violence, the industry has been the scene of orderly bargaining. Do the present eventss mean that Mr. Cooper and his comrades want to go back to the days of Homestead and the class war?

Inflation and Retirement

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. WALLHAUSER. Mr. Speaker, it is a privilege for me to be able to bring to the attention of my colleagues and, through them, to interested persons throughout this great land of ours, some very pertinent and informative facts regarding the serious problem of the relationship of inflation to our senior citizens.

The Honorable Robert W. Kean, who gave the 12th Congressional District of New Jersey, outstanding representation for 20 years as a Member of this House—the district I have the honor of presently representing—and who has been named Chairman of the National Advisory Committee for the White House Conference on Aging, which Conference is to be held on January 9, 1961, made a most interesting and informative address at the Chautauqua Institute, Chautauqua, N.Y., on July 9, 1959, which is included in its entirety with these remarks.

This is, in reality, a research paper and should be studied by everyone who is interested in this very serious problem.

INFLATION AND RETIREMENT

(Speech delivered by Robert W. Kean, Chairman of the National Advisory Committee for the White House Conference on Aging, at the Chautauqua Institute, Chautauqua, N.Y., on July 9, 1959)

I am happy that here in this beautiful setting this week has been devoted to talking about our older citizens, for in this Nation bursting with progress and enthusiasm our emphasis in the past has been on youth. Perhaps this is one reason why we have been so profligate with our resources and so extravagant with our national assets. We need the mature wisdom, we need the experience of our older people.

Having reached the age of 65 myself, within the past year, I think I am needed still; and when, last year I gave up my seat in the House of Representatives, which I had held for 20 years, decided to run for the U.S. Senate, and found that the majority of the voters of New Jersey did not choose to be represented by me in the U.S. Senate, I was not ready to be put on the shelf and retire so I was happy to accept among my other activities the position as chairman of the National Advisory Committee for the White House Conference on Aging when it was offered me by Secretary Flemming.

More than 1,800 years ago a well-known Greek physician named Galen is quoted as having said: "Employment is nature's best physician." I believe that everyone who is in good health should and must have some sort of a job. That does not necessarily mean that he must have a paying job. Often this may be impossible. But in his own mind, he must have a job to do. He or she must have an objective. As Dr. Galen continued

in 172 A.D. "This is essential to human happiness."

Certainly I know there is no automatic age at which human productivity ends. Robert Louis Stevenson is quoted as having said: "Life should be full of employment and enjoyment." "For surely," added Stevenson, "life goes down with a better grace—foaming in full tide over a precipice—rather than slowly dragging to its end in sandy deltas."

Public Law 85-908 of the 85th Congress—the legislation under which the White House Conference is being planned, specifically states: "Premature retirement of middle age and older persons is depriving the economy of their much-needed experience, skill, and energy." I agree.

We hope as a result of the White House Conference in future to make better use of the talents, wisdom, and experience of our older citizens—to provide for them opportunities for service—not only for the happiness of each individual but for the good of our Nation as a whole, which can and should make use of these talents.

Let's consider for a moment why it is at this time in 1959 that we are concerned with such problems. It is not only because our Nation has matured, but the magic of medical discovery has, as we all know, lengthened the lifespan until today almost 10 percent of our population is over the age of 65, and the percentage will increase, but what is equally important is that this same medical science has made it possible in most cases not only to keep us alive but to keep mind and body active for many more years.

We also are faced with a Nation which is steadily becoming more and more urban. When most of our people lived in large, roomy houses on a farm, the three-generation family was the rule. The older people had tasks in the household and on the farm which they were expected to perform, and through which they made a valuable contribution to family life.

But now our city apartments, our small suburban homes, are so cramped that usually there is little room for the older generation, and under such circumstances living together is often not only not good for the younger people but is often not good for the older people either.

In planning the White House Conference, the advisory committee which met in Washington in June set up 19 fields for particular study by the Conference. Technical experts are even now starting to prepare papers giving all possible information and factual data in these fields, so that they may be available for State and local conferences this coming winter.

Such conferences are of basic importance to the success of the White House Conference which will meet in Constitution Hall in Washington on January 9, 1961.

These studies will cover nearly all activities of the older people, and include housing, rehabilitation, health, religion, family relationship, employment, etc.

One topic chosen is income maintenance. But what is meant by this? Is it the maintenance of mere dollars received? Should not the title of this paper be "maintenance of buying power" rather than "income maintenance"?

As we consider the happiness and the future welfare of our retired people, we cannot fail to realize more and more that it is essential to them that the buying power of the dollar be maintained. We have come to realize that though inflation may be a hardship for most of our people, it is a tragedy for our retired population.

In studying the problems which face our older people it is interesting to note just where our older people live. Most of us would assume that the greatest percentage of those over 65 would be in Florida and California, but this is not so. Florida is only the 11th State in this regard, and California is the 20th. From hearing the people of this growing State talk you would hardly believe that more than half the States have an elderly population greater than that of California.

However, the concentration of older people is greatest in such States as Vermont, Iowa, New Hampshire, and Maine. In general, farm States seem to have the greatest percentage of older people. I think this is perhaps the result of so many young men from these States moving to the cities, as per the old song, "How Are You Going To Keep Them Down on the Farm Once They Have Seen Paree?"

In all, America's population today of those over 65 is approximately 15 million, or 9 percent of our people. These 15 million are important.

But when you consider those who are over 45—those who now should start thinking about their future plans for retirement—there are 50 million souls—almost a third of our population. And what is perhaps of greater significance is that the total number of Americans over the age of 18 amounts to approximately 110 million. So that of our adult population nearly half should be really concerned with the question of future retirement—and they should be worrying as to what will be the purchasing value of that retirement income to which most of them are contributing every day that they work, by deduction from their pay now, when the day that they retire comes.

What are the resources of most of our retired people? First, 90 percent of our workers when they retire can count on social security benefits. These will be paid in a promised number of dollars.

Second, 26 percent of our retired workers can look forward to pensions paid by the business for which they have worked. And, as happily such plans are growing by leaps and bounds, this percentage will soon be much greater. These also will be paid in only a promised number of dollars.

Third, comes life insurance and annuity policies. Seventy percent of our retired people have some form of life insurance. Proceeds from this will also be paid in a promised number of dollars.

Fourth, 40 percent of our retired people have some form of health insurance. This will be paid only in a promised number of dollars.

Fifth, 48 percent of our retired people have savings accounts. This will be paid only in a promised number of dollars.

Sixth, 27 percent own United States savings bonds. These will be paid only in a promised number of dollars.

Seventh, 6 percent are entitled to veterans benefits. These will be paid only in a promised number of dollars.

Eighth, it is a happy fact that the majority of retired couples do own their own homes.

Let us look at the other side of the coin. National figures are not available, but New York City in 1958 took a survey of costs for a retired couple. Of course the cost of living may be much less in some other parts of the country than in the metropolitan area, but percentages should remain generally the same. Thirty-two percent of the expenses of an older couple represents food. With inflation this would, of course, skyrocket. Twenty-six percent represents rent which would also go up with inflation, 6 percent represents clothing, the cost of which would also increase with inflation. Seven percent represents medical care, which has risen so fast in the last few years and will certainly rise further with inflation; 5 percent represents laundry, cleaning, and other such services; and 4 percent represents public utilities—the cost of which would also skyrocket if we had inflation.

From these figures you can see why the retired person has a greater stake than almost anyone else in the stability of the dollar. Every item of income is in a fixed number of dollars. Every item of outgo would increase with inflation.

The only substantial asset held by the average older person which would increase in value with inflation is his ownership of a home.

No one can deny what has often been said in the past that certainly for the retired individual inflation is the cruelest form of taxation.

President Eisenhower in his state of the Union speech last January said:

"Inflation is not a Robin Hood, taking from the rich to give to the poor. Rather, it deals most cruelly with those who can least protect themselves. It strikes hardest those millions of our citizens whose incomes do not quickly rise with the cost of living. When prices soar, the pensioner and the widow see their security undermined, the man of thrift sees his savings melt away; the white collar worker, the minister, and the teacher see their standards of living dragged down."

During the next quarter century we will have need to provide for a greatly expanding population owing to the explosive birth rate of the last few years. We will need 30 million new homes. We will need perhaps a million new schoolrooms. We must find jobs for millions of young Americans. To do this we must have dynamic productivity and in order to provide the tools to employ these workers someone must supply the capital.

It takes, on an average, about $14,000 invested in a business to supply one job. This capital can come only through savings by someone. If the average American comes to believe that thrift is not worthwhile, that a dollar saved will shortly not be worth the same as when it is saved, sufficient capital to finance normal growth will not be forthcoming.

If we are to have inflation, why should labor continue to bargain for retirement pay, when upon retirement, the dollar that has been put aside for the worker will not purchase the retirement income for which he has planned? Why should anyone spend his hard-earned money for life insurance if we are to have inflation?

When I was a young man in the late twenties I purchased a life insurance policy. I paid for it in dollars, then worth 100 cents. Though, of course, I did have the comfort of knowing my wife had protection at that time, having lived, it is perhaps the poorest investment I have ever made—for even if we have no further inflation when the policy is finally paid—my wife will only get half the purchasing power that I thought I was contracting for when I purchased the policy.

Most of you patriotically bought war savings bonds during World War II. Though the Government, of course, will pay you the $100 upon maturity which it promised when you paid $75 for your bond, with the value of the dollar cut in half—as these bonds mature you are getting back actually less in purchasing power than you put in.

It seems to me that Government has a particular responsibility to see that individuals who have accumulated savings should not have their purchasing power impaired and that individuals should not lose their incentive for savings in the future.

Secretary of the Treasury Anderson has said: "If we ever reach the point where our people believe that to speculate is safe, but to save is to gamble, then we are indeed in trouble."

Now what is inflation? Basically it is an increase in available purchasing power which is not paralleled by a corresponding increase in the quantity of goods and services avail-

able. Inflation has been characterized as "Too many dollars chasing too few goods."

There are many causes of inflation. First, Government deficits. If the Government spends more money than it takes in, additional purchasing power will be created by the money paid out by the Government to its employees and to the contractors from which it buys goods, which is not matched by the amount of money taken from the people in taxes.

Of course inflation can be brought about by the Government just printing additional money. But in our economy by which most large transactions are carried out by check inflation may be stimulated if more and more people, who can meet the banker's requirements, start to borrow money.

When you or I go to the bank to borrow money, the bank does not put aside actual physical dollars to await your use, but when you sign the note it merely credits your checking account with the money which it agrees to give you. Thus, magically more buying power is created. That is why one of the classical controls of inflation has been the raising of money rates to make it less attractive for people to borrow.

A constant rise in wages when not met by increased production, also has inflationary tendencies. Now we all want everyone who is employed to have the highest possible pay and the highest possible standard of living. But when wages are increased all over the country—unless the workers at the same time produce more goods—the wages received will create a purchasing power not matched by the goods available which they have produced.

A very clear example of how consumers bear the burden may be seen in the utility field.

Gas companies, electric companies, private water companies, are regulated by State governments as to the amount that they can charge for their services. They are permitted to earn a certain amount to insure that they have enough earnings to make possible getting the additional capital needed for the growth of their communities. During recent times, every year there has been an increase in wages in most of these companies. This wage increase is, of course, part of the cost of doing business. And the utility then goes to the public service commission and asks for higher rates to meet these additional wage costs. When this is granted the consumer pays directly in his cost of gas, electricity or water, for these wage increases.

Let's think a bit about the history of inflation. It was an early discovery of monarchs that here was a method of getting more money to spend without annoying the people by raising taxes. Then the medium of exchange was gold and silver coins. Their method was to shave the metal off the edge of the coins and then to melt the shavings into new coins, thus providing more available currency.

In this country we have had several periods of inflation—usually associated with wars—for those in control felt that the people could or would not make the additional sacrifices needed to pay the taxes for a pay-as-you-go war. I have often wondered whether this is true.

America's first inflationary period was in our Revolution. Then issues of negotiable bills by the Continental Congress became so numerous that our currency became practically worthless and the saying still persists that something is "not worth a continental."

There was inflation during the war of 1812. There was inflation during the Civil War. There was inflattion during World War I. There was inflation during World War II. There was inflation during the Korean war. But after all these wars—up to World War II—there was a period of lower prices. The last few years was the first period in our history that prices have not gone down somewhat after a wartime inflationary period.

A dozen years ago the Congress, realizing that deflation brings hardship and unemployment, deliberately set about to prevent a deflationary period by passing a law stating that it was government's duty, as far as possible, to provide for full employment.

This is right, but if government is to fight natural economic consequences and work to prevent deflation, is it not just as important for government to fight inflation, too, and maintain that stable dollar so necessary to our peoples' welfare?

In all history, inflation has been one of the easiest ways to stimulate business activity and even now in this country many politicians are advocating that we take this course. Just a little inflation every year—say they—perhaps 2 percent—would do no great harm.

But how about the retired individual? His average life span after retirement is 14 years. Can he before he dies without great hardship stand an increased cost of living of almost a third?

Some have suggested that we should fight inflation with price controls. Of course price controls even if only temporary, to be effective must include wage controls for certainly in time of peace in our free enterprise system you cannot expect businessmen to keep prices low if their chief cost of production—wages—are constantly rising.

But price control cannot be anything but a very temporary palliative. Price controls do not affect the cause of inflation, only the results of inflation. Price controls are like trying to hold down one of the lids of a coal stove. The inflationary pressure will always be there—and will constantly try to break out somewhere. It will blow the lid off at various points. And if we do not look out, the whole stove will blow up.

I am not here to argue the methods which should be used to combat inflattion, but I do know that price control is not one of them.

There is another impact of inflation and that is the resulting increase in taxes.

It is true that most older people do not have to pay much in income taxes. With the double exemption for those over 65, with the exemption of social security benefits from income taxes, with the partial exemption of retirement income, a retired couple—both over 65—may well have an income of $4,000 with no income taxes to pay. But they do pay taxes indirectly.

Today more than two-thirds of the cost of our Government is for defense. We have enormous costs for planes, for missiles, for submarines. Through inflation, the cost of manufacturing these has gone up by leaps and bounds. And this is one reason why taxes have had to remain so high—too high in my belief for all elements of our population.

And don't you think for a minute that you are not paying the heavy corporation tax that is needed to meet these Government costs.

Taxes are just as much a cost of doing business as is labor and the cost of the goods needed to produce the products. And corporation taxes in nearly every instance are passed on to you—the consumer.

Of course, you also pay an excise tax on many products.

And to those of you lucky enough to own a home, inflation will mean a higher cost of maintaining municipal services and more costly municipal services mean higher property taxes on your home at the local level.

To move to another subject: All retired people have a vital stake in our social security system. We must see that it remains sound and that benefits are as adequate as possible—but the impact of further inflation on our social security system may well be disastrous. Perhaps it might be of interest to outline to you the basic principles on which our contributory social security system is founded. I believe they are sound.

First, benefits are paid as a matter of right—without a means test. Workers and their employers have paid the tax and the former are entitled to benefits whatever their financial situation may be.

Second, the program is financed by the contributions from both employer and employee. This insures that management, labor and the general public will take a responsible interest in the program.

Third, benefits are related to wages. This principle is in accord with our American system of free enterprise and incentive. The worker who earns more while working, gets more when he retires.

Fourth, the system is not one which can possibly provide for a comfortable retirement. It can only be a floor upon which other types of savings should be built by the individual worker.

Fifth, benefits are paid only to those who have virtually retired. The system is one by which benefits are paid upon retirement, not a system to pay annuities at a certain age.

Sixth, the program should be maintained on as sound a financial basis as is possible in any program where there are so many unknown quantities, such as how many aged people there will be 50 years from now, what will be the wage scale, what will be the value of the dollar then, and so forth.

There is now in our social security trust fund some $21 billion. It is your money. It has been collected over the years from you, from your employer, and from other workers and employers, to insure that there will be money available to pay benefits to those who retire, and to pay benefits to survivors if, unhappily, workers die prematurely.

But this money has been collected in dollars at their value at the time you and your employer paid their social security taxes. If we should have further inflation, if we should have a sharp rise in the cost of living, it is inevitable that there will be a demand for a sharp increase in benefits, and the demand would be a justifiable one.

But where would the money come from? The trust fund might soon be exhausted. The inevitable demand would be to dip into the income collected in other taxes by the Federal Government, and to find enough money all taxes would have to be raised. But to use general tax revenue for social security benefits would destroy the principles upon which our system is run and in all probability would cause our entire contributory social security system to collapse.

Why could we not just raise social security taxes to meet inflation? Under present law, as you may have forgotten the social security tax increases every 2 or 3 years until in 1969, the rate will be 9 percent—4½ percent on the employer and 4½ percent on the employee; or 6¾ percent on the self-employed.

Even at this rate of taxation, by 1969 the self-employed person if he is the average worker with a wife and two children—will pay about as much in social security taxes as he will in income taxes at present rates, for you must remember the social security tax is a gross tax on earnings to be paid without the exemptions allowed in the income tax law.

It would be a shame to destroy our social security system. It is a tremendous system. This year approximately $10 billion will be paid in benefits to almost 13 million Americans. Approximately the same amount will be paid in social security taxes by American workers. You can see how even minor changes in the law can have a profound and far-reaching effect on American life. You can see also why there is dynamite in the program for voting increased benefits has a strong political appeal, and you can see that

the fight to keep the sytem sound—both financially and socially—will be unending.

Naturally everyone would like to see his benefits increased if possible.

You might be interested to know that over a thousand bills were introduced at the last session of Congress to increase social security benefits, and you might also be interested to know that only about a half dozen of them provided for any additional tax to pay for these additional benefits. To increase benefits without thought of the cost has been a most popular cry of the irresponsible. It has been only the fact that the responsible committees in the Congress have been able to say to those advocating increases—all right we'll consider the matter but for every increased benefit we must at the same time increase taxes to pay for the new benefit—which has kept the system within bounds.

If through inflation it is necessary to dip into the Federal Treasury anyway, this restricting influence will be taken away and the irresponsible would have complete sway. You must remember a bankrupt system is worse than no program at all.

But getting back to the impact of a rise in the cost of living on our retired people. Inflation does the most damage to those least able to protect themselves. But anti-inflationary methods are in their very nature very unpopular. Inflation brings a feeling of temporary well-being among workers. They like to be able to hear the jingle of additional money in their pockets, even though their dollars cannot buy as much. Strict anti-inflation measures often make it less easy to borrow, require higher taxes, require lower Government expenditures, and the postponing of many worthwhile projects. So there will be those in public life who will continue to advocate inflationary measures.

Ladies and gentlemen, our Nation must make a choice now. Should we gird our loins and take the stern way, or should we take the easy way which may well lead to chaos?

In the past this Nation has risen to emergencies when we encountered them. I think we would again, but temporary periods of sacrifice are much easier than constant vigilance for this is an ever-present threat.

Some say we have grown soft with our national wealth and have no longer the backbone that we used to have. Many preach the easy way. That we should think only of the moment. They say, "Why worry about the future?" But I have confidence in America. I have confidence that our 110 million adult people will be thinking of the day when they must retire, and that they will say to their leaders and lawmakers, "We have helped build this Nation—you must protect our heritage." We must dare to face reality.

Proposal for the Construction of a Linear Electron Accelerator

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. GUBSER. Mr. Speaker, Stanford University recently submitted a proposal for the construction of a linear electron accelerator on university property. Thinking that my colleagues would like to know more of this proposal I submit the following editorial from the San Jose Mercury in its July 17 issue.

[From the San Jose Mercury, July 17, 1959]

STANFORD SITE A NATURAL

Congress will be making a wise investment in the Nation's future if it authorizes construction of a $105 million linear accelerator, the world's largest, on the Stanford University campus.

To date, testimony by responsible officials of the Atomic Energy Commission before a congressional committee has developed these major points:

1. The United States now enjoys an appreciable lead over the Soviet Union in high energy nuclear research.

2. The proposed linear accelerator would insure the maintenance of this lead.

3. The scientists who are largely responsible for the lead are now associated with Stanford and would be available to man the new, 2-mile-long, multi-million-dollar research facility.

The logical and inescapable conclusion is that the hills back of the Stanford farm is the best of all possible locations for this critically vital piece of atomic research machinery.

The projected savings to be realized from installing the accelerator in an abandoned railroad tunnel in the State of Washington would, it seems, be more illusory than real. This proposal by a Washington Congressman is understandable from the standpoint of local pride, but it breaks down at two critical points.

Point 1: The men who have the theoretical and technical know-how to utilize the accelerator effectively are at Stanford, not in Washington State.

Point 2: Since two parallel tunnels will be necessary at all events, the railroad proposal offers the taxpayers only an opportunity to drill another, a highly expensive bore through the rocky core of the Cascade Mountains.

It is difficult to imagine how these simple yet telling points can fail to be lost upon Congress.

The Stockpile Problem

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. THOMAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from by distinguished friend the Honorable Will Clayton of Houston, Tex., who knows as much about foreign trade and foreign exchange and stockpiling of critical material as any man in America or anywhere else:

Hon. ALBERT THOMAS,
House Office Building,
Washington, D.C.

DEAR ALBERT: Heartiest congratulations on the facts brought out by your committee on the stockpile.

This whole stockpile problem is bound to wind up in a horrible mess, perhaps even worse than the agricultural program.

The stockpile will become frozen with billions of dollars invested in stuff we don't need, terrible carrying charges, etc.

As you know, I had charge of the stockpiling of strategic and critical materials purchased abroad, beginning in 1940. There were certainly sound reasons at that time in stockpiling rubber, tin, and many other commodities in anticipation of war, because we knew nothing about the atomic bomb and had every reason to expect, if we got into war, it would last a long time. But even then, we ran into numerous instances where interested parties attempted time and again to take advantage of the stockpiling program to advance their own selfish interests, and we had to fight against that sort of thing all the time.

With the atomic and hydrogen bomb, etc., it just seems to me we are wasting our money and upsetting markets to lay in all this huge stockpile against the possibility of the kind of war which we know we will probably never fight again.

Sincerely yours,

W. L. CLAYTON.

States Rights Bill

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. DORN of South Carolina. Mr. Speaker, the collectivists, the seditionists and national socialists are the ones really concerned about H.R. 3, the States rights bill of Judge HOWARD SMITH, of Virginia. The farmers of America are overwhelmingly for this bill. It is in absolute keeping with the traditions, ideals, heritages, and sentiments of our rural people. It promotes freedom, States rights, and individual liberty.

Those of us who are really concerned about the farm problem cannot understand why Clyde Ellis joined with the CIO and the NAACP in an attempt to defeat this urgently needed legislation.

The following letter was written to Mr. Ellis by Congressman HOWARD SMITH, the chairman of our Rules Committee, the author of the States rights bill, H.R. 3:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 14, 1959.

Hon. CLYDE T. ELLIS,
General Manager, National Rural Electric Cooperative Association, Washington, D.C.

DEAR MR. ELLIS: I acknowledge receipt of your letter of July 9 in which you undertake to explain your unjustified and inaccurate attack on the States rights bill, H.R. 3, when it was under debate in the House. You did so in the name of the National Rural Electric Cooperative.

As the letter has done incalculable harm to REA amongst its best friends in the House of Representatives and the Senate, I have been trying to ascertain whether you spoke with authority for the National Rural Electric Cooperative or whether you were acting from some other motives. Certainly, your letter of explanation of July 9 has very little resemblance to your letter of June 16 in which you urge the defeat of the States rights bill in behalf of the NRECA. The fact stated in your letter that you permitted some other person, evidently unfamiliar with the merits of the legislation, to dictate such a letter for your signature reflects seriously on the present management of the National Rural Electric Cooperative Association.

The REA needs no lobbyist. It is stronger with the people than you or I, or the Congress itself. Its friends in both Houses of Congress are alert to any legislation that

would in anywise handicap its legitimate purpose.

It is a serious reflection that the popularity of REA is apparently being used to pull the chestnuts out of the fire for other organizations in matters in which the REA has no direct concern.

Very truly yours,

HOWARD W. SMITH.

The Citizens Public Expenditure Survey, Inc.

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. WHARTON. Mr. Speaker, the above concern with offices at 100 State Street, Albany, N.Y., has established an enviable record in the compilation and comparison of tax rates in New York State. Such activities not only highlight the comparisons of the several municipalities, but in many cases tend to bring about corrective measures and direct public attention to various deficiencies which might otherwise be overlooked.

The fact that such comparisons and comments have attracted attention at the grassroots level is evidenced by a very excellent editorial contained in the Saugerties Post of July 16 which I wish to submit as applicable to Federal spending as well as at the municipal level:

A COMPARISON OF TAX RATES

The Citizens Public Expenditure Survey, Inc., of 100 State Street, Albany, has compiled a comparison of combined full value tax rates in 60 upstate cities. The rates are based on the equalization ratios established by the State board of equalization and assessment. The ratios express the State's determination of the percentage of the full value at which property is assessed on local tax rolls. The survey said its study is intended to show the extent of the variations in tax rates. It does not provide a basis for conclusions as to the causes of those variations. The figures given, showing considerable increases all along the line, do not serve a vital purpose because there is so much variation in assessment as well as in the equalization tables. However we are made newly acquainted with the fact that taxes are going up and up. The fact is that a family could buy and pay for a home and have money left over a few years ago for what they now pay in general, school, municipal, State, and National taxes. And the worrisome fact associated with these taxes is that they are contributing to inflation—and more taxes.

Do you think it does much good to talk about these things? We read a commencement address by a noted scholar a few weeks ago in which it was said that more spending and less saving was seen as sound economic policy. The people, it was stated, should have more leisure time for spending and less hours at labor. We may assume that with more leisure time the people could apply more pressure on government for aid, and cut more melons delivered to their door, prepaid, by the various levels of government. At least that is the impression we got from the address of the commencement speaker who was on the public payroll.

The Citizens Public Expenditure Survey has been preaching against such philosophy. It has tried to awaken the public to an increasingly hazardous tax situation, and so far as the majority of people are concerned this viewing with alarm hasn't penetrated deeply into the public skin. In fact, it hasn't even scratched the fellow who feels content in the fact that his assessment is lower than that of his neighbor. Nor the community favored by a higher equalization rate. Those people who think they are getting something for nothing are as happy as can be until they get to vote on a budget for a new school, or a new truck for the fire department. They are many.

It all adds up to the floodlighted need for more commonsense on the part of Mr. Average Citizen in his government, more action against processes that devaluate the dollar, more opposition to mounting expenses that lead to confiscation of homes and businesses.

Surplus Agricultural Commodities for Underdeveloped Countries

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to include copy of my weekly column which was released today:

KEENOTES

(By Representative ELIZABETH KEE)

WASHINGTON, *July 20, 1959.*

The Senate and House Agriculture Committes are now considering legislation to extend Public Law 480. Under this little known but important legislation surplus agricultural commodities are sold to underdeveloped countries, and the United States receives payment in the currency of the buying country.

Under this legislation large amounts of cotton, wheat and other commodities which are in surplus supply in this country are made available for use by less fortunate people abroad.

Our surplus food has proved to be a valuable weapon in the cold war. We have moved fast on occasion to see that food is sold to nations which experience floods or some other natural emergency which wipes out its food supply. Such action tends to hold down political unrest and makes it much more difficult for the Communists to gain a toehold.

Congress has recognized the value of such a program by continuing it each year, usually authorizing the sale of about $1 billion worth of these commodities. Certainly it would seem to be more desirable to sell the surplus foods, even for foreign currencies, than to let it pile up in warehouses at a cost of billions of dollars a year.

It is tragic that more attention is not given to the needs of our own people. Hundreds of thousands of people in many areas have to live on surplus commodities which the Department of Agriculture makes available. I have tried for some time to have the Department expand the list of foods made available for feeding hungry families.

As important as it is to see that our surplus food and fiber are used abroad, and not permitted to pile up in warehouses, it seems to me that it is even more important to see that our own people who are in need receive an adequate diet. I shall continue to do all that I can to expand the surplus food distribution program.

CCC BILL REPORTED BY SENATE COMMITTEE

The Senate Labor Committee has approved legislation to establish a Youth Conservation Corps patterned along the lines of the old Civilian Conservation Corps. I have pending in the House a bill similar to the measure just approved by the Senate committee.

Under this bill, young men would be taken off the streets and put to work mainly in national parks and forests and on conservation projects in other federally owned areas.

I am firmly convinced that such a program would go a long way to meet the serious juvenile delinquency problem which faces us today.

The CCC record provides that boys who are given an opportunity to work in our parks and forests learn many valuable lessons which last throughout their lives.

Not only that, the program would make a valuable contribution to our efforts to preserve natural resources.

I hope that before the end of this session the House will act on legislation along these lines. Whatever the program might cost would prove to be a successful investment in the future of our young people and in the future of our Nation.

Homage to Colombia

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. FASCELL. Mr. Speaker, today is the anniversary of the independence of Colombia, one of our fine South American neighbors. Colombia's gracious people, their culture and intellectual achievements have always been oustanding. In saluting all Colombians on this occasion, I call to my colleagues' attention the following editorial from the Diario Las Americas newspaper:

HOMAGE TO COLOMBIA

Tomorrow, one more anniversary of Colombia's glorious independence will be celebrated, and for that reason the noble country of Santander, the Colombians residing abroad and all the friends of that highly educated nation, render tribute of admiration and sympathy to the heroes of that independence and to the great moral and intellectual values of that South American Republic.

The Colombians, with their culture and their civic and democratic sense, have dignified their own lives and have given great meaning to America's coexistence.

On their own merits and through many sacrifices, the Colombians have strengthened their political institutions, having overcome many obstacles, until achieving the reorganization of their democracy in a proud and decorous manner, with a government that is an example of republicanism, and in front of which is a figure of such intellectual and political brilliance in America as is Dr. Alberto Lleras Camargo.

For Miami, the date of July 20 has special meaning, because here in this city there is a large and distinguished Colombian colony,

that has brought to these shores their human enthusiasm and their background of culture and laboriousness, thus contributing to fortify the prestige of the Latin Americans living in this splendid Floridian city.

On the occasion of Colombia's greatest day, Diario Las Americas renders tribute of respect and admiration to that land of thinkers, poets, and statesmen of exalted merits, and expresses its best wishes for the prosperity of that nation, for its own good and as an example for America. This newspaper also very cordially salutes all the Colombians residing in the United States, and in a very special way extends congratulations to His Excellency, Dr. José Gutiérrez Gómez, Ambassador to the White House, and to the Honorable Dr. Octavio Villegas, consul general in Miami, both gentlemen valuable representatives abroad of their country.

Tenth Anniversary, Berlin Airlift

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. DAGUE. Mr. Speaker, for the past several years it has been my privilege to engage in correspondence with Dr. Walter Becher, a member of the Bavarian Landtag, who is the Secretary General of the Sudeten German Council. The Council is understandably dedicated to the reunion of those parts of the German nation which were separated as a result of war and conquest, and under Dr. Becher's militant leadership active resistance to the further advance of Godless communism is being carried on without letup.

In a recent communication the good doctor has furnished me with a translation of an article which appeared in a recent issue of the official Press Bulletin of the German Federal Government commemorating the 10th anniversary of the Berlin airlift. This was a striking example of what happens when free peoples stand up to ruthless dictators and in the light of the current bluff and bluster emanating from behind the Iron Curtain it seems quite appropriate to include the article with these remarks in hopes that our representatives at Geneva will stand firm in their resistance to aggression:

MEMORIAL DAY OF THE BERLIN LIFT—10TH ANNIVERSARY OF THE LIFTING OF THE BLOCKADE—THE LAYING OF WREATHS AT THE MONUMENT—MEETING IN THE DEUTSCHLANDHALLE—THE FAILURE OF THE SOVIET PRESSURE

The Berlin airlift for the mastering of the Soviet blockade represented the greatest undertaking of aeronautics, which has up till now been organized. Four days after the beginning of the blockade, on the 28th of June 1948, every 8 minutes an airplane loaded with food and articles of supply landed in Berlin. On the 18th of September 1948, on the American Air Force Day, the number of American airplanes amounted to 651, which delivered 5,500 tons of coal, and on the same day 244 British planes landed in Berlin. On the 16th of April 1949, every 62 seconds an American or British airplane arrived at the airfields of Tempelhof, Gatow, or Tegel, and delivered goods of a weight of 12,940 tons into the blockaded city. The airlift was maintained, even after the official ending of the blockade on the 12th of May 1949, for some time longer as a precaution. In the 15 months during which the airlift lasted a total of 2,326,205 tons of food and articles of supply were brought to Berlin in 277,728 flights. In this undertaking 31 American and 41 British pilots as well as 5 German workmen of the ground personnel lost their lives. In their memory the airlift monument was erected in front of the Templehof Airfield, which, at the same time, has become a true sign of free Berlin.

By means of the blockade the Soviets had aimed to bring Berlin under their servitude. The blockade was prepared long before the interruptions of the Berlin traffic started as early as the beginning of 1948, when on the 24th of June the total passenger and goods traffic on the railway and the highway stretches, Berlin to Helmstedt, as well as the electric current supply from the Soviet occupied zone to West Berlin were stopped. Any supply of food or other goods to West Berlin was interrupted. The war of starvation against women and children had begun.

In fact, during the first days of the blockade thousands of babies and small children, who were getting no more milk, were in danger of their lives, until the Americans ordered their squadrons of airplanes from all regions of the world to Germany, in order to satisfy as soon as possible at least the most pressing needs of supply for the city of millions of inhabitants. The people of Berlin had to be satisfied with dried potatoes, dried vegetables and artificial coffee by candle or petrol light. The electric current was switched on only two hours a day. The Communist newspapers derided the women of Berlin, who in bitter cold had to collect wood in the Grunewald, and the East Berlin broadcasting station took pleasure in the fact, that the Berlin supply stations, hospitals and other social institutions were in danger of having to be closed as a result of the lack of material and of electric current. In autumn 1948 the Communists realized then the partition of the city after they had dissolved the city parliament, then in session in the Parochial Street. On the 5th of December 1948, at an almost 90 percent poll, the West Berlin population voted for their parliament, and on the 7th of December Ernest Reuter became lord mayor of Berlin by an unanimous decision.

In the meantime the originally improvised airlift had grown into a gigantic undertaking and even the Soviets had finally to acknowledge that their blockade had failed, firstly owing to the greatest air operation of our time, and secondly owing to the stubborn spirit of resistance of the Berlin population, who had borne the sufferings of the blockade winter 1948–49 and had shown in no way any tendency to succumb to the offerings of the Communist propaganda. The Soviets therefore ordered their Ambassador Malik to negotiate with the Americans, firstly in secret discussions, about the endings of the blockade, and on the 4th of May 1949 the decision was drawn up between the Governments of the United States, Great Britain, France and the Soviet Union, in which the Berlin blockade officially ended on the 12th of May and all limitations on traffic and trade in Germany were lifted. In July of the same year this decision was once more confirmed by a Foreign Ministers' Conference of the Four Great Powers.

Thus the Soviet attempt to force the whole of Berlin under its domination and therewith to gain a starting point for further expansions had failed in every respect.

Fourth of July Address by Hon. Charles E. Goodell

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. TABER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Hon. CHARLES E. GOODELL, of New York, before the Chautauqua Institution, Chautauqua, N.Y., on July 4, 1959:

THE FOURTH OF JULY: RENDERING UNTO CAESAR THE THINGS WHICH BE CAESAR'S

Today, as I stand upon this podium, I am a humble man. Through the span of my meager years, since the age of about 6, I have been awed and impressed by chautauqua. You know chautauqua is the cultural conscience of Jamestown. My father was a doctor in Jamestown, one of those oldtime doctors. Father loved the chautauqua of Donald Dame, Josephine Antoine, Alfredo Valenti, and Franco Autori. And while his affection and enchantment with chautauqua were permeating our family outlook, an appreciation of some of the finer and subtler things in life began to sprinkle on our souls, unbeknownst to us. Aside from the plays and operas and lectures and concerts, and without intention of slighting them, I think one of the finest arts practiced on these grounds was the gentle art of sniping which used to go on every Wednesday and Saturday afternoon on the baseball diamond over here. All three of my older brothers played there before me and, as a young boy, there was no place I enjoyed watching a ball game more than right here at Chautauqua.

I remember during my latter years—when I was an oldtimer of 27 or 28 on the team (helping to season the college youngsters), I came to bat one day at an important juncture in an important game and watched a called third strike go by (below my knees). And as I was dolefully laboring back to the bench to put on my catcher's equipment, a gentleman who truly appreciated the artistic pathos of the situation, commented, so everyone could hear: "We've got a nice croquet team here, Catch, if you'd like to try out. I think even you could hit that ball."

Earlier, when I had had an opportunity to work out with the Brooklyn Dodgers before a doubleheader with Pittsburgh at Ebbets Field, I was worried about the large crowd unnerving me—and, you know, it wasn't near as bad as Chautauqua. All that the players on Ebbets Field could hear was a constant impersonal roar in the background, that they soon got used to, and the would-be tormentors were drowned out in the roar. What a frustrating thing that would be for a Chautauqua baseball fan. And now, at long last, a would-be baseball player has an opportunity to talk back to Chautauqua's fans.

One hundred and eighty-three years ago today it became necessary, in the course of human events, for one people to assume among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitled them. And, appealing to the Supreme Judge of the world for the rectitude of their intentions, a small band of men solemnly published and declared "That these United Colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British Crown, and that all

political connection between them and the State of Great Britain, is and ought to be totally dissolved."

So Americans are, today, for the 183d time, celebrating that memorable event when it was declared to be a self-evident truth that all men are created equal, that they are endowed by their creator with certain unalienable rights including life, liberty, and the pursuit of happiness. And we Americans have been pursuing happiness with a vengeance, and very successfully, I might add, throughout much of our history since that great Declaration.

Because these men pronounced their unity of purpose on the 4th of July, 1776, the 4th of July has become our most prominent national holiday in the United States of America. What does it mean to us? Why do we pay tribute to these 56 men, and others who later signed the pledge? Why do we wave the flag, toot the horns, and bespangle the sky today?

About 1,929 years ago, a man was speaking out against the leaders of his day, and telling stories and parables about them. Discomfitted by all this, the leaders sought to trip him up and one of their questions was: "Is it lawful for us to give tribute unto Caesar, or no?" But this man perceived the craftiness of his inquisitors and he said: "Why do you tempt me? Show me a penny. Now tell me whose image and superscription is that?" They answered, "Caesar's." And this great man then said: "Render therefore unto Caesar the things which be Caesar's and unto God the things which be God's."

I'd like to talk to you today about just how we in America go about rendering to Caesar the things which belong to Caesar.

Today is Caesar's Day in America, and I speak of it as Caesar's Day because, in at least one sense of those words spoken by Jesus, the word "Caesar" is the Nation—the loyalty we pledge and owe to our worldly ways of life, nationalism, if you will. For us today, the United States of America, and all the images that those words evoke in each of us: the flag, the Star-Spangled Banner, the Constitution, our glorious moments in history, and our dark hours of misery and pain. Patriotism rings with anthems of war—clashing armies at Bunker Hill, Antietam, Pearl Harbor, and the Battle of the Bulge. But patriotism has a soft and gentle aspect, too, the things that lonely men at war remember about home when half the globe divides them from family and friends: the lush beauty of our rolling hills and shimmering lakes; Mark Twain, Walt Whitman, Abraham Lincoln, and Perry Mason; Paul Hindemith, Gian Carlo Menotti, Li'l Abner, or Morris Graves; the Roosevelts and Eisenhower; waiving fields of grain, and bulging, rotting storage bins; supermarkets and TV commercials; model-T Fords, the gay nineties, and the roaring twenties; the wild western frontier; Oliver Wendell Holmes.

We could go on and on. Ours is a replete history, full of heroes and with no shortage of beauty, or bounce, or color. And this is surely part of the Caesar to which we pay homage on this day. An American Caesar, of many forms and moods; and it is a powerful, vibrant Caesar.

We laugh at aspects of our American way of life, at times we ridicule it, and at other times we seriously criticize and try to change it. But, taken as a whole, we cherish this part of our American Caesar as we pay tribute to it today.

When the Man of Nazareth spoke of Caesar, however, He wasn't just talking about the patriotism or nationalism of the Roman Empire, nor the mores of His day, nor was He talking just about Tiberius I, the then omnipotent ruler of Rome. He must also, and most importantly, have been referring to the authority that human government exercises over its citizens—the loyalty and the dedication that our worldly leaders extract from us in some minimal respect (or we end up as guests in the jailhouse).

These laws and these leaders are apart, in most significant respect, from God and from religion. "My kingdom is not of this world," Jesus said, "if my kingdom were of this world, then would my servants fight, that I should not be delivered to the Jews: but now is my kingdom not from hence."

I can't here deal with the problem of drawing the line between what today we should render to our American Caesar on the Fourth of July and what we should render unto our God, whatever we individually believe His nature to be.

In that connection, though, I remember during the years I was with the Department of Justice, one of the hardest types of cases we had was that of the conscientious objector. It was sometimes almost impossible to separate those who were using this device merely as a stratagem to avoid rightful obligations, from those who were sincere and devout in their belief that, whatever the worldly consequences to Caesar, they should never take up arms against their fellow humans. Many of the judges felt so much personal prejudice in this type of case, having fought and sacrificed in war themselves, that they refused to hear them, and every judge was particularly careful to see that a conscientious objector had a lawyer to represent him in court. One day one of the newly appointed Federal judges was hearing his first conscientious objector case. "Haven't you got counsel to represent you?" he asked the defendant. "My counsel is Jesus Christ," the man replied steadfastly. Without hesitation the new judge responded, "Yes, but don't you have someone to represent you locally?"

It is the local responsibility that we are concerned with on the Fourth of July. There may be immutable principles of religion. They are not to be found in, nor made a part of, our worldly government. Our Federal Constitution is surprisingly free of moral judgments or prescriptions, and the Bill of Rights begins in the first amendment: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; * * *." Interestingly enough the Constitution and its amendments are not so worded as to require the Government to go in and affirmatively guarantee you and me freedom of speech, freedom of the press and the right to peaceably assemble. They just bar the Federal Government, and in other instances the State governments, from denying us those rights. And amendment 10, that poor neglected orphan among amendments, says: "The powers not delegated to the United States, by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." It was the vision of our forefathers that the vast reservoir of human rights would be untapped and undisturbed by the necessities of orderly government.

If those 40 gentlemen-toilers who finally produced and subscribed our Constitution could have been transported back for a moment and could have sat beside this freshest freshman in Congress on June 2, 1959, the day I was installed, their eyes would have been wider than saucers, wider even than mine. What hath God and man wrought? A $38.8 billion budget just for the engines of war. That's what we took up as a first order of business in the House of Representatives when I arrived there. Just for perspective, it should be noted that the first budget after adoption of the Constitution was $4,269,027; and just 30 years ago, in 1929, it was $3,000,289,000. We've spent close to $81 billion in the fiscal year just ended. If you and I spent $1 million every single day it would take us 222 years to spend $81 billion.

But I picture here the surprise of Madison and Rutledge and Pinckney and Franklin, and their friends, if they could peek in the House of Representatives for a moment today, not to imply that the Congress is wrong or right, but to emphasize that the affairs of men have changed, and the affairs of Government have complicated immeasurably since 1776. Imagine these same men walking down one of our city streets, or breezing across what was then the entire unknown vastness of our continent in 4 hours and 55 minutes on a passenger jet, or watching our ubiquitous, iniquitous television commercials, or contemplating the fetching qualities of our modern ladydom, enhanced by a superabundance of the most miraculous cosmetic creations and exposed in apparel of the most incredible geometric patterns. If they were wide-eyed on the floor of the House of Representatives, I'm sure our gawking visitors from the 18th century would be rendered totally recumbent soon after an exposure outside the halls of our conservative congressional confines.

I speak of these things not in shock or rebellion. The world changes and gathers complexity, and Government either changes with it or we soon reach that stage of compressed wrong when, in the words of our Declaration of Independence, "it is the right of the people to alter or to abolish it, and to institute new Government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness."

We live today in an age when our welfare recipients in America have more material wealth and comfort than kings and queens were able to enjoy two centuries ago. It is our obligation as citizens of the wondrously abundant society to recognize and appreciate the forces which have propelled us to success. In brief, those forces are: Mass production in a free enterprise, incentive-dominated economy, with every free workingman sharing a just portion of our total increased productivity.

The other day I was talking to a friend of mine who works in a shop in Jamestown and I mentioned the word "freedom" and later the words "free enterprise," and he said, "Well, I guess freedom and free enterprise are OK, but they don't mean much to me, except maybe that the big guy is free to gouge the little fella." That kind of a concept of freedom, and that kind of a concept of our free-enterprise system, is dangerous. If my friend would travel, by boat or via the local public library, to Russia, or even to our friendly neighbors in Western Europe, and then take stock of what we have, I think he'd have a little different perspective on this word "freedom."

Freedom (not license but responsible, restrained freedom) is the elixir without which our bountiful way of life would wither and unravel at the seams.

Now I don't want to be an alarmist, nor to exaggerate the situation we face in Washington today. I'm not one of those people—sincere, informed, and intelligent people, I might add—who believe that we are hovering on the brink of economic disaster because of the bloated octopus in Washington. In the first place, some of the bloat's gone out of that octopus in the past 6 years. In 1952, expenditures of $65.4 billions per year by the Federal Government represented 18.8 percent of our gross national product. As you know, gross national product is the total national output of goods and services at market prices. In 1959, expenditures of $80.8 billions per year represents 17.3 percent of our gross national product. Federal employees numbered 2.6 million in 1952; they number 2.35 million today, a drop of 244,521 at the same time that our population has increased substantially. These trends are encouraging to those of us

who believe in decisions being made, to the extent possible, in the free marketplace.

But there are people abroad in our society who think that getting something, whatever it be, is simply a matter of having our Federal Government legislate it. They want our Federal Caesar to open the throttle wide and spend us all into a wild and illusory prosperity. Their method of paying for things has to be either taxes or inflation. There is no getting around that craggy, ugly fact. And it is the person with a small income who hurts and hurts and hurts as taxes go up and the value of our dollar goes down. Yet many of these moderate wage earners have been sold a bill of goods that Government spending, especially Federal Government spending, is automatically and inevitably good for them. I'm sure we can all agree on one incandescent fact today on this beautiful Fourth of July, 1959: All of us could do with less tribute to Caesar in the form of taxes to our Federal Government in Washington. And the only way we can ever reduce taxes is to reduce the proportion of our gross national product which is represented by Government expenditures.

Up to now I've sounded pretty much like a hidebound, earthbound old conservative. And I am, in many ways, and proud of it, too. But conservatism doesn't mean negativism. I cherish the values of our great America: A man's freedom to be what he wants to be; a man's opportunity to lift himself, mentally and materially; a man's guarantee that the color of his skin or the color of his creed will not deprive him of his rightful and equal station in our society; in sum, every man's respect for the dignity and worth of other men.

President Harold Dodds of Princeton University said in September 1955: "In an age enamored of skills, techniques and mechanical shortcuts toward a competent life, we shall maintain the creative and generating power of liberal learning broadly conceived. Our position is based firmly on the rock of our confidence in the uncommon man and our conviction that without him our democracy will wither and die."

Those words impressed me so much when I read them almost 4 years ago in the New York Times that I clipped them out of the paper and kept them. They were uttered at a time when conformity was "pedestaled" high in this country.

Whether we label ourselves "conservative" or "liberal," or something else, let us conserve those true values of our Nation. Let us be imaginative and positive about this. And please don't let us be satisfied with the old methods and the old cliches in politics. We need some freshness and some vigor in our fight to conserve the good, while we at the same time attack the things about our society that are unworthy of us. We, as citizens, must render to government our time, our thought, our knowledge, and our patience. Believe me, our Caesars in Washington and Albany and Harrisburg and Columbus need all the help they can get.

Now, what can you, you people sitting here today and listening—or snoozing, as the case may be—what can you do?

1. If you ever said it, you can make sure you never say again, "My vote doesn't matter," or "He's going to win anyway." Join either a political organization or a nonpartisan movement to get out the vote at elections and to understand the issues. The most powerful bloc of votes in this country today are the stay-at-home votes. In 1956, a presidential year, only 60 percent of our adult population voted. In 1958, an off year, 46 percent of our adult population voted. You and I can do something about that in our own small ways.

2. Think and read about issues; and talk and write to your elected officials. When you have collared your Congressman, don't tell him arbitrarily what he should do. He just might know more about it than you. Ask him his opinion and then tell him where he's wrong. Your reasons for thinking what you do are more important to a Congressman than your conclusions. And a Congressman does watch his mail.

3. Get into government yourself. And urge your family and friends, the ones you know have something valuable to offer the community, to run for office. You'll find that major reforms are more easily talked about than accomplished, but you'll make some progress and you'll have some fun in the process. I'm told a recent poll revealed that 80 to 90 percent of parents don't want their children to get into politics. If you have the opportunity you might talk to my mother about this. She's sitting right over there, and I think she still acknowledges me in public.

There are more recommendations I could make as to how you and I might effectively render service to Caesar, not on the Fourth of July but when it counts: the year around. But you are the people who really know how you can best serve. If you are a factor in your community politically, that's what is important.

During my recent campaign I met and shook hands with about 20,000 people in 4 weeks. We talked about farm surpluses, about labor racketeering, and about balancing the budget—all of them critical issues. But the main theme, recurring throughout every movement of our political symphony, cacaphonous as our symphony may have been— the main theme was get the Government back to the people. All the candidates in our special election in May played that theme in one key or another, because we hear it reverberating from the hills and valleys throughout these four counties in the 43d Congressional District of New York.

There are encouraging signs that Government is beginning, ponderously and laboriously I admit, but nonetheless beginning, to respond to this swelling chorus echoing alike from the rural hills and the urban caverns of our great Nation. State and local governments have been assuming an increasing share of the load. Since 1954 the State budget in Ohio has gone up 56 percent; in Pennsylvania, 43 percent; and in New York, 49 percent. The Federal budget has increased only 6 percent in the same 4-year period. If the States will in turn pass the responsibility for these programs down to the justice of the peace and the town councilman and the mayor, together with the revenue sources to cope with that responsibility, (to use the vernacular) we'll be in business. Seventeen percent of the present Federal nondefense budget is spent for grants, not loans but grants—gifts—to the States.

Six billion eight hundred million dollars will be given to the States in 1960 by the Federal Government. In most instances the only reason the Federal Government is involved in any of these programs is that we in Congress have the tax revenue—and if we can't find enough tax money we can spend our own printed money or borrow the money, and you people can pay for it over the years in inflation and interest. That $6,800 million does a lot of wasting and eroding on its round trip from us to Washington and back again.

I welcome Federal programs which stimulate and prod our people to arouse themselves and which help them overcome their local problems. The Federal Government is a progressive instrument, which I personally welcome in our local affairs, provided it does not enlarge itself into vast programs which can only ultimately oppress and enervate our local initiative. Unfortunately, the history of our Federal Government revolves all too often around the self-perpetuation of programs of aid and control. And such programs, when they emanate permanently from Washington, soon become encrusted with bureaucratic organizations and schemes, which almost seem to feed upon themselves in growing to massive proportions. These unresponsive bureaucratic beasts are a scourge upon modern society. It is this tendency of our Federal Caesar, to which you and I must never render homage or tribute.

The rebirth of this Nation—our entrance upon the glorious age for which all the sacrifices of the past have been made—is at hand, if we don't fumble and stumble our way down the blind corridor to heavy-handed, centralization of everything in Washington. This Nation cries for a rejuvenation of local government. The imagination and ingenuity of our people are not dead. That imagination and that ingenuity will exhibit themselves in endless variety throughout this great land, if we just give them a chance.

I stand before you an optimist. If you and I consent to participate in our destiny, through all the menial means available to us; yes, if we consent to render the right things to our Caesar, we cannot fail. Let us rededicate ourselves—unremittingly—to that sacred objective on this Independence Day, 1959.

A Well-Reasoned Veto

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial from the Arizona Daily Star, Tucson, Ariz., of Thursday, July 9. This editorial, entitled "A Well-Reasoned Veto," was written by the very able editor and publisher of the Arizona Daily Star, Mr. William R. Mathews:

A WELL-REASONED VETO

President Eisenhower performed a most unpopular, but wise and necessary act, when he vetoed the housing bill that Congress had passed to him for signature. Probably as many Democrats as Republicans in Congress are saying, "thank goodness," because most of them knew that it was a wasteful hodgepodge of homebuilding assistance. Yet many many of them probably voted for it, in order to win popularity with the building industry—with the pretty good assurance that Ike would veto it.

His reasons are excellent. At a time when he is striving to curb extravagance, he could not well allow an appropriation of $900 million for urban renewal to stand. What a gay party of real estate sales in many cities—possibly including Tucson—that would have financed. The only people that will suffer from that elimination are those in cities where the city administration shrinks from assuming its own duties in a self-reliant way.

Its provisions for housing for the elderly were nothing but a disgraceful bid for votes from numerous elderly people. As matters now stand that could be cared for by Federal insurance for loans for such people.

The authorization of 10,000 public housing units was made in the face of the fact that 100,000 previously subsidized housing units remain unbuilt.

While the veto will, temporarily, create uncertainty about the financing of numerous major housing programs, those with any merit should find sponsors on the Appropriation Committees of both Houses. The cost of these could be included in the general appropriation bill.

The veto does not stop meritorious housing projects from being financed by the FHA. It does stop some needless extravagance.

Fair Trade

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. CELLER. Mr. Speaker, one of the most aggressive young liberals in Congress is our friend and colleague, the Honorable JOHN D. DINGELL from the 15th District of Michigan. In his 3 years in Congress JOHN DINGELL has established an outstanding record as a conservationist, has been responsible for the enactment of many significant pieces of legislation in that field, and has been known for his work to liberalize social security and unemployment compensation, and to improve housing and medical care for the people of this country.

He has been credited by an outstanding national newspaper columnist with having been instrumental in preventing the gas bill of last year from becoming law by his forceful opposition to that measure.

JOHN DINGELL has been one of the most vigorous voices in Congress on behalf of the consumers. His significant contributions in this field have been the support of the Federal Food and Drug Administration and enactment of legislation to require adequate pretesting of all substances going into foods, to protect our people from poisonous substances in the food they eat daily.

However, one of his most courageous endeavors has attracted little attention. An editorial appeared in the Washington (D.C.) Daily News of June 18, 1959, setting forth some of young JOHN DINGELL's efforts to defeat the highly inflationary fair trade bill, H.R. 1253, which would, in the words of responsible economists, cost the American people up to $12.4 billion annually. According to a recent Department of Justice study, so-called fair trade costs consumers 27.7 percent more for appliances and 28 percent more for drug items.

That bill would, in the words of the Department of Justice and the Federal Trade Commission mean "pro tanto repeal of the antitrust laws," enacted to protect the American people from monopoly, price fixing and restraint of trade. Reputable economists and official spokesmen for the Department of Justice and the Federal Trade Commission have all said that the so-called fair trade bill would not only not help the little businessman but would actually be hurtful to him.

Our colleague from Michigan, JOHN D. DINGELL deserves the thanks of every housewife in the country for the gallant and effective fight he has been making against a measure which would dip deeply into the pocket of every family in the country.

[From the Washington Daily News, June 18, 1959]

WHAT'S FAIR ABOUT IT?

In opposing the so-called national fair trade bill, Representative JOHN DINGELL, of Michigan, calls attention to an advertisement which appeared here recently.

The ad was sponsored by a drugstore company, having nearly 100 outlets in the District of Columbia and neighboring Virginia and Maryland.

Prices were listed for a variety of drugs offered for sale but on a number of items there had to be two prices because Maryland—but not the District of Columbia or Virginia—was operating under a fair trade law.

Some examples: Abbott Vi-Daylin, $2.99 but $4.19 in Maryland; Parke Davis Abdol with C capsules $7.23 but $9.68 in Maryland; Upjohn Unicaps, $5.65 but $6.96 in Maryland; Squib Theragran capsules $5.55 but $9.45 in Maryland. And so on down a long list.

Same drugs, same stores but prices were as much as 65 percent higher in the fair trade State.

Wide markup margins are justified for some stores, depending upon the nature of services rendered; credit and delivery policies, perishable nature of the commodity, etc. Markups aren't profit. They have to include the expense of operating the store.

But services vary widely and if a customer doesn't want the expensive kind, no law should make him pay for it. If this law, already approved by the House Commerce Committee, is passed, a manufacturer can fix the retail price of his product and no one, no matter how profitable his business, can charge less.

Fair trade is theoretically helpful to merchants who dislike to compete for business. But for others, mainly including the consumer, there's nothing fair about it.

National Insurance for Independence in Old Age

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my message at the 19th national convention of the Townsend Clubs of America held at Portland, Oreg., July 20 to 23, 1959:

NATIONAL INSURANCE FOR INDEPENDENCE IN OLD AGE

(Message of Congressman THOMAS J. LANE, of Massachusetts, at the 19th national convention of the Townsend Clubs of America, Portland, Oreg., July 20 to 23, 1959)

Delegates and friends, for too many generations, the fate of old people was to live alone; on a farm, or in a single room overlooking Main Street.

There was no way for them to meet in groups with people of their own age who share their interests and their hobbies.

Then came the Townsend plan that brought you together, and gave you a new purpose in life.

The confidence and the unity that you have found in the Townsend clubs is an inspiration to the millions of retired Americans who have so much in common but have found no way to organize and make their voices heard in the determination of our Nation's policies. More and more of them will join with you as time goes on.

Social-security legislation is not only here to stay, but it will become stronger with each passing year. Eventually we shall have a system to provide full retirement benefits for all of our people when their working years are over. The fairest and most efficient way to do it is by providing benefits for the aged through a national insurance formula. When that goal is reached, the Nation can thank the Townsends Clubs of America for their forsight, patience, and work in behalf of security with dignity for all people in the harvesttime of their lives.

Wishing you every happiness and success at your 19th annual convention.

Goldwater Hits Labor Abuses

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial by Victor Riesel entitled "Goldwater Hits Labor Abuses," which appeared in the Phoenix Gazette, Phoenix, Ariz., on July 13, 1959:

GOLDWATER HITS LABOR ABUSES

(By Victor Riesel)

Few fight as hard for what they believe as does BARRY GOLDWATER, jet pilot, explorer, merchant, writer, Senator and one of labor's severest critics. I asked the Arizona Senator to explain in detail his sentiments and to pull no punches. The last bit of advice was unnecessary. Here is the Republican leader's reply written especially for this column:

For 2½ years, the Senate Rackets Committee, under the guidance of Senator JOHN L. MCCLELLAN, has been disclosing abuses within the field of labor-management relations. With numbering regularity, detail after sordid detail has been paraded before the American public. The committee has issued one interim report and is on the verge of producing another.

With this background, many bills have been introduced in both Houses of Congress directed ostensibly at the basic troubles in this field. Hearings have been held at great length. The Senate itself labored long, hard, and at times bitterly, to frame a bill which its Members anesthetically believe will accomplish the reforms needed.

The astounding fact of the myriad hearings, testimony, debate, reports and bills is that in not one instance has the source of the trouble been touched. The Congress and its Members, as well as the Secretary of Labor, have failed to strike at the disease itself and have applied themselves only to the symptoms.

The result is that if the present legislation which passed the Senate becomes the law of the land, the abuses diligently spotlighted by the Rackets Committee will merrily continue and Congress will be charged with having legislated a bill which is a sham at best.

The disease I speak of is power and nothing else. Power of the nature that allows Hoffa to threaten the entire Nation and to issue this threat with impunity and the ability to carry it through without the law being able to touch him, and, in fact, protecting him.

Power that allows Al Hayes to uphold the dismissal of three of his members because they dared to speak out against a position of the union, exercising a right which the Constitution recognizes as inherent, but which the union denies.

Power that allows Walter Reuther to carry on the brutal strike at Kohler, defying the clergy, the bar, and the public and even exerting that power in another State to prevent for 3 years the extradition of a goon who beat up a nonstriker.

Power that allows George Meany to openly tell the Congress of the United States just exactly what he will permit to be written into labor reform law and extending his dictates into the corridors and rooms of the Capitol where his lawyers wrote amendments to the labor bill.

Power that allows COPE to cross State lines to engage in politics, in part with compulsory dues money taken from Republicans and Democrats alike in violation of the spirit of both the Taft-Hartley and the Corrupt Practices Acts.

Power that flaunts the laws of the land and scorns the rights and prerogatives of the people.

Power that is denied, and properly so, to other segments of our society, but which is used by labor leaders with the knowledge they are protected by law and that their strength in Congress insures the continuance of those laws.

Power, then, is the root of all this trouble in the union movement and this power is fostered by Congress, by the National Labor Relations Board through many of its decisions, and by the Supreme Court which has upheld these decisions. New laws are not the real need. The real need is repeal of those portions of the law which have created and sustained this power.

In addition to denying the uses of secondary boycott and blackmail picketing, which the Kennedy-Ervin bill does not do, compulsion should be withdrawn from the National Labor Relations Act in order to create in this country a truly voluntary labor movement. Section 8(a)(3) of the National Labor Relations Act permits an employer and a union to enter into a contract requiring all employees covered by the contract to join the union within 30 days as a condition of retaining their jobs.

It is in this section of law that I feel the real trouble lies. It requires a man to join a union regardless of his desires. He may disagree with the philosophy of the union leader, or he may not want portions of his dues money to be parceled out for political purposes. But nevertheless, he must join the union. This is as much against American traditions and American rights as any act can be.

In all our society, only in the labor movement do we find compulsory membership sanctioned by law. Among all the nations of the world, the United States is the only one which establishes conditions under which it is compulsory for a worker to join a union.

In my opinion, it is this mandatory membership that has provided corrupt union leaders the opportunity to engage in activities outside the normal realm of collective bargaining, affording them the certainty that regardless of their activities, there would always be a membership to supply the checked-off money for their caprices and that this membership could never vote with their feet, or walk out on them.

It has been the timidity of Congresses and administrations which has denied injunctive relief to the public, to management and to the working people. It has been this same timidity that has allowed continued use of secondary boycotts and blackmail picketing by those who would abuse the labor movement.

If the abuses disclosed by the McClellan committee are to be stopped and further arrogant acts against our people curbed, then the source—the power—must be attacked, not the symptoms of this power which the Kennedy-Ervin bill so timidly slaps.

Is the Small Businessman at a Disadvantage Today?

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. QUIE. Mr. Speaker, an exchange of letters recently made public serves to highlight the plight of the small businessman who has no legal means of redress for such wrongs as may be inflicted by unions.

I believe the letters between my colleague, the distinguished gentleman from California [Mr. HIESTAND] and the Administrator of the Small Business Administration, Mr. Wendell Barnes, might well be studied by all Members of Congress.

Not long ago, Lyle Wilson, chief of the Washington Bureau of the United Press International, discussed Mr. Barnes' statements in his daily column. It is an accurate appraisal and I believe of great interest.

I ask unanimous consent for it to be reprinted in the Appendix of the RECORD, as follows:

LITTLE MAN THE POLITICIANS FORGOT
(By Lyle C. Wilson)

WASHINGTON, July 10.—Standard operating procedure for most politicians is to cry out in angry protest against oppression of the underdog, the little fellow, the common man.

These little fellows vastly outnumber the big fellows, especially on election day. It is remarkable therefore, that there is so little angry outcry by Members of Congress against the oppression of little businessmen by labor unions with which they must deal.

These unions are rich and allpowerful monopolies by comparison with the smalltime employer on Main Street, U.S.A. Wendell B. Barnes, in behalf of the Small Business Administration has written Representative EDGAR W. HIESTAND, Republican of California, about the plight of the small businessman oppressed by the big union. Mr. Barnes said the little fellow is defenseless against the unions without Federal action against labor abuses, especially blackmail picketing and coercive boycotting.

Of approximately 4 million small U.S. business concerns, Mr. Barnes said, at least 3 million have no legal means of redress for wrongs inflicted by unions. They lack financial resources to resist economic pressures which, Mr. Barnes indicated, are peculiarly but not exclusively exerted by the Teamsters.

"For these firms," Mr. Barnes wrote, "the rights guaranteed to employers by the Taft-Hartley Act have no practical significance. It is hardly an exaggeration to say that, under existing law, they have no rights at all."

He explained that this situation arose by reason of a jurisdictional gap between Federal and State authorities respecting labor disputes. The National Labor Relations Board cannot handle all of the labor disputes arising which affect interstate commerce. The NLRB, therefore, declines to deal with those it regards of lesser importance. NLRB, directly or indirectly, determines the importance of a dispute by the dollar volume of interstate sales and purchases transacted by the employer.

An aggrieved employer may be—usually is—denied a hearing if his dollar volume falls below the NLRB standard. Prior to 1957, such a smalltime employer frequently was able to obtain relief from State courts which assumed, according to Mr. Barnes, that they had jurisdiction. In that year, however, the Supreme Court held that, in vesting NLRB with jurisdiction over labor disputes affecting interstate commerce, Congress had removed all power of State courts to deal with such matters.

"Since then," Mr. Barnes wrote, "the 3 million small employers of whom I speak have been at the mercy of the unions with no right of recourse to State courts or tribunals for protection from illegal action."

Mr. Barnes hopes the House will improve the Senate's Kennedy-Ervin bill which now is before the House Labor Committee. He said the Kennedy-Ervin bill contained a section dealing with his little fellows but that it had "little or no merit."

Representative HIESTAND and Mr. Barnes seem not to have much company in their efforts for the small businessman despite the numbers of him who can vote.

Rivers and Harbors

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, it has been my pleasure and honor to serves as president of the National Rivers and Harbors Congress. This nationwide organization, through the cooperation of citizens who are interested in the proper development of our water resources—and this includes many of our Members of Congress—has been instrumental in guiding needed public works. I wish to present, herewith, the report of the year's work as given to the 46th national convention of the National Rivers and Harbors Congress held in Washington, D.C., on May 15, 1959:

During the 5 years which I have been president of the National Rivers and Harbors Congress, we have gone through great periods of change. When I came into office 5 years ago, the postwar effect on the work of our great organization was apparent to everyone. Our membership was down and the income of the organization had practically ceased. Some of our bills, including salaries, were more than 6 months delinquent.

During this time I am happy to report to you today that with your great help, cooperation, and assistance, we have been able to bring our organization from one of poverty to one of affluence. The National Rivers and Harbors Congress today finds itself in better financial shape than at any time during its entire history. As of December 31, 1958, our budget stood at $38,790.44. It has been increasing year by year in a healthy way, and should continue to increase until it reaches its full-grown strength after 58 years of

active effort and influence in the cause of water development throughout the United States.

During the course of this year I have been made chairman of a most important standing congressional committee of the House of Representatives, the Committee on Science and Astronautics. During the course of our deliberations, this committee has learned much that relates to weather reporting and possible weather control. All of this information which we are developing is of vital importance to the work of the National Rivers and Harbors Congress. Our convention presents to you a fascinating panel discussion about satellites, communications, weather reporting, and weather control.

I cannot overemphasize the importance of this new development. If we can predict weather accurately weeks and months ahead, we can save this Nation and its people billions of dollars in the course of time. Dr. Reichelderfer, Chief of the Weather Bureau, has told our committee that we can save the Lower Mississippi Valley $500 million per year if this can be done, and he has told us further that he can save the Nation $2 billion a year if long-range weather forecasting can be accurately given to our people.

Our Army Engineers are alert to these possibilities. They realize that long range weather forecasting and some degree of weather control together with their own engineering operations may bring about an end to floods in this Nation. Long range weather forecasting will permit them to operate their reservoirs so as to retain or release water, depending on the forecast of the future weeks and months. They can retain water for irrigation and reclamation or they can release it depending on possible needs in the future. The effect of this fact on our industries and on our increasing population will be fabulous.

Pending these exciting developments, we as an organization must proceed with our earthy problems of building dams, reservoirs, levees, improving channels, providing water for reclamation and irrigation, and developing our harbors. With this in mind I headed a committee which this year presented to the Bureau of the Budget our estimates of the needs of our water development program. We asked the Bureau of the Budget to recommend $1 billion in the overall program, and I am glad to report that the Bureau of the Budget recommended this amount as needed to the Congress of the United States. I therefore advised the Bureau of the Budget that we as an organization would stand behind their recommended ceiling of $1 billion overall expenditures for this purpose.

I am sorry however that the Bureau of the Budget did not take our recommendations for beginning of new starts. The Budget Bureau did not recommend new starts. We as an organization think that we must fight to prevent the stopping of new starts. Unless we continue to fight for new projects to be begun and to be constructed, our program will eventually dry on the vine and become as obsolete and dead as the dinosaurs that inhabited this globe hundreds of thousands of years ago.

I like to go down to the riverside and get my feet in the mud and wade near the river bank. I like to think of the tremendous boon rivers and waters bring to our civilization and like to forget the savagery of the floods and the destruction of uncontrolled waters. I am somehow reminded of a refrain from an old song: "It's a treat to beat your feet on the Misaissippi mud."

The country is rapidly filling up with population. Three million more people each year live amongst us and many of them are living in sunken, swamped, and poorly drained areas, which 10 years ago were not considered fit for human habitation. The pace of our growing population—and we will see 200 million people in this country by the year 1975—has caused us to do things which 10 years ago would have seemed foolhardy. We then pass onto the Army Engineers the increasingly acute problems of flood control and expect them to do the job which the experiences of the people have warned us should not be attempted. In spite of this fact, our Corps of Engineers does not let us down. From the days of George Washington on to the present hours the Army Engineers carry the banner of progress in water development, reaching out for victory after victory and writing across the skies of the future the great saga of accomplishment for our teaming millions of people to enjoy.

You will recall that when Russia fired her first sputnik, there was a stampede to cut off all public works programs and to get the money to develop satellites and missiles. At this critical time let the historic record remain that the National Rivers and Harbors Congress stood firm against any program that would stifle our internal development in order to buy rockets, satellites, and missiles for our defense. We thought then that both programs could be maintained and history has indicated that this is possible. We felt then, and we feel now, that there can be no sound defense which brings economic decay internally in order to meet the demands of armament.

In this connection you have seen a magnificent exhibit of the new St. Lawrence Seaway. This great navigation project has been the subject of interest for a lifetime and has had the support of the National Rivers and Harbors Congress from its founding.

Let me read from an editorial of the Washington Post of April 25, 1959. I feel this editorial gives a panoramic background and view of the significance of this project to many of our Great Lakes ports:

"HAIL THE SEAWAY

"Today the dream of well over a century will be realized when North America's great chain of inland lakes is opened to ocean commerce. The official date for the inaugural of the St. Lawrence Seaway is June 26, when Queen Elizabeth of Canada (and the United Kingdom) and President Eisenhower will participate in formal ceremonies. But today a Canadian icebreaker pushing westward from Montreal through new locks and canals will actually open the seaway for oceangoing ships.

"Since 1954 Canadian and United States projects have been underway to complete deep-water channels and works (most of them on the Canadian side) around the rapids-filled section of the St. Lawrence River in the 180 miles from Montreal to Lake Ontario. By June 1 there will be a 27-foot channel all the way to the foot of the lakes, and by 1961 the same minimum depth will prevail all through the Great Lakes system. Heretofore traffic has been limited by antiquated locks and a 14-foot canal depth in some sections.

"The organizational phase of the St. Lawrence Seaway was not altogether happy. Canada, which had the most evident immediate interest (and which proposed to do most of the work), urged Congress for years to authorize a joint development program, but to no avail. Not until Canada signified its intention of going ahead with an all-Canadian project did Congress take action over the objection of certain pressure groups. Interest was heightened concurrently with the new importance to American industry of iron ore from the developing mines in Labrador.

"Let us hope that this initial reluctance has now been forgotten in the prospect of enormous joint benefits. If anything, the United States, as the more populous country with many large cities situated on the Great Lakes, stands to gain more at first than Canada from this new access to the ocean. Buffalo, Cleveland, Toledo, Detroit, Gary, Chicago, Milwaukee, and Duluth will now be ocean ports and are feverishly anticipating new commerce.

"But the benefits will be many-sided. The lake route can be a vast stimulus to Canada's further development. Toronto, Hamilton, Windsor, Sarnia, Sault Ste. Marie, Port Arthur, and Fort William will also be ocean ports capable of large expansion. Sizable cargo vessels carrying up to 9,000 tons from any part of the world will be able to call at Canadian and American ports. Downbound huge lake freighters will be able to carry as much as 25,000 tons of wheat."

This dedication is the fulfillment of a dream of a lifetime and marks a major landmark in our river and harbor program.

Another matter that has been a subject of concern to the National Rivers and Harbors Congress for many years is the Panama Canal. You can recall that in 1956 a special committee of our organization reported on the advisability of building a second sea-level canal. That able committee was headed by our own member, Hon. Henry H. Buckman, of Florida.

The other day came rumblings reaching Washington that the Republic of Panama wants to seize the Canal, despite a 1903 treaty granting the United States in perpetuity the right of using and controlling the Canal Zone. As we all know, Panama has been on the verge of a revolution and Latin America generally is threatened with major disturbances. The time for building the second canal through the Isthmus is near at hand.

This organization has revitalized our program of endorsing and supporting projects through the United States. We have weeded out the dead timber and put our work on a sound, efficient basis. The projects committee has made a major contribution over the years in this respect.

The National Rivers and Harbors Congress has set up new committees and undertaken new functions. We have the committee on industrial water use, pollution abatement, wildlife and recreation, the committee on irrigation and reclamation, a resolutions committee, and other committees of great importance to our program. They have functioned efficiently and deserve the praise of all of us.

I wish to announce the selection of several new vice presidents of our organization. Of course, we now have U.S. Senator SPESSARD L. HOLLAND, of Florida, and Representative JOE MARTIN, of Massachusetts, as vice presidents of our organization. Recently Representative JOHN A. BLATNIK, of Minnesota, and Representative ROBERT L. F. SIKES, of Florida, as well as U.S. Senator RALPH YARBOROUGH, of Texas, have been selected as vice presidents. They have done great work for our organization, and we look for even greater contributions in the future than in the past.

This marks the conclusion of my service as president of this organization. It has been 5 years of active service—service that I have appreciated and have enjoyed. I have had the pleasure of making friends with people from all parts of the United States, and I hope these friends remain with me during the remainder of my active life.

It is a privilege to be able to serve a great organization such as is the National Rivers and Harbors Congress and it gives one a feeling of worthwhileness of a nationwide development program. It gives your president a feeling of accomplishment, and when we join together on a program of an investment of a billion dollars in a year placed into the future of our Nation to make it a better and fairer land in which to live, we have a program that all of us can get behind and push

with the zeal and enthusiasm of one engaged in a righteous cause.

Let me thank all of you—officials, delegates, and friends of the National Rivers and Harbors Congress—for your loyal and active support in the past. Let me beseech of you the same sympathetic understanding and enthusiastic support of the incoming president, whoever he may be, that this organization may continue down the road to even greater achievement and success in the future.

Tobacco and Cancer

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. ABBITT. Mr. Speaker, for the information of those interested in the controversy regarding the causes of lung cancer, I include an article from the Washington, D.C., Evening Star, of Friday, July 10, 1959:

BRITISH TESTS DON'T LINK CIGARETTES AND CANCER

LONDON, July 10.—A group of British researchers report that in 5 years of laboratory experiments with mice, rats, and hampsters they have failed to induce lung cancer in the animals by exposing them to strong concentrations of cigarette smoke.

"Our failure is a striking negative result," said scientists of Britain's Institute of Cancer Research.

An account of their experiments was included yesterday in the 36th annual report of the British Empire Cancer Campaign—a voluntary body devoted to fighting the disease.

Cancer Institute scientists reported the only lung cancer encountered during their experiments was a solitary tumor in a rat and this was not due to cigarette smoke. This tumor was associated with marked bronchitis.

TWENTY-SEVEN OF FORTY ALIVE

The report showed that at Leeds University mice were subjected to cigarette smoke and atmospheric pollution. Of 40 mice in an experiment which began 8 months ago, 27 were still alive and none had developed lung tumors.

It did not say how the rest had died.

Substances found in tobacco smoke and city smog also were inoculated at London's St. Bartholomew's Hospital into the lungs of rats and guinea pigs. So far, said the report, no definite malignant changes have been detected.

The cancer institute did report, however, that smoking apparently keeps down the weight of animals as well as human beings.

Small boys long have been warned smoking would stunt their growth, the report said.

PARTIAL INHIBITION

There was a partial inhibition of growth, said the investigators, after the animals were exposed to tobacco smoke.

"Exposure to cigarette smoke results in reduction of food the animal consumes just as in man the smoker usually eats more sparingly."

There was evidence that a smoking animal utilizes food in some manner different from normal.

The cancer campaign report claimed the prospect of prevention and cure of cancer by means of inoculation is being brought nearer by other experimental work at Leeds.

Scientists produced tolerance in rats to cancer-causing substances by means of inoculation, the experts said.

The research also pointed a way to attack on cancer by drugs, said the report. It did not go into details.

Offering People the Moon Without Price Tag Attached

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I include an editorial from the July 15, 1959, Wisconsin Rapids Daily Tribune, of Wisconsin Rapids, Wis., one of the outstanding daily newspapers in Wisconsin. I commend this editorial to the attention of the Members of the House:

OFFERING PEOPLE THE MOON WITHOUT PRICE TAG ATTACHED

The argument among leading Democrats as to what Congress should or should not do seems, on the surface, to concern measures described as progressive.

Actually, it involves money, and where to get it.

The so-called progressive proposals call for heavy outlays for urban renewal, schools, health, and other matters.

The supporters of these programs think the Democratic leadership in Congress should dare the President's veto by passing them, and thus letting the country know what sort of action they favor.

This may appear to have substantial political advantages. But it also has a major political handicap.

The backers of the progressive programs do not include any plan for financing these measures. They would be like laws passed without enabling clauses.

In the absence of any specific financing, the Government would, of course, have to pay for the proposals out of heavy borrowings which would add materially to future deficit prospects. The alternative, higher taxes to pay the freight, is not even mentioned.

The mood of the Nation, in this time of a rising economy, seems to be against either new taxes or further additions to the deficit. Both Mr. Eisenhower and the modern Democratic leadership of the House and Senate are responding to this mood by trimming or blocking heavy expenditures and trying to keep the budget within tighter bounds.

Those who favor heavier expenditures to further their progressive aims would seem to have a responsibility to show the voters exactly how these proposals are to be paid for. It is hardly fair for them to offer people the moon, unless the bill is attached.

Promises of great social and economic advances are not sober pledges when they leave out of account the effect on the taxpayer's pocketbook. He may in any given situation be willing to pay the price, either through inflation or higher taxes, but at least he should know what it is.

He should not be deluded into imagining he can enjoy major gains at no cost to himself. The current vocal supporters of so-called progressive legislation have not yet shown that they understand the need to be utterly candid on this important point.

One More Warning

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mrs. KELLY. Mr. Speaker, members of the Republican Party and members of the Democratic Party in recent speeches have expressed great fears over the present course of the cold war. Their emphasis is placed upon the gravity of the present situation. Yet the American people appear apathetic. What is the reason? Have they succumbed to the new look of the Soviet leaders of the U.S.S.R.? Have the Russian visitors, Mikoyan and Koslov, left a favorable impression? Have the Americans forgotten the lessons of treacheries, bloodshed, deceit and violence of communism? Have we forgotten the captive peoples of Latvia, Lithuania, Estonia, Czechoslovakia, Albania, Bulgaria, Poland, Hungary, and Red China? I hope all will pay heed to one more warning:

[From America, July 18, 1959]

SOVIET UNION: THE NEW LOOK

(By L. C. McHugh)

Russia's clever iconographers have been working overtime lately. The result is a gigantic triptych that was unveiled in New York's Coliseum on June 30. It is called the U.S.S.R. Exhibition of Achievements in Science, Technology, and Culture. No matter that the achievements are not always carefully distinguished from the stuff that dreams are made on—the show is calculated to interpret Russia's New Look to the American public. One dollar and 3 hours of rambling amid machines, models, placards, and products wil give you such a tour of the Soviet Union as you couldn't buy in Moscow for a bagful of rubles.

I will not attempt to describe this impressive display of some 10,000 items. The Soviet trade fair is carefully planned and cunningly executed. It has a powerful psychological impact on the spectator, especially if he is ignorant of classic Marxism and the realities of Soviet history. My sole concern here is to show how this exhibit uses the direct pitch and the hidden sell to project a beguilling picture of communism.

The direct pitch weaves together three simple themes: peace, technological prowess, and the proletariat. The first of these hits you as soon as you step into the lobby of the coliseum. Your eyes fasten on a muscular nude who is laboriously beating a sword into a plowshare. "Peace, it's wonderful," is the glowing thought that lightens your heart as you mount the moving stairway to the main exhibit floors. Riding the escalator is like climbing into a slice of sky that is gleaming with sputniks. Here is a master stroke of propaganda: The peaceful rockets, unquestionable symbols of Russian technical prowess, dominate the whole exhibition and condition the mind to acquiesce in the reality of Soviet supremacy in all the other displays. The third theme engages the eye almost as soon as the rockets do. Under the vaulting segment of Russian sky looms a heroic bronze worker, the obvious creator of these lush acres of technological magic.

With these three themes variously compounded and endlessly reiterated in photos, placards, production items and artful models, the desired image of the U.S.S.R. begins to jell. It is the image of a vast society

of hardworking people who are marching confidently into an automated future of goodies and gadgets. They march at a dizzy pace, but they can pause long enough to give you a glimpse of their creative dynamism. They invite you to admire their technology, envy their education, share their love of sports. They will even let you ride in their dreamboats. All they ask of the cold non-Communist world is peace—atoms-for-peace, peaceful coexistence, peaceful competition in creating the earthly paradise. Very disarming indeed. The Soviet Union would like nothing so much as "to build a house by the side of the road and be a friend to man."

The hidden sell, too, lurks in the coliseum. All the brassy clangor of classic communist propaganda is muted or overridden by loud organ tones of sweetness and light. The exhibition reveals none of the gross materialism that is essential to Marxism. The average viewer gets no impression of economic determinism, no theorizing on the bloody class struggle, no hint of the death of God and the martyrdom of His people that are involved in the march of progress. One walks out of the show without any concept of the totalitarian state and its subjugation of human dignity. There are no blaring echoes of the glorious leader motet or the sycophantic cult of personality that disgusts the decent human being when he thinks of Soviet politics. In fact, one can leave this gaudy trade show with the impression that communism is nothing more dangerous than an economic and social plan for harnessing heaven, a sort of perennial Brotherhood Week.

Against the backdrop of a happy people preoccupied with the construction of an earthly paradise, the sourness of Gromyko and the harshness of Khrushchev seem unreal. In the never-never land of the coliseum, aggression and subversion, missiles and militarism are nasty words that have been expunged grom the dictionary. Upstage and downstage surge only the Soviet masses which, as Mr. Kozlov told us when he opened this fantastic exhibtion, "cannot harbor any evil intentions in regard to other nations."

This disarming and beguiling image of the Soviet Union, calculated to put the viewer off guard, is precisely the impression that the U.S.S.R. exhibit is meant to stamp on the minds and hearts of the unwary groundlings.

The Dixon-Yates Decision

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial entitled "Two Millions for Nothing," which appeared in the July 16, 1959, issue of the St. Louis Post-Dispatch:

TWO MILLIONS FOR NOTHING

The damage claim of the Dixon-Yates syndicate against the U.S. Government which the U.S. Court of Claims has just upheld leaves the Eisenhower administration in a thoroughly ironical position. Here is an economy-preaching administration, which has scrimped on resource development, public education, national defense, and many other items, called on to pay out $1,837,545 for absolutely nothing in return—a complete waste of money. Here is an administration which promised to bring business methods to Government penalized to the tune of nearly 2 million by its own bungling.

For the Dixon-Yates case has been a bungle from beginning to end. President Eisenhower ordered the contract in 1954 to produce private power to replace power the Tennessee Valley Authority was supplying to the U.S. Atomic Energy Commission—and President Eisenhower canceled the contract in 1955 when it became too hot to handle.

The administration through its Department of Justice then attacked, as against the public interest, the contract it had commanded the TVA and the AEC to sign as being in the public interest. The legal attack was based on the contention that Wall Street Banker Adolphe Wenzell was guilty of conflict of interest for serving the Government and his firm at the same time. If there was any conflict, it had been carefully arranged within the administration itself.

At the same time as his Attorney General was attacking the canceled contract in court, President Eisenhower continued to defend it at press conferences, aided by his then chairman of the AEC, Lewis L. Strauss.

What more would it take to make an opera bouffe? A musical accompaniment would be required, but it would be a crime against literature to change a word of the script.

The Equal Rights Movement

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mrs. MAY. Mr. Speaker, I was privileged this past weekend to attend a celebration at Alva Belmont House, Washington, in honor of the 111th anniversary of a historic meeting at Seneca Falls, N.Y. The celebration was held to recognize the date of July 19, 1848, when the equal-rights-for-women movement came into being in the United States.

The Honorable KATHARINE ST. GEORGE, of New York, a long-time champion of this cause, delivered a particularly illuminating speech at this celebration, and I feel it is appropriate that the speech be printed at this point in the RECORD.

THE EQUAL RIGHTS AMENDMENT

(By KATHARINE ST. GEORGE, Member of Congress, July 19, 1959, at the celebration of the 111th birthday of the historic meeting at Seneca Falls, Alva Belmont House, Washington)

Members of the National Woman's Party, ladies, and gentlemen, I think that before saying anything on the subject of equal rights for men and women, we all want to thank Mrs. Mesta, the greatest Washington hostess and one of the greatest hostesses of the world, to promote the cause and to assist the work of the National Woman's Party to further the passage of this constitutional amendment.

There are many of the members of the National Woman's Party here tonight but I want to pay especial tribute to Mrs. Walker, the president, who came all the way back from Florida for this occasion, and to Miss Paul, who has been a valiant fighter for the cause of equality since the days of the victorious fight that gave the women of the United States the right to vote.

All the members here are worthy of special mention, all have worked and are working for this great cause, and we are hoping, through the passage of this amendment, to achieve the final and complete victory.

A little over a century ago, July 19, 1848, the equal rights for women movement came into being in the United States at a small gathering at Seneca Falls, N.Y. This was the first equal rights for women meeting ever held in the United States and, as far as is known, the first equal rights for women meeting ever held in the entire world.

At this meeting, women demanded the vote. They demanded the right to enter schools and colleges, to enter the professions, to hold political office, to control their own property, to earn a living for themselves and their dependents, to control their own earnings. They demanded equal guardianship of their children, the right to make contracts, the right to make a will, the right to sit on a jury, the right to conduct a business. In short, as set forth in one of their "Declarations":

"We insist that they (women) have immediate admission to all the rights and privileges which belong to them as citizens of the United States."

Twelve resolutions and a declaration of sentiments were adopted at this historic meeting. A momentous declaration of independence was issued. "We hold these truths to be self-evident; that all men and women are created equal," they intoned; American men at that time scoffed, ridiculed, and angrily rejected this claim to equality. They called it "feminism" and firmly classified it with atheism and socialism. But today it has provoked what one writer has called the greatest American revolution: the emergence of the American wife from the status of charwoman and maternity machine to that of an independent human being with the heady power of freedom.

In 1848, when the first National Woman's Rights Convention made its declaration of independence, there were, beyond all argument, serious defects in the status of women, particularly married women, in the United States.

Is there really any need to discuss, "Why a Constitutional Amendment?" There are those who desire more of an answer, and it can be given. Following a survey of various fields of law it is revealed that, despite the great progress that has been made toward narrowing the common law gap between the sexes, there is no full legal equality for women in present-day America. The magnitude of this remaining differentiation has led to the introduction in Congress of this equal rights amendment. Some of us have become dissatisfied with the slow process of whittling away at discriminatory legislation statute by statute, and now seek to achieve absolute legal equality for our sex in one constitutional stroke.

In looking over the life of Susan B. Anthony we find that the Revolution, her magazine had as its motto these words: "Men their rights and nothing more; women their rights and nothing less." We always find any philosophy best stated briefly and the more talk and verbiage we get the less we understand and the less, to be brutally frank, we know what we are talking about. In these very simple words Susan B. Anthony and her friends epitomized what the so-called equal rights amendment would do, and also answered the objections of those who claim it would take away necessary protection and special legislation needed by women.

This amendment would protect the rights of men and women. The title reads:

"Proposing an amendment to the Constitution of the United States relative to equal rights for men and women."

We want both sexes to have their rights, nothing more and nothing less. These rights

we spell out as being equality under the Constitution, nothing more or nothing less. It is the fashion in some quarters to say: "Oh, I am all for equal pay for equal work." Well, you will never get it until you have full equality under the Constitution and under the law. You will never get it as long as you have second-class citizens, be they men or women, under the Constitution.

We are constantly told that the women of our country have all the money, all the power in the world, and that the American male is an unfortunate worm who toils ceaselessly for the female of the species without regard and without apparently even a kind word or a pat on the head. We are told that he will welcome the amendment, or should—this is considered perfectly hilarious—because it would give him some rights and some semblance of equality which he does not now posses.

Well, the supporters of the amendment believe in equality, nothing more, nothing less. I quote the opening sentence of the amendment:

"Equality of rights under the law shall not be abridged by the United States or by any State on account of sex."

Medical Care for Senior Citizens

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. SANTANGELO. Mr. Speaker, on May 14, 1959, I introduced H.R. 7154, a bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits. This bill is identical to the bill introduced by Congressman AIME J. FORAND, and which is numbered H.R. 4700.

The following is the statement which I presented to the Committee on Ways and Means in support of my bill, which remarks I believe will be of interest to the readers:

STATEMENT OF HON. ALFRED E. SANTANGELO, CONGRESSMAN FROM THE 18TH DISTRICT OF NEW YORK, IN SUPPORT OF H.R. 7154

This 86th Congress now has the opportunity—and responsibility—to continue the progress that has been made since the Social Security Act of 1935.

The opportunity confronts us in the form of H.R. 7154, which I have introduced, and which is identical to H.R. 4700, which this committee is now considering. Under this bill, persons eligible for old-age and survivors insurance benefits would be assured of essential medical insurance coverage.

The results of innumerable studies and surveys support my conviction that one of the most pressing problems of the elderly is how they can meet the onslaught of expensive medical care which most of them inevitably face. It is indisputable that few of them have incomes or resources sufficient to cover long and costly illnesses and surgical care. An abundance of such evidence has already been presented to the committee. Sickness often constitutes a catastrophe for our older people and for their families.

Those who experienced illness, short or prolonged, know the aches and pains which came with the night and disappear with the dawn. Sickness and illness are companions of old age, especially for persons above the age of 65 of whom there are approximately 15 million in the United States. Ask any of these senior citizens as to their health and you invite a torrent of complaint as to subjective and objective pain and agony. Five hundred and twenty-four out of every 1,000 of these over 65 are receiving old-age and survivors insurance. These would be assured of medical care under this bill.

In my State of New York, 150 million are over 65 years of age and approximately 780,000 would receive the benefits of these provisions. From the number of requests I receive in my congressional office from elderly people who seek supplemental welfare or additional medical care, one would think that the greatest percentage of these people reside in my congressional district.

In addition to the great number of people suffering from illness due to old age, we know that the illnesses of later life are not only of longer duration but are also of a more serious nature. These facts were brought home to me by a conference held in my State of New York on financing health costs of the aged. In addressing the conference which he had convened, former Governor Harriman stated:

"The costs of adequate medical care for older persons are higher than for younger persons. Hospitalization is needed more often and for longer periods of time. Prolonged care is more frequently required, because chronic disease is more common among the aged. A recent national study showed that the average annual cost of medical care for persons over 65 was $102 compared to $65 for the general population.

"At the same time that extra care is needed, the older person has fewer financial resources to meet the added cost. As medical and hospital costs have risen sharply in the past quarter century, retirement income has not kept pace."

Those meetings brought to light much information which supports my proposal. For example, our New York State Commissioner of Health, Dr. Herman E. Hilleboe, pointed out that, according to a survey made by the National Opinion Research Center in 1955, approximately 62 percent of all age groups in New York State were insured against the cost of hospitalization while only 35 percent of the population 65 years and over had such insurance. Obviously the ability and opportunity to pay for medical care or to purchase health insurance depends on age, income, and whether an individual has a job. Group insurance provided for people at work usually ends with retirement—the time, sadly enough, when most people need it the most.

The New York conference report took account of the difficulty that elderly people have in meeting hospital bills by pointing to figures developed by the American Hospital Association's commission on financing of hospital care. These statistics showed that 21 percent of those patients who could not pay their hopital bills were 65 years of age and over whereas persons in this age group comprised less than 9 percent of the overall population. The conclusion was that many older persons—perhaps as many as 80 percent—would not be able to meet medical bills, even of a fairly modest amount, from income presently available to them.

Another significant 80-percent figure concerns the chronic disease problems which face older people. As I have already said, illnesses of the elderly are likely to be more severe and of longer duration. This is documented by the studies conducted by the staff of the commission on chronic illness which show that the age group 65 and over had 80 percent more chronic cases than did the age group 35 to 64.

From these and others related studies it is clear that the health needs of older people are exceedingly complex. The situation is made more difficult because the kind of magnificent care which is becoming available through the skill of medical science is very costly. I agree with Commissioner Hilleboe that these people have "every reason to demand a bill of health rights for the aging. Enhancement of the physical and mental capacities of our older people can bring numerous rewards to society by enabling these people to contribute their share to the community good. It also will enable these aging individuals to preserve the dignity and serenity that should be their rightful heritage."

The idea of adding hospital and surgical benefits to the social security system is not a new one. But up to the present, it has received little legislative consideration. This proposal is a classic example of the concept of a government's responsibility described by Abraham Lincoln. Mr. Lincoln said that the legitimate function of government "is to do for the people what needs to be done, but which they by individual effort cannot do at all, or do so well."

The problem is a growing one. Figures from the Census Bureau indicate that in 1960 persons aged 65 years and over will constitute a new high of 8.8 percent of our country's total population. Most of these people will be living on fixed retirement incomes, which often are barely adequate to cover daily needs. At the same time they will be asked to meet medical costs which are soaring far beyond their means, at a rate even higher than other items in the cost of living index. The result can only be a denial of adequate medical care to a portion of the population that needs it most, or financial calamity for those who do seek it.

I believe, however, that passage of this pending social security legislation will solve the grotesque dilemma facing our older people, in a thoroughly reasonable and equitable way. The estimated annual costs of $1 billion would be paid for through a slight increase in social security taxes of three-eighths percent of payroll for employees and employers, and nine-sixteenths percent for the self-employed on all earnings up to $4,800 a year. In this way each person under the social security system would contribute to the cost of the program in a way and at a time that he could afford.

It has been argued that the number of older people who have medical coverage under private insurance plans is growing at such a rapid rate that government sponsored legislation in this field is unnecessary. I do not believe that this argument is a valid one. In the first place, only two out of five now have this coverage, and much of that is inadequate and uncertain. Secondly, it seems clear that the point will soon be reached where all those who can afford coverage will have it, and the others will be left without protection of any kind. Thirdly, private plans, which have only limited membership, can never be in a position to offer insurance at a rate which a more comprehensive, federally sponsored system can support. The costs will inevitably be higher.

I think it must be recognized, too, that the program of coverage provided under H.R. 7154 has very specific and immediate advantages over most private systems. There would be no problem of denial of benefits because of preexisting conditions. Benefit coverage could not be arbitrarily withdrawn, but would be automatic and continuous. The size of hospital and surgical benefits would be generally far more adequate than those presently available under private insurance. Benefits to cover nursing home costs would also be provided.

This legislation to help our older people is clearly within the responsibility of the Na-

tional Government and of this Congress. It is a responsibility which, in view of the desperate need, we dare not abdicate. Delay can only mean unnecessary anguish for thousands of people. Through the social security system now in existence we already have the administrative machinery and resources to put the program into almost immediate operation. By taking advantage of this opportunity, we would be rendering our older citizens, and the country, an invaluable service.

It seems to me that we are needlessly hesitant about passing this legislation, failing to recognize that we have, after all, already admitted our responsibility in related areas of need. There is a long history of legislation relating to the elderly. Congress has also taken vitally important steps to help assure the people of this country that they will have necessary medical facilities available. I point to the Hospital Construction Act as a primary example of this.

Aside from the many questions and issues involved in the consideration of this bill, all of which will undoubtedly be discussed before the committee, I believe there is one basic consideration which must be kept in the forefront. There is needless suffering—not just in my district, or my State—but throughout the country. We cannot completely eliminate this suffering, but we can alleviate it.

The strength, health, and vitality of our people is a resource we must protect. In view of this, favorable action on this legislation is essential. Our senior citizens are entitled to a bill of rights to provide for their old age. This bill is a bill of rights for our senior citizens.

More Reasons for Partnership Development of Trinity Power

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. GUBSER. Mr. Speaker, the House Interior Subcommittee on Irrigation and Reclamation began hearings on July 20 on bills to provide that withdrawals or reservations of public lands shall not affect certain water rights; to require the Federal Government to submit to state laws on control, appropriation, use, and distribution of water, and to recognize the authority of the States over its water. On July 24 the subcommittee will consider a related subject, namely, whether the Federal Government shall preclude an electric company from building and operating the Trinity River powerplants in northern California. The common vein flowing through these hearings concerns the extent to which Congress will permit the Federal Government to expand its asserted claims of paramountcy over the individual States and their citizens in the fields of water rights and water development.

In the matter of water development, the July 24 consideration of the Trinity issue will determine basically whether the Government is to continue needless spending in the face of an offer by a utility to finance the powerplants itself and thereby to "financially aid and assist" water development, as provided by the Central Valley Project Act of 1937, of which the Trinity project is a unit. As phrased by the Marysville (Calif.) Appeal-Democrat, regarding Secretary Seaton's advocating the Trinity partnership proposal, "Whereas in the original Central Valley project planning power was intended to help pay for water, the Bureau of Reclamation has sought to make water pay for power." Commenting on the plan whereby the Government, not the utility, would build the plants, the Appeal-Democrat continues, it "asks the majority of the people of the State to subsidize tax-free power facilities for a few privileged communities. It asks the taxpayers to pick up the $55 million tab for construction of Trinity power development. Worst of all, it recommends that the power phases of the project not be used for the fullest benefit of the water users of California, the very people the Trinity, Feather, and other California water projects are intended to help."

An editorial in the Santa Cruz (Calif.) Sentinel in my district, reads in part:

The Pacific Gas & Electric maintains that under the proposed partnership for the Trinity project, the initial cost will be $55 million less than under total Federal operation, that Pacific Gas & Electric will pay $165 million for water from the Trinity more than the project would receive under public operation, and that Pacific & Electric will pay tion, and that Pacific Gar & Electric will pay an estimated $135 million in taxes during the 50-year tenure of the contract.

The article also states:

If private utilities can provide adequate power for an area, it is our opinion that such an operation is far more beneficial, all things considered, than the so-called cheap power provided by the bureaucracy of Government.

The concluding sentence editorializes:

Therefore, we favor the partnership plan for the Trinity project and appeal for confirmation by Congress of the plan proposed by the Secretary of the Interior.

The San Juan Mission News, also in the 10th District, which I am privileged to represent, admonishes us:

Remember this: There is no magic or secret way by which Government can furnish goods or services at cheaper rates than private enterprise. The magic touch can only be provided by Government using its powers to subsidize the few who directly benefit by shifting the costs to all the taxpayers. And beside this important issue—look at the money angle: The Pacific Gas & Electric offer would provide $310 million in benefits to the public which would be lost otherwise. Thus, instead of being a tax burden, the project would be a taxpaying enterprise.

Again, the answer to this problem clearly is to permit the utility to construct and operate the power facilities, save the Government nearly $60 million in construction costs immediately, and save the Nation's taxpayers $175 million in additional surplus to the Central Valley project over Federal development and $83 million paid by the company in Federal taxes. The correct, proper and sensible solution is inescapable: Let investor-capital supply the construction costs, and the Nation's taxpayers and California water users will receive the square deal promised them by both political parties.

Space Secrecy

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. MOSS. Mr. Speaker, on Sunday, July 19, 1959, the Washington Sunday Star published an editorial entitled "Mistake in Space," berating the House for cutting the funds requested by the administration for the National Aeronautics and Space Administration. The Star, in its editorial, asks the question: "Why such economizing?"

One of the best reasons can be found in the same newspaper of the same day. On page A22, the Sunday Star carried an Associated Press story reporting that information about the administration's space program had been withheld from the Symington subcommittee of the Senate Committee on Aeronautical and Space Sciences. The Symington subcommittee reported that the "exercise of executive privilege hinders the Congress from obtaining basic policy information." This is the latest instance of the administration's growing practice of hiding under the cloak of privilege information needed by the Congress to fulfill its Constitutional duties in legislating, particularly in the vital fields of space, foreign aid and defense.

Contrary to the Star's conclusion—and there is no reason to doubt the soundness of its warning—there is clearly strong reason to question the judgment of any person charged with programing the expenditure of large sums of public moneys. There is a right and a need for the Congress to receive the candid advice and judgment of public servants without their invoking specious claims of privilege.

The editorial and the Associated Press story follow:

[From the Washington Star, July 19, 1959]

MISTAKE IN SPACE

Dr. T. Keith Glennan, head of the National Aeronautics and Space Administration, has pulled no punches in his appearance before the Senate Appropriations Committee. Speaking in somber and urgent tones, he has flatly declared that the House, in recently voting to cut $68 million from his agency's budget for the current fiscal year, has taken a step that threatens to result in "disastrous consequences," and there is no reason to doubt the soundness of his warning.

The sum sought by NASA, with the strong and unqualified backing of President Eisenhower, is $530 million. As Dr. Glennan has said, this represents a tight budget with "less than any slack in it." In other words, it is the rockbottom minimum needed to give our country, for the sake of both its prestige and its security in a dangerous world, a fighting chance to catch up with the Soviet Union in space, and to go on from there to achieve genuine leadership in the field—an unchallengeable second-to-none position.

This is the objective that the American people want to see attained with the least possible delay. It is why Congress not many months ago, after the Russians had successfully orbited the world's first earth satellite, acted with extraordinary speed and unanim-

ity in bringing NASA into being and in recommending that no expense be spared to establish our country's supremacy in space. Yet, with massive inconsistency and a certain measure of recklessness, the House now has slashed a great chunk out of the money the President has requested to do the job that must be done if such supremacy is ever to be realized.

Why such economizing? In Dr. Glennan's words, "What has happened * * * to give anyone a sense of complacency? * * * Have we—who started serious work in the space field 6 or 7 years after the Soviets were pouring unlimited funds and their best brains into the drive for dominance in space—suddenly achieved some enormous advantage?" Of course we haven't. Actually, we still lag behind in several vital respects, and so we can ill afford to pinch pennies in dealing with a situation in which "the United States must bend every effort to achieve a position of leadership. * * * And we are all agreed that leadership in a race where there are only two participants cannot conceivably mean running second."

In saying this, and in admonishing that there will be "disastrous consequences" if the House cut is sustained, Dr. Glennan has backed himself up with a chapter-and-verse documentation of what is likely to happen unless Congress restores the money that has been taken away. Among others, the "consequences" will involve a slowing down, a curtailment or a shelving of key projects—including the one aimed at sending an American into orbit in 1961—designed to make us look reasonably impressive in our spatial competition with the Russians.

Accordingly, it is good to know that space-minded Senator JOHNSON, the majority leader, is in agreement with all this. As he has put it, it would be "a great mistake" not to provide NASA with every penny it has asked for. We hope that Congress as a whole, when the issue is finally decided, will act in keeping with the warning that he and Dr. Glennan have both sounded.

[From the Washington (D.C.) Sunday Star, July 19, 1959]

SENATE GROUP PROTESTS SPACE PLANS SECRECY

A Senate space group said last night a Presidential secrecy decision is keeping from Congress information about the Nation's astronautics program.

In a report to its parent Committee on Aeronautical and Space Sciences, the Subcommittee on Governmental Organization for Space Activities said this "exercise of executive privilege hinders the Congress from obtaining basic policy information."

Congressional committees have expressed similar complaints about other activities during the past few months. These have included the asserted withholding of information by the executive branch from the General Accounting Office and charges by the House Government Information Subcommittee that testimony has been withheld under White House policy.

The Senate subcommittee said there should be improvements in reports by the National Aeronautics and Space Administration, the Federal Council for Science and Technology, and similar agencies "in order that more complete information will be presented regarding the space policies, programs, and activities of all agencies."

PRIVILEGE OF PRESIDENT

Committee members asked why information was withheld. Senator Dodd, Democrat, of Connecticut, excerpts from testimony showed, asked whether the theory behind that was "secret information or is it the privilege of the President?"

Dr. T. Keith Glennan, Director of NASA, said "It is the privilege of the President." And to another question he said "No; classified information was not the reason."

Some members said they thought that the only overall report made by NASA so far was inadequate.

Senator SYMINGTON, Democrat, of Missouri, subcommittee chairman, said this report was "essentially a summary of what has been done in the first year" and "really no projection beyond the current year." The subcommittee's report called the NASA account "primarily a résumé of space events" instead of the comprehensive description of planned activities provided for under the act setting up the space agency.

Senator SMITH, Republican, of Maine, wanted to know whether the space program was planned by space experts or "tailored to the budget on a year-to-year basis?"

Dr. Glennan insisted that "the Bureau of the Budget does not plan the space program."

"The validity of the program, the character of the program, is something we in the agency settle," he said.

QUESTION ON CONTROL

The Senate group said it was uncertain who had what authority in the space programs among NASA and Pentagon agencies.

However, the subcommittee decided that no changes in the law through new legislation are needed now, that these can be accomplished by executive order. Among other things, the subcommittee said there should be a clarification of the roles and missions of each of the Armed Forces—Army, Navy, and Air Force—in the space program.

Failure to act promptly to correct the inadequacies pointed out by the subcommittee, the report said, "will not only result in additional waste of time, money, and skilled personnel but also will impair both our national security and our international prestige."

Poison in Your Water—No. 142

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in Tuesday, July 14, 1959, edition of the Washington (D.C.) Post and Times Herald.

I have on a number of occasions inserted into the Appendix of the CONGRESSIONAL RECORD articles and editorial comment in the newspapers on the radioactive substances which have been dumped into the Animas River, in Colorado and New Mexico, and the danger to the people from that dumping there.

Contrary to what might be thought the dumping of waste into the Animas is not an isolated instance. This article entitled "More Streams Found Polluted by Radium" shows that the San Miguel River in southwestern Colorado is also polluted by wastes from a number of uranium refineries.

As in the case of the Animas the river is used for supplying nearby communities and for irrigation. In cases of use by communities the tapwater was found to have radium content 1.5 times permissible limit. Radium like strontium 90 is a bone seeker and causes leukemia and bone tumors.

The article also mentions pollution of Colorado River with radioactive wastes by refinery at Grand Junction.

I hope all will read this article.

MORE STREAMS FOUND POLLUTED BY RADIUM

(By Edward Gamarekian)

The pollution of a number of streams in the Colorado River Basin with radioactive wastes from four uranium ore refineries came to light during the past week in an unpublished 1955 report by the U.S. Public Health Service.

Concentrations of radium in the river water were found to be as high as 22 times the maximum permissible limit.

Although the report was made 4 years ago, virtually nothing has been done to correct the situation since then, with one recent exception. A few weeks ago, the Vanadium Corp. of America, under pressure by the Public Health Service, said it would stop dumping radium into the Animas River from its refinery at Durango, Colo. The Public Health Service found that 30,000 people living downstream from the plant were unknowingly ingesting radium at a rate of 2.7 to 4.6 times the permissible limit.

Radium, like strontium 90, is a bone-seeker that can cause leukemia and bone tumors. Although it is not considered dangerous to exceed the permissible limit for short periods of time, excessive amounts for extended periods can result in dangerous accumulations in the bones which will remain there.

REFINERIES INCREASE

The 1955 Public Health Service report contains brief measurements on the rivers that carry wastes away from six refineries. Four showed excessive radioactivity. There are now about 28 uranium refineries in the United States. The number has been increasing at a rapid rate—about 8 to 10 new ones during the last 18 months—yet nothing is known about the extent to which most of them are polluting the streams into which they discharge.

The Public Health Service says it does not have the facilities or money to do the job. The Atomic Energy Commission says the same, although it has been charged with responsibility for the public's health by the Atomic Energy Act.

The 1955 PHS report shows that the radioactive pollution of the San Miguel River in southwestern Colorado is coming from two sources, the uranium refineries at Uravan and Naturita.

Downstream from the Natuvan plant, the radium concentration is as much as 22 times the permissible limit for human consumption—28 micromicrocuries per liter as compared to a permissible limit of four. Below this point, the concentration gradually decreases because of the pickup of radium by fish, insects, and algae.

Downstream from the Naturita plant, the radium level is 5.5 times the limit, and this too decreases further on.

A Public Health Service scientist, E. C. Tsivoglou, yesterday stated that relatively few people live along the banks of the San Miguel.

REPORT MADE LAST YEAR

In a paper delivered at a nuclear energy conference last year, Tsivoglou reported that the river below the Naturita plant served as the water supply for a small community and that the tap water during some tests was found to have an average radium content of 1.5 times the permissible limit.

In the vicinity of the uranium mills, river water is also used for the irrigation of crop lands and grazing lands, stock watering and recreation, Tsivoglou pointed out.

The fourth case of river pollution mentioned in the 1955 PHS report, in addition to the two in the San Miguel and the one in the Animas River, was the pollution of the Colorado River by a refinery at Grand Junction.

The radium concentration in the river from this plant was found to be 10 times the permissible limit.

Portsmouth Metal Trades Council Favors S. 19, Portsmouth Naval Shipyard Wage Rate Bill

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement from the Portsmouth Metal Trades Council, affiliated with the American Federation of Labor and Congress of Industrial Organizations of Portsmouth, N.H., and Kittrey, Maine, an organization representing the employees at the Portsmouth Naval Shipyard, in reference to S. 19, a bill to regulate and fix wages at the Portsmouth Naval Shipyard, and companion bills filed in the House.

In my opinion, these employees have a justifiable complaint since their wages at the Portsmouth Naval Shipyard are not commensurate with the wages of those employed at the Boston Naval Shipyard at like employment. There should be no discrimination made between these two shipyards located within 60 miles of each other since Federal workers in this area employed in one shipyard do certain types of work identical with those employed in the other shipyard, but receive more wages.

Since the bill has passed the Senate without objection on May 26, 1959, I am hopeful that the House Committee on Armed Services will program this legislation for an early hearing. This situation should be rectified and at this 1st session of the 86th Congress:

Since the year 1947, the Navy has established wage schedules for blue-collar workers at the Portsmouth Naval Shipyard using a new "immediate vicinity" concept of comparable jobs in private industry. This procedure has resulted in dissatisfaction and resentment, primarily because no comparable jobs or comparable industry exist within the survey area as prescribed by the Navy. These factors were recognized during the years prior to 1947 when the wages at Boston and Portsmouth (which are less than 60 miles apart) were the same. Incidently there were no apparent disastrous consequences, as claimed by the Navy, would result by enactment of S. 19. For reasons yet unexplained, the Navy, in 1947, made two separate wage-survey areas for Boston and Portsmouth. Since that time hundreds of attempts for administrative return to the procedures used prior to 1947 have been made by our Senators and Congressmen. This the Navy adamantly refused to do, while at the same time recognizing that unfair inequities existed.

S. 19, a bill to regulate and fix wages at the Portsmouth Shipyard would correct this injustice. It was passed without objection by the Senate on May 26, 1959. It is essentially the same as S. 2266 which was passed by the 85th Congress unanimously, vetoed by the President, overridden by the Senate, and sustained by the House by a narrow margin in August of 1958.

The primary motivation to sustain the veto by the House was an Executive order by the Secretary of the Navy, inspired by the President, to invoke the "public interest clause" to meet the objections of the Congress and the employee organizations at the shipyard in Portsmouth. It is our contention that the Navy did not act in good faith, and only intended to provide the abovementioned motivation. It is a matter of public record that at the very next opportunity (December 6, 1958) the Navy proceeded to increase the disparity which was reduced by the Executive order of August 1958.

S. 19 and the companion bills in the House, which have had bipartisan support, are the only alternative to attain fairplay and justice. The facts are, we only seek to recover procedures arbitrarily taken away. The new procedures have placed Portsmouth in the unique position of being the only major naval installation located outside a heavy industrial area. The net result being no comparable industry or jobs upon which to base a fair wage determination.

We would also point out that the "immediate vicinity" concept is not the gospel as many would have you believe. As an example over 1,600 Navy employees at the Portsmouth Shipyard have their wages set by means other than immediate vicinity surveys. In fact, our complete argument is based upon the contention that people should be paid for services rendered and work performed, rather than be paid different or substandard wages only because the area does not contain heavy industry other than the Navy installation.

With these thoughts in mind, we respectfully request and urge you to actively support S. 19 and the companion bills in the House introduced by Mr. MERROW, Mr. OLIVER, Mr. BATES, and Mr. LANE.

Résumé of the Program and Addresses Delivered on Sudeten German Day

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. BOSCH. Mr. Speaker, on May 17, 1959, the Sudeten German expellees celebrated their annual Sudeten German Day in Vienna, Austria.

Under leave to extend my remarks, I include a short résumé of the program and the messages delivered by Dr. Ing. Julius Raab, Austria's Federal Chancellor, and Dr. Rudolf Lodgman von Auer, president of the Sudeten German Association:

At the season of Pentecost, or Whitsunday, Christians whose faith has not yielded to the acids of modernity celebrate the descent upon the Apostles of the Holy Spirit. It is not by chance that the Sudeten German expellees have chosen this sacred feast of comfort and reassurance as a time for reunion and rededication to a just solution of the problems resulting from the loss of their homes by Communist brutality and theft.

Convening for the 10th time since they were forced to leave homelands of Bohemia, Moravia, and Silesia—known since 1919 as Sudetenland—the expellees met 400,000 strong to face realistically but without revenge or hatred the problems linked to their return to antestral farms, trades, and industries. Numerically exceeding all former rallies, 1959 saw Sudeten Germans throng to Vienna, pregnant with historic meaning and with youthful memories for thousands of their members.

Messages rolled in from high church and civil dignitaries. Pope John XXIII wired an apostolic blessing; West German Chancellor Konrad Adenauer sent "hopes that the meeting on neutral Austrian soil leads to harmony and understanding between European neighbors."

From Members of the U.S. Senate and House of Representatives came congratulatory wires and letters. Messages were also received from the Steuben Society of America, patriotic, and anti-Communist organizations, all expressing solidarity with the Sudeten aims and their dedication to self-determination and to a future in freedom.

Key figures in this year's demonstration were President of the Sudeten German Association, Dr. Rudolf Lodgman von Auen, and Austria's Federal Chancellor, Dr. Ing. Julius Raab, to whom the Sudeten Karl's Prize was awarded. The Karl's Prize goes annually to a political leader, scientist or publicist who has made an outstanding contribution to the idea of a United Europe.

Addressing as compatriots the 200,000 Sudetens assembled on Vienna's spacious Heldenplatz (Heroes Square), with its monuments to Archduke Karl and Prince Eugene, Chancellor Raab said: "If I say 'compatriots' to you, there is good reason for my so doing. My father, too, was a Sudeten German, born in Klein-Mohrau at the foot of the Altvater, attended school in Freudenthal and later came to Vienna as a young technician to help build the Vienna University.

"The peoples of German ethnic origin were driven from their homes whether or not they were in sympathy with Hitler's policies of terror, even victims of national socialism had to go."

Praising the willingness of the expellees to help rebuild Austria's war-damaged economic structure, Raab emphasized that it was the Sudeten group who did most to restore normal economic activity. He voiced esteem for the Sudetens who, he stressed, "have come here with no thought of revenge or force. They have founded a new livelihood and are satisfied, even if their present circumstances are much humbler than they were before."

In expressing thanks for being selected as recipient of the Karl's Prize, Chancellor Raab remarked: "The awarding of the Karl's Prize might primarily be interpreted as a sign of solidarity between our new citizens and the native population. Karl IV of the House of Luxembourg, elected emperor in 1347 and crowned in Rome 8 years later, was a farsighted realist whose chief focus was on the economic development of central Europe. He was a promoter of trade and industry. With the University of Prague he created an intellectual center that shone out far beyond the borders of Bohemia and we must not forget that the University of Prague was the mother university of our own Vienna alma mater."

Referring to the role of Austria today as a small nation at the crossroads between two worlds that face each other with great distrust and enmity, Dr. Raab added: "Historical record will one day refrain from entering the expulsion of the Sudeten Germans on the page of honor of human culture of the 20th century. The expulsions are only explainable as due to the internal disruption of the war and early postwar years that seized the Czech people, otherwise so industrious and peaceful."

"If one tries to justify the expulsions by saying that under Hitler millions lost their lives or were brought to disaster, one only descends to Hitler's own level * * * Not force,

but the desire that man * * * should not become a machine, should be a human being in every possible sense of the word. I know," said Raab in conclusion, "that you have come to this demonstration, one with us in these sentiments, and I beg you to join us on this road toward the well-being of Europe and the blessing of mankind."

Dr. Rudolf Lodgman von Auen, following Dr. Raab to the speaker's stand, told those gathered on the square that a telegram had been sent to the Ministers convening in Geneva stating that the Sudeten Germans expected them to strive toward a just peace that would not be based on expulsion and expropriation.

In his address Lodgman stressed: "We have not come to Vienna as the Prague Government implied, as revengists and nationalists, to infringe on Austrian neutrality and foster feelings of hatred and revenge against the Czech people. The Sudeten Germans have come to Vienna as a national group that has abandoned any thought of retaliation and, despite the events of 1945–46, desires to hold out their hand to reconciliation with the Czechs."

"Preservation of a great heritage." "That is the motto of the 10th Sudeten German Day," continued the speaker, "and if the Sudeten Germans dedicate themselves to historic solidarity with the peoples of the Danubian area and to one folk unity, it is also a pledge to a new middle Europe in the spirit of mutual respect and self-determination of all peoples and national groups in that area. It is a day of recollection of the occidental supranational concept which old Austria represented throughout the 19th and 20th centuries as a spiritual heritage of the Holy Roman Empire."

"Ever since the Middle Ages the Bohemian and Austrian lands were dynastically and culturally linked. From 1526 to 1918 the homelands of the Sudetens were united with the Austria hereditary lands under the scepter of the Hapsburgs. The Sudeten German Day serves also to refresh these facts in our memories and in so doing makes the occasion a day for the Austrians as well.

"For the Sudeten people the treaty of St. Germain was the beginning of a patch of suffering that led them through forced incorporation into the Czech National State and to expulsion in 1945–46. It was the thorny path which today another national group in old Austria, the south Tiroleans, are forced to go.

"Of the Sudeten people, who numbered more than 3 million souls in the old homelands, there are 2 million living in the West German Federal Republic and Austria today, where they have set up an organization whose aim is to keep alive the concept of homeland.

"Citizens of these respective countries today, the Sudeten Germans have served as a positive element; their presence, that at first seemed a burden, has turned into a permanent gain."

Taking this opportunity to announce his retirement from the political field, Lodgman von Auen concluded his message with the words: "Though we are scattered throughout the world, the Sudeten Germans will remain united in spirit with Austria." Turning to the youth, to whom he entrusted the the struggle for the Sudeten cause, Dr. Lodgman bade them continue the fight for a free homeland in a free Europe.

What Is the Secret of a Successful Life?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. LANE. Mr. Speaker, most of us are so busy that we have little opportunity to stop and contemplate, and take inventory of our lives.

In the rush and confusion of each day, there is so little time or opportunity to check on ourselves. We are moving fast, but in what direction? How will we find the real fulfillment that will give meaning to our lives?

There is not one of us who does not feel the need of guidelines to keep us on the right course.

Under leave to extend my remarks, I bring to your thoughtful consideration the following advice from the August 1959 issue of A Magazet:

RULES FOR SUCCESSFUL LIVING

When President Garfield was a young man, someone placed in his hand one day a slip of paper, which he carried with him all his life. The paper contained the following lines:

"Make few promises.
"Always speak the truth.
"Live within your income.
"Never speak evil of anyone.
"Keep good company or none.
"Never play games of chance.
"Drink no intoxicating drinks.
"Good character is above everything else.
"Keep your own secrets, if you have any.
"Never borrow, if you can possibly avoid it.
"Do not marry until you are able to support a wife.
"Keep yourself honest, if you would be happy.
"When you speak to a person, look into his eyes.
"Make no haste to be rich, if you would prosper.
"Save when you are young, to spend when you are old.
"Never run into debt, unless you see a way out again.
"Good company and good conversation are the sinews of virtue.
"Your character cannot be badly hurt except by your own acts.
"If anybody speaks evil of you, let your life be so that no one will believe it.
"Never be idle. If your hands cannot be employed usefully, attend to the culture of your mind."

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Surprising San Angelo

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. JOHNSON of Texas. Mr. President, the development of the Western States has been, and continues to be, one of the most exciting aspects of this century. Overnight, cities which scarcely were on the map half a century ago, have grown to 50,000 or to 100,000 in population.

An outstanding example of how the West is realizing its rich and varied potentials is the city of San Angelo, in west Texas. Incorporated in 1903, San Angelo has grown to a city of 66,000—more than doubling its population since 1940. The city continues to thrive, and its progress is dramatic proof of what can be accomplished when men of vision set out to overcome the limitations imposed on a region by nature.

I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article on this west Texas city. The article, entitled, "Surprising San Angelo," was written by Lewis Nordyke, and was published in Texas Parade magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SURPRISING SAN ANGELO

(By Lewis Nordyke)

San Angelo, which is out in the wide, open spaces of developing west Texas, is a surprising city. The visitor who takes the time to look around a little can happen upon many things he didn't expect to see.

As one example, San Angelo's Central High School is one of the most revolutionary public schools in the Nation. It not only is significant of the trend in education in America but it typifies the spirit of solid progress in the city.

The same civic aggressiveness shows in the new million-dollar coliseum, with almost unlimited parking space which is lighted at night. This building would be a credit to any city much larger than San Angelo.

Then there is home-grown industry that has been surprising not only to San Angelo and Texas but to much of the Nation as well. These industries are about as diversified as they can get. At last count there were 87 different manufacturing industries in San Angelo and these are listed under 74 different classifications.

The civic leadership goes all out to help industries get started and keep going. The organized effort in this direction is made through the board of city development and the San Angelo Industrial Foundation. The latter began in 1946 with $123,000 pooled from local citizens and to date it has aided more than a score of local industries which now have an aggregate payroll of more than a million dollars annually.

This leadership is interested in the total economy of the area and has sponsored a community enthusiasm for development. San Angelo College is a typical project. The college offers courses, as the need becomes apparent, for training local people for different jobs. Among such courses are specialized classes in IBM operation, moccasin sewing, and other skills and arts needed by local industries.

That area workers readily learn the skills of industry is attested by the success and growth of these homegrown industries. Take Monarch Tile Manufacturing, Inc., for example. Thirteen years ago a tile contractor decided that there should be a change in the tile situation—improved tile and a greater variety of attractive colors. He started the company which today is a multi-million dollar concern and is among the ten largest tile producers in the Nation. It does business in 28 States in middle America and has warehouses and showrooms in Chicago, Denver, Omaha, Albuquerque, Oklahoma City, San Antonio, Lubbock, El Paso, Houston, Fort Worth, Tucson, Phoenix, and Dallas. Nearly all of these warehouses are operated as individual distributorships which use the Monarch name.

Monarch whipped transportation problems by setting up its own trucking system to deliver the finished products.

When Monarch was started, there were no trained tile workers in the area. Yet the force was recruited from people living in the San Angelo region—people who were willing and able to be taught. Monarch is a shining example of how an industrial concern conceived, developed, financed and managed locally can succeed in San Angelo.

Five years ago, a luggage repairman, a watchmaker and a dentist decided to go into the moccasin-making business. At that time, a long drought had hit the ranching and farming business and agricultural workers were having difficulty in finding work. Among them were quite a few Latin-Americans. They didn't know how to make moccasins, but they soon learned. Today they are prosperous and driving late model cars. Alco moccasins are distributed almost worldwide. This summer the company will make its 9 millionth pair of washable (even in a washing machine) moccasins. The company has 300 employees. It has more than 19,000 accounts—retailers that buy and sell the moccasions. Among these accounts are a few Indian tribes out West that sew a few beads on footgear and sell them in trading posts.

Like Monarch, Alco makes a good product and has had very effective management. It has trained a force of expert workers. Alco is a remarkable example of how a worldwide industry can flourish in San Angelo, starting from scratch in the short period of 5 years.

You'd probably not expect to see it, but there is a printing plant in San Angelo—Newsfoto Publishing Co.—that is one of the Nation's biggest publishers of high school and college yearbooks.

Then there's the San Angelo Die Casting Co. which began after the war with the specialized operation of casting components of the famed York pecan sheller which, incidentally, is another interesting San Angelo industry. Growing from that, San Angelo Die Casting Co. moved into many other fields, including the manufacture of boat trailers. The company now has 67 employees.

Fitting into this pattern of home-grown enterprises are scores of other operations—each an interesting success story in itself.

Not too many years ago a photographer started Wallace Studio specializing in developing and retouching portraits. The operation now keeps up to 110 locally trained specialists busy processing film that comes in from studios all the way from Maine to California and in between.

San Angelo's biggest industry was moved in. It's General Telephone of the Southwest, a subsidiary of General Telephone & Electronics Corp., a billion-dollar concern which is the second largest telephone company in the Nation. The 5-State—Texas, New Mexico, Oklahoma, Arkansas, and Louisiana—headquarters office is in San Angelo, where there are more than 482 employees. The company serves 265 exchanges in the 5 States. There are more than 287,000 telephones.

The headquarters building is an out-of-this-world thing, a beautiful structure out where there is plenty of parking space. It has won high awards for its architecture. It is air conditioned. It is a sort of outdoor-indoor building. In the center of the inside is a garden with ivy and other plants growing. This garden is protected by an open roof that doesn't look to be open. But when there's rain, it comes showering down in the garden. Employees can sit at their desks and have an inside look at what the weather is like on the outside.

General Telephone sets a high standard of civic service, lending the know-how and energy of its executives to community affairs, notably in the areas of industrial and economic development for which San Angelo has several effective organizations.

There is no doubt that quite a few people outside Texas, and also many inside the State, think of San Angelo as a vigorous outpost of west Texas, a sort of shining metropolis in a land of sheep and cattle, with some oil wells thrown in. This area of Texas is often thought of as a place of wide and very dry horizons. The surprise is that it is growing rapidly into the status of a land of lakes, a sort of oasis. It already has Lake Nasworthy, 7 miles to the southwest, and Lake North Concho (sometimes called San Angelo Reservoir) at the northwest city limits. Three Rivers Dam, a firmly authorized Bureau of Reclamation project figured to cost $32 million will impound a still larger lake, Twin Buttes Reservoir, 9 miles southwest of the city. Land acquisition is now underway for the project. The three streams to be dammed are the Middle Concho, South Concho, and Spring Creek. The completion of this project will put San Angelo in the enviable position of having more than enough water.

San Angelo has all sorts of water sports and good fishing in its present lakes and also fishing in the streams, mainly the North, Middle and South Concho and Spring and Dove Creeks.

So here is a land of water and recreation. When the three rivers project is complete, San Angelo will rank with the best in the Southwest as a recreation center. On top of that, San Angelo has long been noted for its healthful climate.

Such an abundant water supply will support a city 4 times as large as the 66,000 conservatively estimated as San Angelo's population. And it should. For back in 1940 the Federal nose count showed 25,802 people. You can't find anybody in town who isn't convinced the town will grow more in the next 18 years than it did during the past 18 years.

An interesting population statistic was turned up by a survey made a while back by a major oil company. It showed that more than 1,000 people living in the San Angelo area owned or had under lease more than 1,000 acres of land each. This land and these leases were located in many different States.

Located in Tom Green County, San Angelo is 229 miles northwest of Austin, 236 miles from Fort Worth, 268 miles from Dallas, 220 miles from San Antonio, and 451 miles from El Paso. It is the center of a vast area of western Texas and the gateway to the Big Bend country and the Big Bend National Park.

San Angelo was a small, sun-drenched ranching town at the start. It was incorporated in 1903. By 1920, it was a town of 10,000. Since that time, there has been considerable oil activity in the region, and the San Angelo area has developed into the world's greatest wool-producing territory. The main trade area covers 24 counties. There are 40 counties within 100 miles of the city, and 77 additional counties within 200 miles.

From the start, San Angelo was a stable, solid town that did things in a substantial way. Always it has been a place where aggressive men could start little and grow big.

San Angelo and a very wide area of West Texas have been blessed with plenty of electric power for all the developments and also a power company that has worked diligently in helping take advantage of natural resources and native opportunity. This is West Texas Utilities Co., with general headquarters in Abilene. Today, it is in a $50 million expansion program, which will greatly increase its generating capacity and its transmission system. WTUC anticipates a 50-percent increase in demand for power by 1965, only 6 short years away, and it has made firm plans to meet this demand. WTUC serves an expanding area in the center of the Southwest. This area is in about the middle of a six-State region—Texas, Louisiana, Arkansas, Oklahoma, New Mexico, Arizona.

Not only is WTUC expanding and keeping ahead of demand, it is promoting its area by telling the world that here is a region with a vast potential that is developing at a rapid clip but on solid ground and minus the elements of stampede or wild-haired boom.

San Angelo and area have the main essentials for industry—good plant sites, plenty of water, adequate power, and an unlimited supply of cheaply priced natural gas. Lone Star Gas serves the city. There is adequate transportation, too. It is on the main line of the Panhandle and Santa Fe Railroad and the main branch of the Gulf, Colorado & Santa Fe. Headquarters for Sunset Motor Freight lines, State's third largest motor carrier, and served by four other lines, San Angelo has exceptionally fine motor freight service. The city is served by two scheduled airlines—Continental, which recently inaugurated jetliner service through the city, and Trans-Texas. U.S. Highways 67 (the gateway to the Big Bend country), 87, and 277, and State Highway 208 give San Angelo an excellent modern-road network in all directions.

Of all the military installations over the country, the U.S. Air Force Security Service Command selected Goodfellow Air Force Base as a training center for its personnel. Goodfellow is more than a multimillion dollar annual payroll for San Angelo. It is a part of the community, its personnel taking active part in civic and cultural affairs. There is a cordial relationship between the civilian and the military at San Angelo that is rarely matched anywhere else in the country.

When you get right down to the nub of things, San Angelo is a good place to live. The climate is mild and so healthful that the State has located its major tuberculosis sanitoriums in the immediate vicinity. The climate is also the basis of a growing colony of retired people. At Baptist Memorial Hospital is the only geriatric center of its kind in Texas—a part of a planned civic effort to broaden the city's appeal to senior citizens.

For the younger citizens San Angelo has a school system that can't be beat from the first reader through junior college. San Angelo College is one of the State's leading junior institutions of learning and is geared to the specialized needs of the community. Then, of course, there is Central High School, subject of a full length article in last month's Texas Parade. The first ageless, campus type high school in America, Central High not only inspires students with a desire to learn, but it is a revealing example of the city's spirit of progress and the practice of doing things big, and with commonsensical thoroughness.

San Angelo is a city of churches and of comfortable homes. The residential sections are beautiful and well-kept. There's plenty of evidence of pride in the homes of this city.

The city has four hospitals and clinics with 392 beds, making San Angelo a medical center for a large area. There are a city-county health department, a city-county welfare department, and the county heart clinic. The clinic is supported by the community chest and memorial gifts.

In addition to its lakes, San Angelo, and the county, has a world of parks, swimming facilities, golf courses, tennis courts, an active YMCA of around 4,000 members, five flying clubs open to the public.

There's some good hunting in the region—deer, turkey, mourning dove, ducks, blue and bobwhite quail, squirrel, rabbit, javelina. Spectator sports include baseball, high school and college football and rodeo. The Fat Stock Show and Rodeo, which are held each March, are outstanding events. They are held at the fairgrounds and in the nearby coliseum. The new coliseum is equipped for indoor rodeo and for shows, concerts, conventions and other events.

Also in March the annual San Angelo Relays are held, featuring performances of outstanding athletes from eight colleges and universities, most of them being members of the Southwest Conference.

In August comes one of the big celebrations of the year. It's the National Miss Wool Pageant, a week-long show giving tribute to the area's wool and mohair industry which, until a decade or so ago, was about the sole basis for San Angelo's economy. A feature of the pageant is the selection and coronation of "Miss Wool of America." Beautiful girls from all over the Nation are sent to San Angelo to enter the contest for this title which the lucky winner holds for a year.

San Angelo College sponsors an entertainment series—six performances a year, bringing widely-known performers to the city. These events have brought to the city Charles Laughton, Van Cliburn, Montavani, the Philadelphia Symphony Orchestra, shows such as "No Time for Sergeants" and other top-quality entertainment. San Angelo has its own symphony orchestra which gives at least four performances a year, usually with noted musicians as guests. The San Angelo Community Theater stages five productions each season—with local and area talent.

The Old Fort Concho Museum is one of the most engaging places in west Texas. It is at Old Fort Concho, an army post of ages ago that has been restored. Fort Concho was established in 1867 to protect the settlements from hostile Indians. This was in the period of uncertainty and general frustration just after the Civil War. The fort was a military outpost until 1889. By that time, the Indians were no longer a menace and democratic government had returned to Texas. On a June day in 1889, the garrison flag at Concho was hauled down and the last of the troops marched away, singing "The Girl I Left Behind Me." The preservation of existing buildings and the restoration of others was started in 1930.

The Concho country is rich in history, other than military. It was long on the cow country frontier, a land of carefree cowboys, outlaws, and rustlers. It is doubtful whether any other part of the Southwest has a more colorful history than the Concho country, a region of cattle, sheep, goats, farming, oil developments, and now industrial expansion.

For many years San Angelo has had industrial enterprises—oil servicing companies, shoe and women's clothing manufacturing, and others. In recent times, it has added many, including quite a boat industry and a Goodyear Co. tire-testing station. Goodyear, which has been in the city since 1941, has more than 100 employees. Among other facilities is a new 5-mile circle on which tires are tested on cars. This circle is so precisely engineered that a driver may take his hands off the wheel at 100 miles an hour and the vehicle will go around the circle without a bobble. The circle was built by a local contractor employing local people—even to the manufacture of some special equipment needed to build and maintain the facility.

San Angelo has a great variety of industries that employ from 50 to 100 persons. The city has always had plenty of good, dependable labor. One executive told me that one superior quality of the labor is the fact that the workers are on the company team. These, in the main, are first-generation industrial workers. San Angelo has had excellent labor relations and also good racial relations.

The people of San Angelo want industry; they cooperate with it. The city and county governments are highly favorable to industry.

This city, which is in easy reach of vast consumer markets, is in a developing area, with plenty of room to expand. The city has exceptionally strong banks, which are interested in bringing in industry—either the homegrown sort that has been so successful or enterprises from afar.

San Angelo is more given to doing things than to boasting. And there's no telling what may happen in the near future in this surprising city.

Americanism in Danger

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1959

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Americanism in Danger," written by Tom Q. Ellis, and published in the Jackson (Miss.) Daily News of July 17, 1959. Adjacent to the editorial is an

editor's note relating to Mr. Ellis, who is one of the great citizens of Mississippi.

There being no objection, the editorial and editor's note were ordered to be printed in the RECORD, as follows:

AMERICANISM IN DANGER

(By Tom Q. Ellis)

Pure and undefiled Americanism for which our forebears fought, bled, and died is today under serious and dangerous attack; not only from without but tragically and dangerously from within. It results from long-range, boastful plans formulated by communism more than 30 years ago. Swept along with its ever rising tides are multitudes of otherwise good Americans who under the misnomer of tolerance or liberalism are aiding and abetting the Godless, hell-born objective.

The Scottish Rite, the York Rite, and the Shrine are of common parentage, viz: the Blue Lodge, whence come their philosophy, their humanitarian ministry, their faculty for leadership, and their inspiration. Friendly rivalry is healthful and much to be desired. But misguided, overly enthusiastic brethren sometimes render hurtful disservice to the entire Masonic structure by overstepping the bounds of friendly rivalry and by overlooking the human imperfections of their favorite Masonic body, while holding up to ridicule and sarcasm the imperfections of another segment. United we stand because united we must stand in order to defeat the dangerous enemy who has gained such a foothold in our very midst.

The time is here for real Masons to avoid any semblance of hiding behind the cloak of refusing to engage in controversial matters.

Saving our America is not a controversial matter among real Masons and other good Americans.

It is time for us to stand up and be counted. A political court (and that is being kind to them) is freeing rapists, murderers, and Communists with alarming regularity. At the last count they have freed some 59 known Communists who were jailed for plotting the overthrow of our Government by force and violence. They have nullified subversive control laws of 41 States and they have nullified State laws and bar association regulations as to Communists. They have told State and city governments that a teacher in our schools, or a prospective teacher, cannot be questioned as to his or her associations with the Communist Party.

We Masons make no public boasts, but unquestionable records disclose that the Boston Tea Party had its inception in a lodge room in Boston. We know that George Washington was master of his lodge when sworn in as our first President; that the oath was administered by Chancellor Livingston who at the time was grand master of New York, and the Bible used was taken from a Masonic altar. We know that Benjamin Franklin, Paul Revere, and other leaders of their day were past grand masters. We also know that other leading Masons of that day were dominant figures in framing and signing our Declaration of Independence, and writing our great Constitution which Gladstone said was the greatest instrument ever struck by human hands. But that great document is being emasculated by psychological and sociological judicial decrees purporting to be the law of the land.

Yes, the time is here for all good Masons, Scottish Rite, York Rite, and Shriners to join hands and hearts with all other good Americans (and there are plenty other good Americans) and stand up and be counted in saving that brand of Americanism which is our most priceless heritage. "Mighty is truth and it shall prevail."

The truth for which united we must stand will prevail throughout all eternity. The pyramids of Egypt will sink beneath the sands of the desert; all the great masterpieces of human genius that adorn the art galleries of the world will fade beneath the still lapse of time; structures of steel and stone that kiss the skies in lofty grandeur will be leveled in the dust. But the eternal truths and principles for which all good Masons and all other good Americans must stand will be shedding forth their glorious light when stars and sun are sunk in night.

EDITOR'S NOTE.—Mr. Ellis is a past grand master of Mississippi F. & A.M.; is a past grand presiding officer of every other York Rite statewide body in Mississippi; past grand patron, Order Eastern Star in Mississippi; a Scottish Rite K.C.C.H.; and in 1957 finished a 3-year term as general grand high priest of General Grand Chapter, Royal Arch Masons—a worldwide organization and the largest Masonic organization in the world, under one head.

(It has been stated many times that he has been accorded more Masonic honors than has any other man in the entire written history of Freemasonry.

(By invitation he has spoken before fraternal, civic, school, and other organized groups in practically every State in the Union and is said to be known personally by more people than any other living man. He humbly states that because of these things he feels a responsibility in speaking up in what he considers a serious crisis, for whatever of good his influence may mean.

(The above article was approved and sent out by the governing body of the Shrine (imperial council) to its 166 Shrine temples, representing approximately 900,000 Shriners in North America. By this means he hopes it will seep down to the 5 million Masons in America, and there are already convincing instances that it is doing just that. Medina Shrine Temple in Chicago, the third largest temple in America, with about 23,000 Shriners, publishes a monthly magazine that goes out to all its members. This article was featured in their recent July issue. A Shrine temple in Oklahoma City, Okla., has made a recording of the article for broadcasting purposes.

(He states that Freemasonry, being a human organization, there is a small percentage who will take issue with him and perhaps attempt reprisals in some form, but he is doing his duty as the sees it, let the chips fall where they may.)

The Corpus Christi School Board Moves To Help Its Teachers

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1959

Mr. YARBOROUGH. Mr. President, the Corpus Christi, Tex., School Board recently announced a system which would provide a $100-a-year pay increase for teachers. This raise would be linked with a program for helping teachers to keep abreast of the latest advancements in their field.

In support of both the ideas of pay increases for teachers and for assistance to instructors to help them keep up with the latest in their fields, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Corpus Christi Caller for Thursday, June 11, 1959, entitled "Teacher Training-Pay Hike Is Move in Right Direction."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEACHER TRAINING-PAY HIKE IS MOVE IN RIGHT DIRECTION

We agree with Walter Lippmann, who said a few days ago that no one is really serious about improving education who is not willing to think about raising more money.

At the same time, however, we believe, as the Corpus Christi School Board evidently does, that more money is by no means the whole answer. Not only must teachers' salaries be increased to attract the best minds into teaching, but an effort must also be made to upgrade present teaching staffs. In other words, a well-administered school system today stimulates its teachers to stay up with new developments in their profession, to keep abreast of new fields of learning, to fill in gaps in their own education, and continually to improve themselves.

The Corpus Christi system seems to be moving in this direction with the announcement that $100-a-year increases for teachers will be linked to a new program of teacher training. This will involve a week of training before the opening of school each fall, plus a series of half-day sessions during the school year.

Guest speakers will address the teachers on various phases of education, and small groups with common interests and problems will meet for specialized work.

Neither the $100 raise nor the expanded in-service training program is going to show immediate or dramatic results. But both are sound moves in the general direction of better instruction.

Voluntary Support of U.S. Educational Institutions

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1959

Mr. WILEY. Mr. President, today the Nation still faces a multitude of unresolved problems in the field of education. Across the country there is a real need for more and more classrooms; a larger number of teachers with better pay scales; more adequate laboratory facilities and equipment; and other efforts to strengthen the overall educational program.

Currently the big question, of course, is just where the major responsibility for education lies—that is, at the local, State, or national level.

Traditionally, education has been—and rightly so, I believe—the major responsibility of the State and local community. In the space age, however, we now find that not only domestic progress, but also national defense, may well depend upon the adequacy of our educational system, particularly in terms of its ability to train and turn out highly qualified scientists, engineers, and other technologists to create and operate the complex armaments of the nuclear-space age.

While defense is important, we also need to educate a sufficient number of individuals in industry, agriculture, the biological and natural sciences, the professions, arts, and other fields, to promote domestic progress.

Despite the national scope of these challenges, it is, nevertheless, extremely important to assure that control of the educational program is maintained in the hands of the State and local communities.

We recall that hearings have been held in both the House and Senate committees on measures to provide additional Federal aid for schools, teachers, students, and other purposes.

As Congress faces the task of determining just how large a role Uncle Sam can and should play in the educational picture, I welcome this opportunity to call the attention of my colleagues to the increasingly important contributions which private individuals and corporations are making to our educational system. In the last 15 years, for example, voluntary support for higher institutions of learning has doubled.

The July 17 edition of the La Crosse Tribune carried a splendid editorial on the increased amount of private contributions to colleges and universities. Reflecting the type of educational consciousness I believe we need to a greater degree in this country, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VOLUNTARY SUPPORT OF U.S. EDUCATIONAL INSTITUTIONS DOUBLES IN LAST 15 YEARS

Americans are believers in education. They reveal this in continuing to vote large bond issues for schools and in taxing themselves increasing amounts to provide good teachers and equipment.

They go further than that.

An interesting phenomenon of our times is the large amount of money given to colleges and universities by individuals and corporations.

What's more, these contributions are increasing.

In the last 15 years voluntary support for institutions of higher learning have doubled. At present 11.5 percent of the cost of higher education comes from private sources as against 5.8 percent 15 years ago.

With the cost of operating schools greatly increased, this means that voluntary support has multiplied more than seven times in this period.

In 1957–58 private gifts and grants for plant expansion were one-fourth of the total of $700 million received for this purpose from all sources.

Private gifts are almost wholly responsible for the huge endowments of many of America's colleges and universities. Endowment principal, now totaling more than $4 billion, is more than $1 billion above the 1958 figure.

That these private contributions have continued to increase is evidence that business and industry, from which most of the contributions come, realize that only as our education system progresses can our Nation meet the challenges before it.

Frank W. Abrams, former chairman of the board of Standard Oil Co. of New Jersey and chairman of the executive committee of the Council for Financial Aid to Education, says that "only as each of us individually contributes to the support of education will he get the kind of educational system we need."

Abrams argues that every American has a stake in the future of our country. Whether or not that future is one we all desire will depend on how well we educate our youth.

"And he said to them, 'Why are you afraid, O men of little faith?' Then he rose and rebuked the winds and the sea; and there was a great calm." (Matthew 8: 26.)

Our National Parks in the Year 2000—The Dilemma of 1959

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. NEUBERGER. Mr. President, perhaps one of the most compelling arguments for the preservation of America's many scenic areas of esthetic and recreational value for the use of future generations has been forcefully put forward by Marion Clawson in an article appearing in the July issue of the colorful and informative National Parks magazine, "Our National Parks in the Year 2000." Working with the conservative estimate that visits to the national parks of the Nation will continue to multiply at just the percentage increase they have in the past 40 years, Clawson projects a frightening picture of 60 times the number of visits now made yearly to these parks, or 1¼ billion visits.

Compound the number of cars on every crowded highway into a national park on a holiday weekend, the amount of trash and litter to be found at campsites in our national parks today, the number of people per square foot of sand on every national seashore area this summer by 60, and you will begin to get a graphic picture of just how serious a problem this need for new recreational areas and improved facilities in the present areas will become.

As Mr. Clawson points out, it is often characteristic of Americans and their leaders to "cross bridges when they come to them," to just wait to deal with a problem until it becomes a problem, oftentimes an insoluble one. It is incumbent upon us to do something about this situation now, before it becomes insoluble, and it is here that Mr. Clawson's article has special significance. His ideas on the solution of the national park dilemma grow from a realm of experience in the field; one of them is the increasing preservation of our scenic and wilderness areas as national parks, and it is here that I and many of my colleagues have endeavored to help the situation. He offers, however, several other ideas well worth the consideration of this body. At the last session of Congress, the National Outdoor Recreation Resources Review Commission was formed to consider remedies such as these to this serious problem. As a member of that Commission, I am happy to report that progress is being made, along many of the same lines he recommends.

Mr. President, I ask unanimous consent that the article from the National Parks magazine, July 1959, by Marion Clawson, entitled "Our National Parks in the Year 2000," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR NATIONAL PARKS IN THE YEAR 2000

(By Marion Clawson)

What will our national parks be like by the year 2000? Will they then still resemble the great areas of unspoiled nature that they were when white man first saw them, or will they have begun to look like Coney Island on a hot summer Sunday? Will historians 200 years from now consider the national park movement to be as anachronistic as Don Quixote's attempt to revive knight-errantry?

I hasten to add, I do not expect to see the year 2000; my life expectancy is more like 1980. But I am interested in the national parks for my children and grandchildren, and I will want to enjoy the parks for the next two or three decades. Just what will there be to enjoy?

SOCIETY OF 2000

First of all, let us try to visualize the society that the United States will have become by the year 2000. There may be, in the interim, a large-scale hydrogen bomb war, in which case there may be few people left to enjoy the parks or, in fact, anything else. But ruling this out as incomprehensible, if not impossible, let us try to picture what our society will be if it continues to evolve along the lines of the past two centuries or so.

By 2000, there will be many more people in the United States. No one knows how many there will be, of course, but the best informed guesses now run somewhere around 300 to 325 million people by 2000, compared with about 175 million now. Not quite twice as many as now, but nearly.

If our economy continues to advance in the same directions and with something like the same speed as in the past, by 2000 we will have twice as high income per person, in real terms, as we have today. With individual incomes of about $3,600 and family incomes averaging nearly $15,000, trips to national parks will surely be far easier to manage then, than they are today.

In 2000, the average person will have far more leisure than now. The average workweek has dropped from 70 hours in 1850 to 40 hours today; and by 2000 it may well be down to 28 hours or less. The past reduction in the average workweek has come about from fewer working hours per working day, fewer working days per week, and longer paid vacations. All three types of reductions in working time will occur in the future. It will be the increase in length of paid vacation that will have the greatest impact on the national parks, for most people live where a longish vacation trip is necessary in order to visit a national park.

The American people today are the most mobile the world has ever known. On the average, we travel more than 5,000 miles each year. Much of this is to and from work, or to the grocery store, but much of it is also vacation travel. There is every prospect that we shall travel much more in 2000 than now, maybe twice as many miles per person annually. The superhighways will make long distance auto travel quicker and easier. Travel by plane and then by rented car will become increasingly common, making possible a visit to a distant national park over the longer weekend or the shorter vacation, or visits to several national parks during the summer vacation.

Perhaps more important than the increased physical mobility of the average person in 2000 will be his increased psychological mobility. Today young people typically go away from home for college, serve in the military forces all over the Nation and the world, take jobs in different towns from those in which they grew up, and move where the best job opportunities beckon. In this, they differ greatly from their fathers, and still more from their grandfathers. But, in the future the typical person will be still more mobile. Because he will move to find good living, industries will increasingly tend to locate where life is most pleasant. People will move freely at different periods in their lives to find the best job, the most enjoyable living. And a location where visits to national parks will be relatively easy will surely attract some people.

Every major social and economic trend points toward enormously greater use of the national parks in the future; no major trend points toward less use.

HOW MUCH USAGE OF NATIONAL PARKS IN 2000?

If we try to accommodate all the people who want to visit the national parks in the future, how many will there be? The only real guide to the future is the past; let us look again carefully at the past record of the national parks.

Everyone knows that the use of the national parks has increased in the past, but I venture to assert that very few persons realize just how much and in what ways that increase in use has occurred. Each year, or nearly every year, the number of visits has increased over the past year. Only the war years, from 1942 through 1945, when gasoline was rationed and other travel restrictions were in force, are a major exception. In those years, travel to the parks fell to one-third the prewar level. But travel to the national parks has been almost depression proof. In years of business recession, travel did not increase normally, but only in 1930 and in 1931 was it less than in the previous year. Back in the 1920's total visits to the national parks increased mostly by 100,000 to 300,000 from 1 year to the next.

By the 1930's, the typical increase from year to year was from one-half to 1 million; by the late 1940's and the 1950's, from 1 to 2 million. The increases, from year to year, in other words, have been getting larger.

In fact, there is good evidence that the year-to-year increases in use of the national parks have been constant on a percentage basis. To those of you who are engineers or mathematicians, the total visits to the national parks have increased regularly when plotted on semilog paper. The rate of increase has been very close to 10 percent annually, leaving out the war years. The more people who come to the national parks, the greater the increase in numbers who will come next year. Growth feeds upon itself, it seems. I should add, visits to the national forests, to State parks, to Federal wildlife refuges, to TVA reservoirs, to Corps of Engineer reservoirs, and other forms of outdoor recreation all exhibit the same percentage increase relationship. For some, the actual percentage is higher than for national parks; for others, lower. But all grow on relatively equal percentage bases, not by equal numbers from year to year.

Let us look at this same relationship in another way: 1916 is as far in the past, measured from 1958, as 2000 is in the future—42 years in each case. In 1916, total visits to the national park system were less than 400,000; the final figures for 1958 run more than 58 million, or roughly 150 times the figure of 1916.

Now, I freely grant that the national park system in 1958 is a far different thing than it was in 1916. Then, national parks accounted for almost all the use, with only a little to national monuments; now, national parks are less than half of the total for the whole system, with national monuments, historical areas, recreational areas, parkways, and others accounting for more than half the total. But usage of the national parks alone has risen roughly 60 times during these 42 years.

It is also true that we have more national parks today than we had in 1916. But usage of the older national parks—those established by 1910 or earlier—has risen almost 25 times since 1916. Moreover, had the areas recently added to national parks been within the system in 1916, their use in the early years would have been very low. Had the park system included all its present parks in 1916, the actual increase in use would not have been so very different from that which has occurred with the expansion of the system. Or, to look at it differently, had no parks been added since 1916, how much might usage of the older parks have increased—as much as usage of the expanded system? That is to some extent, one national park is a substitute for another, and had new ones not been added, usage of the old ones would have increased even more than it did.

Suppose you merely say the next 42 years will repeat the experience of the past 42 years. Then visits to the national parks alone will rise 60 times—from their present level of about 21 million visits to a total of about 1¼ billion visits. "Impossible," you say. But how many people in 1916 ever expected 21 million visits to the parks alone by 1958? A simple, unmodified extension of past trends in park usage leads to what now seem like impossible numbers. But, we must admit, all the forces of the past which led to increased use of the national parks—more people, higher incomes, more leisure, more travel, better roads, and the like—seem likely to continue upward in the future, and at a rate not much less than in the past.

At some point, increases in usage of the national parks will almost surely slow down. But when, and to what degree? It would help some if we knew how many different people the total visits of the past represented. Do the 21 million visits of the present mean 5, 10, or some other millions of different individuals? We can be fairly sure they do not represent 21 million different people, because the same person is counted more than once as he visits more than one area or the same area at different times. Twenty-one million visits for 175 million people is about one-eighth visit per average person, in 1958; 1¼ billion visits for 310 million people in 2000 means about 4 visits per average person. How many people will visit four different national parks each year, or the same national park four times? Since some people will not be interested at all, even if by then incomes permitted everyone to come, others would have to visit six, eight, or more parks each year. Surely there is some point of satiety for national parks, even for the most confirmed lovers of the parks and even if incomes are ample. But at what level? Will the visits to the national parks by 2000 be 300, 500, or more millions?

WHAT HAPPENS TO THE PARKS?

If we should get anything like the enormous increase in use of the national parks which the foregoing discussion seems to suggest as probable, what happens to the parks themselves?

First of all, merely getting this many people into and out of the parks will be a major feat. Where there are roads today, there will have to be superhighways then. There has recently been some controversy over the construction of a major highway in the Lake Tenaya country of Yosemite. I suggest that, in the retrospect of 40 years from now, this will look like the first raindrop of a major hurricane storm. If we are to get 300, 500 or more million visits into the parks, then we must have many, many, fast, wide highways into and through every national park. Remember, every one who goes in must also come out.

Anything like this volume of visits will create a terrific demand for opening up the back country of each park. There is some limit to how many people can be concentrated in small areas, no matter how skillfully they are managed and how fast they are hurried through. It is difficult for me to visualize how 20 times as many people as now can be crowded into the floor of Yosemite, or around Old Faithful or at Canyon Rim in Yellowstone, or at South Rim in Grand Canyon, to mention a few of the most heavily used areas today. (As a matter of fact, since 1916 usage of these popular parks has increased, not by 20 times, but by 30 and 40 times.)

Anything like this volume of visits will unavoidably cause substantial physical destruction. Mere walking, and a place to walk, and to park, will have a major impact. If areas are paved, this destroys what was there originally; if they are not paved, then the human foot may destroy it anyway.

But far more serious than the physical destruction will be the change in the character of the park areas, if people crowd into them on anything like the scale suggested. Peace and quiet will have vanished. The natural scene will have become a human scene. Some may argue that the resulting experience will be as meaningful for those who partake of it as is the present or an earlier scene; I disagree, but in any case, no one can deny that it will be different.

I need not pursue further this matter of what the national parks would resemble were there to be 15, 25, or 50 times more visits than now. Anyone who knows the parks now, and who has seen crowds anywhere, can let his imagination supply the details. Of course, long before conditions get as bad as I have pictured, many people might rebel and refuse longer to come to the national parks.

WHAT TO DO ABOUT IT?

All of the foregoing is based upon the assumption that we try to accommodate everyone who seeks to use the national parks. The picture is, for me at least, very gloomy. But what can we do about it? Are there alternatives? Might we in fact seek to keep the usage of national parks to some reasonable level—reasonable, not only in view of the physical limitations of the parks, but reasonable to preserve the emotional and psychic qualities of the parks? Is there any way use could be limited that is compatible with our democratic society? These are, after all, public lands; everyone owns a share in them, has a right to use them. How can we deny anyone that right? These are questions we must face frankly; moreover, I think we must face them now, while park usage is clearly within reasonable limits, not after it gets to impossible acuteness.

As I see it, action to preserve our national parks in perpetuity must proceed on three levels. The first two could be done independently, or together; the last, I would argue, is reasonable only to the extent the first two are carried out. Let us look at these three possible lines of action.

First, there needs to be ample opportunity for outdoor recreation in places other than the national parks. The many more people of the future, with their higher income, more leisure, and more travel, will demand vastly more outdoor recreation than today. To the extent areas other than the national parks are not available, then some of this pressure for outdoor recreation will find an outlet in the parks; to the extent that other areas are fully available, some of the pressure on the parks will be siphoned off.

Ideally, there should be ample outdoor recreation opportunity reasonably close to everyone. If there were good parks for outings within an hour's drive, or closer, of nearly everyone, many people would not care to go further, no matter how much more outstanding the more distant areas were. These more localized outdoor recreation areas might be State parks or private recreation areas. In some regions, some of the national forest areas would serve the same purpose. Some national forest lands, of course, closely resemble national parks, and the problems are very similar.

Physically, there are many sites well adapted to good, but not superior, outdoor recreation use. Rolling hills, especially if tree covered, with intermingled lakes, may be less inspirational than the Grand Tetons, but they will satisfy many users, at least for most of the time. The lakes can be artificial. Relatively low-grade farm and forest land can be converted into quite respectable park areas, given a little work and time.

During this past summer, my family and I drove to California and back, camping out nearly all the way, mostly at State parks. We camped in western Pennsylvania, eastern Indiana, central Ohio, southern Wisconsin, eastern Iowa, western Kansas, western Nebraska, and many other places. We had done the same thing in 1956, camping in still other States. We are much impressed with some of the State parks, not only for use such as we made, but as local recreation grounds for nearby people. Important as the present parks are, they are wholly inadequate to met the prospective demands of the future. But I have seen literally hundreds of sites, as I have driven and flown across the country, where equally good additional parks could be made. I am sure there must be thousands of such sites.

Where will the money come from to build the necessary State parks, private recreation areas, and other alternatives to national parks? Who is going to pay for them, and how? If built, would they actually serve the purpose of relieving the pressure on the national parks? I do not have a full answer to these questions, and it would take more space than is here available to lay out adequately such ideas as I do have. But I would like to suggest that those whose primary interest is in the national parks must begin to think about the whole recreation system of the United States in mere self-defense if nothing else. As a Nation, we are and will be wealthy enough to afford the needed areas. I think we can devise mechanisms for channeling our wealth into this usage. Maybe grants-in-aid from Federal to State Governments, and from the latter to local governments or to private landowners, is part of the answer. Maybe we must reconsider our past attitudes toward entrance fees or use charges as a source of revenue. While no one would argue that a manmade local park fully substitutes for the best national park, any more than beans are a full substitute for steak, yet I am convinced that the first step in protecting the national parks from overuse is the provision of alternatives.

The second major line of attack is, I think, to pitch the programs of the national parks a little differently. Instead of urging people to come, let us urge them to stay, once they come—not to make the national park a summer vacation resort, but to stay for more than the few hours it takes to drive through. Let us try to make the visit of the typical citizen a little richer, with more emotional and intellectual depth. I fear that many visitors to many national parks now regard them as little more than glorified parkways—see what you can from the car, park and look briefly at some of the best sites, but go on quickly. Some, I realize do far more than this now, and some are not interested in doing much more, no matter how you try to help them. But I think we could, if we tried hard, considerably change the nature of the typical visit to national parks. Of course, this would cost money, for naturalist and other specialist services, and in other ways, but the costs would not be great in terms of results.

I think we need a new attitude regarding travel toward, in, and beyond the national parks. We have tried so hard to make the roads good, safe, and quick. The safe part no one will disagree with. The quick part many wonder about. This matter of road policy in national parks in one with many angles—one that has concerned the readers of this magazine greatly. I will not attempt to go into it, except to say that I think a look really well into the future provides new perspective. In encouraging people to stay, we would, I think, be discouraging other people from merely traveling through.

My third general line of attack is more direct, more positive, and, I am sure, will be less generally accepted, at least now. I would initiate direct measures to reduce the casual visits to national parks, while at the same time trying to avoid hurting too much the really serious visitor. The first measure I would suggest is to raise entrance fees to national parks sharply—to something in the order of $25 where they are now $3, for instance. I think this would sharply discourage the family that merely wanted to drive through and to look a little. I know that many persons will immediately say, we do not want to discourage the people who really appreciate the parks but cannot afford them it you put a stiff entrance fee on. But how many really poor people now can visit national parks? Of all the studies of national parks visitors I have seen, the lowest average cost of a trip which included a visit to a national park was $125; for Grand Canyon, it was over $500. Visiting a national park means owning a car these days, usually means a paid vacation, and necessarily means an ability to spend something on recreation. A $25 entrance fee would only mean raising the cost of the trip by 5 to 10 percent, in most cases—hardly a critical margin. As it is now, a family can get into any national park cheaper than they can visit a movie.

This matter of proper entrance fees, and what one would do with the money so collected, is also a large subject. Unfortunately, it is one most people approach with strong prejudices, derived from economic and social conditions of long ago. I think it is time we looked at fees in light of their effect upon the kind, as well as the amount, of park usage.

For many of the more popular national parks, I would now or very soon initiate a system of reservations—of issuing advance permits for certain areas for certain seasons. We now, in many States, sell a specific number of deer or elk hunting licenses for a specific area or district. Why should we not, weeks or months in advance, issue a limited number of admission passes to Yosemite, Yellowstone, Grand Canyon, or other popular national parks for the second week in August, or some other specific period? I see no reason why we should seek indefinitely to accommodate all would-be users, whenever they choose to show up. Almost no other vacation activity is conducted on this basis. If entrance at the more popular seasons were regulated, this would be a strong incentive toward use at other than peak periods, which in itself would be a good thing.

FUTURE THREATS TO THE NATIONAL PARKS

From time to time in the past, the national parks have been threatened by commercial exploitation—for mining, for lumbering, or for other uses. Such threats have by no means ended, yet I think they are not the really serious ones for the future. Rather, the real threat to the parks is simply too many visitors—visitors who seek individually to do more or less what the parks were established to provide, but visitors who in mass will destroy the parks as surely as any commercial use. My argument is that we should begin to think now, while a large element of flexibility in management is yet open, how to deal with such overuse. Maybe we can head it off, not merely cope ineffectually with it when it comes.

Joseph Lucius: Pioneer and Forest Ranger

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1959

Mr. WILEY. Mr. President, progress in America is the story of hearty-spirited pioneers, marching fearlessly into the wildernesses—of nature, of knowledge, of spiritual understanding.

Too, it is the saga of people working together in a climate of freedom and opportunity, utilizing their God-given ingenuity and our vast natural resources for the betterment of mankind.

Today, I pay particular tribute to a hearty Wisconsin pioneer, Mr. Joe Lucius, of Solon Springs, Wis. During his fruitful 88 years, Joe has made a constructive contribution, not only to local community life, but also has pioneered in forestry and conservation work in a remarkable way that has left its mark on our State programs.

Among other achievements, he was instrumental in setting up the first State forest fire laws, to help prevent the devastation by forest fires which unfortunately destroy millions of acres of woodland, not only in Wisconsin, but throughout the Nation.

Throughout his life, Joe, as a logger, guide, fisherman, conservationist, railroad worker, and general all-around civic-minded citizen, has made an indelible impression on his community, through his constructive pioneering efforts to attack and resolve individual and local problems.

The Evening Telegram, of Superior, Wis., recently carried a splendid article entitled "Pioneer Ranger Justly Proud of Forests He Fostered," written by Sybil Weade. The story is a fine illustration of the kind of pioneering spirit that has helped to build this into a great country.

I request unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PIONEER RANGER JUSTLY PROUD OF FORESTS HE FOSTERED

(By Sybil Weade)

Few persons are living today who were more closely associated with the growth of northern Wisconsin than Joe Lucius, 88, of the Midway nursing home, particularly in the field of conservation.

Pioneer of Solon Springs, inventor, builder, trail finder and mapmaker, he is the only

surviving member of the first U.S. Conservation Congress which was established in Washington in 1904 and believed to be the only surviving member of the first State forestry department which was started a year later.

He planned and built the first State conservation headquarters and his children gathered the bushels of pine cones along the Brule River from which the first State nursery plantation sprung.

Together with his brothers, Joe rediscovered the markings of the old portage trail between the Brule and Lake St. Croix, and to the head of the Mississippi. A monument now marks that spot where the adventurous Greysolon Du L hut discovered in 1680 the route from the biggest lake to the biggest river. The trail was marked by members of the Superior Garden Club, the Solon Springs Parent-Teacher Association, the Daughters of the American Revolution and the Douglas County Board of Supervisors.

Lucius was instrumental in setting up the first State forest fire laws as well as the present system of town government used at Solon. An avid sportsman all of his life, Lucius was one of 15 young men who built the first baseball diamond at Solon Springs in 1886.

Today he recounts thrilling tales of early logging operations in the area and tells with great humor of his jack-of-all-trades work with the first railroads.

Born in Kirby, Wyandotte County, Ohio, in February 1871, Lucius came to the area as a lad of 15 when his parents settled in Solon Springs (White Birch) in 1886. From his early youth he was strongly identified with the out of doors and by the time he reached his middle teens he knew every trail and hill, the lakes and rivers in the Solon Springs-Brule area. He knew every spot in the Brule River where he could drop a line and hook from a bamboo pole and lure a wily trout to his favorite bait.

GUIDE

He became well known as a guide to fishermen and after his marriage to former Helen Rutherford of Stillwater, Minn., in 1893, he operated the Brule Lodge from 1894 to 1899, then operated the St. Paul Club on the Brule which was a recreational center for a number of prominent businessmen from the Twin Cities and Duluth.

In 1911 he left this work he so thoroughly enjoyed to become associated with the State conservation department.

After becoming a member of the conservation congress he was named to the election board and in that capacity he attended the congress session in 1910 at the St. Paul Hotel. It was at this meeting that he was selected to help locate the first State nursery and ranger station at Trout Lake near Woodruff.

Prior to the meeting of the congress, in the winter of 1904, a man named E. M. Griffith was appointed to make a thorough study of the forestation in the Brule area. Griffith was destined to become an important figure in the Wisconsin forestry work and he and Lucius met and became friends that same year.

Together the two men, so interested in the forests, explored the area and traveled thousands of miles around the countryside with Lucius' horses.

In 1905 Lucius was delegated to present to the State legislature a grant of Weyerhauser land, 5,280 acres, for a State park, the first in Wisconsin. He found, he explained, that on presentation the State would not accept the gift because of the fact that 2 years before a charter had been created for a dam in the Brule. The Weyerhauser terms stipulated that the river had to be kept open to the public forever. In case this failed, the land would revert back to the heirs.

Lucius immediately began action to have the charter for the dam revoked. He took his case to the Douglas County Circuit Court before the late Judge Vingi, Fred Seguin, clerk of courts, James Hill, court reporter, the assistant attorney general, and George B. Hudnell, State senator and personal friend and attorney for Lucius.

"After a 6-day hard-fought battle, I won single handed," said Joe, "before 13 witnesses and a half-dozen attorneys opposing the case."

"In 1907 the land was accepted and I bought other lands from lumber companies, acquired some on tax titles and from private clubs and privately owned estates.

"Now the State has full control of the Brule River from the headwaters to probably some distance below the Northern Pacific Railway crossing."

This Government-controlled area along the Brule is now known as the Brule Forest. The dam is called Joe's Rapids and is located about 200 yards above the Brule Ranger Station.

Lucius, knowing the country so well, was able to furnish Griffith with valuable information. He deplored the skunk currant bushes as harmful to the forests. He explained to the forestry chief how the Indians living all along the rivers were constantly setting fires to the brush and barren lands to produce a better blueberry crop and provide better grazing grounds for the deer.

"There were always forest fires," Lucius declared, "and some of these burned-off places never did produce again."

NAMED CHIEF

Because of his vast knowledge of the woods, when the Conservation Congress met in 1910 in St. Paul, Lucius was appointed director to prepare plans for the first State nursery. He was to do the planning together with Griffith who was delegated to pick three locations and then leave the final choice up to "Joe."

"When I looked over that place on Trout Lake," Lucius recently explained to State forestry and historical society officials, "it showed there had been no fires. The ground hadn't been disturbed a great deal. The beautiful timber was there for logs. Therefore, I picked Trout Lake, which had a wonderful gravel beach and different things appealed to me. I told Griffith, this was the best pick and then I went home."

By this time Lucius' two children were growing up. Holbrook, who was named in honor of a close friend, Dr. Arthur Holbrook of Milwaukee, was home from Superior where he attended school.

While their father got busy drawing up plans for the forestry buildings, Holbrook, then 11 years old, and his sister, Josephine, 7, were put to work gleaning pine cones for the plantation. They picked bushels and bushels of cones near the Lucius home.

These first cones to keep Wisconsin green and provide trees for tomorrow were planted by C. L. Harrington, who retired as supervisor of forest and parks in July 1958, and Holbrook Lucius.

Before he purchased materials for the buildings, Lucius asked for bids on everything needed, from shingles to cement and kerosene.

"Everyone in those days was bent on getting rich," he says, "and some favored their friends. But I did business strictly on the square and accepted the low bids if the materials passed my inspection."

The shingles, he recalls, he bought from a little mill in Ironwood, Mich., right on the banks of the river. They were the low bidders.

When his plans, drawn during the winter, were complete for the four ranger stations, three barns and four fire towers, the original drawings had to be blueprinted. In the spring Lucius shipped his tools to Trout Lake and brought his men there to do the work. Workmen were from Maple, Poplar, Wentworth, and Brule. The buildings were started in 1911 and finished in 1912. The pine cones were planted and 65,000 seedlings were sent in from Ann Arbor, Mich., and planted on the adjoining land.

OBJECTION

When time came to build the fire towers, the original plans the forestry men had set up called for wooden structures, built from native logs. Lucius insisted the tower be built of steel and declared that he wouldn't consider drawing up plans for wooden towers 60 feet high with ladders that would be safe for about 4 or 5 years.

When the officials heard of Lucius' idea, he said, "they threw up their hands and said that it would cost a fortune."

But, Lucius already had an idea for the towers. He had been buying pumps at the time from the Duplex Manufacturing Co. in South Superior and had their catalog handy. The Duplex firm, he knew, had become well known throughout the country for building windmills. They had built them for concerns in Texas and other southern firms.

Working on the basis of an 80-foot tower Lucius explained to his employers how the tower would taper toward the top to a 4- to 8-foot floor. It was agreed that the towers would be of steel.

A little later on, it was Joe Lucius who designed and built the first tower cabin which was placed on a tower near Gordon.

"Just eight pieces," he explains, "I made the sliding windows myself that worked on rollers. The forest ranger put it up there and it worked beautifully." Later the Conservation Department put cabins on all their towers.

FIRE LAWS

Lucius took a major part in setting up the early fire protection laws and while associated with the conservation department was appointed locomotive inspector. His job was to check up on the railroad inspectors to see that the law was enforced. During this time he built another ranger station at Carl Lake.

By 1880 the area was gradually filling with settlers, Lucius recalled, the bulk settling in Douglas County. Lumber companies were cutting the timber which was dwindling fast.

One of the first lumber companies was the Musser, Sauntry and Tozer Co., he said, and smacked his lips as he remembered the pies and doughnuts the camp cook made "with big holes in them."

He has a vivid picture of a load of logs handled by four horses on March 23, 1892, that moved down the first creek crossing on Highway 53 north of Solon. It scaled over 35,000 feet lumber measure. The load was hauled a distance of 1 mile and landed on St. Croix Lake and from there the logs were driven down the St. Croix to Stillwater where they were made into large rafts and towed down the Mississippi to be sawed into lumber at Dubuque, Rock Island, St. Louis, and New Orleans.

"The McLaughlin camp had the largest average for January and February," he said. "This camp had the largest sleds, each weighing about 900 pounds including the chains. The average load was 20,000 feet. The camp foreman superintended the building of the logging roads and saw to it that they were on a downhill pull to the lake or river. The ruts were 6 to 8 inches deep and 12 to 18 inches wide, cut into a bed of ice."

Joe's experiences as a railroader were varied and began as a section hand at the age of 15. In 1886 he was building railway fences. Then when the railroads were hauling gravel from a 40-acre tract near Solon Springs, and put in a steam shovel and gravel train, he served as a "jack of all things." If they needed a timekeeper, he was timekeeper, if a brakeman or fireman

quit, he filled in on their jobs. He learned many things while railroading that later led to better fire laws and saved million in fire losses.

Through the years Joe Lucius was considered one of the first and best sportsmen of northern Wisconsin. He is one of the survivors of a group who built the first baseball diamond at Solon in 1886. The men completed the project by using shovels, axes and picks, then leveled it off with a section of rail from the tracks pulled over the field with a wire cable, five men on each end. Joe believes this sparked the idea for the first bulldozer.

Lucius designed and built a number of canoes that operated on the area lakes and rivers. During the winter of 1893–94 he and his wife were caretakers for the lake boats wintering at Superior.

The Schooner *Algonquin*, first commercial trader on Lake Superior, was built in 1834 and came to Lake Superior before the Soo Locks were built. Pioneers came to Superior on the *Algonquin* in the early 1850's. Joe Lucius made many trophies from pieces of the *Algonquin* which was finally beached and demolished by people seeking historic relics.

Lucius became well known as a canoe builder and operated his little factory in Solon Springs until he was well into his 80's. Here he cut and glued his canoes by hand from finest weathered cedar and mahogany. He also made inlaid cribbage boards, marble games, notebooks, and other articles.

"I made the survey of Tomahawk Island," the pioneer builder said, "and in the winter of 1912–13 I made the original name and built some of the buildings for the Boy Scouts."

This was the beginning of Boy Scout Camp Fidelity on Tomahawk Island in Lake Amnicon.

He was a great promoter of the Boy Scout movement, and in this capacity took part in plans for the late President Coolidge's stay at Cedar Island. He was well acquainted with prominent figures, a friend of shipbuilder Alexander McDougall, who had a lodge on the Brule, and with Judge Horace Stone, Judge Adams, and others.

He served the village of Solon Springs in various capacities after he and his family settled there permanently. He served on the Brule School Board and represented the village of Brule at one time on the county board.

He built a number of homes at the Brule and built the furniture that went into them. His library, which he left behind him when he came to the Superior rest home, contains biographies of the Great Lakes, books written by author Grace Lee Nute, who sought his help in checking her materials. He owns miniature models of machines used on the ships *Monitor* and *Merrimac* and other relics.

Lucius designed and built the blockhouse and the log-top tables in the wayside on East Second Street and contributed a good deal of historical data during the city's centennial celebration, having sketched a map of old Superior in 1886. He recently gave to the John Ericsson School in Superior a hot-air engine Ericsson invented at the age of 18.

When he found he could no longer operate his little shop in Solon Springs, Lucius went to visit with his daughter, Mrs. Josephine Quam, then later on came to the rest home in Superior "to live," he says, "near Lake Superior, the Brule River, and my old friends and enjoy the Lake Superior breezes and delightful winters."

Today, although this wealth of experiences, so valuable to his town and State, are well in the background, Joe Lucius relaxes in an easy chair, his ever-present cigar aglow, and reminisces about the past.

He daydreams, too, of the future, when he hopes to complete the notes he's making daily on early forestry history for records of the State Historical Society.

Can America Compete?

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. McCARTHY. Mr. President, the Manchester Guardian Weekly of July 16, 1959, contained an editorial entitled "Can America Compete?" It raised the question as to whether the United States is pricing itself out of the market. I think it is interesting to note the comments of the British press on this question. This editorial makes what I consider to be a significant observation. I quote a sentence or two from the editorial:

What strikes the British Observer is that this alarm about the dollar and the competitiveness of American prices appears to be excessive. For one thing the United States still sells substantially more abroad than it buys from other countries. The reason why gold has been lost is that this trade surplus is no longer sufficient to cover both the massive flow of foreign aid and the considerable overseas investments which are being made by American companies.

There are those who are advocating further tax consideration with respect to American investments overseas. In one instance they advocate what is likely to bring on a condition which they deplore when they find it in another situation.

The editorial makes a further significant point which I should like to call to the attention of the Senate:

The danger is that Americans may be misled by their own propaganda. The sort of measures that are being talked about in the United States to restore a more favorable balance of payments—tighter money control, or a cut in foreign aid, or a greater restraint on imports—could not fail to damage the rest of the free world's economy.

The editorial also makes some reference to the use of these arguments as a device to keep wages low.

I ask unanimous consent that the entire editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Manchester Guardian Weekly, July 16, 1959]

CAN AMERICA COMPETE?

Is the United States in the process of pricing itself out of world markets? This is a thought that is increasingly troubling the minds of American officials and bankers. It is also one reason why the remarkable upsurge of American business activity in recent months has been welcomed less rapturously than might have been expected. The U.S. economy, after an initially sluggish recovery, is now leaping ahead. Industrial production, personal incomes, and business profits have all advanced beyond their previous record levels in the past month or so, and unemployment has decreased sharply. With consumers drawing freely on installment credit to finance their purchases of cars and other durable goods there are all the signs of a gathering boom. But, as the Federal Reserve Bank of New York points out in its latest monthly review, there is one major exception to the broad upswing of business. Exports in the first 4 months of this year were smaller than in the corresponding months of 1958 and a long way below those at the same time in 1957. This is in sharp contrast to the rapid growth of American imports from the rest of the world. Moreover, there has been a heavy drain of gold out of the United States in the past 18 months and American gold holdings are now at their lowest point for 20 years. It is in this context that the New York bank review draws attention to the persistent rise in American prices during and since the recession and to the upward trend of wage costs which is threatening to force prices still higher. Hence the anxiety of most American commentators about the current phase of wages bargaining in the steel industry. There is a widespread fear that the United States is about to enter on a fresh bout of inflation just as most European countries have succeeded in bringing their inflations under control.

What strikes the British Observer is that this alarm about the dollar and the competitiveness of American prices appears to be excessive. For one thing the United States still sells substantially more abroad than it buys from other countries. The reason why gold has been lost is that this trade surplus is no longer sufficient to cover both the massive flow of foreign aid and the considerable overseas investments which are being made by American companies. Even so, the gold lost is only a fraction of the vast reserves that remain to support the dollar. Admittedly the U.S. authorities could not remain indifferent in face of a persistently adverse balance of payments. But the evidence that there has been a shift against America in world trade is not particularly convincing. The greater part of the drop in U.S. exports over the past 2 years, as the Federal Bank's review shows, has taken place in only five commodity groups—cotton, wheat, coal, iron, and steel, and petroleum. But exports of most of these goods were abnormally swollen in 1957—partly because of the Suez crisis and partly because the European boom caused a heavy demand for American coal and steel. The one real sign of a lack of competitiveness has been the way in which American machinery manufacturers have been losing orders—on their home ground as well as overseas—to European rivals. There is no doubt that capital goods prices in the United States have risen rather rapidly in the past 4 years; this, together with the improved quality and delivery terms offered by European producers, has put the Americans at a temporary disadvantage. The fact remains that American industry, with its inventiveness and capacity for increasing productivity, is unlikely to go short of export markets for long. Much of the recent gloomy comment on the dollar's standing seems to have a domestic purpose: It is hoped that it may act as a curb on wage demands. The danger is that Americans may be misled by their own propaganda. The sort of measures that are being talked about in the United States to restore a more favorable balance of payments—tighter monetary control, or a cut in foreign aid, or a greater restraint on imports—could not fail to damage the rest of the free world's economy.

Labor Threat to Constitution

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very important and informative article entitled "Labor Threat to Constitution," written by David Lawrence, and published in the Washington Evening Star of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star, July 22, 1959]

LABOR THREAT TO CONSTITUTION—THREE BILLS CALLED MOVE TO GIVE UNIONS HOLD OVER VOTING IN SEVERAL STATES

(By David Lawrence)

Efforts are being made by certain Members of Congress to ignore specific provisions of the Constitution by trying to enact laws that would take away from the States their exclusive right to determine the qualifications of voters.

The change, of course, could give the uninformed voters—including those who cannot read or write—the opportunity to override the wishes of the intelligent voters. Sometimes, in close elections for the House and Senate, a small number of voters—influenced by groups able to spend lots of money to mislead the uninformed citizens—can swing the result.

Already there is talk of big money contributions in the coming campaign. James Hoffa, head of the Teamsters Union, is reported to be getting ready to have about $9 million a year collected from his organization, whose membership is the largest in the country. He is quoted as saying:

"We've got to stop those guys from passing laws to destroy the American labor movement."

To raise $9 million a year is something unheard of in American politics, though in the 1958 campaign the AFL–CIO is reported to have spent many millions—far more than the regular Republican or Democratic campaign committees. Much of this was contributed directly to State committees, and hence does not appear in the national totals formally disclosed by Congress. A prominent Democratic Senator sizes up the situation this way:

"Labor leaders are flushed with the victory they won in a number of States last fall and plan to expand their activities next year. They have specifically indicated 10 Members of the Senate that they intend to purge. Two of those Members live in States that have poll taxes, and the other eight in States which have rather strict educational requirements for registration. Needless to say, if they can get Congress to take charge of that situation for them at this session, they could either win or create much confusion in contested elections in all of the 10 States in question.

"No one in Congress has ever challenged the fact that section 2 of article I of the Constitution leaves to the States exclusive jurisdiction over the qualifications of voters. But section 4 of the same article authorizes Congress to legislate concerning the time, place, and manner of holding elections, and all three of the pending bills express the pious fraud that they are dealing with the manner of holding elections.

"Of course, if the Senate passes any of these bills, it means that the States hereafter—barring relief from the Federal courts, which is not too likely—would be subject to the temporary whim of a labor-dominated Congress on what restrictions, if any, a State could put upon the election of State and local officials as well as Federal officials, because it is impractical to have two sets of qualifications. In other words, we are confronted with a very serious threat to constitutional government, as well as to the future opportunity of any State to be represented in the Senate by those who are unwilling to wear the yoke of organized labor."

Key to the problem is the qualification of voters. Some States have a poll tax, which means that every voter must pay a small registration fee to help defray the expenses of Government. Some States, moreover, require literacy or intelligence tests. One State permits 18-year-olds to vote. The Constitution says in article I:

"The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature."

Another section of the same article of the Constitution says:

"The times, places and manners of holding elections for Senators and Representatives shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators."

Clearly the phrase "manner of holding elections" has to do with the arrangements for the elections themselves and not with the qualifications of voters. Otherwise the writers of the Constitution would not have found it necessary to specify at all that the qualifications of the "electors"—the persons who do the voting—should be prescribed by the State legislatures.

In support of this point, the 17th amendment proclaimed in May 1913, specifically says with respect to the election of U.S. Senators by popular vote:

"The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures."

If Congress could at any time prescribe voter qualifications merely by the passage of new laws, there would have been no necessity for the farmers of the 17th amendment to have repeated the language used by the Founding Fathers when they gave the States the exclusive rights to prescribe the qualifications of voters.

The Superiority of West Coast Fir

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. PORTER. Mr. Speaker, in Oregon we have more Douglas fir than any place else in the world. The best houses in the Nation are built of Douglas fir.

I want to commend Monumental Engineering, Inc., of Pasadena, Md., for pointing out this fact in their full-page advertisement in the Washington Daily News for Saturday, July 11, 1959.

In mentioning the numerous features of their home called the "Colonial," they mention:

All west coast fir construction (pine or hemlock is never substituted).

Favorable Benefits From Proposed Coos-Millicoma Navigation Project

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. NEUBERGER. Mr. President, in 1896, during the administration of President Grover Cleveland, the Congress authorized the construction of navigation improvements for the Coos and Millicoma Rivers project in southeastern Oregon. Two weeks ago, the Senate passed the 1960 public works appropriation bill which earmarked the sum of $23,000 for preconstruction planning of the project. I do not think I can be accused of overstatement when I say to my colleagues that the Coos-Millicoma project has encountered prolonged and unseemly delay. That fact speaks for itself. Other facts regarding the value and benefits of the project were described in a recent editorial in the Coos Bay World, and I ask unanimous consent to have the editorial printed in the Appendix of the RECORD, so members of the conference committee on the public works appropriation bill may have this information available during their discussions of the measure.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Coos Bay (Oreg.) World, July 10, 1959]

OLD PROJECT MAY COME TRUE

Inclusion of $23,000 in the Federal public works bill by the Senate Appropriations Committee still leaves the Coos-Millicoma dredging project a long way from a construction start. But at least it is a hopeful sign, a step in the right direction.

The Senate committee inserted the sum for the planning phase of the project. The money isn't in the appropriations bill already passed by the House of Representatives.

The Senate committee's recommendation must first pass the Senate, then must survive a conference committee between the two Houses or else be passed "as is" by the House of Representatives, and then must be approved by a veto-minded President Eisenhower. The President has apparently uttered private threats to veto the measure if it contains money for any new starts on any projects. The Coos-Millicoma planning fund is one of many new starts added to the House bill by the Senate committee.

So the odds are long that we will not get the planning money through this year. But at least, there is a chance.

As many will recall, from it having been printed here heaven knows how many times now, the Coos-Millicoma dredging project was first authorized by Congress during the administration of President Grover Cleveland. That was quite a spell back. For one

reason on another, including a number of war emergencies, planning and construction funds for it have never been authorized.

If the need for dredging of the lower streams was apparent in 1896, it is more apparent now. The need is, in fact becoming more acute each year.

Basically, dredging will permit the towing of log rafts down the two streams from woods operations on any tide. At present Weyerhaeuser and Menasha timber is brought down on only high tides. There is not enough water in the upper reaches of the river otherwise. The dredging will allow the two private corporations to even out their production schedules to a great extent. It will, in time, mean more utilization and more jobs.

But more than private—Weyerhaeuser and Menasha—timber is involved here.

The public has as great or greater a stake because the dredging project will permit the towing down of millions of feet of Government timber as well, cheapening the cost for smaller operators in bidding on U.S. timber (administered by the Bureau of Land Management), allowing them to become more competitive in their bidding.

The Government timber angle has appeared only in the past few months when it was discovered that the BLM had an old right-of-way across Weyerhaeuser land which will permit the trucking of O. & C. and Wagon Road timber to the water near Allegany for rafting down into the bay area.

When private and Government timber are considered together, the dredging project has a benefit-to-cost ratio of 4 or 5 to 1—meaning there will be a primary $4 or $5 benefit for each dollar of cost. That is an excellent ratio for Government projects of this type—so good, in fact, that immediate construction is almost a demand.

The Senate and House will do well to follow the Senate committee's recommendation on this project and appropriate the planning funds. Everyone in this area sincerely hopes they will.

Then we can hope that the President withholds his threatened veto.

Statement From Direct Mail Advertising Association on Pornographic Mail

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mrs. GRANAHAN. Mr. Speaker, I am in receipt of a statement of policy from the Direct Mail Advertising Association on the need for greater vigilance against the small group of unscrupulous operators who use the mails for distribution of obscene material. The statement is as follows:

STATEMENT OF POLICY

In the light of the present publicity being circulated regarding the use of the mails for the distribution of pornographic materials, the Direct Mail Advertising Association today reaffirmed its stand against such practices.

Robert F. DeLay, president of the DMAA, released the following statement today:

"In accordance with the ethical standards proposed and maintained by the Direct Mail Advertising Association during its 42 years of existence, we again publicly detest and deplore the practice of using the mails for the distribution and dissemination of information on pornographic materials.

"The records and vigilance of our ethics committee continues to indicate that the purveyors of this material represent a few unscrupulous operators. Nevertheless, this small minority causes constant suspicion to be cast on the thousands of ethical users of the mail.

"We must constantly guard against this minority by being careful to keep the objectionable use of the mails in its proper perspective. Without public fanfare, DMAA, as a spokesman and guardian of the direct mail industry it serves, has vigorously resisted any practices which might further assist smut peddlers.

"The present publicity being waged to fight the smut battle has the unqualified endorsement of the direct mail industry. The assistance of the news media and other advertising media is a welcome addition to the self-policing actions that the direct mail industry has consistently carried on."

The Indiana Dunes

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent editorial entitled "Save the Dunes," published in the Washington Post of this morning. The article strongly urges Congress to save the dunes, the extraordinarily beautiful area only 40 miles from Chicago which will shortly be destroyed by the National Steel Corp., under Mr. George M. Humphrey, and the Bethlehem Steel Co., unless Congress creates a national park or a national monument in that area. I am greatly pleased that this great newspaper of the Nation's Capital endorses Senate bill 1001, which I and other Senators have the honor to sponsor.

Mr. President, I also ask that there may be printed in the Appendix of the RECORD a letter to the editor of the Washington Post, published on July 7, 1959, written by Carl Sandburg, beloved poet, historian, and writer, urging the setting aside of the Indiana dunes as a national park. Mr. Sandburg's letter is a very eloquent plea for the saving of this unique area.

Mr. President, I ask unanimous consent also that there may be printed in the Appendix of the RECORD another letter to the Washington Post, urging the setting aside of the Indiana dunes as a national park or a national monument. This letter was written by Mr. Edwin Way Teale, of Hampton, Conn. Mr. Teale is a celebrated naturalist, who is probably the closest continuer of the tradition of John Burroughs that we have in this country.

There being no objection, the editorial and letters were ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 22, 1959]

SAVE THE DUNES

Around the south end of Lake Michigan is a geological phenomenon virtually unique in the United States—the Indiana dunes. There are of course many other sand dunes in the country, but few if any of them approach the distinctive grandeur of those in this brief strip of beach and border. Rising in great billows 190 feet above the lake, they contain a whole biological and geological history in the fight of forests and other vegetation against erosion. They are precious lands worth saving for the enjoyment and education of all the people; yet unless something is done very quickly some of the choicest parts will be transformed by the bulldozer.

A small part of the original dunes area is already preserved in the Indiana Dunes State Park west of Michigan City. But an essential remaining 5-mile piece of the shoreline belongs to the National and Bethlehem Steel Cos., and National has just announced plans for a huge steel plant to coincide with an Indiana port development. Already most of the dunes area from Michigan City west to Gary has been preempted by industrial and residential development.

The way to save the dunes is in enactment of S. 1001 sponsored by Senator DOUGLAS and seven other Senators to establish an Indiana Dunes National Monument through purchase of the remaining strip. Recently the Senate Public Lands Subcommittee turned down the bill, although the proposal has the strong endorsement of the National Park Service and the Department of the Interior as part of the movement to preserve a few irreplaceable areas of unspoiled shoreline. The Indiana dunes have especial appeal because of their proximity to the Chicago metropolitan area. They can still be saved if there is enough public sentiment to induce reconsideration in Congress, but the time for action before the opportunity becomes lost forever is tragically short.

FLAT ROCK, N.C., *July 7, 1959.*

To the EDITOR OF THE WASHINGTON POST:

The Midwest area known as Chicagoland has steel mills galore. Some of the largest steel mills in the world are in this area. There have been poets in this Midwest who have tried to celebrate the dramatic, the picturesque, the many fascinating wonders to be seen in the making of steel.

And now an issue has arisen around the question: Is it an absolute necessity that more steel mills can't find space on which to locate without dumping themselves on the irreplaceable, priceless, and incomparable Indiana dunes?

There are masses of people in Illinois, Indiana, Michigan, who love the dunes region as a wonderland for play, rest, and you might say creative art or creative pause.

Now a bill is before the Lands Subcommittee, Senate, Interior and Insular Affairs Committee. It provides that the Secretary of the Interior be authorized to acquire 5,000 acres of "relatively unspoiled dunes, beaches, forests, bogs, and related landscapes suitable for national recognition."

Now I am merely one of many who salute and deeply appreciate the toils and efforts of those who seek to bring about the Indiana Dunes National Monument.

I have known these dunes for more than 40 years and I give my blessing and speak earnest prayers for all who are striving for this project.

These dunes are to the Midwest what the Grand Canyon is to Arizona and the Yosemite to California.

They constitute a signature of time and eternity; once lost, the loss would be irrevocable.

CARL SANDBURG.

JULY 17, 1959.

To the EDITOR OF THE WASHINGTON POST:

A century ago when the famed English traveler and author, Harriet Martineau, visited the Indiana dunes along the south shore of Lake Michigan, she rated them as second only to the Mammoth Cave among the natural wonders of the Midwest.

As one who grew up in this area and early fell under the spell of the unique interest and beauty of the dunes, I would like to urge support for Senator PAUL H. DOUGLAS' patriotic fight to make this area a national park.

For generations the Indiana dunes have provided surprises for scientists, inspiration for artists and recreation for innumerable visitors. In recent years, during the course of gathering material for books on the natural history of America, I have traveled more than 60,000 miles in 48 States of the Union, visiting national parks and wildlife areas. Nowhere have I found a more fascinating region than the dune country of Indiana.

Changing with the winds, the mobile dunes flow in shifting, fluid lines that provided an endlessly altering show of pictorial beauty. Rare plants bloom in the moist hollows between the hills of sand. The lake shore, the high dunes, the marsh beyond present varied habitats for many forms of life. All this is pathetically easy to destroy. Bulldozers can do it with dispatch.

What has taken a hundred thousand years to produce can be wiped out in a week. And once destroyed it is destroyed forever.

If the alternative to Senator DOUGLAS' plan is carried out, this will be the consequence. Construction of a harbor and steel town in the area—an industrial development that could be shifted elsewhere—will eliminate all possibility of preserving the only remaining stretch of dune country in this region. In addition, the pollution of air and water will blight the dunes of the State park adjoining.

In another age, one of the Roman writers noted that great trees are long in growing but they can be rooted up in an hour. This is, for many irreplaceable features of American nature, the Rooting Hour. Mechanized destruction is proceeding swiftly. Senator DOUGLAS' proposal offers a plan for saving one rare beautiful area which lies close to a great center of population and which can be preserved for the enjoyment of all.

EDWIN WAY TEALE.

HAMPTON, CONN.

(Mr. Teale's many books on nature include "Dune Boy, Early Years of a Naturalist.")

Tribute to Speaker Rayburn and Senate Majority Leader Johnson of Texas

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1959

Mr. ENGLE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very stimulating press release signed by Representative CECIL R. KING and seven of his colleagues from California.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

Following is the text of a letter sent to House Speaker SAM RAYBURN and Senate Majority Leader LYNDON JOHNSON by Congressman CECIL R. KING, Democrat, of California, and seven other Democratic Congressmen from the State of California:

"In periods when the Government is divided, there is always the temptation for irresponsible politicians to concentrate on the division, and seek to impede, obstruct, and even paralyze our Government.

"This temptation has been resisted and fought by the Democratic leadership of the Congress, which has demonstrated its preference for constructive achievement as against destructive argument.

"We are proud of the leadership you have exhibited, and we want you to know that it meets with our wholehearted approval, and we believe with the approval of an overwhelming majority of the American people."

CECIL R. KING, HARRY R. SHEPPARD, Judge D. S. SAUND, CHET HOLIFIELD, B. F. SISK, CLYDE DOYLE, JOHN MOSS, HAROLD T. JOHNSON.

A Look at National Policy—Study by the Jackson Subcommittee

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1959

Mr. HUMPHREY. Mr. President, on Monday, there appeared in the New York Times an editorial entitled "A Look at National Policy." The editorial comments on the proposal of the Senator from Washington [Mr. JACKSON] to study the national policy machinery of the Federal Government, particularly as it relates to foreign policy and national defense and national security policy.

The editorial gives a constructive message, and outlines the activities of the subcommittee which will make the study.

I now read from the editorial:

The Government is overweight, perhaps not so much with squandered money as with overlapping agencies.

Senator JACKSON's three-man Government Operations subcommittee may get somewhere if he sticks to his announced principles and resists the temptation to put on a circus. A scholarly congressional inquiry would be refreshingly new.

Mr. President, the editorial staff of the New York Times can be assured that the members of the subcommittee will conduct an objective, sound, and, I trust, scholarly review of the national security policy machinery or apparatus of the Federal Government. A number of us have for some time been deeply concerned with what we believe to be the inadequacy of the machinery of the Federal Government to coordinate such policies as foreign trade, national defense, the over-all diplomatic aspects of foreign policy and economic assistance, and a host of other activities which constitute what we commonly call—for lack of a better term—our national-security structure.

The purpose of the Jackson subcommittee is to make a careful analysis of what we currently are doing in the way of national policy machinery, and then to make recommendations for new structures or adaptations of existing structures.

Mr. President, congressional inquiries which are objective are not necessarily refreshingly new. There have been been many congressional inquiries, however, which have performed great services for the American people and the American Government, without the fanfare of television or radio, or even the presence of a number of newspaper reporters. It has been my privilege to participate in the work of subcommittees which have done good, constructive work; but since the subcommittees did not accuse anyone or abuse anyone or malign anyone or investigate anyone, the newspaper reporters seemed to think there was hardly any news value to the work of those groups, whose purpose was to ascertain what could be done for the good of the country, rather than to produce the fanfare and the circus to which reference are made in the editorial.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 20, 1959]

A LOOK AT NATIONAL POLICY

Senator HENRY M. JACKSON, Democrat from the State of Washington, believes that today's "fundamental issue is whether a free society can so organized its human and material resources as to outthink, outplan and outperform totalitarianism." He has overcome President Eisenhower's original reluctance to cooperate in "a scholarly and nonpartisan evaluation of our national policy machinery."

Anyone who delves into that illuminating publication called the U.S. Government Organization Manual is likely to come out with a headache and a realization of the need for some study of this sort.

The trouble is not that we lack policy-making machinery, especially in the obvious fields of foreign programs and defense. We have the National Security Council, whose members include the President, Vice President, Secretary of State, Secretary of Defense, and the Director of the Office of Defense Mobilization.

We have a Planning Board to formulate "policy recommendations to be considered by the Council; we have an Assistant Secretary for Planning in the State Department, with the modest task of "evaluating current foreign policy in the formulation of long-range polices"; the Office of Defense Mobilization coordinates "all mobilization activities of the executive branch of the Government"; the Central Intelligence Agency advises the Council "concerning such intelligence activities of the Government departments and agencies as relate to national security," and all the Operations Coordinating Board has to do is to "provide for the integrated implementation of national security policies."

In this set-up there are little wheels and big wheels. Senator Jackson, who is a member of the Committee on Government Operations and therefore familiar with the work of the Hoover Commissions, will understand the problems and the difficulties.

A layman might suspect that what the Government needs is a simplified structure of responsibility and command. Who does the original thinking when everybody is either being coordinated or is coordinating somebody else? The Government is overweight, perhaps not so much with squandered money as with overlapping agencies.

Senator JACKSON's three-man Government Operations subcommittee may get somewhere if he sticks to his announced principles

and resists the temptation to put on a circus. A "scholarly" Congressional inquiry would be refreshingly new.

Government Security Hearings and Procedures

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. HART. Mr. President, increasing discussion is heard concerning Government security hearings and procedures.

Interesting are the observations of Snow F. Grigsby, editor, in the Postal Alliance for April 1959, which I ask to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT IS SUBVERSION?

The National Alliance of Postal Employees is opposed to communism, and to subversion in any form. This has been our position down through the years, and this continues to be our position today. We have never harbored Communists within our ranks, nor do we ever intend to knowingly. This is not, and has never been the purpose of our organization.

The alliance has always been opposed to all forms of racial discrimination and segregation. Likewise, we have opposed legislation and behavior which tends to deny to any race or group their rights as American citizens.

It has been proven time and time again that discrimination and segregation is costly. Wherever it exists, it restricts the best possible training, the full utilization of human skills and abilities, lowers the potential production output, and adds an additional burden to the already overloaded taxpayers. There is also the waste of leadership potential and special abilities.

In early 1948 the Post Office Department put the loyalty order into operation. In 1952, the administration issued Executive Order 10450 to all departments and agencies. There were post offices where Negroe employees were cited out of proportion to their ratio to white employees. At the time the loyalty order was put into effect, the alliance was faced with the problem of breaking down barriers of discrimination in many large post offices in various cities. The Negro postal employee was fighting for an opportunity to be employed by the Government on an equal basis with the majority group. In too many instances his training and ability was overlooked; he was assigned to menial jobs, and rarely promoted even though qualified for such recognition. While many of the labor unions permitted the Negro postal employee to become members, they, too, discriminated by limiting him to secondary membership by withholding rights enjoyed by other members, such as holding office and representation on grievance issues. The alliance was the only service organization which insisted on equal treatment of all employees, and equal opportunities for promotions and preferred assignments. In New York, Philadelphia, Chicago, Cleveland, and other cities, Negro postal employees made strong representation against patterns of discrimination that denied them equal opportunities in the postal service.

In cases in which alliance members were dismissed for alleged activities termed subversive, the question arises, were these men who were militant in their efforts to open doors of opportunity closed to them because of their color and previous social condition, in fact, subversive? If a person, who is denied his full citizenship rights, works to secure these rights within the framework of law and order, engaging in activity which is disloyal and subversive?

The American Negro in his continuous struggle for equality has never through overt behavior or declaration defied the Constitution, nor the Government, nor the courts, even though many of the decisions handed down continued to deny him the citizenship guaranteed under the Constitution. On the scene today are any number of militant spokesmen and leaders and groups who are busily engaged in activities which are contrary to the American way which embraces the concept of equality and justice for all. This element of our citizenry has openly defied the Supreme Court, which represents the highest law of our land, and have committed acts of violence to further enforce their position. Many of these people are in sensitive positions. Yet, with all of the talk and the editorializing denouncing the southern and northern practices of discrimination and segregation, the persons who are responsible for the perpetuation of these practices continue on unhampered by loyalty orders and the like, breeding hate, lawlessness, utter ruin, and destruction, all characteristic of disloyalty and subversion. It has seldom been uttered that these people are Communists. It has seldom been implied that they are subversive and disloyal.

If the truth about discrimination and equality hurts the liberal conscience, is it fair to silence the person or group who makes this truth known, by allegations of disloyalty and subversion?

What in fact, does constitute subversion?

YOU CAN'T HAVE ONE WITHOUT THE OTHER

Justice always contains the idea of equality. So obvious is this, that even small children can recognize this concept. If you have two small children and give a large piece of candy to one child and a small piece to the other, the child who receives the small piece of candy will ask why he was given the smallest piece. Justice and equality go hand in hand. Every schoolchild salutes the flag saying, "With liberty and justice for all."

What is justice? Justice is first of all rendering to every man his due. If a prominent citizen breaks the law and is permitted to go free, that is unjust. If two men are working side by side with equal qualifications, and doing the same work, and one is given a raise in salary and the other one is not, that is unjust. Justice does not care about passing whims, uncertain emotions, or expediency of the moment; justice does not care what mood we are in, or the special group to which we may belong. Justice is rendering to every man his due no matter what our personal feelings. If we become the kind of people who consent when rights of others are denied, we become unjust, and in such an atmosphere, our own rights will not long survive.

The chief principle which should always be brought to bear on the subject of race, is justice. This is the principle on which this country stands, and it is a principle which is often neglected in situations which require tolerance and patience. To deny a person his just due because he is a member of a minority group, is unjust.

Justice means that the individual and his rights are protected. Justice is love in action in public life. Justice means that we are governed by principles and law, and not by passing whims. Justice is equality, and you can't have one without the other.

NO RIDERS

Efforts are being made to attach a security rider to the budget bill of the Post Office. This rider would grant the Postmaster General the authority to fire any employee whose loyalty is in doubt. Closed door hearings have been held on this issue, and officials of the Department have been called in to give testimony before the House Appropriations Committee. However, so far, no service organization has been invited to come in and testify before this Committee. This is a serious matter, and all service organizations should alert their membership to the potential danger of such legislation. If this legislation is enacted, the Post Office Department will be in the position of complainant, prosecutor, and judge. If such broad authority is given to the Post Office, an employee can be accused, and dismissed from the service, and all other avenues of appeal will be closed to him. There will be no recourse to the courts and all retirement benefits lost.

SNOW F. GRIGSBY, *Editor.*

Workers Are Doing Well, but Only Until They Retire

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. GOLDWATER. Mr. President, in the absence of Victor Riesel, a noted labor columnist, a number of people have been writing columns for him from day to day. One column was written by the Senator from Kentucky [Mr. MORTON], and was published in the Wichita Beacon of July 9, 1959, under the title "Workers Are Doing Well, But Only Until They Retire." I ask unanimous consent that the column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

WORKERS ARE DOING WELL, BUT ONLY UNTIL THEY RETIRE

(By Senator THRUSTON B. MORTON (pinch-hitting for Victor Riesel))

WASHINGTON.—"Our trade unions have continued to obtain substantial wage advances, while prices have remained relatively steady. * * * Real wages are showing very significant increases. This means a continuously rising American standard of living."

Republican propaganda, you say, delivered by the Republican National Committee chairman?

Not at all. The quotation is from an article written earlier this year by George Meany, president of the AFL-CIO.

The quotation sets forth the broad basic reason why the Republicans nominee for the Presidency in 1960 again is going to receive the votes of an overwhelming majority of American's workers and at least a near-majority of the votes of union members, despite whatever may be the political leanings of the unions' leadership.

The simple—but monumental—fact is that since 1953 America's workers, both union and nonunion, have made more personal economic progress than in any comparable period in our history.

Another testimonial came from a union source in February of this year, when the Machinist—official organ of the AFL-CIO

Machinists' Union—published a research study aimed at finding out whether the American worker had more purchasing power in 1958, 1948 or 1938.

The verdict was overwhelmingly in favor of 1958, the sixth year of our Republican administration.

"Almost everything is cheaper" now than in 1948 or 1938, said the Machinist, when prices are measured against the time it takes to earn the money to buy things. The Machinist cited an impressive list of examples, including these:

In 1938 it took 12 minutes of work to earn enough to buy a quart of milk. By 1958 this had almost been cut in half—the required 1958 labor for the price of a quart of milk is 7¼ minutes. In a family which uses 2 quarts of milk daily, in other words, the wage earner now works 89 fewer hours over a year to pay his annual milk bill—this is more than a 2-week saving.

For two packs of cigarettes, the Machinist reported, 24 minutes' work was required in 1938 against a required 12 minutes' work today—a 100-percent reduction required labor.

Hard facts and documented realities such as these will stand up against the flood of things-were-never-worse propaganda which is hitting workers' families from sources more interested in political power in the opposition party than in the economic status of the workers.

All measurements confirm the findings of Mr. Meany and the Machinists Union.

Personal income, factory income, savings, consumer expenditures—all are at record levels.

Prices have remained steady for about the past year—the longest period of such stability in history.

Social security has been made almost universal and benefits have been improved. The minimum wage has been increased.

Compared with 1952, more than 7 million more American families have incomes of $4,000 or more while those limited to $2,000 or less have been reduced a stunning 2 million—this is real migration upward in the income brackets for everybody.

And this is the economic record on which we will run in 1960, a year for which every indicator points to the greatest American prosperity in history, nurtured and promoted by sound Republican policies.

This is a record which needs no defense, only effective presentation.

In the U.S. Capitol in Washington today, a tremendous battle is going on which involves the security and future of every American worker. This is the so-called battle of the budget.

This battle is far deeper than most generalizations would indicate. It's not a matter of penny-pinching. It's not a matter of cold numbers on a balance sheet. And it's not a matter of partisan politics.

National security and personal security are involved and America's workers especially are involved.

The issue might be stated thus: What does it profit a man to labor his entire life if what he is laboring for becomes worthless when he is ready to enjoy it?

That is what inflation does to hard-earned savings, investments, social security payments, insurance policies, and the pension plans on which so many millions rely for retirement income. And deficit spending by the Federal Government is a definite major factor in inflation.

Consider a typical retired senior citizen. He's 76 years old now, 11 years retired. When he retired his $200 a month pension would let him live out his days in comfort.

What he didn't figure on, however, was the 50-percent price rise skyrocket sent up by the Truman administration during a Democratic era in which the value of the dollar was being halved through inflation and deficit Government spending. So today the retired gentleman is dependent on the charity of distant relatives.

This is the type of thing which the Republican Party is fighting against—it's what the battle of the budget is all about—and we've been largely successful. Since 1953, loss in dollar value has been less than a nickel and the 50-percent price rise of the Democrats has been slowed to a 6-year increase of just 8 percent. For the past year consumer prices have been steady.

This is a record, and an economic policy which deserves and will get the support of those hurt worse by inflation—those on fixed incomes, those with savings accounts, insurance policies, pension, and all other types of retirement plans.

If we can hold the spending line against inflation today—a time of rising prosperity—then the future will be more secure and brighter, both for the Nation as a whole and for each individual family.

Northern Michigan Has Lost a True Friend and Great Citizen

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. CEDERBERG. Mr. Speaker, Northern Michigan has lost a great friend.

Glenn MacDonald, editor of the Bay City (Mich.) Times, was called by his Maker list Friday after a brief illness.

Few men in the field of journalism, or any other field, had a greater circle of friends, and few men have labored more diligently and untiringly for the growth, the advancement and the welfare of his particular geographic area than Mr. MacDonald. It would be difficult to enumerate all the worthwhile projects in Northern Michigan in which Glenn MacDonald participated.

The industrial and recreational growth of Michigan and particularly northern Michigan were close to his heart and Glenn MacDonald could be counted on to contribute his time and energy for their advancement.

He will be greatly missed.

His career and his dedication to his fellow citizens are set forth in an editorial in the Bay City Times and I desire to present this tribute to a fine American for insertion in the RECORD:

GLENN MACDONALD

A foremost figure in the contemporary American newspaper scene was removed Friday.

If death struck unexpectedly, it was even more untimely when it claimed Glenn MacDonald in the ascendancy of a brilliant career in the business.

Although he had given nearly 40 years in almost every capacity to the editorial division of the industry, he was still young in years. He had the capacity, the farsightedness, and the will to do the many things still to be done, which he could have done so well had he but lived the normal period of life expectancy.

It is the untimeliness of his death that is so cruel, that leaves such a great void among his fellow workers, his host of real friends in and out of the newspaper ranks.

Glenn MacDonald was the editor of the Times, but he preferred to be known as a newspaperman.

He had to work hard at the business of the editor's routine. But the hurly-burly of the city room, pushing around crowded sports arenas, in muddy sites of sudden death, in police court, through the fire lines, the down-to-earth, day-to-day job of producing a newspaper came easy to him.

Although he could assume the pontifical air of the ivory tower when that became his duty, he was more at home in the typographical department directing the mechanics of putting a newspaper together which was masterful not only in content but also in design.

There were no closed doors to Glenn MacDonald anywhere in the State of Michigan—in the world, if you please, wherever he chose to go. And to his eternal credit never was the door of his editor's office ever closed to a single person.

He was blustery, but that bluster was his only false front.

He was generous to a fault. He was unshakingly true to his friends. He couldn't keep a grudge nor an enemy.

There are few newspapermen who had so wide and diversified a circle of friends. Glenn MacDonald not only knew them in every walk of life, he cultivated them.

He had a creed that if newspaper people were to chronicle accurately the history of the era in which they lived they had to be close to the people making that history.

That kind of newspapering is hard, intense work. Hardly to be accomplished in an ivory tower. But elbow rubbing in the seething life of modern America takes its toll in a physical way, and a hard bargain it drives.

It may well have brought his early death.

But he would not have had it otherwise.

Those of us who worked with him—we never worked for him—are sure that had he been given the opportunity of a long life in the seclusion of the ivory tower, or the span that befell him in the way he wanted to be a newspaperman, he unhesitatingly would have chosen the latter.

They need not erect monuments to his memory.

His contributions to the community will long outlive his memory.

He was a great newspaperman, a fine boss, an upright husband and father, a real neighbor, a true friend.

Mr. Robert Prescott's Crusade To Free American Prisoners of Red China

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. NEUBERGER. Mr. President, the personal crusade of Mr. Robert W. Prescott, of Eugene, Oreg., to secure the release of American citizens now imprisoned in Red China is attracting widespread interest. For many months, Mr. Prescott has sought support for his idea that American schoolchildren, by writing to youngsters in other countries about the plight of the imprisoned American prisoners of the Peiping reternational indignation so the Communist regime would release them. Moral

sanctions often provide a powerful weapon against injustice. I hope that Mr. Prescott's enlistment of schoolchildren to help force the release of American prisoners of the Pieping regime achieves the desired result. Some of the beneficial effects of Mr. Prescott's work are described in an editorial which appeared in the Eugene Register-Guard of July 16, 1959, and I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Eugene (Oreg.) Register-Guard, July 16, 1959]

WORTHY CAUSE

The Eugene School Board has referred to its administrative council and its attorney the suggestion that Eugene students take part in a propaganda campaign to get justice for Americans illegally imprisoned in Red China. Legal and administrative opinions are important.

But if there is no serious barrier to having our boys and girls take part in this campaign, we hope the school system encourages their participation. Robert W. Prescott, a Eugene real estate man, has spent countless hours and a great deal of money in promoting this expression of indignation on the part of American children. The campaign, in which private schoolchildren in the Portland area have been quite active, is beginning to show results. Replies to the children's letters are coming in from India where the plight of the imprisoned Americans had not been so well understood.

It will be a credit to the Eugene system if our children join in this selfless and worthwhile campaign. We hope that through contacts they make in other nations, they can inspire children from all over the world to register their protest—to Peiping whenever possible—over the disgraceful imprisonment of Americans whose only crime was to have been Americans in China.

Gov. Edmund G. Brown, of California, To Serve on Democratic National Advisory Council

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. ENGLE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release issued by California's distinguished Governor, Pat Brown, in Los Angeles on July 15, 1959.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

LOS ANGELES, July 15.—Gov. Edmund G. Brown today said he is accepting an invitation from Democratic National Chairman Paul Butler to serve on the Democratic National Advisory Council.

The Governor said that as a member of the council he will "work for the election of a Democratic president and a Democratic Congress for the Nation in 1960."

He made the announcement in a statement issued here prior to leaving for Sacramento. He had spent the last 2 days in southern California reporting on the accomplishments of the first 6 months of his administration.

"I want to help assure that a progressive and united Democratic Party stresses actual accomplishments in the record we present to the people next year," Governor Brown said.

"I believe, for example, we must help build actual houses, not just prefabricated issues," he said. "I think the vigor and vision of the Democratic Party across the country contrast sharply with the vetoes and vacillation of the GOP.

"I am confident the Democratic Congress is putting together a comprehensive record of accomplishment, and as a member of the party's advisory council, I shall consult closely with our party leaders and Members in the Congress," Governor Brown declared.

"As the basic philosophy of the Democratic Party, I believe we must seek the best the human mind and spirit can conceive," he said, "but when we cannot attain all of that today, let us accomplish all we can with the realities that confront us, then strive again for higher goals after that.

"Human progress is accomplished with hard work, not hollow words," the Governor said.

"I think the Democratic Party nationally needs a greater western viewpoint," he concluded, "and I am working with Senator CLAIR ENGLE and many others to provide that in our party's councils and convictions."

Union Shop Legitimate—Right-To-Work Laws Seen Blocking Rights

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 22, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Union Shop Legitimate—Right-To-Work Laws Seen Blocking Rights," which was published in the Catholic Bulletin of June 19, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Catholic Bulletin, June 19, 1959]

UNION SHOP LEGITIMATE—RIGHT-TO-WORK LAWS SEEN BLOCKING RIGHTS

WILMINGTON, DEL.—So-called right-to-work laws tend to interfere with the right of working people to organize effective unions, the director of the social action department of the National Catholic Welfare Conference said here.

In the opinion of many, perhaps the majority of Catholic students of industrial relations, "right to work legislation hampers the normal growth and lessens the stability of trade unionism," declared Msgr. George G. Higgins.

And trade unions are "not merely tolerated nor permitted, but encouraged" by the church, Monsignor Higgins added in an address at graduation exercises of the Salesianum labor-management school here.

The U.S. bishops and the administrative board of the NCWC have never issued an official statement on the morality of the union shop, he said, because "the morality of the union shop has hardly ever been called into question by competent spokesmen for the Catholic point of view."

"American theologians and American Catholic experts in the field of labor relations are almost unanimously agreed that the union shop is morally legitimate," he said.

Monsignor Higgins cited a marked difference between the attitude of most supporters of right-to-work laws and that of most commentators on the papal social encyclicals.

"The average opponent of the union shop and the average proponent of so-called right-to-work legislation regards the decision—to organize or not to organize—as a purely individual decision on the part of the individual workers," he said.

"By contrast, the American bishops, the Canadian bishops and the majority of American students of Catholic social teaching place their emphasis on the social responsibility of individual workers to contribute to the common good by organizing with their fellow workers."

Monsignor Higgins described labor racketeering as a very serious problem. But the extent of labor corruption "deliberately or otherwise has been exaggerated," he said.

"The overwhelming majority of unions and union leaders in the United States are basically honest," he declared.

He said he believes the current Senate hearings on labor racketeering "are about to go out of existence."

Rightful Claims of American Citizens

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. DEROUNIAN. Mr. Speaker, I am pleased to include in the Appendix of the RECORD an editorial appearing in the July 25, 1959, issue of the Saturday Evening Post, concerning the meritorious bill of our colleague, the Honorable J. ARTHUR YOUNGER:

WE PAY OFF EVERYBODY FOR WAR DAMAGE—EXCEPT OUR OWN CITIZENS

Probably most people believe, if they give the matter a thought, that all legitimate claims for damage growing out of World War II have long since been settled. The fact is, however, that some of the most meritorious claims by American citizens are still unsatisfied.

Many of these claims are on behalf of Americans who lost their possessions, or perhaps their health, through Japanese military action in China, Malaya, or elsewhere in Asia outside Japan itself. Some of these individuals were businessmen, others were missionaries, doctors, lawyers or other professional people. Their losses, through confiscation or military action, were as severe as those of Americans who were caught in Japan proper. The latter have been paid in full, but in our treaty with Japan the United States waived the claims of Americans in other parts of Asia who had been damaged by the Japanese. Except for partial payment to Americans who suffered damage in the Philippines, none of these claims has ever been settled. Indeed a number of Americans who emerged from Japanese prison camps with nothing but the

clothes on their backs are currently receiving bills for transportation back to the United States.

Another group of claimants suffered damage in Germany, Poland, Czechoslovakia, Greece, and other areas attacked by the Nazis. The principal hindrance to a settlement of these claims appears to be the insistence of those who want to return the German oversea assets that were sequestered during and after World War II that Americans' claims should not be paid until the German assets are returned. This seems unreasonable in view of the fact that in 1953 the Bonn government of West Germany agreed to compensate its own citizens for these assets in return for what amounted to a reduction of reparations by the Allies. Thus it would seem logical that the legitimate claims of American sufferers should be satisfied from German assets held in this country.

The proceeds from sale of some of these German and Japanese assets have been paid to certain classifications of American claimants, but there remain a large number of claims by Americans who suffered grievously from the war, but who have up to now been left out in the cold.

Various bills, including one introduced by Representative J. ARTHUR YOUNGER of California, have been presented to correct this injustice. Mr. YOUNGER declares that "practically every nation, except the United States, which engaged in World War II has already made some provision to indemnify or rehabilitate its nationals, in every case at the expense in whole or in part of the American taxpayer. * * * No reason exists why the United States should provide funds for other nations so that they can pay their own damage and we continue to neglect the rightful demands of our own citizens."

German and Japanese individuals and corporations suffered from the seizure of their property by the allied governments, including ours. However, it seems fantastic to be so concerned over these hardships that the at least equally valid claims of Americans are ignored.

Rural Development

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. HORAN. Mr. Speaker, I wish briefly to call attention to the fine progress that is being made in the Stevens County, Wash., resource development program. This work is part of the national rural development program, which I understand, is now going forward in more than 100 counties in all major regions of the Nation.

Washington State College has entered into an agreement with leaders in Stevens County setting up a cooperative program which will push forward the long-term economic development of the area. A rural resource development planning council was recently established in the county. Industrial and educational development are two important objectives of the program in Stevens County.

Although less than 2 years in operation, the resource development work in Stevens County has already had considerable influence in the area. According to latest reports of the State college, which is also cooperating with the U.S. Department of Agriculture in the program, two additional counties in my district, Ferry and Pend Oreille, are now organizing programs similar to the one in Stevens County. This is an extremely important development. It indicates that in my district resource development is moving from the pilot stage to the stage of established areawide cooperation, under a long-term program involving several counties and many small towns and villages.

Many difficult problems remain to be solved if our rural resource development program is to raise incomes and levels of living among our rural people. We need more industry to balance our agriculture. And our county development committees are presently handicapped in some of their projects by a lack of credit resources.

However, I believe that rural and resource development programs, modeled on those underway throughout the Nation, offer the only sound approach presently on the horizon for a long-term solution to the chronic problems of our declining rural areas and rural low income. I for one intend to exert every effort to make this work succeed and help the able, conscientious leaders in my district who are volunteering their time and talents to make the program a success.

What the Farmers and Taxpayers Want

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. WESTLAND. Mr. Speaker, an editorial in the July 15, 1959, issue of the Everett Daily Herald summarizes the results of a poll made by the Farm Journal. Under leave to extend my remarks, I would like to include the editorial, "What Nation's Farmers Want Set Forth in Farm Journal," in the RECORD.

This poll is of great interest to me because there are many farmers who reside and earn their livelihood from the land in my district of Washington State. In fact, the majority of the dairymen who supply the Puget Sound marketing area are in my district. Also, the results of the Farm Journal poll parallels the results of the one I conducted this year.

According to the Farm Journal as quoted in the Daily Herald, 78 percent of the farmers across the Nation favor plans calling for no support or for less support. Some 7,500 persons answered my most recent questionnaire. Of these, 79 percent said they do not approve the present price support program. As a group the farmers in my district also opposed the support program, the percentage of opposition being 84.

These figures lead me to the conclusion so well put in the Daily Herald: It is up to the political powers to see that the farmer gets what he wants and the taxpayer realizes his desire.

The editorial follows:

WHAT NATION'S FARMERS WANT SET FORTH IN FARM JOURNAL

Farm Journal, the leading magazine in its field, has polled its readers to find out just what kind of a Government farm plan they really want.

The results will come as a big surprise to those who think farmers as a whole want more and more Government aids, controls and supports.

Here is how the vote adds up:

Fifty-five percent want total abandonment of supports and controls, and a return to the free market.

Fifteen percent favor supports on an emergency basis only.

Eight percent want adjustment supports which could permit a gradual return to normal markets over a period of time.

In sum, therefore, 78 percent favor plans calling either for no support or for less support.

By contrast, only 14 percent say they want high price supports, of 90 percent to 100 percent of parity, and only 8 percent favor the production payment plan.

The percentages were pretty much the same in all sections of the country. Among the different commodities, farmers specializing in poultry, beef, or fruit and vegetables are the most inclined to get rid of supports. Wheat and grain processors are least disposed to do this—but even so, close to half of them consider it the thing to do.

Farm Journal has done the country a real service—and the hope is that the lesson learned will find its reflection in future policy. Farmers, like the rest of us, know past programs have been monumental failures, and that billions have gone down the drain with no return.

And farmers want to stand on their own feet.

And the taxpayers desire that no further billions go down the drain.

It is up to the political powers to see that the farmer gets what he wants and the taxpayer realizes his desire.

Statement by T. Keith Glennan, Administrator of the National Aeronautics and Space Administration, Before "My True Security" Awards Dinner, Statler Hotel, Washington, D.C., July 21, 1959

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. SCHWENGEL. Mr. Speaker, the principal address at the national awards dinner for the "My True Security" essay contest program on Tuesday, July 21, in Washington, D.C., was T. Keith Glennan, Administrator of the National Aeronautics and Space Administration.

I had the privilege of hearing this address. It was intended for the high school youngsters who were representing their States as the contest winners in each of our States. I wish that more adults could have heard it, especially Members of Congress, because there was much food for thought which we can

apply in our negotiations here as we try to legislate for the good of America and the free world in this space age.

Under leave to extend my remarks, I include Dr. Glennan's address in the Appendix of the RECORD. I am sure that all who read them will be as impressed as I am with the weight of these words:

My purpose tonight is to discuss with you some aspects of the security of this Nation on which, in my opinion, the continuance of the American way of life will depend. You all must have thought seriously about some of these as you prepared your papers for this contest. To say that we are threatened or that our way of life is threatened these days is but to repeat the statements of men much wiser, better informed, and more influential than myself. But security has many facets, and I want to talk about some of the important aspects of security which do not reside particularly in the military strength of this Nation.

While recognizing the need—yes, the absolute need—for military strength in these days of nuclear submarines, atomic and hydrogen bombs, supersonic high-performance airplanes, and intercontinental ballistic missiles, I want to consider more particularly what I believe to be the real strengths of this Nation in our fight for security. These strengths reside in the will, the determination, and the dedication of the individual. These are not idle words—platitudes taken from some long-forgotten essay or even from the pages of the public press. They are characteristics of human behavior without which there can be no real security—American way or no American way.

Now this is not going to be a lengthy oration. And first let me say that I count it a very real privilege to be here tonight. With you, I am anxious to see and to applaud the national award winner and the runners-up who are to be recognized for their achievement in this contest. May I congratulate them as well as the sponsors of this program—the U.S. Junior Chamber of Commerce and the Mutual Benefit Life Insurance Co.

And I'd like to say just a special word to those fifty other finalists who are here tonight and to the many thoughtful young men and women who have not had the good fortune, as you have, to visit in our National Capital during the past 2 days. This is indeed a competitive world, and not all of us can win the top honors in any particular contest. But there are many competitions in life and many kinds of awards. Each person who competes honestly and with all his heart in every contest in which he enters finds his own reward in some form.

The opportunity to think seriously and creatively about our way of life which this program has offered is itself a reward. It is a challenge that all of you have shared equally. The outward and visible sign of success is the trophy, and the person winning it has been judged worthy of recognition for superior achievement. But for all of the others competing, if they have done their diligent best, there is a satisfaction of accomplishment, a growth in knowledge and understanding, and a development of confidence in their own abilities of expression—these will become the building blocks for a useful life.

And now let me get back to this business of the national security and my evaluation of the other than military methods of providing that security. For the past year, as head of the National Aeronautics and Space Administration, I have been engaged in the most difficult task of any that I have met. Not only does it represent a personal challenge to me as an engineer, a public servant, and an administrator—it is a challenge to our country as a whole—a double dare, tossed in the face of American science and technology by the Soviet Union. We are given the choice of competing with Russia in the new realm of space research, or else resigning ourselves to the role of onlooker in the most inspiring enterprise of our time.

For the United States, this challenge represents a real threat to our security. You will agree, I am sure, that we as a nation are not alone in this world. Never again will we experience the security of what was once known as splendid isolation. Our progress, from revolution to world leadership in a little more than a century and a half, has resulted in large part from our abilities, as freemen, to apply the new knowledge resulting from the researches of scientists to the creation of devices and processes which have lifted the burdens from the backs of our people. The rest of the world has marveled at—and envied—the results of these efforts. The image we have created is that of technological superiority in almost every field. So much so, that we came to believe it ourselves.

For several years past we have been disturbed—whenever we took the time to think about it—by the progress made by the Russians in the development and production of military devices—submarines, tanks, high-performance airplanes and missiles, and the atomic and hydrogen bomb. More recently, we have been experiencing the challenge of economic competition in various markets throughout the world. Nowhere before, however, have we seen the dramatic impact of a single accomplishment in technology influence world opinion as was the case when the Soviet scientists succeeded in placing the first satellite into orbit around the earth on October 4, 1957. I want to take just a few minutes to review the manner in which this result was accomplished, because we find ourselves in a situation so novel to us that we are hard put to it to realize the true urgency of the problem.

We had pioneered in the development of jet airplanes after World War II. Our experimental rocket-powered aircraft—the X–1, the X1A, and Skyrocket, and the X–2—had first broken the sound barrier, and had set the world's unofficial speed record of 2,350 miles per hour and the altitude record of 24 miles above the surface of the earth. We were then confident of bringing our intermediate range ballistic missiles to a state of operational readiness. We were preparing, as a contribution to the International Geophysical Year, to launch a series of small, exploratory earth satellites, as a modest preliminary to the development of space flight.

Then, on October 4, 1957, the Russians lofted their first 184-pound sputnik into orbit. They followed it up with two more, ranging in payload weight as high as 2,925 pounds. The blow to our national pride in this unexpected achievement by Soviet science was tremendous. The cost to us in prestige abroad was, and continues to be, even greater.

In effect, the Soviet Union has been able to create in the minds of the people of a very large portion of the world's uncommitted areas the belief that success in space research is the principal measure of the scientific and technological efforts of a nation and, hence, the real measure of the worth of a culture. Entering this race with a certain amount of complacency, we now find ourselves at a disadvantage that will be overcome only by a determined effort and intelligent and creative attention to the task of developing our own program in space research.

Only 2 years ago, most of us took it comfortably for granted that the United States was the most advanced country in the world in scientific discovery and application. We had no monopoly of talent or brains, although we were not as ready to admit that fact then as we are now. But we did have the finest laboratories and the most modern engineering facilities, and our vast industrial resources lent their support to scientific research.

How has this situation come to pass?

Recognizing that, to compete in this modern world, communism must be buttressed by industrial might, the Soviet leaders determined soon after their revolution that large numbers of the youth of that nation must be trained in science and technology. It was an up-hill battle—the broadening of the educational base, first, to provide for a significantly large proportion of that nation's youth the primary and secondary school training that must precede college-level work in science and engineering—and then to channel into these difficult fields of learning a majority of all students in higher education. The success of their efforts is now well known even though we may criticize some of the methods used by them to achieve that success.

Just 1 year ago, I was in Russia. In company with seven other college presidents, I was trying to understand the Soviet system of higher education. After learning something of the structure and administration of their technicums, technological institutes, universities, and institutes for research and advanced study, we visited a variety of institutions and talked to many students and teachers.

You have read, I am sure, about the stiff requirements which must be met by the Soviet student if he is to be allowed to continue his education. Incentives for superior academic performance are real and highly prized. Examinations are tough, thorough, and frequent. Education is a serious matter for the youth of the Soviet Union, and this is particularly the case in the institutions of higher education.

The most vivid impression I carried away from that brief exposure, however, was that of the dedication of the student and his teachers. As I recognized this characterized on their campuses, I became aware of its pervading presence in almost every meeting we had. People believed in what they were doing. And, quite apparently, the system of incentives, awards, and rewards provided by the Soviet Government keeps them working, producing, and believing.

It seems to me that the really important ingredient that the Soviet young people—indeed, people of all ages in the Soviet Union—possess is the pride they have in their present achievements. While by our standards, their personal and material rewards seem at times ridiculously small, it is clear to even the most obtuse observer that their progress has been very great in the past few decades.

As a nation they are second only to the United States in most fields of production, industrial development, and in military strength. As a people, they really fit the phrase—"They never had it so good." And all of this they have accomplished in the short span of 40 years. Based on this performance, they have confidence that greater achievement will come in the future, and with this conviction goes the willingness to work and to sacrifice for that achievement. These are the forces on which the Soviet leaders now can depend in their drive for dominance of the uncommitted peoples and nations of the world.

In the face of this determined and disciplined effort, what are we to do? Shall we imitate their system, which seems, for the moment at least, to have brought about these tremendous advances? Shall we bury our heads in the sands of complacency, secure in the belief that the American way will win out in the long run? Shall we withdraw from the responsibilities of leadership of the free world, preferring to en-

joy the prosperity that abounds in this land rather than facing up to the fact that there never can be a peaceful world when the majority of the population of that world lacks food and shelter and clothing—the barest necessities of life? Where does our true security and the security of this Nation really lie?

Let's stop for a moment and take stock. What are the real elements of security for each of us and for the Nation? There is security for all of us in the knowledge of past achievement—and this we have in large measure. No other nation in the long history of man has been able to distribute the fruits of man's labor so widely as has our Nation. In two world wars our industrial and technological genius provided the materiel for victory while our Armed Forces acquitted themselves as true champions of freedom.

There is security, too, in the ability to cope with present problems. This ability we have in some considerable measure, but it is an ability that we can lose very easily. We are tempted today to depend for our security on material things—armaments and superior technological achievements in the various fields of warfare even though we are aware of the fact that victory in modern armed conflict is a hollow mockery—that there is no lasting security to be gained from it.

And finally, there should be security in our democratic system of education—but here we need to face up to some hard facts—you as students and those of my generation as parents and responsible citizens. We have prided ourselves on our growth in the field of higher education. Unlike the Russians, who limit the number permitted to study beyond the high school or its equivalent according to the needs of the state, we have made it possible for ever-increasing numbers of young people to go on to college. In doing so, however, we have allowed college work to become too easy. College has become a social rather than an educational goal in all too many cases. Now we are confronted with what a dictatorial system can do while we have let down our guard. To regain the security inherent in a strong educational system we must greatly improve the quality at all levels and particularly in college level work. Quite naturally, you would expect me to stress the need for higher quality and greatly increased numbers of graduates in the sciences and engineering. I do—but I would stress, too, the great need for improved quality in all fields of study these days.

As I started this discussion, I indicated my conviction that our real strength as a nation lies in the will, the determination, and the dedication of the individual. Let me be more specific. Our strength, in my opinion, lies in our will to understand what our history has made of us, the determination to contribute something of ourselves to make the continuation of that history possible, and the dedication which keeps each of us contributing in spite of the necessity for some considerable personal sacrifice. Only with the will, the determination, and the dedication of the individual will we succeed in this contest.

To sum up—the danger to our society that disturbs me most is not the menace of Soviet spacecraft or missiles. I know that by hard work and intelligent planning we can overtake the Russian lead in rocket vehicles. What worries me instead is the possibility that we may lose the habit of individual effort that brought us our freedom and gave us our strength as a nation. Without this independence, this initiative, we will have little of value left to protect. If this deterioration proceeds, we must face up to the fact that our political and economic adversary will win this contest for men's minds—hands down.

I hear so much talk these days about the search for leisure and personal security, so little about building up our national resources and our moral influence to preserve our institutions. I hear so much emphasis placed upon possessions, and so little on the sacrifices that we need to make in order to guarantee a life of freedom for our children.

In spite of all our technical achievements in overcoming poverty, starvation, disease, and the worst kinds of tyranny, this remains a very tough and serious world—one in which millions of people do not even recognize the existence of the personal security that we take for granted. The stakes are high in this competition between our traditional view of the supreme importance of the individual as against our adversary's belief in the supreme importance of the state. The time left for our decision is growing shorter.

This is your challenge. It will be up to the generation that you represent to determine whether we sit idly on the sidelines, enjoying our leisure, while other nations drive ahead, or whether we throw all of our ingenuity, our talent, our energy, into the struggle for human enlightenment. The same qualities that give us individual strength of character also give us strength as a people, as a society. The choice will largely be yours whether all of us together win our true security.

Area Redevelopment and Automation: Potential Partners for Plenty in the Years Ahead

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. MOORHEAD. Mr. Speaker, two of the most able Members in this House, and, I am happy to say, both of them my colleagues in the delegation from Pennsylvania, DANIEL J. FLOOD and JAMES E. VAN ZANDT, joined to write a letter which all of you have received by now and which I earnestly suggest you study carefully.

They wrote of area redevelopment or aid to distressed areas as it is also called.

They wrote after years of study and sad firsthand knowledge of chronic unemployment in their areas.

They wrote of need well known to Members from Pennsylvania, West Virginia, Kentucky, Michigan, and other States suffering from what economists call structural unemployment—the unemployment resulting from the permanent change in the structure of a community's industry rather than from general economic conditions.

It is good these two veterans of the legislative arena joined in this cause because they have the skill to convince the Members of this House that the area redevelopment bill is a bipartisan measure for the good of the entire Nation. Their's is an uphill battle. This is true because the plight of idled workers in our Nation's pockets of unemployment is all too often ignored generally in periods when the Nation as a whole is becoming more prosperous.

This would be an understandable reaction were area redevelopment of purely sectional importance. But it is not.

In the parlance of the philosopher, the whole is no stronger than its weakest part.

The same applies to economies of nations. We strengthen the whole Nation when we restore the economy of a declining coal town or rail center to vigorous health.

But there is another aspect of area redevelopment in which this proposed legislation can play a key role, along with automation, in the orderly growth of our economy to new heights.

These were my thoughts upon reading an article in the Reader's Digest recently entitled "What Happens When Machines Don't Need Men?"

Primarily, the article covered the growing use of automation in American industry and the resulting impact upon workingmen.

We need automation to compete in world markets.

Automation lifts a burden from the backs and arms of men.

In time it will create an abundance of better paying jobs for the sons and daughters of the workers it is displacing today.

But what about the interventing 10 to 20 years of wrenching economic and human dislocation in many of the Nation's labor markets?

It is all very well to tell sons and daughters with their lives ahead of them of new and distant employment fields. But these become hollow and heartless words to the 40- or 50-year-old worker you are asking to abandon lifetime roots and work patterns.

Reeducation and retraining of the workers is the answer given by the Reader's Digest article to which I have referred.

That is merely one of the answers given by the area redevelopment bill.

In addition to stimulating development of new industry in areas of chronic unemployment, the area redevelopment bill carries grants which would aid in retraining older workers and keeping them going until they can acquire new skills.

The Flood-Van Zandt letter I referred to earlier is now in your offices. Here, under leave to extend my remarks, I am including the article from the Reader's Digest.

I mention both the letter and the article because area redevelopment and automation can be partners.

Area redevelopment can ease the transition from our industry of today to our more automated industry of tomorrow. This is why, viewed in its proper place in relation to the whole economic picture, area redevelopment becomes far more than a parochial bill. It is a national answer to a growing national problem:

WHAT HAPPENS WHEN MACHINES DON'T NEED MEN

(By Lester Velie)

Not long ago an automobile executive proudly showed United Auto Workers president Walter Reuther through a new plant.

Pointing to a battery of automatic drilling machines, the executive asked:

"How are you going to collect dues from those fellows, Walter?"

"How are you going to sell cars to them?" the union leader shot back.

This jesting exchange underlines a historic upheaval—a second industrial revolution that has already affected millions of Americans. Automatic machines, harnessing electronic brains to mechanical muscles, are fast displacing unskilled industrial workers, and will soon displace some unskilled white-collar workers, too.

Today car makers can produce 50 percent more automobiles than they did a decade ago—with virtually the same number of workers. In 1958 the steel companies turned out as much steel as they did a decade ago, with 20 percent fewer production workers. Chemical manufacture has almost doubled in 10 years, but the blue-collar work force keeps shrinking.

Some of the big industrial unions, made up mostly of unskilled workers, reflect what has happened. The United Mine Workers, 475,000 strong in the late 1930's, has dwindled to less than 200,000. (Declining use of coal played some part in this, but mechanization was the major factor.) The United Auto Workers, which had 1,500,000 members in 1955, is down to 1 million members and sliding. The Electrical Workers, Textile Workers, and other industrial unions are losing members, too.

To see why, let's watch one of the new machines at work.

The "X-A," a kind of wizard of oxygen is a mechanical monster that works with no human assistance. Developed by Union Carbide Corp., the Wizard hums along happily 24 hours a day, breathing in air and separating it into oxygen (needed in steelmaking and other industries) and nitrogen. The Wizard takes its own temperature and pressure. When things go wrong it automatically telephones a supervisor, giving its symptoms. If the trouble is serious it shuts itself off. And the Wizard works right at the customer's site, so there is no need to haul oxygen from a chemical factory in cylinders.

The Wizard means the end of the line for workers who once produced oxygen. The 250 chemical workers who used to manufacture it for the Pittsburgh area have shrunk to 80 and will continue to dwindle as the new automatic units are installed.

Improved technology has had a similar effect in other major industries. Not long ago, at the Ford Motor Co.'s world-famous River Rouge plant outside Detroit, I watched an iron casting move down a machining line and, untouched by human hands, turn into a finished engine block. Each block is transferred automatically from one machine to another, automatically positioned before automatic drilling machines. Several attendants, policing the line for electronically signaled breakdowns, have replaced the whole crew of machine operators.

During the first industrial revolution, 150 years ago, laborers sometimes invaded the new factories and smashed the machines that replaced them. Today, laborsaving machinery is so accepted that union and employer take it into account in their contracts. Automobile workers get an annual 2½ percent wage increase, on the assumption that steadily improved machinery permits the worker to produce 2½ percent more with his hour's work. So, obligated to pay productivity increases, the auto companies must find new ways to make machines more efficient. Add to this the contribution to industry that scientists—working with the military—have made: first, they developed electronic computer devices to solve gunfire problems. Then they created machines with mechanical brains (like the guided missile) that are set to do a certain job, take note of changing conditions and automatically correct themselves. The result: industrial progress has been pushed ahead by decades.

A simple set of figures tells a dramatic story of what has happened and provides a glimpse of what's to come.

Back in 1919, when there were only 105 million of us in this country, it took some 26 million workers to grow our food, dig our fuels and metals, and make the goods we needed. Today there are 178 million of us. Yet the number of workers needed to supply us is virtually the same—26 million—and they're working a shorter week.

But if jobs in factories, farms, and mines didn't increase, where did the jobs come from for the 60-percent rise in population? The jobs came from a higher standard of living—from additional services to the American people. Back in 1919, only 14 million Americans worked in service industries: in selling goods, in moving and storing them, in nursing, teaching, entertainment, banking, insurance, government, etc. Today nearly 32 million Americans work at providing such services.

As a guide to the future, these figures mean that in the unfolding era of automation, laborsaving machines will do what they have always done. They'll lift onerous chores from men's backs and legs; they will create new national wealth, produce more things and services for more people. They'll open up new vistas of greater leisure and fuller living.

But, meanwhile, there is the transition, the birth pangs of a new era. When machines don't need men, what happens to the men?

Ex-Chrysler metal polisher John Miller (that's not his real name), a slight man of 52, is one of the displaced industrial workers. His $7,000 home in northside Detroit, bought with a GI loan, had a "for sale" sign when I looked in on him recently. In the living room Miller's wife quieted a toddler in her arms, as two other children studied me.

Miller was laid off 13 months ago. Although he had 12 years of seniority, his shop steward said, "You won't be called back, ever." Since then he has been getting a $41 weekly unemployment insurance check intermittently (it stops whenever he picks up an odd job). U.S. surplus food—15 pounds of corn meal monthly, 7 pounds of butter, rice, flour, and dried milk—helps eke out the unemployment check and keep Miller, and some 100,000 other jobless in Michigan, from hunger.

Miller uses every waking hour looking for a job. "Nights I lie awake thinking. Where do we go when we lose the house? How will we get by when the unemployment checks stop in a couple of weeks?"

The unemployed in the United States totaled 3,625,000 during April. This figure was lower than in the prior month, and Labor Secretary James P. Mitchell predicts it will continue to shrink. Yet, while industry had recovered to reach an alltime peak, only one of every two jobless factory workers had regained his job. Industry was able to surpass old output records without taking all the men back.

The perplexing result is that amid returning prosperity, higher production, and even higher wages, indigestible lumps of unemployment persist in various parts of the Nation. Most of these pockets of poverty are in old established industrial centers: in Buffalo, a steel center; in Detroit; in the coalfields of West Virginia.

The unfolding era of machines without men obviously confronts us with vast challenges. The immediate problem is a human one: the urgent need for a holding operation until the technologically unemployed can be absorbed elsewhere. Recognizing this need, President Eisenhower supported congressional action that twice helped States to extend unemployment insurance payment periods. The President has also urged all States to meet a common insurance standard: payments equal to half pay for 26 weeks.

For the long pull, large-scale programs of education and training are needed. Though automation shrinks the unskilled work force, it requires new armies of highly trained men and women.

The transformation of the Bell Telephone companies already reflects, within one industry, how automation can result in a need for more trained people. When the change-over to dial began, telephone operators made up more than half of the companies' total work force. Now they constitute about a third of the employees—thanks to local and long-distance dialing. Yet Bell System's total employment has advanced some 200,000 since 1945 to 590,000, as the country's growing wealth has increased the demand for telephone services. Advancing technology has required a much higher proportion of trained persons in the industry—more clerical help, more scientists, engineers, and craftsmen.

This is a nationwide pattern. When an electrical manufacturer introduced automatic machinery for assembling parts of television sets, many monotonous, unskilled assembly jobs were wiped out. But some surprising new demands followed. The company's industrial engineering staff doubled within several years. The company also found it needed more mechanical designers and technical writers, more salesmen and office workers.

"It's an intellectual recolution," says Prof. Gordon Brown of M.I.T. "I think the human being has to become smarter. This isn't anything to be afraid of—this is what man, intellectually, was destined to become."

In response to this challenging need for new skills, some businesses, unions and government agencies have already plunged into large-scale training programs. Consider the Plumbers' and Pipe Fitters' Union. Many chemical and oil-refining operations are already largely automatic, requiring human attention only to maintain, repair or clean out the intricate piping. This is a job for a plumber or pipefitter—but he has to be an educated worker who has mastered trigonometry, thermodynamics and many special skills. Aware of the coming golden age for plumbers and pipefitters, Peter T. Schoemann, president of the union, has opened some 34 schools across the country where apprentices train, and journeyman members retrain.

The International Brotherhood of Electrical Workers, finding that its electricians have to be upgraded to "electronics technicians" to hold their own, is also sending its journeymen members back to school. So are the machinists.

Employers, too, are retraining. Du Pont, for instance, needs a new breed of all-around skilled craftsman for the job of maintaining the new equipment. To obtain them the company has developed intensive programs that in 400 classroom hours, plus additional training on the job, can turn a raw high-school graduate into a mechanic with fundamental skills in blueprint reading, in mathematics, in handling tools. With longer training, up to 750 classroom hours, the program turns out a "control mechanic," a combination electrician and instrument repairman who can maintain the machines' intricate electronic control devices. Any employee with aptitude, from 17 to 64, can apply, and while learning may earn full-time pay. The result is a continuous upgrading of the entire Du Pont work force.

It is clear that we are on the threshold of vast changes in the face of America. The unions, for instance, must recruit new members from the growing white-collar groups to replace the loss in industrial workers—or dwindle in power. Violent changes are already apparent in our country's industrial

landscape. New industrial life has been pouring into a great geographical crescent from the Pacific Northwest to the South as employers abandon old multi-story factories and move to more efficient, one-story automated plants, usually away from the old locality and nearer to customers or to sources of materials—or to university centers with their scientists and technicians.

At the Labor Department in Washington, Commissioner of Labor Statistics Ewan Clague paced excitedly before a favorite chart. He pointed to a downhill line that dramatized the decline of jobs from 1929 into the trough of the depression year 1932. "Do you know there were proposals in Congress then to suspend patents on laborsaving machinery, on the ground they destroyed jobs?" he asked. "But new machines went on to play their usual role of wealth-producing heroes—not villains."

Then he pointed to another line, reflecting the steep rise in service-industry jobs since the thirties. "Who would have thought, in darkest 1932, that today we would be enjoying a prosperity such as this country had never known?

"The future is terrific," Commissioner Clague concluded.

And so it can be, if we use the present wisely.

Remarks by H. Bruce Palmer at the First Annual "My True Security" National Awards Program, July 21, in Washington, D.C.

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. SCHWENGEL. Mr. Speaker, on Tuesday, July 21, I had the privilege of attending the national awards program for the "My True Security" essay contest conducted by the U.S. Junior Chamber of Commerce in cooperation the Mutual Benefit Life Insurance Co., of Newark, N.J. One of my constituents, Miss Dianne Walljasper of Salem, Iowa, was Iowa's representative by virtue of having won the contest for her State.

Among the speakers at this event was H. Bruce Palmer, president of the Mutual Benefit Life Insurance Co., and himself a former president of the U.S. Junior Chamber of Commerce.

Mr. Palmer's remarks on self-reliance on the part of the individual say something which we in Government should heed. Under unanimous consent, I include those remarks in the Appendix of the RECORD:

All human beings grow in dignity and self-respect by reason of accomplishment and the assumption of responsibility. The spirit of independence, or of confidence, or of self-reliance is mightily nourished by the exercise of one's own efforts. Moral stature is increased and moral fiber is strengthened by each job done with the free play of one's own ability. Ambition, which inspires men to attainment, is fed by an atmosphere of endeavor. In short, a man develops by standing on his own feet. He does not wax strong by having others do for him what he can and should do for himself.

Are we interetsed in the cultivation of these qualities in our own citizenry? Have we properly appraised the value of the spirit they create, in terms of a powerful influence for the preservation of freedom in America? If this land of opportunity, where men traditionally have enjoyed more independence than in any other, is to maintain that national spirit which has blessed it from the very beginning, it must carefully foster the dignity, self-respect, moral stature, and self-reliance of the millions of individuals which make up the integrated whole.

Too much coddling, too much paternalism, too much recession from personal responsibility can have a decidedly weakening effect upon the aims and purposes of man. With the possibility of lapsing into a false feeling of security provided wholly by others, whether in financial matters or in business and social relationships, one of the spurs to maximum effort becomes inoperative. We should take thought, then, serious thought, that in our overall approach to this matter of planning security we do not adopt methods which will wither the spirit while catering to the needs of the flesh.

Individual security is the product of a man's continual growth toward the ability to meet the changing conditions of life and to adapt to them whatever they may chance to be. It is the ability to size up a situation properly and correctly—and to handle it competently and confidently. It is maturity. It is man's doing as much as he can for himself, and wanting as little done for him as possible.

The mature man, the secure man, plans. The immature, the insecure man has to have things planned for him.

For the infant cries for his mother: The adult plans for his family. The boy plays in today, but the man works for tomorrow. The child sees what he has and wishes somebody would give him more, but the man foresees what he will need, and plans so that he will have it. To the child, it is always now. To the man, now is only the beginning of what can be.

The grown man, the mature man, plans for his security. He knows that neither his personal nor business security can be donated from without. He knows it can only be created from within himself. He knows that the planning of his own moral, physical, and economic development are more than his democratic right. They are his democratic right. They are his personal duty. And so—he plans. By himself, for himself, to the very best of his ability.

This, too, I believe. A great many people share with me a growing concern that as more and more is done for the individual, more and more this stifles in him his initiative to do things for himself.

I believe that the man who knows his security is of his own making is armored against attacks upon his security of others' making.

I feel that a people collectively yields to demagogery or isms because the individuals composing it are lured by the promise of having more and bigger things that they want done for them.

I know that this ends in human beings having things done to them that they do not want.

This, finally, I most earnestly believe:

The man who has learned to speak for himself will not quickly yield to being told what to say.

The man who has learned to think for himself will not supinely succumb to being made a slave. And the man who has learned to plan for himself so that he can stand on his own feet will never agree to plans for himself or fellowman that would drive them to their knees.

Never before in our history have we so needed individual maturity and self-reliance among the great body of our citizens and the sense of true security which it brings.

Farmers Not Concerned With Carrots on the Moon

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. ALBERT. Mr. Speaker, the distinguished majority leader has sent me a clipping from the Boston Sunday Globe of July 19, 1959, containing an article on the farm problem by James H. Powers which I am taking the liberty of extending in the Appendix of the RECORD. This article looms like an oasis of fact amid the desert of untruths and half-truths that are appearing in most of the metropolitan press on the subject of agricultural legislation.

I hope our friends from the great urban areas of our county will read this article. I hope also it will be read by those among our Republican friends who seem inclined to follow the Pied Pipers of the Department of Agriculture. There are those who seem to believe that all we have to do to solve the farm problem once and for all—all that is necessary to insure a strong and healthy agriculture—is simply to revert to the do-nothing policies of the Harding-Coolidge-Hoover administrations, which were followed by the most serious economic depression in the history of American agriculture.

Mr. Speaker, a copy of the article to which I have referred follows:

FARMERS NOT CONCERNED WITH CARROTS ON MOON—BUT ARE LIKELY TO SHOW RESENTMENT AT POLLS IN 1960 OF BENSON'S POLICY THAT INDUCES BUMPER CROPS IN THE FACE OF VAST GRAIN SURPLUSES

(By James H. Powers)

The farm problem which emerged like a djinn from the magic bottle to plague the Nation's economy through the twenties and thirties, and harass Congress, appears to be preparing a return visit—and with a vengeance. With an election year looming, this may prove politically awkward.

Storm signals are flying already in this paradoxical situation, wherein abundance spells woe alike to husbandman, politician, and taxpayer, and above all to Secretary of Agriculture Ezra Taft Benson.

One such alert is Mr. Benson's own recent prediction that net farm income in 1959 will fall still another billion dollars. In the wake of a billion-dollar drop in 1958, this will mean that the net earnings of more than 6,800,000 farm families have nosedived close to $5 billion in the past 7 years. When consistently falling farm prices face further steep declines, while the prices the farmer pays for his necessities edge steadily upward in an economy industrially flourishing, the mixture becomes explosive.

WARNINGS MULTIPLY

Other storm warnings have been multiplying. The Nation's cattle herds now exceed 100 million head—a record. That

presages a beef deluge on the winter and spring markets, and a swift sag in growers' prices. Hog raisers have similarly bred up their stocks to huge dimensions to bolster falling incomes. The prospect has so alarmed the Agricultural Committee of the National Planning Agency that it urged, this past week, a 1-year-only Government subsidy on hogs. There are now no price supports on livestock.

Meantime, a super corn crop, 14 percent above all previous records, is pouring into midwestern bins. This follows from a policy Mr. Benson urged last winter, when he induced corn growers to abandon acreage controls in return for a relatively strong price support program of $1.12 a bushel paid by the Government. Now he is moving to do the same for wheat—though the Government already has $2.2 billion tied up in wheat surpluses.

Mr. Benson's basic policy seeks removal of all Government intervention through planting restrictions, and retention of a flexible, moderate, price-support program. Experience with corn this year suggests that the plan is gravely defective. Indeed, the Secretary's foes in Congress accuse him of a deliberate plan to wreck the Nation's basic price support, acreage-control policy in an effort to impose free farm market ideas on one of the most vital sectors of our economy.

OUR TREMENDOUS STAKE

The charge is doubtless exaggerated yet if anything is clear from 30 years of experience, it is that the country's stake in a sound farm policy is tremendous. Our agriculture is only partially symbolized by the number of farm families and by the fact that farming covers only about 11 percent of our population. More than half of all raw materials used in the country come from the land. Farmers also represent a multibillion-dollar market for American industry. Continued agricultural convulsions are no negligible matter.

President Eisenhower's recent warning, that, unless the $9 billion surplus problem is dealt with resolutely, our entire agricultural policy faces collapse, is a simple statement of truth. That Secretary Benson's ideas have not restored health to this ailing sector of our economy in the past 6 years, is equally obvious. Nor can Congress escape its share of the blame for our farm policy failures.

PROBLEM 38 YEARS OLD

How did this costly riddle develop in the first place? Before 1919, our agriculture expanded by 8 percent in productivity to meet demands of World War I. Thereafter, productivity remained high while markets declined at home and abroad; but the successive administrations of Harding, Coolidge and Hoover offered no constructive lead to put the distorted picture in order. The farm problem had appeared.

The impasse between our floundering agriculture and tight conservative orthodoxy in the White House produced the farm bloc in 1921, precipitating political war in Congress in both parties. The great depression brought matters to a head. In the Agricultural Adjustment Acts of the thirties, the Roosevelt administration sought to extricate the farmers from the economic swamp through a policy of price supports and acreage controls designed to bring the farmer's dollar into balance, in buying power, with the industrial dollar. This was the famous parity idea translated into policy.

But World War II repeated the history of World War I. Huge wartime expansion of American agriculture was followed by collapse of markets. The technical revolution in farming forced by the war had literally made two blades grow where there was once but one. New farming science, new machinery, new techniques, all spelled rising production, even as the number of people on the land declined, and markets shrunk abroad. The depression-born system of farm price supports and planting controls became distorted. Its difficulties have increased since the Korean war.

SNAP BEANS ON THE MOON

The answer to the riddle is unlikely to be that of Mr. Benson, whose vision of agriculture is tinged with a belated 19th century nostalgia for a free farm market in a nonexistent laissez faire economy. Nor will solution be found in politically rigged farm price-support policies which ignore the preposterous trends illustrated by the present $9 billion surplus, and more bumper crops on the way.

A nation experiencing the second phases of the 20th century industrial revolution cannot afford much longer to act as if American agriculture were but an indigent rural relative. In the 1958 elections, opposition to the Benson philosophy devastated traditional Republican strongholds in most of the 17 major farm States.

Portents suggest clearly that in 1960 the primary concern of the farm voter in the economically distraught congressional districts of those 17 States will be not with projects for growing carrots and snap beans on the moon (as an economist proposed last week) but upon getting our enormously important farm policy put in order.

Journal Star Editor Reports on Tour Into Russia

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. MICHEL. Mr. Speaker, Mr. Charles L. Dancey, editor of the Peoria Journal Star, has just returned from a month's tour of the Soviet Union. He is presently writing a series of articles which will appear daily in his paper, and I should like to read into the RECORD at this point, the first article of the series. It will be my intention to ask for permission to print the entire series from time to time and assure Members of the House that they come from one well known in our area for his objective reporting of the news. The series will, I am sure, be very good editorial reading for all of us:

[From the Peoria (Ill.) Journal Star, July 19, 1959]

JOURNAL STAR EDITOR REPORTS ON TOUR INTO RUSSIA

(By Charles L. Dancey)

WASHINGTON, D.C.—It is unwise to make general statements about the Soviet Union. Many writers have done so, but it is unwise because it is a big country made up of many millions of people of all kinds.

If a reporter is both honest and industrious, he will find a goodly share of happy, contented people—and he will also find people who are bitterly unhappy.

He will find aggressive people with a high morale and driving purpose—and he will also find cynical people and apathetic people.

He will find great accomplishments and examples of amazing efficiency—and he will also find great failures and examples of scandalous waste and inefficiency.

He will find confidence—and he will find almost unbelievable fear.

In short, a reporter can find and report what he wants to find. And since there is no Gallup poll available, who can judge the degree of loyalty to the Communist regime, for example, or of love for America, or of hate for America?

Therefore, a writer ought to tell his readers under what conditions he received his information and as much as possible an account of facts, and let the reader interpret for himself—or at least evaluate the interpretations that are offered.

It should be understood, first of all, that a newsman can get into Russia in only two ways—as a journalist, or as a tourist. If he enters as a journalist, he is subjected to strict controls, with rare exceptions including confinement to the city of Moscow.

If he enters as a tourist he may travel but he is required to travel deluxe at a level where any contact with ordinary citizens is difficult, and accompanied by a Russian guide and interpreter who prevents effective contact with unauthorized persons. As a tourist, one has no status or rights as an investigator or reporter.

I traveled as a tourist but, thanks in part to the flood of U.S. tourists into Moscow at this time and to my position that it would not be seemly by American standards for me to travel alone with a young woman guide, I was permitted to travel completely alone (although guides met me at every city and stayed with me for varying amounts of time).

In this manner, I entered Russia on one of their fast jets to Moscow, converted to an ancient relic similar to a DC-3 and flew to Odessa, spent a few days, proceeded alone by ship to the Crimea, thence by ship to Sochi on the Caucusus mountain coast, thence by train to Rostov, and then enjoyed a 3-day trip up the Don River, through the canal into the Volga to Stalingrad, thence by air from Stalingrad to the great oil center of Baku, from Baku into the heart of the Caucusus and to Stalin's home city of Tbilisi, and finally by plane over the Caspian Sea into Trans-Caspian areas of Tashkent and Samarkand in Central Asia.

During this journey I visited not only Russia but the Ukraine, Georgia, Azerbaijain, and Uzbekistan, besides a "weather stop" in the Ural mountains at Sverdlovsk.

I had long and intimate conversations with many Soviet citizens in the middle management and worker classes without benefit of interpreter, and with the aid chiefly of Berlitz' remarkable book on the Russian language and a dictionary—plus the Russians' own insatiable curiosity about the United States.

Among those I talked to were Russians, Ukranians, Jews, Georgians, Armenians, Azerbaijanese, Uzbeks, and Tartars, not to mention East Germans, West Germans, and Czechs.

Among them were two librarians, a school director, an electrical engineer, a radio engineer, a local union official, doctors, sailors, collective farmers, the director of a state farm, two police officers, a number of students, a few teachers, a former partisan unit commander, a former major of a tank battalion (who fought at Stalingrad) and a former Baltic fleet sailor—plus many who were not clearly identified as to occupation.

These are the people veteran correspondents with long service in Russia told me I could never talk with effectively.

And on one occasion I was able to enter a Russian home, spontaneously and without warning, the one thing which was emphasized above all as impossible for an American.

The interview technique which finally evolved was quite simple. Let the Soviet citizen lead with his many questions about

the United States. This gives time to establish a rapport both personal and also in the matter of language—understanding one another in a sort of simplified pidgin Russian.

Then with rapport established, and some obligation on his part, you simply turn around and ask him the same questions but about his country. Actually, his selection of questions is often as illuminating as his later answers to your own.

The only way to fairly report what happened is to refer to my three notebooks full of notes and simply offer extracts of actual incidents in a daily log form, and the reader can judge for himself how the people feel about Americans, the economic level of their existence, and what sort of people they are plus a good bit of how they live.

Unfortunately, some of these people are frightened. I do not know if it is with reason or not. Some obviously are not frightened. However, out of respect for those who are, it is necessary to report some information in a general way without clearly indicating in what place and from what sort of persons this information was obtained. (Most of it was piecemeal anyway).

These reports will be separate from the log, but the astute reader will also be able to do a good deal of reading between the lines.

Some readers may figure that some of these contacts were planted by the Russians, and others not. I don't know myself. I do know that there were some of whom I was particularly careful.

Such a trip is definitely an adventure, and I returned having lost enough weight that my clothes fit badly, with a rather heavy facial tan, and my hair in the same condition as that of the western actors on TV.

But I tried to reach the Peoria area of the Soviet Union, and came closer to it, I think, than I really expected would be possible.

U.S.S.R. Visitors Oppressed; Editor Discovers Why

(By Charles L. Dancey)

Americans, by and large, even those who are deeply impressed and enjoyed themselves in Moscow or at the Black Sea resort area, are glad to leave and feel an indefinable atmosphere that is oppressive to them.

I think I know what this is.

In a manner of speaking, there are no civilians in the U.S.S.R. There are only classes that can best be compared with military classes. There are the troops (workers and peasants), the NCO's (foremen), the officer caste (middle management) and the high brass.

Inside these classes in the next to the top are also the "West Pointers"—party members—who theoretically have no advantages or privileges but have a tendency to take better care of one another than of the nonparty folks.

The people live a barracks-type life, even those in the new apartment buildings which resemble our own housing projects (Government). They fill the streets after working hours, just wandering around, standing on corners, sitting on park benches, like soldiers in the city from camp.

Their entertainment, while some of it is excellent, has the unmistakable flavor of the USO.

Their stores are all post exchanges.

Their newspapers are house organs run by the company or like a camp newspaper.

And last but not least, every noncommissioned officer and officer in the Soviet Union is necessarily a career man with his finger on his number.

In short, the whole country has an institutional odor about it which is very depressing to an American used to our own free and often spontaneous way of living.

It should be said, however, that to many Russians this is the height of efficiency, and our own way of life seems loose, inefficient, even frightening.

"How can you locate a friend or relative that has moved if everyone doesn't carry a passport and isn't registered wherever he goes with the authorities?" is a sample of their attitude about freedom.

"But what do you do if * * * ?" keeps cropping up. Many of them would be lost without Big Brother over their shoulder.

Dictators in Our Colleges?

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks, I include an article which appeared in the June–July 1959 issue of the Steuben News, official publication of the Steuben Society of America. I commend this article to the attention of my coleagues:

Dictators in Our Colleges?—Some Reactions to the National Defense Education Act of 1958

(By Albert E. Reitzel)

Students, though citizens, are being prevented by some college authorities from obtaining loans from the U.S. Government to pay for courses of study in the colleges. The loans are authorized by the National Defense Education Act of 1958. This law passed by the 85th Congress provides that students at a college may borrow up to $1,000 a year to a total of $5,000 directly from the funds allotted to the college. Under this law the funds are allotted by the United States to the college and the college must match not less than one-ninth of the amount of the fund allotted to it.

The newspapers say that seven colleges have returned to the Government at Washington the funds allotted to them for loans to students under the law. The reason given is that the authorities of the colleges disapprove the requirement of the law that a student seeking a loan must file an affidavit with the U.S. Commissioner of Education that "he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods."

The colleges which have returned the funds are Amherst, Antioch, Bennington, Goucher, Reed, Sarah Lawrence, and Wilmington College in Ohio.

Princeton, Bryn Mawr, Haverford, and Swarthmore have refused to apply for the funds either because of the affidavit or the oath of allegiance which is also required by that law. Either one or both requirements are objected to by the Association of American Colleges and the Association of University Professors. Similar objections have been made by other organizations.

The law represents the overwhelming judgment of our Government. It was passed by the Senate of the United States on August 22, 1958, by a vote of 66 to 15; the next day by the House of Representatives by a vote of 212 to 85, and a few days later was signed by the President.

PURPOSE OF THE ACT

The law declares that it is "the purpose of this act to provide substantial assistance in various forms to individuals, and to States and their subdivisions, in order to insure trained manpower of sufficient quality and quantity to meet the national defense needs of the United States."

The reason stated by the law is that "the security of the Nation requires the fullest development of the mental resources and technical skills of its young men and women," because "the present emergency demands that additional and more adequate educational opportunities be made available" and "the defense of this Nation depends upon the mastery of modern techniques developed from complex scientific principles."

So the law requires that in the selection of students for the loans, special consideration shall be given to "students with a superior academic background who express a desire to teach in elementary or secondary schools" and to "students whose academic background indicates a superior capacity or preparation in science, mathematics, engineering, or a modern foreign language."

AFFIDAVIT AND OATH REQUIRED

The exact language of the affidavit required by the law from the student seeking the loan is that the applicant "does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods." And the exact language of the oath which the law requires the applicant to subscribe to is: "I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic." The law makes these affidavits, if false, a crime subject to severe penalties.

No information of how the requirements of affidavit and oath got into the law can be found, except that they first appeared in the bill offered in the Senate. They were among certain provisions of that bill that were incorporated in the bill introduced in the House of Representatives (H.R. 13247) that became the law of the land.

The wording of the affidavit suggests that it was in recognition of certain influences which may affect some students entering college.

One influence is pointed out by a report of January 2, 1953, of a Subcommittee to Investigate the Administration of the Internal Security Act. The report was to the Senate Committee on the Judiciary and said: "Despite the unquestioned loyalty and self-sacrificing devotion to duty of the preponderant bulk of America's teachers, there are yet many hundreds of teachers who are Communists" and "Communist teachers radiate an influence much greater than their proportionate number."

And a law of Congress of 1954 declares that the Communist Party of the United States, which claims to be a political party, is in fact an active part "of a conspiracy to overthrow the Government of the United States."

Already a law of Congress of 1950 had stated that "the nature and control of the Communist movement itself, present a clear and present danger to the existence of free American institutions." And the Communists make use of teachers, as Georgi Dimitrov, a Russian official, has said: "A university professor, who without being a party-member lends himself to the interests of the Soviet Union is worth more than a hundred men with party cards."

This statement is quoted from a report of 1958 of a special committee of the American Bar Association on Communist tactics, strategy, and objectives.

In the face of this background and the purpose of Public Law 85–864 to help students to take courses that will be of aid in our defense, who can have reason to say that Congress was not justified in requiring the applicant for a loan under the law to make the affidavit that he does not believe in or

support groups advocating the overthrow of the Government by force or illegal methods?

And what convincing reason can a patriotic student give for refusing to take the oath in connection with his application for a loan under the law?

STUDY OF FACTS

The further requirement of an oath of alegiance from the applicant for a loan under the law must be looked at in the light of several facts. Among the students may be many who have dual citizenship, in these ways. Some of them, though American citizens by birth in this country may be citizens also of foreign countries through their alien parents. Other students may be persons born abroad of American parents and so have American citizenship but continue to be citizens of the country in which they were born.

Even persons born abroad of one American parent may under certain conditions be American citizens as well as citizens of the country in which they were born.

Also, the law does not expressly require that an applicant for a loan must be a citizen. Many students in our country are aliens. Some of them are lawful permanent residents here. Many others are here temporarily as students. Some of these students have come from countries, in which they grew up under traditions and principles of government different from or even hostile to ours.

No law prohibits any class of students to depart from the United States at any time, even after obtaining loans under the law to aid them to take courses at our colleges or universities, or to depart after completing their courses in colleges here.

So it is reasonable that Congress wished to confine the loans to students with special attachment to our country and Government that would cause them to wish to remain here.

Only in that way could we be sure to have the benefit of their training resulting from the loans under the act of 1958, instead of their department to live in some foreign country that then would get all the benefit of the student's training in the United States of America.

The oath is obviously required only for the special purpose of the law and is not a law relating generally to the acquiring of American citizenship. Under such circumstances, the oath could not have been intended to confer American citizenship on an alien student. And if an alien student wishes to avoid any possible effect on his foreign citizenship, he is free to refuse to take the oath and do without the loan.

PERMANENT ATTACHMENT

So the requirement of the affidavit and oath of allegiance are reasonable means to confine the loans to those beneficiaries of our Government who are students that show a permanent attachment to our country and its traditions and future, hence likely to remain here and stand by our country in any crisis.

The requirements can be easily enforced by having the student under oath sign the affidavit and the oath in the application for the loan. False swearing to either would be the basis for prosecution for that offense or for perjury.

Nothing in the law or its spirit prevents any student from refusing to sign the affidavit or take the oath of allegiance, and thereby give up the opportunity to obtain the loans.

But no information is available or indicated that the great majority of students desiring the loans are not ready and willing to sign the affidavit and take the oath of allegiance required by the law. But such students are being prevented from obtaining the loans in cases in which the college authorities are returning to the Government the funds allotted for such loans or are even refusing to apply for such funds.

SPIRIT OF DICTATORSHIP

That attitude of the college authorities is not in the spirit of liberalism or of conservatism, but in the spirit of dictatorship, in that the authorities are using their personal notions to prevent any students from exercising their individual rights to comply with the law and obtain the loans, and such notions of the college authorities could seriously cripple the defense program of our Government.

That dictatorship of personal notions is in thoughtless disregard of the defense purpose of this particular law, in the face of an international Communist conspiracy against us that causes every year hundreds of thousands of men to be drafted by our Government from their homes and chosen pursuits to serve in our Armed Forces anywhere in the world.

Bills have been introduced and are pending in Congress to eliminate the requirements of the affidavit and oath of allegiance.

The bills are hardly worthy of serious consideration, but the law ought to be amended in such a way as to clearly confine any loans under Public Law 85-864—the National Defense Education Act of 1958—to such students only who are either American citizens or who are aliens legally residing here permanently under our immigration laws.

Anti-Communist Week

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. DORN of New York. Mr. Speaker, I believe the unselfishness and eagerness of Dr. Leon F. Nadrowski in his efforts to fight communism on our homefront deserve the attention of my colleagues.

Dr. Leon F. Nadrowski is a physician. He has devoted his life to fighting disease. He is now launching a move to fight the greatest disease of all—communism. He suggests that everyone be thoroughly educated, beginning in the classrooms, as to what the Communist doctrine and threat means to all of us. Dr. Nadrowski believes that Americans should be as aware of the Communist menace as they are of cancer and polio. Periodic medical checkups are advised to catch the cancer cell early—but we have no checkups to alert us to the budding Communist cell. We have the Salk vaccine as a precaution against polio—our only vaccine against the evils of communism is education.

Ignorance and apathy are the great allies of the Communists. To overcome these, the free world must arm with a new weapon—enthusiasm and interest. Dr. Nadrowski has suggested an Anti-Communist Week—a week devoted to alerting and educating the peoples to the great disease of communism.

Early this year a successful anti-Communist rally was held in Greenpoint, sponsored by the St. Stanislaus American Legion Post. It met with such enthusiasm that it was suggested that an Anti-Communist Week should be promoted on a national scale, starting appropriately enough on the 23d of October each year, the anniversary of the Hungarian uprising. This week should be spent by all Americans to further their knowledge of communism and its grave threat to our existence. This should not, of course, substitute for our daily vigil against communism, but serve as a special reminder of our alertness against communism.

The So-Called Maffia

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. KEOGH. Mr. Speaker, increasing protests are being made with respect to the unjust attempts to discredit the more than 12 million loyal, law-abiding, decent Americans of Italian origin because of the acts of the few. Since the discovery of America by one of their forebears, Americans of Italian lineage have made great contributions to the growth and welfare of our country and have proven their loyalty both in peace and in war. Thinking people everywhere decry the efforts being made to erroneously portray the place in our society of millions of Americans of Italian origin who comprise one of the most important segments of American life.

In connection with this subject, I am pleased to insert in the RECORD the following excellent article by George E. Sokolsky which appeared in the Washington Post of Wednesday, July 22, 1959:

THE SO-CALLED MAFFIA

(By George E. Sokolsky)

When anyone generalizes from the particular, his logic gets twisted. To assume therefore that all Italians in the United States and their descendants are criminally organized in a body called "the maffia" is to accept not only guilt by association but damnation by birth and nationality.

The maffia was a criminal society organized in Sicily at the beginning of the 19th century and maintained a reign of terror until it was reputedly suppressed by Mussolini. One of its principal activities was kidnaping. The first record of the existence of the maffia on American soil was in 1890 in New Orleans when a chief of police was killed and 11 Italians were lynched because of it. At the turn of the century, kidnaping scares were attributed to the Black Hand, which was reputed to be an American emanation of the maffia or the Camorra, its counterpart in Naples. During the era of bootlegging, the genius of the business was Al Capone, although not all bootleggers were of Italian origin. Nor was the entire Capone organization of Italian origin. Nor is there evidence that Capone belonged to the maffia.

It is roughly estimated that about 12 million Americans are of Italian origin. Many of them have intermarried with Americans of other origins. The relationship of a few persons engaged in marginal and criminal enterprises to the entire Italo-American population is infinitesimal, but even a small criminal element should be suppressed by police action.

What has happened in this country after each wave of immigration is that the process of adjustment to a new environment produces a residue of persons who do not adjust and others who are able to take enormous and sometimes illegal advantages of their opportunities. To say that the large population of Italo-Americans are all marginal operators is obviously untrue and adds another unfortunate quarrel among our people.

Each wave of new immigrants developed a discrimination against their kind. Perhaps no immigrants to this country had as difficult a time as the Irish who came here after the great famine of 1846 and encountered the sign, "No Irish need apply." The antipathy toward the Irish was complicated by an anti-Catholicism which was general and which still persists in many parts of the country. The Irish have become ubiquitous and in many places powerful. In fact, now like their predecessors, the Germans, they are becoming thoroughly assimilated into the American population and no one any longer questions their right to be.

As one speaks of waves of immigrants, he refers to periods of intense migration. The fact is that immigrants of all stocks have been here since the beginning of the white man's presence in this country. After all, Christopher Columbus, an Italian, discovered the Americas; and John Cabot, an Italian, discovered the coast of North America for the British. Cabot was probably born in Genoa but was a citizen of Venice, although his name sounds English.

The meeting at Apalachin, N.Y., in November 1957, of 60 men, all of Italian origin, stimulated renewed interest in the Mafia. Whereas there is no testimony to establish that this was a meeting of the Mafia, it is generally assumed that it was. While nobody has been able to ferret out the facts of this meeting, it is generally assumed that it had to do with laying out the areas of operations in dope, prostitution, etc., of the criminals who attended.

Out of approximately 12 million Italo-Americans, 60 were present at Apalachin. They were all Italians, it is true. But does this prove, for instance, that Italians do not make good citizens? Do we have to balance Enrico Fermi against Vito Genovese? Do we have to balance Frank Sinatra against Lucky Luciano? What does such balancing out prove? It really proves nothing at all. Some men are useful citizens and some are not. It would be like denying Einstein's achievements in science because there was also a Julius Rosenberg.

The ad hominem conclusion can lead one far astray in his thinking. The Italians are a comparatively young strain in our population. They follow the general pattern of other immigrants in putting their roots deep in the country's soil. After all, the largest and one of the most progressive banks in the United States, the Bank of America, was founded by an Italo-American, Amadeo Giannini.

National Indian Encampment

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. ULLMAN. Mr. Speaker, in celebration of her 100th birthday, Oregon has planned many spectacular events for your enjoyment. One of the most outstanding, in my opinion, is the National Indian Encampment to be held in Pendleton, Oreg., from July 18 to 26, 1959. The Umatilla, Walla Walla, and Cayuse Tribes of the Umatilla Reservation and the Nez Perce Indians will cohost this memorable gathering. Invitations have been issued to 2,300 tribes in North America to take part in this encampment.

It will be an all-Indian show with members of many tribes competing at their games, working at their native crafts, and displaying their handiwork. On display will be priceless heirlooms handed down from forefathers and historical items never before displayed.

It is fitting that the encampment be held in Pendleton inasmuch as it is located in the home territory of the Umatilla, Nex Perce, Cayuse, Walla Walla, and Yakima people. Perhaps no other city has done more to preserve the traditions and culture of the past than Pendleton. The Pendleton roundup is famous throughout the world and it is now hoped that the National Indian Encampment will become an equally famous annual affair.

It would provide an excellent way to preserve knowledge of authentic Indian music, arts, crafts, and ceremonies and insure the perpetuation of these basic American traditions.

The Indians of my district join with the townspeople of Pendleton in urging you to visit this encampment. Mayor Norman Gorfkle spoke for all of us when he welcomed centennial visitors, saying:

We possess an asset that can only be earned. It's hospitality, and you'll be aware of it during your every moment as a visitor. We like people; we don't just tolerate them.

Canadian Experience With Respect to the Export of Forest Products to Red China

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. PORTER. Mr. Speaker, I have advocated on the floor of this House and I still advocate the sending of a trade mission to Red China to discover the potential and conditions of trade with the United States.

Naturally I have been interested in the prospects for our exporting forest products, considering that men and women in the Fourth Congressional District of Oregon, which I have the honor to represent, are chiefly concerned with the harvesting and processing of forest products.

The Canadian experience, according to their Embassy in a letter dated July 13, 1959, is not encouraging.

The letter states:

No forest products were exported in 1955, 1956, 1958, or the first half of 1959. It has been the experience of Canadian businessmen visiting China that it is most difficult to obtain any idea from the Chinese of their requirements for various commodities including forest products.

I do not underestimate the difficulties to be faced by such a mission, but these difficulties are small compared to the benefits to be derived in terms of world peace and the trade which certainly can be developed in due course.

Under unanimous consent I am including the entire text of the letter sent to me by the Canadian Embassy:

CANADIAN EMBASSY,
Washington, D.C., July 13, 1959.

The Honorable CHARLES O. PORTER,
The House of Representatives,
Washington, D.C.

DEAR MR. PORTER: May I refer to your letter of June 25, and my interim reply of June 30, about your interest in Canadian exports to mainland China.

I have now received some comments from the Department of Trade and Commerce in Ottawa which indicates while Canadian exporters of forest products in the Pacific Northwest have been interested in the possible market in mainland China for their products and in some instances have visited China, there have been very few enquiries or orders received from the Chinese. Moreover, as far as the Department is aware, the latter had given no indication as to what their requirements might be. In 1957 Canada exported $78,237 of pulp sulphate kraft, $50,000 of pulp sulphite and $296,795 of kraft paper. No forest products were exported in 1955, 1956, 1958, or the first half of 1959. It has been the experience of Canadian businessmen visiting China that it is most difficult to obtain any idea from the Chinese of their requirements for various commodities including forest products.

I hope that this short report will be of use to you. If there is anything further which we may be able to do for you, please do not hesitate to get in touch with us again.

Yours faithfully,

WM. JONES,
First Secretary (Commercial).

Prayer of Dr. Frederick Brown Harris at Launching of the NS "Savannah," Camden, N.J., July 21, 1959

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, except the Lord build a ship they labor in vain who build. On yesterday, Dr. Harris invoked Almighty God to protect, guide, and direct the forces of America to dedicate the power of the atom to the relief of want and woe. He has reminded us as other men of other days have been reminded, "I have set before you life and death, the blessing and the curse, therefore choose life."

To be sure, Mr. Speaker, we all pray with Dr. Harris that the *Savannah* undertake her world mission and speed "to the seven seas, and our Nation answer to God's challenge."

Mr. Speaker, it was no accident that the Almighty God gave America the power to harness the atom. Mr. Speaker, it is no accident that the atom has been dedicated to peace by this peace-loving, God-fearing Nation. Mr. Speaker, Dr. Frederick Brown Harris spoke with an unanimous voice of 180 million Amer-

icans on yesterday when he invoked God's help and mercy in a solemn dedication to His work and our application of the mightiest force on earth—the application of the harnessing of the atom. I commend his prayer to those who are fortunate to read it. His prayer follows:

PRAYER OF DR. FREDERICK BROWN HARRIS, THE CHAPLAIN, U.S. SENATE, AT LAUNCHING OF THE NUCLEAR SHIP "SAVANNAH," CAMDEN, N.J., JULY 21, 1959

Our Father God, who hath made and preserved us a Nation, Thy sea is vast. Our boats are small. Yet, there is a wideness in Thy mercy like the wideness of the sea. We are grateful that across the boundless expanse of that infinite mercy our little barques of faith and compassion propelled by Thy constraining love may reach, with cargoes of good will, needy lives half a world away.

Upon the waters of this storied river which saw the birth of the Nation, we come to commit a vessel our frail hands have fashioned. In this epochal hour we fervently pray that to a fear-haunted world this deed may be a prophetic symbol of potential destruction, being harnessed as the willing servant of the gentle and benevolent forces that uplift and relieve and make to blossom wildernesses of want and woe.

We come conscious that the eyes of the Nation are upon this scene, over which is arched a rainbow of radiant hope. With the keys of awesome power now in the hands of erring and wilful men, we beseech Thee for the restraining grace of moral control and the passion for a fairer world to be shared by all Thy children, lest the awful instruments of terror and havoc, ignited by human hate, shall scourge the planet which is our home and melt into brittle glass the fruitful earth.

As this historic ship glides down its destined way, to join those that go down to the sea, who do business in great waters, to be propelled by mystic power that could incinerate the globe, we witness before man and before Thee, our God, that a vow is registered in heaven, to utilize this force—which could destroy us all—to serve us all as with potent energies it may carry food and clothing, help and hope, to the uttermost parts of the earth.

Above all other voices, louder than the tumult and shouting of these violent days, we would hear Thy voice saying to us even as it spoke to men of old, "I have set before you life and death, the blessing and the curse; therefore choose life." Dear God and Father of us all this ship, destined to carry blessing, now to be speeded to the seven seas, is our Nation's answer to Thy challenge.

In these days when the tempest still is high, we implore Thy guidance for those by the people called to steer the ship of state in mountainous seas, especially upon the President to whose heart this project is so dear, upon his coadjutors, and the Congress, that they may be given wisdom from on high regarding the things which belong to our peace.

May this ship be a sign to all the world of human wills bent to Thy control, and dedicated to the great causes that concern our human family, to the selfless ministries that will help to heal the sad world's open sores and burn away barriers to a brotherhood of goodwill where mouths shall not cry for bread, where hands and feet shall not be shackled, where speech shall not be silenced, where eyes shall not be bandaged, nor minds darkened by distorting falsehoods which hide the light of truth and where there may be poured out under all skies, upon Thy children the myriad benefits for titanic good, locked in the tiny atom.

We ask it in that Name which is above every name. Amen.

Fair Trade

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. CELLER. Mr. Speaker, under unanimous consent, I insert in the CONGRESSIONAL RECORD an article from the Passaic, N.J., Herald-News, of June 26, 1959, entitled "Drug Lobby Pushes Fair Trade":

DRUG LOBBY PUSHES FAIR TRADE—TERRIFIC PRESSURE FOR BILL TO FIX HIGH PRICES

(By Ray Tucker)

WASHINGTON.—A costly and dramatic demonstration of consumer helpnessness in the face of an organized lobby may soon be staged on Capitol Hill through passage of a so-called fair trade bill.

Although bitterly opposed by the White House and every affected government agency (the President's Council of Economic Advisers, State, Justice, Agriculture, Commerce, and Federal Trade Commission), as well as by many members who support it publicly, the National Assaciation of Retail Druggists' powerful lobby appears to be more effective than Uncle Sam's united opposition.

Two other influential lobbies—the farm organizations and labor unions—oppose the measure, but even they were unable to prevent the House interstate and foreign commerce committee from reporting it favorably by more than a 2-to-1 vote.

The Senate committee of the same name is now holding hearings on the proposal, and the drug lobby's pressure in that chamber is terrific.

House Resolution 1253, which was introduced by Chairman OREN H. HARRIS, of the House Committee, provides that, once a manufacturer has fixed a price on a brand-name article shipped in interstate commerce, it shall be a violation for any retailer anywhere in the United States to sell at a lower price.

Enforcement would be in the hands of the Federal Government through civil suits.

In a minority report blasting the Harris scheme, which received almost no publicity, Representative JOHN D. DINGELL, of Detroit, exposed the obvious fallacies of the bill's very title and principle—"fair trade."

He introduced an advertisement run in Washington's newspapers by a large drug chain. It gave the prices on 17 items in Maryland, which has a fair trade act, and in the District of Columbia, which has no such law. The articles were mainly medicinal or of the health-building kind.

The housewife in Maryland paid a total of $100.22 for the 17 items, as against only $71.43 for the same purchases in the Capital.

The only factor responsible for the $28.79 discrepancy was Maryland's fair trade legislation.

Representative DINGELL reported on the vast spread between manufacturers' charges to retail druggists and the prices which fair trade outlets impose on consumers.

The list contained 22 nationally sold brand products. They ranged from razor blades and vitamins to home permanent liquids and baby powder.

The retailers paid $40 for the 22 articles and the customers paid $88, a markup of 120 percent.

The druggists' lobbying on behalf of the Harris bill becomes understandable after a reading of these profit incentives.

Robert A. Bicks, acting chief of the antitrust division, declared before House-Senate committees that the bill would be unenforceable, requiring an "army of Federal agents."

Despite the provision for enforcement by civil suits in courts already clogged, Bicks said it would increase other Government expenses.

"General Electric," he continued, "estimated that its cost of enforcing fair trade ran to $900,000 a year. I think the result (from the Harris bill) would be pressure to appropriate more money for the Federal Trade Commission to enable them to enforce it.

"Then, you would really have the Federal Government ramming a principle down the throat of 16 States that have held that principle (fair trade) to violate their fundamental law."

Gov. Price Daniel, of Texas, enlarged on this point in a letter to the committees. He said:

"The proposed legislation would, as I understand it, permit a New York manufacturer to dictate and enforce its retail price in Texas, notwithstanding the antitrust laws of this State. This will cost Texas consumers millions of dollars each year."

Atomic Arms Pacts Opposed

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. HOLTZMAN. Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD the letter written to the editor of the New York Times by David R. Inglis, which appeared in this morning's issue of that paper.

Dr. Inglis is the chairman of the Federation of American Scientists, and knows whereof he speaks. He presents the case against the proposed nuclear agreements so completely and so intelligently that I feel it points out the absolute necessity for the rejection of such pacts at the present time.

I urge my colleagues to read his letter most carefully, and to give most serious consideration to his recommendations.

The letter follows:

ATOMIC ARMS PACTS OPPOSED—IMPLICATIONS OF AGREEMENTS FOR OUR FUTURE SECURITY DISCUSSED

The writer of the following letter is a physicist at the Argonne National Laboratory and is chairman of the Federation of American Scientists:

To the EDITOR OF THE NEW YORK TIMES:

In view of the crucial diplomatic and military problem of avoiding nuclear war both now and in the future it seems irresponsible for the Joint Congressional Committee on Atomic Energy to have endorsed the NATO atom arms pacts (Times, July 14, p. 1) without giving adequate warning to Congress of the dangers for our future security implied by this decisive step.

It is clear from the remarks quoted that the committee recognized as the sole argument the need to give more firepower to the North Atlantic Treaty Organization armies in an attempt to counter the numerical superiority of Soviet manpower. The policy endorsed is based on an unproved and essentially unprovable proposition (probably a myth) that a small nuclear war could be

fought in Europe without very great danger of growing into the big nuclear war that must be avoided.

MAINTENANCE OF FORCES

The policy also rejects the alternative that we should adequately maintain in NATO the relatively small U.S. forces that would be required to deliver nuclear firepower, an alternative which would make less likely the degeneration of NATO capabilities to wage a nonnuclear war against the Eastern satellites. Such capability is needed because the big nuclear deterrent is too big to be plausible against brushfires but still must be relied on to discourage nuclear attack by Soviet forces. Nuclear capabilities for West German troops are not necessary against either of these contingencies.

The dangers in going ahead with the pacts lie not in what the pacts themselves will do this year or next but in the next steps which will almost inevitably develop from them and in their negative effects on other aspects of diplomacy. As has been pointed out in subcommittee testimony to belittle the dangers, the pacts themselves do not guarantee delivery of anything, but merely establish a channel for communicating information and nonnuclear parts. They nevertheless do imply an important commitment, incompatible with a possible future agreement, for example, to establish a nonnuclear zone in central Europe.

VETO POWER

The pact with West Germany (as with three other countries) has the remarkable provision that it can be terminated (as long as NATO lasts) only by agreement of both parties. This provision does give our recurrent former enemy, Germany, now our strong partner in NATO under a friendly government, a veto power over our future diplomacy. This might be a serious infringement of our freedom if a future administration, in the light of future developments, should find it important to negotiate a European atomic settlement.

The pacts could be just as effective in their primary purpose without the remarkable provision of giving away a veto power over us. At the very least, Congress should by prompt action this week hold up the pacts long enough to have this provision removed.

Delaying the pacts until the next session of Congress would have a further advantage. It would give more time for the Geneva negotiations to explore all possibilities of agreement for a controlled cessation of nuclear tests as a means of preventing the proliferation of nuclear-weapons techniques to many nations of the earth. In spite of the precaution confining the material now transferred to "nonnuclear parts of atomic weapons systems" these pacts do constitute an important step in the diffusion of nuclear information and capability incompatible with our diplomatic efforts to solve the many-nuclear-nation problem before it is too late.

DAVID R. INGLIS.

WESTERN SPRINGS, ILL., *July 16, 1959.*

The Money Tree

EXTENSION OF REMARKS

OF

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. CURTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Levittown Times of Levittown, Pa., on Thursday, July 16, 1959, which discusses with great clarity the problems attendant to, and the inevitable consequences of, Government spending. The editorial follows:

THE MONEY TREE

The argument among leading Democrats as to what Congress should or should not do seems, on the surface, to concern measures described as progressive.

Actually, it involves money, and where to get it.

The so-called progressive proposals call for heavy outlays for airports, urban renewal, schools, health, and other matters.

The supporters of these program think the Democratic leadership in Congress should dare the President's veto by passing them, and thus letting the country know what sort of action they favor.

This may appear to have substantial political advantages. But it also has a major political handicap.

The backers of the progressive programs do not include any plan for financing these measures. They would be like laws passed without enabling clauses.

In the absence of any specific financing, the Government would, of course, have to pay for the proposals out of heavy borrowings which would add materially to future deficit prospects. The alternative, higher taxes to pay the freight, is not even mentioned.

The mood of the Nation, in this time of a rising economy, seems to be against either new taxes or further additions to the deficit. Both Mr. Eisenhower and the moderate Democratic leadership of the House and Senate are responding to this mood by trimming or blocking heavy expenditures and trying to keep the budget within tighter bounds.

Those who favor heavier expenditures to further their progressive aims would seem to have a responsibility to show the voters exactly how these proposals are to be paid for. It is hardly fair for them to offer people the moon, unless the bill it attached.

Promises of great social and economic advances are not sober pledges when they leave out of account the effect on the taxpayer's pocketbook. He may in any given situation be willing to pay the price, either through inflation or higher taxes, but at least he should know what it is.

He should not be deluded into imagining he can enjoy major gains at no cost to himself. The current vocal supporters of so-called progressive legislation have not yet shown that they understand the need to be utterly candid on this important point.

Textile Import Problem

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. ROBERTS. Mr. Speaker, the domestic textile industry continues to try to cope with the problem of giving the American people quality goods at prices which can compete with imported goods produced in lands of low wages and cheap cotton.

One of the outstanding textile manufacturers in this country is Avondale Mills, of Alabama, and its president, J. Craig Smith, has written an article which appeared recently in the Avondale Sun, entitled, "Tell Them Before It Is Too Late."

I urge every Member to read this splendid article:

TELL THEM BEFORE IT IS TOO LATE

Every underdeveloped country in the world aspires to have industry. The first industry that these underdeveloped countries think of attracting is textiles. This is true for a number of reasons, the principal one being that the textile industry provides more jobs in relation to investment.

Japan has a rebuilt textile industry. India is in process of expanding hers. Korea, Formosa, and Pakistan are building mills. Mexico, most of the countries of Central and South America, and even parts of Africa have plans of becoming industrial areas and propose to take the first step in this direction by building textile mills. A portion of this development has been financed, and is still being financed, with American tax money.

The identical machines that we use in this country are available to these underdeveloped countries. Their wage rates are a small fraction of ours and they have a 25 percent lower cotton cost. Eventually, the American people are sure to demand that at least a part of the American textile industry be kept alive. It can only be kept alive by limiting the amount of textiles which these low-wage areas of the world can ship here.

Many of these underdeveloped countries are our friends. If we permit them to go ahead and build up their textile industries with the expectation of supplying this market and then later, after they have trained their people and built mills to supply this market, take the market away from them, we will make bitter enemies around the world. How much better it would be for our Government to take preventive action now before thousands of additional textile jobs in this country have been liquidated, and before underdeveloped countries around the world have geared their economies to supply a market in this country which sooner or later the American people are going to demand be taken away. I can think of nothing calculated to build more international ill will than, for example, to let our neighbor, Mexico, build textile mills, employ thousands of people in them, ship the product of their low wages and cheap cotton here, and then have this country create economic chaos in Mexico by placing an embargo on Mexican goods.

Up to now, our State Department has not shown much interest in saving American textile jobs. If they can be convinced that they are doing the underdeveloped countries a grave disservice by permitting these countries to build an industry on the expectation of supplying a market which they will later lose, the State Department may be willing to spell out now just how much of the American market is going to be given away.

Drinking and Serving of Alcoholic Beverages Aboard Air Carrier Aircraft

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my letter addressed to Mr. James T. Pyle, Acting Administrator of the Federal Aviation Agency, with

comments, suggestions, and recommendations relative to the proposed amendments of section 40.371, 41.135, and 42.65 of the civil air regulations:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 22, 1959.

Re proposed amendments sections 40.371, 41.135, and 42.65 of the civil air regulations.

Mr. JAMES T. PYLE,
Acting Administrator,
Federal Aviation Agency, Washington, D.C.

DEAR MR. PYLE: Pursuant to the notice set forth in the Federal Register, page 5424, Friday, July 3, 1959, my comments, suggestions, and recommendations, relative to the foregoing matter (drinking and serving of alcoholic beverages aboard air carrier aircraft) are set forth below:

It is obvious to all that the common carriage of passengers by air entails certain risks and dangers peculiar to that form of travel. It is therefore incumbent upon every one and especially your agency, which is concerned with safeguarding the lives and safety of passengers, crews, and others, to discover, eliminate, and prevent wherever and whenever possible all hazards to safe air travel.

The foregoing duty is required not only as to known hazards but also for the elimination of potential dangers, dangers which are obvious and apparent to people of ordinary and reasonable prudence. Any failure to eliminate such potential dangers is not only inexcusable but also culpable should injury or loss of life or damage to property result therefrom.

An intoxicated persons is irresponsible and his behavior is unpredictable. Space on board an airplane is limited and confining and there is no room to avoid him, no policeman to restrain him and opportunities for imperiling the lives and safety of all aboard and on the ground are varied and many.

The mischief he can do and the tragedy that can ensue is irremediable and inexcusable.

The hazards and dangers to which all are exposed by the presence of an intoxicated person on board an airplane is clear and obvious and incidents have been testified to and your agency is cognizant thereof.

A drunk on board an airplane is a clear and present danger to the lives and safety of everyone, everywhere, whether the inebriety is brought on by liquor carried onto the plane and there consumed or by liquor purchased on the airplane from the carrier by one who does not appear to be intoxicated.

I feel that in recognizing the dangers that flow from intoxication aboard an airplane your Agency should adopt regulations that eliminate them by eliminating all possibility of intoxication on board the airplane.

The effect of the proposed regulation is not to eliminate the risk but simply to place the responsibility, in the event tragedy flows from it, onto the shoulders of anyone other than this Agency.

As long as you can regulate you can eliminate. There is no actual need for intoxicating beverages during flight nor is there a demand for such. All airlines would gladly discontinue serving such beverages provided the discontinuance would be complete for all airlines.

The Air Lines Pilots Association and the Stewards and Stewardesses Association have brought this subject up at their national conventions. Each has called for regulations forbidding the serving of alcoholic beverages on planes because it is a potential nuisance to passengers and crews alike and a threat to the safety of all.

In the opinion of those who serve and in the opinion of those being served there is no place for liquor in airplanes during flights.

The language of the proposed regulation could easily imply that: only airlines can serve non-intoxicating alcoholic beverages, the airlines derive a sizable revenue from the sale of intoxicants, and you encourage the consumption of intoxicants sold by airlines.

The proposed regulation places an unfair and unjust burden on the airline personnel by requiring them to determine if a person requesting service is or appears to be intoxicated.

I fail to see how the proposed regulation eliminates the possibility of tragedy that can arise from a drunken act by one made drunk from being served intoxicants by the airline although he did not appear to be intoxicated when served.

To avoid an anomalous situation created by this Agency I recommend that the regulation be amended to read as follows:

"No person shall drink any alcoholic beverage aboard an air carrier aircraft while in flight within the United States."

The actual amount of time in flight is so short that the total prohibition of the use of intoxicants during flight will create no hardship on anyone, even the habitual user.

Sincerely yours,

THOMAS J. LANE.

DRINKING AND SERVING OF ALCOHOLIC BEVERAGES ABOARD AIR CARRIER AIRCRAFT

Notice is hereby given that the Federal Aviation Agency has under consideration a proposal to amend parts 40, 41, and 42 of the Civil Air Regulations as hereinafter set forth.

Section 43.45 of the Civil Air Regulations forbids a pilot to permit any person to be carried in the aircraft who is obviously under the influence of intoxicating liquor. However, there is no regulation dealing with the problem of alcoholic beverage consumption by passengers aboard an aircraft.

At hearings conducted before subcommittees of the House and Senate Committees on Interstate and Foreign Commerce, to consider bills to prohibit the serving of alcoholic beverages aboard air carrier aircraft, witnesses described a number of instances in which the intoxication of passengers aboard air carrier aircraft had led to disorderliness or other conduct which may have endangered the safety of the aircraft. These instances, however, appear to have been caused by the passenger's consumption of a personal liquor supply rather than by consumption of liquor served to him under the control and supervision of the air carrier.

Under the provisions of section 601(a)(6) of the Federal Aviation Act of 1958, the Administrator has the power and the duty to prescribe regulations governing such practices as he finds necessary to provide adequately for safety in air commerce. In the exercise of this power and duty the Administrator now finds that the drinking and serving of alcoholic beverages aboard air carrier aircraft must be controlled to the extent necessary to provide adequately for safety in air commerce. Accordingly, in order to provide such control, it is proposed to adopt a regulation which would prohibit (1) the drinking of any alcoholic beverage aboard an air carrier aircraft unless the beverage has been served by the air carrier operating the aircraft, and (2) the serving by the air carrier of such beverage to a person who is or who appears to be intoxicated. Under this regulation, a passenger who drinks an alcoholic beverage aboard an air carrier aircraft without being served such beverage by the air carrier will be subject to a civil penalty not to exceed $1,000. Correspondingly, an air carrier which serves an alcoholic beverage to an intoxicated passenger will also be subject to such a penalty.

Interested persons may participate in the making of the proposed rule by submitting such written data, views or arguments as they desire. Communications should be submitted in duplicate to the Docket Section of the Federal Aviation Agency, room B-316, 1711 New York Avenue NW., Washington 25, D.C. All communications received within 60 days after publication of this notice in the Federal Register will be considered by the Administrator before taking action upon the proposed rule. The proposals contained in this notice may be changed in light of comments received. All comments submitted will be available for examination by interested persons in the Docket Section when the prescribed date for return of comments has expired.

This amendment is proposed under the authority of sections 313(a) and 601(a)(6) of the Federal Aviation Act of 1958 (72 Stat. 752, 775; 49 U.S.C. 1354(a), 1421(a)(6)).

In consideration of the foregoing, it is proposed to amend parts 40, 41, and 42 by adding new sections 40.371, 41.135, and 42.65 respectively, each to read as follows:

Drinking and serving of alcoholic beverages: (a) No person shall drink any alcoholic beverage aboard an air carrier aircraft unless such beverage has been served to him by the air carrier operating the aircraft.

(b) No air carrier shall serve any alcoholic beverage to any person aboard an air carrier aircraft if such person is or appears to be intoxicated.

JAMES T. PYLE,
Acting Administrator.

TVA, Coal, and Electric House Heating

EXTENSION OF REMARKS
OF
HON. FRANK A. STUBBLEFIELD
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. STUBBLEFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to make a statement relating to the actual benefits which coal miners, coal producers, and the coal industry in general will derive from the TVA self-financing bill, H.R. 3460, which is scheduled to come before the House for final action soon.

I especially commend this statement to those of my colleagues who are particularly interested in expanding coal consumption.

TVA, COAL, AND ELECTRIC HOUSE HEATING

More and more sections of our Nation are beginning to discover a simple fact that many of us who live in the Tennessee Valley have known for many years. I refer to the fact that electricity can provide the most satisfactory and satisfying way to heat one's home. Or to heat one's store or shop or factory, for that matter. And furthermore, that electric heating can be a boon not only to the user, but also to the electric systems and the coal industry.

These are facts which some of us in the Tennessee Valley and in the Pacific Northwest have known for many years. We are happy that others too are now discovering the advantages of electric heat.

The gentlewoman from West Virginia [Mrs. KEE] is one of my colleagues who is looking forward to great benefits to

her district and State from a growing use of electric heat. She placed in the CONGRESSIONAL RECORD on February 5 a statement entitled "Coal by Wire." With this statement she introduced us to a series of articles on electric heat that have been appearing in the United Mine Workers Journal. I am happy to help the gentlewoman from West Virginia put in the RECORD some of the encouraging facts about electric heat. Let me begin by joining her in quoting the United Mine Workers Journal. Its issue of May 1, 1958, said:

> If you, as a consumer, want ulramodern, ultraconvenient and ultraclean heat, electricity is the answer. And here coal stands ready to serve the Nation by producing the electricity to heat your home or other buildings.

The great value of electric heat to the coal industry is fairly obvious. To supply electricity today to the average home, the average power system burns about 1½ tons of coal a year. However, if the home is heated electrically, the power system will buy about 10 tons of coal to supply its annual power requirements. This reflects not only the energy used for electric heat, but the almost inevitable fact that a family which heats its home electrically will also use electricity for cooking, water heating, and any other purposes for which it might otherwise use some other fuel. Ten tons of coal, instead of 1½, multiplied by any number of homes in each utility's service area. No wonder the coal industry is interested.

But the curious question is, Why has this not happened in more areas sooner? Only now is electric heat beginning to be used in widespread areas. In January of this year, the lead editorial in the magazine Coal Age contained the following:

> The good news is that electric coal for home heating—and cooling—has reached the snowballing stage, meaning in turn a major increase in electric-power generation in the years to come. Most significant is the fact that this means that coal, since it is the premier powerplant fuel, is staging a reentry in the home-heating field.

Why wasn't this snowballing stage reached 10 or 20 years ago? By then both gas and oil were rapidly displacing coal as the usual home-heating fuel. Why didn't electricity then enter the heating field on a large scale nationally?

I am afraid the answer is only too simple. The coal and electric industry were not as alert to their opportunities as the gas and oil industries. The only exceptions were the public power systems in the Northwest and particularly in the Tennessee Valley. Elsewhere one found among the electric utilities not only an absence of any considerable interest but quite often active discouragement of electric heating—even outright refusal to allow its use.

Now, finally, with the rather late encouragement of the coal industry, the President of the Edison Electric Institute, the utilities' trade organization, can be quoted as saying:

> I firmly believe that we should view electric house heating as a principal means by which our rate of growth can be dramatically increased. (J. W. McAfee quoted in Electrical World, Apr. 28, 1958.)

I am glad that the electric industry is finally, though lethargically, awakening to its opportunities.

Let me give you an interesting statistic. The area served with TVA power includes only 3 percent of all the homes in the United States, but it includes half of all the electrically heated homes.

Again the reason is simple. Congress did not ask TVA to supply power only to loads that were sure to be highly profitable. Congress told TVA to encourage the abundant use of electricity at the lowest possible rates. TVA operates on the basis that the consumers are entitled to use electricity in new ways if they want to.

TVA takes its public service obligations seriously. Why do not the private utilities? They are given the exclusive right to serve an area. Regulatory commissions guarantee them a 6-percent return on their investment. Are they not obligated to furnish their customers all the electricity they want to buy?

What is happening now is this. With the benefit of the long experience of the public power systems of the Tennessee Valley and the Northwest, the utilities have become convinced that electric heat can be a profitable load. So now they have become interested in providing this service. Now they are interested in building up this load.

Some of the utilities are now even beginning to offer electricity for house heating at a little lower rate than before. The Wall Street Journal stated on December 16, 1958, that 105 utilities in various parts of the country have reduced their rates to electric heating customers. This is in interesting contrast to the steady upward trend of nearly all of the other rate schedules of the private utilities.

Why utilities should even have special rates for electric heating, I do not know. Homes served by the distributors of TVA power buy electricity under the same rate schedule whether they use electricity for heating or whether they do not. This simple rate policy has worked to the eminent satisfaction of all concerned. The distributors and TVA have covered their costs, and the consumers can buy electricity for heating, as for other purposes, at an attractively low rate. Experience has demonstrated the soundness of the TVA determination that it was unnecessary to establish special rates for this, that, or the other residential use. Many of the private utilities, on the other hand, set up prohibitively high rates for electricity used for space heating. Now they are gradually reducing those rates.

I hope it will not take the utiilties as long to learn that electricity for heating can be supplied at a low price as it has taken them to learn that heating is a desirable load. Here, too, they need to apply the lessons they can learn from the TVA demonstration.

The UMW Journal's series on "coal by wire" and the remarks on that subject by the gentlewoman from West Virginia presented ably some very pertinent information. I would protest mildly, however, that the reader might assume that electric home heating was invented by certain private utilities. The utilities and the coal industry would not appear to be the fountainhead of knowledge on this subject. Perhaps some of my colleagues or their constituents would like to learn more about the advantages of this most modern form of home heating. If so, may I suggest that they turn to the area where more time-tested experience has been developed than in all the rest of the Nation put together. I refer, of course, to the Tennessee Valley—to TVA and the distributors of TVA power.

It will be a blessing if the use of electric home heating multiplies rapidly throughout our Nation. Our homes will be cleaner and more comfortable. The coal industry will find a needed market for many millions of tons of coal. We will conserve some of our exhaustible supplies of gas and oil. The electric industry can profit from a much expanded residential load. It can, that is, if it seeks for a volume market and is content with a low profit per unit. I fear, however, that the electric utilities may hope that many consumers will heat their homes electrically even if they have to pay 2 or 3 cents a kilowatt-hour for the electricity. If any of them think that, I can assure them that the oil and gas industry will continue to outcompete them. As each new home is built, the builder and owner, however reluctantly, will nearly always decide against electric heat. However, if the power industry follows the example of the Tennessee Valley and puts its customers' interest first, then, as in the Tennessee Valley, many new homes fill be electrically heated. Then power use will multiply as it has in the Tennessee Valley. Coal use will multiply as it has in the Tennessee Valley. I wish all success to the mine workers, the coal producers, and the power companies in pursuing that goal.

The Challenge To Preserve Our Wilderness

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. SAYLOR. Mr. Speaker, a significant editorial on the wilderness bill appeared in the Washington Post for Monday, July 20, 1959, and on the following day a national conservation leader commented on the editorial in a letter to the editor of the Post that both commended and supplemented the editorial. The editorial and the letter were both entitled "Preserving a Refuge."

The refuges referred to by the Washington Post, Mr. Speaker, are not merely places where we can protect wild creatures. Rather they are the unspoiled natural areas where man himself can find a freedom from the tensions and

strains, the noise and confusion, and even the luxuries and protective agencies with which we are all surrounded in our way of living. And I mean "surrounded."

I believe, of course, that our civilization is the best that man has yet developed. I would change it for no other in the world. But I do maintain, nevertheless, that it is always good to get away from our own crowded mechanized cities occasionally to quiet our minds and refresh our spirits while we use and develop our muscles in the simple life of the out of doors. In fact, this too is part of our American way of life. For some people, especially young people, these excursions can best be realized in the wilderness, away from the crowds, where a man or woman or boy or girl can come close to being on his own and practicing self-reliance.

The places where this can still be done are the refuges for human beings of which the Washington Post writes, describing them—and I quote—as "a haven of escape which will be all the more desired as the growth in population increases the hunger for the forest's peace."

Mr. Speaker, these places will continue to be available to us as wilderness only if we protect them as such. That is why we have been working to establish a policy and program to protect them. As Secretary of the Interior Fred Seaton said in reporting to Congress on the wilderness bill:

> It is time that wilderness and allied values be given greater recognition—their rightful place—in the statutes relating to management, development, conservation, and use of Federal lands and associated resource.

As this national wilderness policy and program are now being set forth in a revised and amended bill we should move forward to enact the measure promptly. That is what the Washington Post urges in its July 20, 1959, editorial and what Executive Secretary Howard Zahniser, of the Wilderness Society urges in his letter to the editor on July 21. After quoting Secretary Seaton as urging Congress "to give serious consideration to taking action now to initiate the establishment of a wilderness system by granting existing wilderness areas statutory protection," Dr. Zahniser pointed out:

> That is what the wilderness bill will do—in some 20 refuges, 4 dozen national park system areas, and 8 percent of the national forests.

He said:

> It is a reasonable measure and will be a great credit to the 86th Congress, and that it should pass promptly.

I heartily agree. The Post refers to "the merits of this modest innovation," emphasizes that "the program would operate within the present land agency jurisdictions," and maintains that its object "could hardly be less controversial." The editorial's immediate purpose was to encourage favorable action in the Senate committee, but its arguments apply all along the line, and I trust that it will not now be long before we can see the wilderness bill enacted into law.

Mr. Speaker, under unanimous consent, I include the editorial entitled "Preserving a Refuge" in the Washington Post on Monday, July 20, 1959, and the letter to the editor with the same title in the Post for July 21, 1959, in the CONGRESSIONAL RECORD. They are as follows:

[From the Washington Post, July 20, 1959]

PRESERVING A REFUGE

The Senate Interior and Insular Affairs Committee has a rare opportunity to win the gratitude of not only the present, but of many generations still unborn. Before the committee is a measure which would create a National Wilderness Preservation System, and at any time this bill may come up for a vote. That vote will assuredly be favorable if the merits of this modest innovation are given fair-minded consideration. What the bill would do is to make it explicit national policy to preserve forever a corner of our national forests which would remain inviolable, shielded by law from the litter of civilization. It goes without saying that once these virgin forests were gone, the loss would be irrevocable.

Extended hearings have been held to accommodate all possible commercial objections. The bill envisages no new bureau, and the program would operate within the present land agency jurisdictions. All it would do is set aside certain areas—amounting to only 8 percent of total acreage of the national forests—as areas which would be wholly unspoiled in perpetuity. It would guarantee a refuge from man's dominion, a haven of escape which will be all the more desired as the growth in population increases the hunger for the forest's peace.

Surely this object could hardly be less controversial. Eighteen Senators of both parties are sponsoring the legislation; the administration has endorsed the measure with qualifications that leave the bill's objectives unimpaired; conservationists have long sought such legislation. The committee ought to give it the warm endorsement it deserves.

[From the Washington Post, July 21, 1959]

PRESERVING A REFUGE

Conservationists who are concerned with saving some areas of our American wilderness, and the public in general, have good reason to appreciate highly the support that the Washington Post has given the wilderness bill. Your July 20 editorial "Preserving a Refuge," is one of the most timely expressions—an endorsement that should encourage the Senate Committee on Interior and Insular Affairs to take promptly the favorable action for which the way has already been so well prepared.

The case you so forcefully present will be recognized by those who have been urging this legislation as a succinct statement of a very simple, modest purpose. That is to preserve for the American people such areas of wilderness as can still be preserved without damaging other interests or interfering with other programs. The purpose is to fit wilderness preservation into a sound overall program for the wisest possible management of the Federal lands in our custody.

The lands thus available for wilderness preservation by the Federal Government include the portions of the national forests to which you make specific allusion, and also the back country of national parks and monuments and portions of some of our national wildlife refuges and ranges.

Secretary of the Interior Fred A. Seaton, under whose jurisdiction the wilderness in parks and refuges would continue to be protected, has endorsed the wilderness bill in an excellent report, even as Secretary of Agriculture Ezra Taft Benson has approved the bill's application to national forest areas. Their suggested amendments, as you point out, "leave the bill's objectives unimpaired."

"It is time," said Secretary Seaton in his report, on June 17, "that wilderness and allied values be given greater recognition—their rightful place—in the statutes relating to management, development, conservation, and use of Federal lands and associated resources." He urged Congress to "give serious consideration to taking action now to initiate the establishment of a wilderness system by granting existing wilderness areas statutory protection."

That is what the wilderness bill will do—in some 20 refuges, 4 dozen National Park System areas, and the 8 percent of the national forests on which you have commented. It is a reasonable measure and will be a great credit to the 86th Congress. It should pass promptly.

As Secretary Seaton said in closing his letter to Senate Committee Chairman JAMES E. MURRAY: "Our children's children should be assured of the opportunity to enjoy the magnificence of the natural beauty of these wilderness areas."

HOWARD ZAHNISER,
Executive Secretary,
The Wilderness Society.

WASHINGTON.

Joint Development Proposal for Trinity River Power Facilities

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. GUBSER. Mr. Speaker, on Friday of this week the House Interior Subcommittee on Irrigation and Reclamation will consider the joint development proposal for the Trinity River power facilities. At least 80 California newspapers have supported Trinity joint development editorially.

The proposal's origin is accurately described by the Sacramento Union:

> The Trinity River project was authorized by Public Law 386, approved August 12, 1955. This law specifically instructed the Secretary of the Interior to continue to a conclusion negotiations with a private company to determine the feasibility of constructing the power phases of the project with private capital, and arranging for the sale of falling water. The Secretary was instructed to report his findings within a specified time, and to submit his recommendations to Congress. A proposal was made by the Pacific Gas & Electric Co., and this was approved in turn by the Bureau of Reclamation and the Secretary of the Interior, after an 18-month exhaustive study.

The San Jose News relates:

> The private utility offers initially to build and pay for the project's powerplants and related transmission facilities for the purpose of obtaining use of the falling water in development of hydroelectric power. In addition, it proposes a schedule of payments to the Government for the falling water amounting to an estimated $4,600,000 each year.

The News concludes that—

> Secretary Seaton and the Pacific Gas & Electric Co. have worked out an ideal partnership for Trinity. It should be implemented with full support of our legislators in the interests of the public's need for water and power.

In reviewing the situation, the St. Helena (Calif.) Star states:

Actually there is no such thing as cheap Government power. The same costs of producing power must be paid, whether Government makes power, or private enterprise does so. Water does not fall for the Government any more cheaply than for the Pacific Gas & Electric Co. All that Government can do is pass the cost along to the taxpayers as a whole, while providing lower rates for a few. We don't think that's fair.

On the contrary—

Continues the Star—

with the Pacific Gas & Electric, in partnership with the Government in developing Trinity power, the Pacific Gas & Electric will not only pay the Government for use of the falling water, but will pay taxes amounting to some $300 million. Moreover, the Pacific Gas & Electric, as are all other utilities in California, is soundly regulated by the California Public Utilities Commission, so that the company is limited to a reasonable profit, while paying taxes even as you and we.

And what is the company? It is a great mass of small stockholders, who put their earnings into its stock, on the assumption that it is right and proper for them to earn a reasonable return. For Government to compete with these small stockholders merely to give lower power to a favored few, seems like the rankest kind of discrimination.

The company, a taxpaying organization—

States the North Sacramento Journal—

is justified in asking that Government not engage in the direct business of distributing power to preference customers. With the advent of the Eisenhower administration's popular partnership policy with private enterprise, the development of this and other like programs will benefit our State and the taxpaying citizens of all other States.

The conclusion of the Bakersfield Daily Report is that—

In any event, partnership points the way to obtaining maximum power development at the least cost to the taxpayers, in the shortest possible time, and without resorting to the un-American practice of pitting Government against private citizens in commercial activities that should be reserved to taxpaying investor-owned enterprises. The record proves that.

To accomplish the dual purpose of cutting out the needless Government spending of $60 million construction costs and, at the same time, of increasing Government's revenues by $320 million, the House Interior Committee would be doing the taxpayers no small favor by reporting out the Trinity joint proposal.

What Is the Price of Freedom?

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. DAVIS of Georgia. Mr. Speaker, I have read with interest an article on the editorial page of Southern Advertising and Publishing magazine, for July 1959. This magazine is published in Atlanta, Ga. The article is entitled "What Is the Price of Freedom?"

The entire article merits reading and consideration. The last paragraph deals with the habit of the Nation's press in slanting news stories against the South, and poses a question which deserves an answer. The writer says:

Readers of the press have had further evidence of this partisan distortion of the news in recent weeks. Who did not read that "no white man ever had been executed in Florida for the rape of a Negro," during the Tallahassee trial? Why pick on Florida? There has never been such an execution in the North either, or anywhere in the Nation. What price freedom?

I have obtained unanimous consent to insert this article, and I attach it herewith:

WHAT IS THE PRICE OF FREEDOM?

Yesterday was the Fourth of July. Today we start another year in the wake of that glorious Fourth of 183 years ago. On that distant date there was tension and turmoil in the land; although there have been years of peace and calm and years of storm and strife during these intervening years, today we still have tension and turmoil.

Perhaps this is the destined lot of mankind. It could be that the nature of life is struggle. But on this continent we have felt for 183 years, and for some before that, that men should be able to regulate their lives and their ambitions in orderly manner. This is the ideal of the peaceful citizen. Unfortunately there are others who refuse to play the game that way. Even in our Nation we have some who prefer to pillage and to kill.

And the Nation as a whole faces a similar condition on the global scale. Make no error about it: the Communist world does not believe in the peaceful, the live and let live, the truthful way of life. Has there ever been a powerful Communist that kept his word when it paid him to break it?

In our own Nation, therefore, it is of paramount importance to play the game close to our vests. As Benjamin Franklin, one of the great patriots of that 1776 era, said, "We must hang together or we will hang separately." There is an awful burden resting on the press of the Nation, on the political leaders of the Nation, not to divert attention from the major dangers by trying to capitalize on sentimental news and politics at home.

The Nation's press must forget that the South is a whipping boy every time a racial story breaks; and it must be fair in seeing the racial problem in its own frontyard. Readers of the press have had further evidence of this partisan distortion of the news in recent weeks. Who did not read that "no white man ever has been executed in Florida for the rape of a Negro," during the Tallahassee trial? Why pick on Florida? There has never been such an execution in the North either, or anywhere in the Nation. What price freedom?

Poison in Your Water—No. 143

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Pittsburgh (Pa.) Post Gazette of April 21, 1959, entitled "Cleanup Won't End River Slop":

CLEANUP WON'T END RIVER SLOP—LABOON CITES OFFENDING UP-RIVER COMMUNITIES

Thirty or more up-river communities will continue to pour the slop of pollution into Pittsburgh district's drinking water supplies even after the Allegheny County Sanitary Authority sewage system begins operating.

Also, thousands of tons of mine acids will continue to pour into our rivers, John F. Laboon, executive director of the county sanitary authority revealed yesterday. Dr. Laboon addressed the bicentennial conference of the American Society of Mechanical Engineers in the Penn-Sheraton.

ONLY FIRST STEP

Mr. Laboon also declared: "There are industrial plants which will continue to pour tons of corrosive acids into Pittsburgh rivers with the permission of State authorities."

The collection and treatment of sewage is only a first step to clean up our rivers, he warned.

Mr. Laboon, in an interview with the Post-Gazette, named some of the offending communities which will dump their raw pollution into Pittsburgh's water.

They include: McKeesport, Duquesne, Clairton, White Oak, and surrounding towns, New Kensington, Arnold, Brackenridge, Tarentum, Springdale Borough, Springdale Township, Harrison Township, Oakmont, and Cheswick.

"Even those who are building their own sewage-treatment plants will continue to drop sewage into district water supplies for about 2 years after we are taking ours out," he said.

Mr. Laboon revealed that the $100 million sewage-treatment system—with 69 miles of interconnecting sewers serving Pittsburgh and 69 other communities—will begin operating next week or within 10 days.

MINING INDUSTRY WORSE

He stressed the public health aspect of cleaning up the district water supplies. Other considerations such as support of fish life and recreation are assets but "secondary in importance," he said.

Industry generally, he said, has dumped "sewage and industrial wastes untreated" into the streams of the commonwealth.

"The coal-mining industry has been the worst offender," he said.

Earlier, Adolph Schmidt, president of the Allegheny Conference on Community Development, estimated that smoke losses in Pittsburgh's former period of smoke blight would be $81,600,000 a year, equivalent to servicing a debt of $1.6 billion. So far, Government, industry, and private cost to control the smoke evil is about $275 million. "Control is a good investment," he concluded.

And John Grove, assistant director of the conference, said that since homes were also brought under the smoke ordinary, since October 1947, Pittsburgh is on its way "to becoming the cleanest industrial city in America."

This Fellow Is Really "For the Birds"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD,

I include a very interesting article which has been released by King Features Syndicate about Walter R. Koe, the kindly Massachusetts man who daily feeds huge flocks of ducks which would otherwise die before summer. Mr. Koe is a most high type citizen, whom I have known all my life. He is held in high respect and admiration by thousands of people, especially due to his interest in the plight of wild birds.

THIS FELLOW IS REALLY "FOR THE BIRDS"—KINDLY MASSACHUSSETTS MAN DAILY FEEDS HUGE FLOCK OF DUCKS WHICH WOULD OTHERWISE DIE BEFORE SUMMER

(By J. Rodger Darling)

BOSTON, MASS.—Twenty thousand loaves of bread * * * 38,200 pounds of corn * * * that's this winter's menu for a daily duck dinner really "for the birds." Every day, snow or subzero, one man acts as waiter (and pays most of the check) for a king-size handout that keeps hundreds of waterfowl from starving.

This winter, as for 16 years, a thousand ducks depend on Walter R. Koe, whose humane hobby makes him the "great white father" of the famed ducks of Norumbega park, largest domesticated flock of wild ducks in the country.

Come summer, you and thousands of sightseers may stop to admire the spectacular flock of ducks in this riverside park at the Boston end of the superhighway from Chicago, New York State, and the Midwest.

For 40 years the colorful Norumbega ducks have shared sandwiches with motorists, picnickers, birdwatchers, students from nearby colleges, and couples canoeing on the placid Charles.

However, when winter armors the river with foot-thick ice, to which ducks sometimes freeze in the 20-below cold, people forget the now-dependent ducks * * * that is, all do except Koe. Daily he drives 15 miles from Wayland, Mass., to distribute hundreds of pounds of lifesaving feed, and rescue crippled and frozen birds.

"Sixteen years ago Mrs. Koe and I stopped one winter afternoon with a loaf of stale bread to feed the ducks," he recalls. "It was awful. The starving birds climbed over each other three deep struggling for food. Some were lying dead on the ice. We went home, got all the bread we could find, and came back. I've been coming back ever since."

Saved from winter starvation, the permanent flock now numbers about 450, with this month's population reaching 1,200 as migrating ducks recognize a good thing. Mostly mallards and blacks, there are occasional baldpates, pintails, sheldrake, teal, coot, grebes, Canada geese, etc., plus seagulls and pigeons on shore patrol.

Koe, a self-employed painter, has spent $10,000 on the ducks, but now others share, thanks to a "Buck for a Duck" plea by local press and radio. Contributions from 5 cents up come from as far as India and Australia, many addressed to "Potey Noah," and other duck favorites that Koe describes in a yearly newsletter sent to friends of the flock.

School and Scout groups are faithful visitors; while the fourth grade from a school for blind children recently came to see the quacking, splashing, fluttering birds, later sending a thank-you note in braille to Koe.

Although the State has erected a duck feeding area highway sign, the flock receives no official support. However, every day a stocky, pleasant, white-haired man happily hauls sacks of grain and bread across the ice as ducks waddle to meet him. Next summer thousands of persons will enjoy hand-feeding these birds, unaware how one kind-hearted man helped them survive the winter.

Representative Evins Urges Amendment to Small Business Investment Act To Protect Small Business

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. PATMAN. Mr. Speaker, it is generally recognized that the Small Business Investment Act of 1958 probably was the most important piece of small business legislation enacted during the 85th Congress. This measure, as all of the Members will recall, is the one that provided a source of equity capital and long-term loans for small business concerns needing such assistance for their normal growth and expansion.

Last month, Representative JOE L. EVINS, chairman of Subcommittee No. 1 of the House Small Business Committee, held a series of hearings respecting the operations of the Small Business Administration and during the course of these hearings emphasis was placed upon the manner in which the Small Business Investment Act of 1958 was being implemented by that agency and by the investment companies. Yesterday, in response to the invitation of the Senate Banking and Currency Committee, Representative EVINS appeared before that committee and testified concerning his views on the Small Business Investment Act and the various amendments that have been proposed, including the provisions of those bills which he himself has introduced.

In view of the high degree of authority with which Representative EVINS speaks on this subject, I believe his testimony will interest the entire membership of the House and for that reason have caused it to be inserted in the RECORD. His statement and proposed amendment (H.R. 8096) follow:

STATEMENT OF THE HONORABLE JOE L. EVINS, MEMBER OF CONGRESS, BEFORE THE SENATE BANKING AND CURRENCY COMMITTEE, JULY 21, 1959

Mr. Chairman and members of the committee, I appreciate the opportunity to appear before you and to testify in regard to amendments to the Small Business Investment Act which the committee has under consideration.

I have the honor to be the chairman of a subcommittee of the House Select Committee on Small Business, which is charged with the responsibility of reviewing the operations of the Small Business Administration. Some weeks ago our subcommittee held extensive hearings on the operations of the Small Business Administration, with special reference to the administration of the Small Business Investment Act. Our hearings have indicated some areas in which amendments are needed and necessary. Accordingly, I have introduced in the other body bills to amend the Small Business Act and the Small Business Investment Act, and I should like especially to refer to these proposed changes to the Small Business Investment Act which I consider needed and desirable.

For the sake of convenience I will discuss these changes, not necessarily in the order of importance, but in the order in which they would appear in the act itself.

1. As the committee knows, the Small Business Investment Act limits the operations of the act to the United States, the Commonwealth of Puerto Rico, and the District of Columbia.

The act should be amended to provide that the geographical limits of the act will include the territory of Guam. The desirability of this was clearly pointed out by the testimony of the Hon. A. B. Won Pat, Speaker of the Legislature of the territory of Guam, in which it was shown that for some reason the wording of the act precluded an investment company from being organized in Guam although this territory is within the jurisdiction of the Small Business Administration under the Small Business Act. The evidence indicates that the financial and economic conditions of Guam are such that a small business investment company could very well perform a worthwhile mission there. At least I know of no logical reason why citizens of Guam should not have the privilege of filing a proposal and having it passed on by the Small Business Administration if they so desire.

This could be provided for by an amendment to section 103(4) of the Small Business Investment Act to provide that the term "United States" includes in addition to the Commonwealth of Puerto Rico and the District of Columbia, the territories of the United States.

2. Subsection 302(a) and 303(b) should be amended to provide that the funds advanced by the Small Business Administration to small business investment companies should be furnished at a rate equal to the rate charged the Small Business Administration by the Treasury for said funds plus a fraction of 1 percent for overhead costs.

The funds furnished under 302(a) are advanced by the Small Business Administration for the purpose of creating the minimum capital requirement of the investment companies. At the present time, the act does not set out what his rate should be and the Small Business Administration is charging 5 percent per annum. I am advised that only 9 of the 18 companies licensed have utilized this fund and only $282,000 has been disbursed to date.

Subsection 303(b) is the provision whereby the Small Business Administration is given authority to lend funds to the investment companies up to one-half of their capital and surplus. At the present time the act provides that the Administration shall set the rate of interest on these loans. The Small Business Administration has also set this rate at 5 percent. Indications are that this fund will be utilized very little by the investment companies. In fact, to date there has been no application for a loan under this section.

These proposed changes concerning the interest charged for Small Business Administration funds have been widely recommended.

As the committee knows, this is wholesale money and there is very little administrative cost in the processing of this type of loan since the Small Business Administration already has complete records of, and almost day-to-day control over the small business investment companies. These loans are not be to compared with the loans made to small business concerns by the Small Business Administration under its financial assistance program wherein it is necessary to process and investigate each loan application through a complete analyses of the financial condition of the applicant from the very beginning. A small business investment company would not be licensed by the Small Business Administration unless it would be eligible for loans under 302(a) and 303(b).

It should not cost them much to process these loans.

The testimony at our hearings indicates that these investment companies are not going to be very interested in making direct loans to small business concerns unless they can receive their wholesale money at a more reasonable rate. Of course, it is hoped and expected that these companies will obtain most of their funds from other sources, but it is also felt that if they could get these Federal funds at a reasonable rate that it will help get them off the ground and will attract other capital.

There may be a time in the future when the 5 percent rate set by the Administration will be realistic but at the present time it is thought by some to be out of line. At the time of the drafting of this statement, the Treasury Department had not yet informed the Small Business Administration as to what the cost of these funds would be during the current fiscal year of 1960. The cost of these funds to Small Business Administration during the past fiscal year of 1959 was 2⅜ percent. The cost of these funds to Small Business Administration is determined by the Secretary of the Treasury, taking into consideration the current average rate on outstanding interest-bearing marketable public debt obligations of the United States of comparable maturities, pursuant to section 4(c) of the Small Business Investment Act. I am advised that the determination is made in the first month of the fiscal year and the rate so determined pertains throughout the year.

This change is recommended both on theory that Small Business Administration should not lose money on these loans and also that the small business investment companies should receive these funds at a rate that would promote the making of small business loans to small business concerns.

3. The next proposed change is one which should certainly be approached with caution but which has much merit. It is felt that section 304 of the act should be amended in such a manner as to give the investment companies more flexibility in supplying equity capital to the small business concerns. At the present time, as the committee knows, it provides only one method by which equity capital can be provided to small business concerns by the investment companies. This is by the purchase of debentures from the concerns. These debentures may be convertible at the option of the holder, but are subject to call by the concern on any interest payment date, with 3 months' notice.

There was much testimony in the hearings before my subcommittee to the effect that, in addition to convertible debentures, the investment companies should be allowed to purchase from the business concerns debentures with detachable stock warrants and perhaps even preferred or common stock. I understand that there are bills before your subcommittee which would amend section 304 to delete the portion concerning convertible debentures and provide that the investment companies could supply equity capital to the small business concerns "in such manner and under such terms as the small business investment company may fix with the approval, by regulation or otherwise, of the administration." This would place the matter of equity financing on open negotiations between the investment company and the business concerns. This would provide for greater flexibility and marketability.

But when considering this important change I think there are other things to be considered, more especially the interest of the small business concern and its attitude toward giving up partial ownership and perhaps control of his company. At the present time, under section 304, the business concern can at least cause the investment company to make a decision as to whether it will convert its stock now rather than holding it over the head of the business concern for a number of years. This can be done by calling in the debentures on 3 months' notice. Under the proposed change this would be deleted from the act and would be left to open negotiations. Of course open negotiations in the marketplace are always a desirable feature. Many feel that when a concern must have money and there is but one place to get it there is no real open market and the negotiations are onesided.

It would seem advisable to put some provision in section 304 which would assure that, somewhere along the line, the small business concern would have an opportunity to reacquire its equity if desired. It is also felt that there should be some protection against the investment companies' obtaining control of the small business concern through stock purchase and subsequent refinancing.

It is suggested that if section 304 is amended provision should be added whereby the small business concern would have the opportunity to repurchase their equity at sound book value from the investment company as long as the investment company has control of the stock. This would in no wise prevent the investment company from obtaining a secondary market for the stock since this repurchase option would not follow the stock into the secondary market but it would provide that as long as the investment company holds control of the stock the business concern could buy it back. Of course, if the stock passed out of the hands of the investment company into the open market it could be reacquired by the business concern at market price and it would also assist in diluting the ownership of the stock passing out of control of the investment companies.

A re-purchase provision would be desirable and evidence indicates it would be acceptable to the investment companies. One witness testified—and I quote—"I think something should be in the act if you want to keep the company from gobbling up the small businesses."

The primary concern of banks and investment companies entering this field is that of the investor and that of making money.

And, of course, it is recognized that they must be able to make money for this program to work. But we must also look to the side of the small-business concerns. Will they be willing to give up equity in their businesses without the hope that they may be able to reacquire it? We do have the testimony of one small businessman who appeared before the House Small Business Subcommittee and who referred to the problem briefly. Mr. Gary E. Lilly, of Des Moines, Iowa, appeared before the subcommittee to testify concerning the direct-loan program of the Small Business Administration. During his testimony and while discussing his attempts to obtain financing, he stated:

"We did subsequently investigate the possibility of a loan through one of these small-business investment firms, but we did not wish to give up the control of our company or stock interest in the company to such a concern, which we were advised would be necessary."

I have spent so much time on this proposed change because I consider it to be of paramount importance. I think that perhaps the success or failure of this program will turn on section 304 of the act. Certainly we would be contradicting our very purpose if, in our anxiety to make small-business investment companies attractive, we set up a system that might exploit small business instead of serving it. Whatever we do about these amendments, in my view, we must keep in mind that the purpose of these small-business investment companies is to serve small business and to help small business. In other words, we want to harness this system of small-business investment companies to work for small business. We do not want to set up a system that would result in small-business investment companies harnessing small business only for their profit and advantage.

4. Section 304(c)2 should be amended in order to provide that the small business concern will agree not to incur any additional indebtedness except open account or temporary short term indebtedness without first securing the approval of the company and giving the company the first opportunity to finance such indebtedness. The only change that this entails would be the insertion of the word "additional" and the phrase "except interim or short term." Our hearings developed that there is a possibility that section 304(c) 1 and 2 of the act could be used as a yoke to keep the small business concern harnessed to the investment company's sole financing sources.

Of the 20 companies licensed to date, at least 4 are owned by banks, bank holding companies, or have common ownership with banks. At least two others are interlocked with banks through common top officials. One is completely owned by a finance company and at least one other is closely connected by interlocking officials with a finance company. This means that at least 8 of the 20 companies licensed are tied in with established lending institutions.

This suggested change would assure the business concern that, if desired, it could refinance its indebtedness at another source and could obtain open account or temporary short term credit without returning to the same company. This is in line with regulations of the Small Business Administration now in effect (regulation sec. 107.304–1(g)), and should be enacted into law.

5. Section 304(d) of the act should be amended to provide that the small business concern will have the opportunity to become a stockholder-proprietor of the company by investing in the capital stock of the company in an amount equal to not less than 2 percent nor more than 5 percent of the amount of capital received from the investment company. At the present time the act makes it mandatory that the small business concern do this, but the proposed change, herein mentioned, would make it optional. There is much merit to the arguments in favor of doing away with this requirement and there is also some merit to the theory that the small businesses should be encouraged to invest in the investment companies. It has been stated by Mr. Barnes, Administrator of the Small Business Administration, in testimony before our subcommittee that this "theory of compulsory stock purchases by the small business concerns was to reduce indebtedness of the investment company to the Government and thus gradually to lessen Government participation until the program ultimately rests solely on private capital." This is perhaps true, but it is also felt that there is another reason; that it was the intent of Congress to set up a program whereby the ownership of these investment companies would be on the broadest base possible and that the small businesses themselves would have an interest in them and in their operation. By this same method, of course, production credit associations all over the country are becoming home owned by the farmers themselves.

A majority of those testifying on this subject stated that the small business concerns do not want to be compelled to purchase this stock—and that it is the small business concern that objects to it. As a result, I believe it to be advisable that this portion of the act be amended to make this stock purchase optional rather than mandatory. I would hope that the investment companies would not discourage the small business concerns from purchasing this stock but

that in many suitable cases would encourage them.

6. Section 304 of the Small Business Administration Act provides that it should be a "primary" function to provide equity capital, and section 305 of the act, which provides for direct loans, failed to indicate that this was a "primary" function of the act.

Subsection 305(a) of the act should be amended in such a manner as to indicate that the making of loans to small business concerns is also a "primary" function of these investment companies.

It is noted that proposed legislation before this committee would eliminate the word "primary" from section 304. I believe it would be preferable to leave it in and add to section 305 that it would also be a "primary" function to provide direct loans.

The act should be amended to provide for assistance to both incorporated and unincorporated business concerns.

7. There is strong argument for the suggestion that some provisions should be made whereby the investment companies would be excluded completely from the Investment Company Act of 1940. It is recognized that the Security Act of 1933, with its disclosure mandate is a necessary control over the investment companies. But, the Investment Company Act of 1940 is essentially a regulatory act and it was not the original intent that it should apply to the investment companies which are created under the SBIA. The constant day-to-day control that the Small Business Administration has over the investment companies should be sufficient regulations, the type which would be provided by the Investment Company Act of 1940.

In other words the Investment Company Act of 1940 should not apply to the small business investment companies and an exemption should be provided.

It is recommended that subsection (c) of section 307 of the Small Business Investment Act be deleted and a provision inserted therein which would make clear that these small business investment companies are not to be construed by law as being subject to the Investment Company Act of 1940.

Before closing, I would like to make one further observation relative to the financing of these investment companies. There exists a need or will exist a need, as more companies are chartered and their business expands, for a secondary market. The committee may well look now to providing a means of guaranteeing an adequate supply of wholesale money for these small business investment companies.

H.R. 8096

A bill to amend the Small Business Investment Act of 1958

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Small Business Investment Act Amendments of 1959".

SEC. 2. Section 103(4) of the Small Business Investment Act of 1958 is amended to read as follows:

"(4) the term 'United States' includes the several States, the Territories and possessions of the United States, the Commonwealth of Puerto Rico, and the District of Columbia;".

SEC. 3. Section 302(a) of such Act is amended by adding at the end thereof the following new sentence: "Any debentures purchased by the Administration under this subsection during any fiscal year shall bear interest at a rate equal to one-half of 1 per centum plus the rate charged the Administration, under the last sentence of section 4(c) of the Small Business Act, for funds obtained during such fiscal year from the revolving fund established by such section 4(c) for the exercise of its functions under this Act."

SEC. 4. The first sentence of section 303(b) of such Act is amended to read as follows: "To encourage the formation and growth of small business investment companies, the Administration is authorized to lend funds to such companies through the purchase of their obligations which shall bear interest at a rate (with respect to obligations purchased during any fiscal year) equal to one-half of 1 per centum plus the rate charged the Administration, under the last sentence of section 4(c) of the Small Business Act, for funds obtained during such fiscal year from the revolving fund established by such section 4(c) for the exercise of its functions under this Act, and which shall contain such other terms as the Administration may fix."

SEC. 5. Section 304 of such Act is amended to read as follows:

"PROVISION OF EQUITY CAPITAL FOR SMALL-BUSINESS CONCERNS

"SEC. 304. (a) It shall be a primary function of each small business investment company to provide a source of equity capital for incorporated small-business concerns in such manner and under such terms as the small business investment company may fix with the approval, by regulation or otherwise, of the Administration: *Provided,* That if a company obtains stock in a small-business concern in exchange for equity capital either by direct purchase, conversion of debentures, exercise of stock options, or other means, the terms of the transaction shall include a repurchase provision whereby the small-business concern shall have the right to repurchase such stock from the company at the option of the small-business concern as long as the stock is held by or remains in the control of the company. The repurchase price shall be the sound book value of the stock, determined at the time of the exercise of the repurchase option.

"(b) Before any capital is provided to a small-business concern under this section—

"(1) the company may require such concern to refinance any or all of its outstanding indebtedness so that the company is the only holder of any evidence of indebtedness of such concern; and

"(2) except as provided in regulations issued by the Administration, such concern shall agree that it will not thereafter incur any additional indebtedness, except interim or short term indebtedness, without first securing the approval of the company and giving the company the first opportunity to finance such indebtedness.

"(c) Whenever a company provides capital to a small-business concern under this section, such concern shall be given the opportunity to become a stockholder-proprietor of the company by investing in the capital stock of the company in an amount equal to not less than 2 percent nor more than 5 percent of the amount of the capital so provided, in accordance with regulations prescribed by the Administration."

SEC. 6. Section 305(a) of such Act is amended by striking out "Each" and inserting in lieu thereof the following: "It shall also be a primary function of each small business investment company to make loans to small-business concerns and each".

SEC. 7. Section 307(c) of such Act is amended to read as follows:

"(c) Section 3(c)(3) of the Investment Company Act of 1940 (15 U.S.C. 80a-3) is amended by inserting 'small business investment company,' after 'homestead association,'."

The Paul Barton Report: Forced Labor in the U.S.S.R. Today

EXTENSION OF REMARKS

OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. FLYNN. Mr. Speaker, in view of the recent Soviet visitors to our country and their good will tours of all segments of American industry, I feel that this report is must reading for every Member of Congress—lest we forget for one instant the essential difference between what these delegates say to our leaders, our statesmen, and our workers—and the actual conditions which they encourage and perpetrate.

The so-called corrective labor institutions, the concentration camps of the U.S.S.R., should remind us, in the face of Russian protestations, of the dreadful human cost of their factory productivity and their slave labor work camp efficiency—a forced labor work capacity geared solely to the life spans of unfortunate men, women, and children.

Under unanimous consent, I include in the RECORD an article appearing in the AFL–CIO Free Trade Union News of July 1959:

FORCED LABOR IN THE U.S.S.R. TODAY

(By Paul Barton)

On Sunday evening, May 17, 1959, Radio Moscow broadcast the message addressed to the central committee of the Communist Party of the Soviet Union by the participants in an important conference which had gathered together a large number of state security officers, in the presence of representatives of the government and of the party. The following is a significant excerpt from that message:

"The 21st Congress of the Communist Party fully defined the role and the position of state security in the Soviet state, as well as the tasks which it is to carry out in the political service of the Communist Party. The resolutions of the congress emphasized the need for a continued reinforcement of the state security services. The congress also specified that numerous Government functions are gradually to be transferred to the jurisdiction of social organizations and that the repressive functions of the state are gradually to be reduced. We fully realize, however, that the reduction of repression in our country does not in the least mean that we shall have less to do or the machinations of our enemies will decline."

LEGEND SHATTERED

It would be difficult to imagine a more shattering contradiction of official propaganda which, especially with the help of credulous foreign visitors, would like to make the outside world believe that the horrors of the Stalin era belong to an irrevocable past. And since, by being constantly repeated, this legend becomes increasingly widespread, we should be grateful to the officials of the political police for having drawn up their message to central committee in such characteristically clear and straightforward language.

This is not the first time that the lies of the Soviet Government, so obligingly repeated by some Western experts and tourists, have been shattered by its own servants. In

fact, the same thing happens each time when experts in the subject of repression begin to discuss the problems of their trade.

For example, there has been a great deal of talk about the so-called reform in the carrying out of the penalty of deprivation of liberty: In the prisons and camps, it has been claimed, attempts would henceforth be made to "reeducate" the detainees rather than punish them. But B. S. Utevski, one of the Soviet experts best qualified in this sphere and the author of a handbook which was an authority in the thirties, "The Soviet Policy of Corrective Labor," Moscow, 1935, simply states that there is no such thing. This is what he writes in his article "Fundamental Problems of Soviet Legal Theory Relating to Corrective Labor," published in the review Soviet State and Law, in March 1957:

"Even the consequent carrying out of the task of reeducating the convicts does not mean that the task of punishment disappears from the work of corrective labor institutions. * * * The very fact of seeing any contradiction between punishment and education constitutes on error."

Utevski returned to this theme in a report which he presented to a conference on the corrective labor law, which assembled in Moscow in May 1957 and of which the same review published a detailed report in its December 1957 issue. And it is by no means Utevski's personal opinion only. Other experts who took part in this conference expressed an identical point of view. The following is an excerpt from the report:

"G. Z. Anashkin, S. S. Studenikin, and B. S. Nikiforov emphasized in their contributions the idea according to which the task of reeducating the prisoners should play the principal part. The proposal was made that during the first period of their punishment, the various categories of criminals should be obliged to perform heavy manual labor, and should then, at the end of a specified period, be transferred to more skilled work. * * * B. S. Nikiforov showed that in the work of the corrective labor institutions there are always present, independently of the character of these institutions, certain elements of punishment which achieve the educational aim only in the last resort and particularly by means of coercion. * * * B. S. Niriforov emphasized, in this connection, that there is no question of opposing the penalty to punishment, but of determining the significance and the position to be accorded to the latter which is, like education, one of the elements of the penalty."

Thus although some of the policies of A. Y. Vyshinski, the infamous prosecutor in the witchcraft trials, have been treated with reserve for some time, his doctrine that education is best practiced through punishment and that, consequently, the more severe the punishment, the more effective is the education, are fully maintained.

DECREE NEVER PUBLISHED

Another example: official propaganda has often spoken of the government's resolution, dated October 25, 1956, finally to do away with the concentration camps and to replace them by two systems of detention: prisons and corrective labor colonies; in pursuance of the same decision, prisoners would, henceforth, be confined within the district in which they normally lived, instead of being deported to distant areas.

No decree containing provisions of this kind has ever been published in the Soviet Union. Former inmates of the camps of Vorkuta, Inta, and Potma, whom I questioned on this matter after their repartiation in the West, had never heard of a transformation of the concentration camps in which they were imprisoned into corrective labor colonies; and some of them were still in the camps in autumn 1957, that is, a year after the alleged reform was adopted.

Still more important, the report of the conference of May 1957 once more provides proof to the contrary. The Minister of the Interior declared at the conference that, since the number of "corrective labor institutions" had diminished, "more favorable conditions have thus been created for an effective control of the distant institutions." There is thus no question, for the minister in charge, of liquidating the great complexes of camps set up in various God-forsaken places, at Kolyma, Norilsk, Vorkuta, and elsewhere, but only of organizing matters in such a way that they should cease to be states within a state, escaping more or less from the authority of Moscow.

Furthermore, certain participants in this conference specified that the term "corrective labor institutions" means prisons, camps, and colonies. This is what the report has to say about it:

"The speakers maintained that the steps taken by the party and by the government to improve the work of the institutions within the jurisdiction of the Ministry of the Interior have contributed in many ways to the consolidation of socialist legality in the work of these institutions and especially in that of the corrective labor camps and colonies."

And further:

"Considerable attention has been paid to the system of detention in the prisons and the practice of transferring the inmates of corrective labor camps and colonies to prisons, and vice versa."

SENT TO DETENTION CAMPS

Moreover, since the supposed abolition of all such camps, a certain number of verdicts sentencing the accused to detention in a camp, have been reported in the Soviet provincial press, for example in Bakinski Rabochi for November 14, 1956, Zarya Vostoka for December 2, 1956, Pravda Vostoka for February 24, 1957, Turkmenskaya Pravda for April 14, June 11, June 25, July 17, and July 24, 1957.

There is certainly no question of denying that the concentration camps and forced labor have undergone important changes in the last few years, and especially since the strikes and uprising in the years 1953–55. But it is necessary first of all to clear away the confusion created by official propaganda and by naive observers, and to state the basic fact that camps and forced labor still exist in the Soviet Union. For only on this basis is it possible to understand the changes of these last few years.

In the last 10 years or so, the Soviet forced labor system has been going through a serious crisis. A glance at the data concerning the population of the country will suggest the reason for this. In 1940, the U.S.S.R. had between 193 and 196 million inhabitants. Under normal conditions, it should by now have had more than 250 million. But the census carried out last January showed less than 209 million (Izvestia, May 10, 1959). The 200 million mark was not reached until spring 1956.

The loss of some 40 million inhabitants which these figures reveal cannot be wholly attributed to military casualties or to the low birth rate during the war years. Mass deportations have also played an important part in bringing about this situation.

This is demonstrated most clearly by the data relating to the numerical disproportion of the two sexes, which is very serious even when one considers the country as a whole.

According to the census of last January, the total number of women exceeds that of men by 20 million. But this figure is trifling in comparison with Naum Jasny's estimates, based solely on official data. In 1955, there were, in the kolkhozes (collective farms), only 3 adult men to every 10 adult women; so that, perhaps for the first time in human history, the birth rate is, at present, lower in rural areas than in cities.

On the other hand, in the vast regions covered by enormous concentration camp complexes and peopled mainly by convicts and ex-convicts, there is a disastrous lack of women. For example, in the town of Norilsk, which forms the center of one such complex at the western extremity of eastern Siberia, the Japanese prisoners have collected, with admirable patience, all the data which it was possible to obtain. From this it appears that the numerical proportion of the sexes there was eight men to one woman.

In the face of so alarming a demographical situation, it was no longer possible to carry on the mass deportations at the same rate without causing irreparable damage to the national economy. After having drawn abundantly on the reserves represented by the satellite countries, the authorities, around 1950–51, were forced to recognize the fact that the sources of recruitment for the camps had dried up and that it was necessary, henceforth to make more efficient the exploitation of those prisoners who were already available.

It was at last realized that the use made hitherto of the prisoners was not only inhuman but also uneconomic. By way of illustration, we cite the Vorkuta conditions where there was one dead per sleeper in the construction of the railway; in the mines, there were two dead per every meter sunk in depth.

The first steps toward greater efficiency aimed at a reduction of the death rate. Common-law prisoners were separated from political prisoners and subjected to less harsh conditions; food, clothes and medical services were gradually improved; the enterprises attached to the camps, which had always worked with the most primitive installations and tools possible began to get better equipment. Beginning with the summer of 1953, they were transferred from the authority of the MVD and entrusted to specialized economic ministries (mines, nonferrous metals, forest exploitation, etc.).

As the capital invested in these enterprises increased, the employment of physically unfit men and the generally low output of the prisoners' work became increasingly more burdensome economically. The release of invalids, the stimulation of productivity by offering inmates the hope of release before completion of their sentence, and the transformation of as many prisoners as possible into deportees became increasingly urgent. It is, however, typical that the government did not decide to adopt these reforms—desirable from a strictly economic point of view—until the prisoners extorted it from them in a bitter struggle, through the strikes and uprisings which had broken out in the camps beginning in the spring 1953.

What is the status of the concentration camps and of forced labor following these reforms? The total number of prisoners has decreased considerably. But the overwhelming majority of those who have been released from the camps have not become free citizens (if this term can be applied to any of the inhabitants of the Soviet Union); they are obliged to remain in the district where they were imprisoned and to continue to work in the same enterprises as before. Thus, what has happened in most cases was merely a transfer from one category of forced labor to another.

The decrease of actual prisoners in the camps varies from district to district. Very marked in the western part of the U.S.S.R., it grows less so as one travels eastward. The Japanese repatriated from Kolyma at the end of 1956 estimate that the number of prisoners in this vast system of camps in

northeastern Siberia has actually remained the same. The fact remains that many prisoners have been transferred from camps in the west to those in the east.

INCREASE OF FORCED LABOR

At the same time, there is an increase of forced labor in the prisons. In 1955, construction was started on a whole series of large new prisons—for example, at Kotlas, at Sverdlovsk, and at Novosibirsk. On the other hand, a report on the well-publicized prison of Butyrki in Moscow, published in Izvestia of September 13, 1956, shows that the prisoners are henceforth obliged to perform forced labor, organized in a way similar to that practiced in the camps. This fact is confirmed in a study by B. S. Utevski, published in the review Soviet State and Law in March 1957. This author also states that the detention in prison should, after the reforms of the camp-system, be inflicted on men who are to be punished with particular severity. This proposal was made into law by the new penal legislation, adopted December 25, 1958.

Finally, there is the extension of forced labor without detention. During 1957, most of the Soviet Republics passed a "law aiming at the intensification of the struggle against antisocial and parasitic elements."

This law authorizes the banishment of a citizen for a period of not less than 2 and not more than 5 years, without any judicial process, by a simple vote of a citizens' meeting—if the verdict thus passed is confirmed by the executive committee of the soviet of the district or of the city.

One can get an idea as to the application of this new law by reading in Pravda Vostoka of July 13, 1957, that a kolkhoznik was condemned to be banished for 5 years for being too preoccupied with his individual garden-plot and for having neglected his compulsory work in the fields of the kolkhoz.

On the whole, the present situation regarding the concentration camps and of forced labor is clear enough. Because of the serious demographic crisis, and in consequence of the prisoners' uprisings, the whole system is gradually falling to pieces.

But the authorities are not, because of present difficulties, losing sight of long-term prospects. While throwing ballast overboard, they do what is necessary to safeguard the essence of the institution throughout this critical period. Thus, they preserve the possibility of developing the institution in another direction, if a more favorable situation should arise.

The Crisis of a Continent

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a very timely and interesting address by a leading Mexican statesman, Dr. Exequiel Padilla. Dr. Padilla is a former Minister of Foreign Affairs of Mexico and at one time was a candidate for President of Mexico.

Dr. Padilla's views, especially what he has to say about his countrymen whom he knows so well, and Latin American affairs generally with which he is so familiar, should be of considerable interest to us at this time. I commend his address to the attention of my colleagues in the Congress and to the leaders and policymakers in the administration. The address was delivered on June 25, 1959, at the Lions Club in Mexico City. It is entitled "The Crisis of a Continent," and reads as follows:

THE CRISIS OF A CONTINENT

I am delighted and thankful for this very cordial reception with which the distinguished Lions Club honors me, and for the generous words of my friend Gen. Juan Felipe Rico. His sincere expressions have thrilled me, above all because they come from a great soldier of the Republic. I am also delighted to be in the company of the Ambassadors of our sister Republic.

This continent is passing through a grave crisis of disunity. Nevertheless, the purpose of my discussion is not to deal with pessimistic considerations, but better still, to make certain that the growing disorders, the violences, and the discords have pressed our nations to concentrate in discovering and eradicating the causes which are producing them.

Many times the darkness that surrounds us is but an indication of the coming of dawn. At present, there is one fact of luminous evidence. And that is, that while the tyranny of totalitarianism tries to crush the disquiet of the common man by the use of tanks, machineguns, and cannons, our democratic doctrines answer with attitudes of understanding and justice.

Here, in the West, we have the conferences of Lima, of Caracas, of Buenos Aires, of Washington. There they have Hungary and Tibet bathed in innocent blood. In fact, our international calendar of the Americas is full of conferences, conventions, agreements, and meetings that rapidly unfold in the security of equality and in the respect of the sovereignty of nations. What is most interesting, however, is the passionate participation of our Latin America. Latin America has taken a new step of leadership. Already the propositions and the initiative no longer come solely from the United States. But now, what is most important is the proof that the justified aspirations of our peoples are encountering cordial, decided, and ardent support of the entire continent. The rule and flood of words has ended. We have arrived at a level of accomplishments. We must disarm the subversive minorities, with irrevocable reality. Looking back, is a reactionary and destructive policy. The oracle of wisdom should be to look forward to the future.

If we should search for a dramatic demonstration of the idea that man and multitudes are what they believe and think, we would find no more appropriate one than the convulsive situation of our Latin America. The tragedy of our people is being written from Moscow. And is the bankruptcy of our intelligence so advanced, the capacity of our people and of our statesmen so limited that we do not have the ability to close the door against the powerful Soviet propaganda, that day to day, is poisoning the mind of America? The answer is to urgently mobilize the defensive spirit of our continent.

And the first thing we must understand is that neither Mexico, nor any other country of the world, can live in solitude or isolation. Let us turn our eyes, for a moment, on this Mexico of ours. What is the fundamental problem of Mexico? One day, while I was President of the Congress of the Union, so many years ago I have not the desire to remember the exact date, a group of Congressmen and I presented ourselves to the National Palace to report certain electoral irregularities. President Calles listened to us attentively. I spoke effusively, frequently mentioning the "people" and the "rights of the people." The President interrupted me saying: "The people? What people? We have no people. We are making a people." These are the words of a statesman. Throughout our Revolution, from our agrarian laws that destroyed the feudal system of the large landowners, from our labor laws, from the emancipation of fanaticism, from the education of the masses, from the banking revolution, we have been constructing a country of free men, masters of their own destiny. But in spite of our remarkable positive advances, we have only come half the way. Who of us can ignore the degrading situation of the immense majority of our workers, living on ruinous wages? High salaries are the product of modern technology; the worker today, thanks to machinery, produces twice of that which he produced in 1939. It is only fair and just, then, that the worker should share in the benefits of modern industrial techniques. But, this does not happen among us. Our incipient industrialization can scarcely absorb a small part of our population. Lacking industries, capital, investments, techniques, and economic virility we can only count on a phantom market because of the lack of purchasing power on the part of the masses. And who of us can ignore the tragedy of our peons? Our farmers, disillusioned, ill-fed, fight an uneven battle with the indomitable earth; they need machines, fertilizers, insurance, disinfectants, credits, education; and because they do not have these things, they wander through our national and even foreign paths in search of opportunities for work, or they stay and vegetate in their little parcel of land, forever beaten by an impious hierarchy of entrepreneurs and iniquitous agents who exploit them.

We have had and we still have patriotic statesmen, but all their efforts crash on the poverty that gnaws at the entrails of Mexico.

Let us consider for a moment the prices obtained for our exportable products. Neither the investment, nor the technique, nor the loans could serve us greatly if the products created are to be sold at prices of enslavement. With good reason our Government and the governments of Latin America strive tirelessly for just prices. It is a fact that we have received gigantic investments in the course of our history. In the period of 15 years after the war, tourism alone—not counting loans, nor foreign investments, nor money brought back by braceros—tourism alone has given us an average of $200 million annually, that is to say, $3 billion totally or 40 billion pesos. This figure is about equal to the value of our total national industrialization. But has the lot of the real Mexican people been improved by this? Certainly not. These enormous incomes have contributed to build for a minority some fabulous incomes whose privileges constantly menace the security of the Republic. And our people continue their way in the same heartbreaking poverty, with the ruinous prices and slave wages.

We must then, insist that the United States, which is our principal buyer and our natural ally in continental prosperity, in the same spirit of justice with which its masses of workers have found remunerative prices for their productions, cooperate cordially in the effort to find a formula, difficult but by no means impossible, for prices that will guarantee to Latin America a level of income worthy of the liberty of America. The enlightened opinion of the United States will not accept to purchase advantages for its economy at the price of permanent misery of the Latin American masses. Solidarity is not a vain word.

But how can we speak this language of justice in this and our other vital problems from a platform of provocation, animosity, and discord? That would be to ignore human nature.

Let us look reality face to face: All of our great problems stem from the lack of money and we lack the necessary resources and

the indispensable basis for a just economic interdependence. To erase the miseries of the people there is no substitute for the cordial union of the material and spiritual resources of the two Americas. Otherwise, our nations will continue living in a gloomy and vicious circle of misery, disquiet, subversion, and dictatorship.

The threats surround the people like an ever-increasing tide. It is then, the time now for true patriotism, which does not consist of sterile, arrogant, or suicidal attitudes but with decision to confront realities with a worthy and constructive spirit and to guard the vast horizons of the future generations.

The present-day examples are marvelous. Let us look at Germany: Where would this great nation be if it would have lived these last years only remembering the destruction, the ruin, and the sorrow of its homes caused by the allied bombardments during the war? Far from such an attitude of paralysis, Germany only thought of the new generations that had to be saved, in the rehabilitation of its forces and of its spirit, and moved to make a strong friendship with its victors. And Japan? Hiroshima and Nagasaki still maintain their horrible imprints and there are still living beings with the scars of their disasters. Japan has not nurtured in its torn heart a sterile hate. But like Germany, rising above resentment and the dark clamor for vengeance, it has sealed a friendship with its enemy of yesterday. And both, Germany and Japan, have risen above the ashes, have given the world a wonderful example of recuperation and their new generations march with a high heart, defying destiny.

We have other dramatic examples: France and England have maintained a traditional enmity for years. During the war De Gaulle bitterly complained of the unjust advantage England took of a wounded France. And you remember Winston Churchill, declaring with his marvelous ingenuity, that "of all the crosses that bowed him down none weighed as much as the Cross of Lorraine"? Well then, only a few months ago many could have contemplated the tearful eyes of Churchill, when at the Hotel Martignon in Paris, the President of France put on the breast of the glorious ex-Prime Minister of Great Britain the Cross of Liberation. And, also only a few months past in the little French City of Colombay, two men were found together: De Gaulle and Adenauer cancelling in an embrace of friendship the hate that had existed and appeared inextinguishable in the hearts of their nations since 1870.

Now then, we too have difficult compromises to make: the one, is to save the generations that follow us from a future full of darkness and shadows. We recall that annually 400,000 citizens leave our country to look for work. While each night—tonight—millions of children are trying to sleep and appease their hunger, and each year 900,000 new human beings in a growing proportion present themselves at the table where the fatherland cannot serve them a confident subsistence. And, this is happening to a glorious race, of proven civilized power, to the builders of the pyramids of Chi Chen Itza, to the creators of the colonial art, to the Mexicans who have made in 1910 a just revolution, before which, no other people of this earth had attempted.

Finally, ladies and gentlemen, we must not forget that America has the duty to cooperate in this dramatic fight to free the world, to make liberty triumph over tyranny. Latin America cannot abandon to its adversary, the citadel of its great destinies.

Anti-Americanism in Canal Zone

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. DORN of New York. Mr. Speaker, there is a rising tide of anti-Americanism beating against our Isthmian lifeline in the Canal Zone.

Panamanian politicians are now renewing their threats to "take the United States before an international tribunal"—The Hague or the United Nations. One of their currently re-avowed objectives is to have set aside, as allegedly "contrary to international law," that part of the 1903 treaty which established "in perpetuity" American rights in the Panama Canal Zone. The long-range aim of these agitators is "nationalization by the Republic of Panama" of the U.S.-built and U.S.-owned Panama Canal. Pending such expropriation, they clamor for another vast increase in the annuity paid by the United States to Panama, now $1,930,000.

Two of the most vocal Panamanian politicos have this month publicly proclaimed a plan to stage on Panama's next Independence Day, November 3, another riotous flag-planting in our Canal Zone. They called their 1958 invasion of our Canal Zone "Operation Sovereignty."

Day-to-day developments at the Isthmus now re-emphasize the need for broader public knowledge within the United States of the forgotten, and to a large extent never told, history of our rights and obligations at Panama.

One brief, informative summary has come to my special attention. It is from a constituent in Brooklyn, the widow of my late friend John F. Stevens, Jr., whose distinguished father, as Chief Engineer, was the "basic architect" of the Panama Canal.

The book review which I am calling to your attention says that "as Latin American Communist danger mounts, an understanding of the American position in threatened Panama becomes imperative." With this I agree; and so I am including in extension of my remarks the following complete text from the book review section of the August, 1959 issue of the American Mercury:

WILL PANAMA BE NEXT?

(By John Lines)

With the grave current news from Panama shouting at us from the headlines, this background book comes with unusual timeliness.

Mr. Harding has been a close observer of Panama events for over 50 years. In 1908, while on the editorial staff of the old New York World, he was given the assignment to secure the facts concerning alleged misuse of money in the involved intrigues which preceded the setting up of the Republic of Panama. He uncovered a sordid story, pointing the finger of guilt at William Nelson Cromwell, the legal counsel for the French company which originally attempted to build the canal. The story cast a serious reflection upon some of the decisions of President Theodore Roosevelt.

Joseph Pulitzer, publisher of the World, published the story. Its repercussions were serious. In the final weeks of his administration, President Roosevelt was instrumental in securing a criminal libel indictment against Joseph Pulitzer, as well as against the editor and publisher of the Indianapolis News, which had reprinted the story. The indictments came to nought, but in defending himself, Pulitzer opened the lid on the closely guarded story of a group of top American financiers who had profited richly from the $40 million which the United States paid to the bankrupt French company which sold its canal rights to us. The list included J. P. Morgan & Co., James Stillman, I. Seligman, Clarence H. Mackay, Douglas Robinson, Senator Chauncey H. Depew, H. H. Rogers, and others.

The story of Mr. Harding's search for the real Panama story a half century ago is still a thriller. We will not spoil it for the reader by disclosing where some of the trails led him.

In the intervening years, Mr. Harding has continued to watch the Panama situation with an alert eye. Today, he sees enemies of America's basic interests scheming to bring about internationalization of the canal. He is equally opposed to the current billion-studded proposal to convert the canal into a sea-level passage.

As the Latin American Communist danger mounts, an understanding of the American position in threatened Panama becomes imperative. Mr. Harding's book, with its hitherto untold history of the secret forces which have shaped events on the isthmus, is a valuable addition to our source material. It answers many questions which have hitherto baffled Americans.

John Nance Garner

EXTENSION OF REMARKS
OF
HON. JOE M. KILGORE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. KILGORE. Mr. Speaker, my illustrious predecessor in the Congress, John Nance Garner, will celebrate his 91st birthday on November 22 this year.

The Texas Legislature paid homage to this outstanding Texan by a resolution. As the third Representative the 15th District of Texas has had since John Nance Garner's retirement from this office in 1932 to serve as Vice President of the United States, I am privileged to have the opportunity to insert the language of Texas Senate Concurrent Resolution No. 9 in the CONGRESSIONAL RECORD so that the Nation may see what the Texas Legislature has to say about our State's senior leading citizen.

SENATE CONCURRENT RESOLUTION 9

Whereas John Nance Garner is the only man in American history who presided in uninterrupted succession over both Houses of the Congress, first as Speaker of the House of Representatives, 1931–33, and as Vice President of the United States, 1933–41; and

Whereas this distinguished Texan, born in a humble cabin in Red River County on November 22, 1868, 3 years after the close of the War Between the States, and deprived of the advantages of formal education, removed to Uvalde County, became a self-taught lawyer and held his first public office in 1893 as county judge of Uvalde County; and

Whereas John Nance Garner was elected to the Texas House of Representatives in 1898, and beginning in 1903 he served 30 years as U.S. Representative from the 15th Congressional District of Texas; and

Whereas in 1932 the people of the United States, on the basis of his achievements in national affairs, elected him to the office of Vice President; and

Whereas in addition to his other public duties, Mr. Garner has made great contributions to the preservation of the Texas heritage, having served as chairman of the U.S. Texas Centennial Commission and assisted in founding the University of Texas Memorial Museum; and

Whereas after serving as a leading American statesman for half a century, John Nance Garner has become a legend in the legendary Lone Star State: Now, therefore, be it

Resolved, by the Senate of the State of Texas (the House of Representatives concurring), That we join with his friends and admirers throughout Texas, the Nation, and the World in extending our grateful salute and best wishes to Mr. Garner, private citizen, now in noble retirement at his home in Uvalde as he approaches his 91st birthday.

Hardeman; Crump; Aikin; Baker; Bradshaw; Colson; Dies; Fly; Fuller; Gonzalez; Hazlewood; Herring; Hudson; Kazen; Krueger; Lane; Martin; Moffett; Moore; Owen; Parkhouse; Phillips; Ratliff; Reagon; Roberts; Rogers; Secrest; Smith; Weinert; Willis; Wood; Lieutenant Governor Ramsey.

BEN RAMSEY,
President of the Senate.
WAGGONER CARR,
Speaker of the House.

Dispute Over Moscow Exhibit Points Up Need for U.S. Arts Council

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, the conflicting views of President Eisenhower and some of his fellow artists as to the kind of paintings the United States should exhibit in Moscow, U.S.S.R., focuses new attention on the importance of establishing a Federal Advisory Council on the Arts, and, indeed, on the touchy question of the relation of the Federal Government to the arts.

This is the conclusion of Thomas W. Ottenad, Washington correspondent of the St. Louis Post-Dispatch. He finds, in an excellent and comprehensive article published in that newspaper on July 19, 1959, that—

There is a surprising amount of support for the view that the time has come for the Government to take a hand in efforts to raise the artistic and general cultural level of American society.

Among those supporting this view are: Mr. Eisenhower, an amateur Sunday-type painter whose taste in art tends to the classic and photographic; Nelson A. Rockefeller, a bountiful patron of the arts; Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, who is scarcely ever on the same side of a political fence as the President or Rockefeller; Representative FRANK THOMPSON, Jr., Democrat, of New Jersey, an advocate of culture by legislation; Secretary of Health, Education, and Welfare, Arthur S. Flemming, and nearly every major artistic organization in the Nation.

I am very happy to be in this company on this issue. In fact, I am very happy to have had my bill, H.R. 7656, to establish a Federal Advisory Council on the Arts, favorably and unanimously reported by the Special Education Subcommittee headed by the distinguished gentleman from Alabama [Mr. ELLIOTT] on June 10, 1959. Everyone seriously concerned with the cultural status of our country is deeply indebted to the members of this subcommittee for their devoted and painstaking work in this field. Due to their efforts this legislation, which has been before the Congress since early in 1955, will likely become law in this 86th Congress.

As to the Moscow Fair, and the art we display there, Senator HUBERT H. HUMPHREY and I have declared that if we are going to have a cultural exchange program with the U.S.S.R. and other countries then let us conduct it in an orderly, logical and mature fashion—in a way that will gain for our Nation the respect of artists and intellectuals throughout the world, rather than subject us to ridicule.

It does little good to appropriate substantial sums of money for State Department and U.S. Information Agency programs of cultural exchange if the advantages of these programs are to be thrown away by hasty and thoughtless comments by high public officials.

Legislation to establish a Federal Advisory Council on the Arts which Senator HUMPHREY and I have sponsored would, if enacted into law, create a vehicle to channel into governmental policy on the arts the balanced and mature judgment of many distinguished educators, artists and supporters of cultural activities throughout our Nation—judgment which would tend to keep our country free of the scourge of "foot-in-mouth-disease" insofar as art and cultural activities are concerned.

I include here the text of my press release pointing up the need for a Federal Advisory Council on the Arts, as well as the article from the St. Louis Post-Dispatch to which I have referred.

CITE PRESIDENTIAL COMMENT ON ART AS ARGUMENT FOR FEDERAL ADVISORY COUNCIL ON THE ARTS

Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, and Representative FRANK THOMPSON, JR., Democrat of New Jersey, said today that President Eisenhower's recent statement on the American art exhibit going to Moscow is "an example of why we ought to have a Federal advisory council on the arts."

The coauthors of the International Cultural Exchange and Trade Fair Participation Act of 1956 termed the President's remarks at his last press conference (that in the future he would see to it that Government art juries would include one or two people who know what America likes) most unfortunate.

"If we are going to have a cultural exchange program with the U.S.S.R. and other countries," they pointed out, "then let us conduct it in an orderly, logical, and mature fashion; in a way that will gain for our Nation the respect of artists and intellectuals throughout the world, rather than subject us to ridicule."

"It does little good," they said, "to appropriate substantial sums of money for State Department and U.S. Information Agency programs of cultural exchange if the advantages of these programs are to be thrown away by hasty and thoughtless comments by high public officials."

The two Democrats have introduced legislation in the House and Senate this year which would create a Federal Advisory Council on the Arts—legislation which was favorably reported by a Special Education Subcommittee of the House Education and Labor Committee on June 10.

"Such legislation," they said, "would create a vehicle to channel into governmental policy on the arts the balanced and mature judgment of many distinguished educators, artists, and supporters of cultural activities throughout our Nation—judgment which would tend to keep our country free of the scourge of 'foot-and-mouth' disease insofar as art and cultural activities are concerned."

[From the St. Louis Post-Dispatch, July 19, 1959]

DISPUTE OVER MOSCOW EXHIBIT STIRS HOPE FOR U.S. ART BODY—SOME FEEL THAT FEDERAL ADVISORY COUNCIL WOULD HAVE PREVENTED TROUBLE OVER SELECTION OF PAINTINGS

(By Thomas W. Ottenad)

WASHINGTON, July 18.—The conflicting views of President Eisenhower and some of his fellow artists as to the kind of paintings the United States should exhibit in Moscow focus new attention on the touchy question of the relation of the Federal Government to the arts.

There is a surprising amount of support for the view that the time has come for Government to take a hand in efforts to raise the artistic and general cultural level of American society.

Among those supporting this view are: Mr. Eisenhower, an amateur Sunday-type painter whose taste in art tends to the classic and photographic; Nelson A. Rockefeller, a bountiful patron of the arts; Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, who is scarcely ever on the same side of a political fence as the President or Rockefeller; Representative FRANK THOMPSON, JR., Democrat, of New Jersey, an advocate of culture by legislation; Secretary of Health, Education, and Welfare, Arthur S. Flemming, and nearly every major artistic organization in the Nation.

To a man, they all favor bills pending in Congress to create a new Federal Advisory Council on the Arts. The council would have two major purposes: to suggest ways for increasing interest and participation in the creative arts and to advise other Government agencies on artistic matters.

The council's powers, while broad in scope, would be advisory only. It would have no authority to hire artists, commission works or conduct competitions. Cost is expected to be nominal at first, perhaps no more than $50,000 a year.

It could open the door eventually to Federal financial support for the arts, a highly controversial proposal that has failed repeatedly in the past.

HUMPHREY and THOMPSON, cosponsors of the pending legislation, feel that the still-smouldering dispute over the Moscow exhibit might have been prevented if the pro-

posed advisory council had been in existence. It would have provided "the balanced judgment which would keep our country from continually getting in hot water where the arts are concerned," they said in a joint statement.

The dispute over the Moscow exhibit arose after Representative FRANCIS E. WALTER, Democrat, of Pennsylvania, chairman of the House Un-American Activities Committee, charged that half of the artists whose works were selected for the exhibition have records of affiliation with Communist fronts and causes. The committee then conducted hearings on the matter.

When Mr. Eisenhower was questioned about the controversy at a press conference, he said he would not censor works selected for the exhibit, but might take a hand in similar undertakings in the future.

He described one of the works to be exhibited, a somewhat unflattering portrayal of an Army general, as a lampoon rather than a serious work of art. Those who had selected the paintings defended their choices, but later several paintings traditional in style were added to the exhibit. The explanation was that they were intended to give balance to the exhibit.

The pending legislation has had a strong bipartisan background. Rockefeller, a potential candidate for the Republican nomination for President next year, is credited by some people with initiating his party's interest in the subject.

Rockefeller helped draft legislation of the type now pending when he was an Under Secretary of the Department of Health, Education, and Welfare. It was he who interested Mr. Eisenhower in the matter.

The President first proposed creation of a Federal Advisory Council on the Arts in his state of the Union message in 1955. He told Congress at that time:

"In the advancement of the various activities which will make our civilization endure and flourish, the Federal Government should do more to give official recognition to the importance of the arts and other cultural activities."

Despite the President's support, the plan did not get very far. In 1956 a bill embodying his proposal was passed by the Senate, but it died in the House. In 1957 a similar measure failed to get out of committee.

This time supporters of the plan think they have a better chance.

"Prospects for the bill are better than ever before," remarked Representative THOMPSON. "Chances are excellent that the bill will be enacted."

He explained that there is no substantial opposition to the measure and added: "Furthermore, the idea of voting for Federal action in cultural fields has become more widely accepted than it was in previous years."

The need for Government action was stressed by Secretary Flemming recently at hearings by the House subcommittee on special education.

Asserting that there is "inadequate recognition of the fundamental importance of artistic endeavor in our national life," Flemming pointed out:

"Our Nation has a rich tradition of achievement in the arts. We take justifiable pride in our great museums, art galleries, and orchestras.

"Yet millions of Americans know painting and sculpture only in reproductions and hear great music only by recordings. We are proud of the creative vitality of our theater, yet living theater is never seen in vast areas of our Nation."

The projected Federal council would seek ways to remedy these deficiencies, Flemming noted, adding that increased development of cultural and artistic interests "serves a dual purpose in that it contributes to the well-being of the individual by developing his creative abilities and, at the same time, it enables the individual to further enrich our civilization."

Artistic organizations strongly endorsed the pending legislation. Elihu Winer, secretary of the National Council on the Arts and Government, an organization with members in all fields of the arts, told the House subcommittee that artists want the Government to give simple recognition to the contributions they have made to American life.

"Art, like anything else," he warned, "flourishes best when its worth is recognized and its practitioners encouraged. It is false to assume that great art can only be created in adversity.

"Individual works of art may be created under adverse circumstances, but it is a fair assumption that these are created despite, rather than because of, circumstances."

Only a scattering of artists has expressed opposition to the proposed legislation. They have voiced concern that governmental activity might infringe on their artistic freedom or lead to socialized art.

The pending legislation would throw the weight and influence of the Federal Government into the fight that a few, dedicated private citizens and philanthropic organizations have been waging to improve the cultural tone of American society.

The proposed Advisory Council is charged with making studies and proposing methods "to maintain and increase the cultural resources" of the United States and to encourage "creative activity in the performance and practice of the arts and participation in and appreciation of the arts." One of its primary objectives would be to seek ways of expanding "private initiative" in the arts and of bringing about cooperation of private interests with local, State, and Federal agencies in cultural programs.

Recommendations by the Council would go to the Secretary of Health, Education, and Welfare for comment and transmittal to the President.

Composed of 21 members appointed by the President, the Council would be assisted by an executive secretary and could call on experts for additional aid. Council members are to have broad knowledge, experience or interest in one art field or more. Major art categories listed by the bill include radio, television, and various crafts along with painting, music, literature, and other traditional art forms. The Council membership is to provide an appropriate balance of representation among these fields.

Some supporters of the pending bill hope that eventually the Council will propose a program of Federal aid to the arts. With the weight of the Council behind it, they feel it may be possible to overcome Congress' usual antipathy to art subsidies.

About the only time the Federal Government has given direct assistance to the arts was during the depression years of the 1930's, but the purpose then was relief rather than art. Congress has denied to artists the subsidy assistance it has given to farmers, railroads, airlines, shipbuilders, and other elements of the American economy.

While Federal activity in the field of the arts has increased markedly in the last decade, the United States still lags far behind many European countries in assisting cultural activities. Emphasizing the importance of expanded artistic and cultural programs, THOMPSON remarked:

"It is certainly true that civilizations are remembered as much for their contributions to the fine arts, to literature, to painting, to sculpture, and by their architecture as they are by the battles which have reshaped the course of human history."

Senior Citizens Annual Outing at Salem Willows, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my remarks as the principal guest speaker at the annual outing of the Senior Citizens and Associates of America, Salem Willows, Mass., on July 19, 1959. Among the other speakers were Charles C. O'Donnell, president and legislative director of the Senior Citizens and Associates of America; State Representative Michael J. Carroll, of Lynn; and Attorney John J. Tobin, counsel for the Senior Citizens.

My remarks at the outing follow:

Greetings: Although I am neither a teenager nor a senior citizen, I am reminded that the one becomes the other in the course of a long and productive life.

Many of the young people who are enjoying themselves at the beach today have started on jobs that are building social security accounts that will provide for them in their old age.

Perhaps some of them will look back across the milestones to this day, and be grateful for your determination to broaden and strengthen our national old-age pension system.

You worked hard during the many active years of your lives to develop our Nation and its wealth, and to love and care for your children until they grew up and were able to support themselves.

Now it is their turn to help you through the group effort that we call social security.

Eventually, when this program is complete, workers and employers, and the Government which represents all, will cooperate to provide a comprehensive plan of benefits to all retired Americans.

But that program is not complete today.

Social security itself is in the process of growing up.

Born in 1935, it is only 24 years old, and it has much to learn, and to accomplish before it reaches full maturity.

The United States was the last of the established nations to recognize the need to provide for the wants of our elder citizens in their retirement.

We started off cautiously, on the basis of old age and survivors or old age assistance checks sent each month to those who were 65 or older.

But as the cost of living increased we found that upward adjustments of the benefits rates were required, even before we could improve on the program.

With progress in public health, and medical science, and in nutritional values the life span of our people is steadily increasing.

Experience in the field of social security revealed serious deficiencies.

We discovered that the monthly checks, such as they were, did not solve the whole problem.

There were other needs, such as proper housing for the aged and provision for hospital, medical, and nursing home care, that were overlooked in the beginning.

Since your able and faithful president, Charlie O'Donnell, first organized the Senior Citizens and Associates of America, retired Americans have been campaigning for

a national old-age pension. This would be at the rate of $150 per month to insure a decent and comfortable standard of living at today's prices.

The aging veterans of World War I are seeking a pension at the same level, and with both groups working toward this objective, the prospects are improving for a general pension that will apply to all who reach the eligible age of 65, or possibly, 62.

The increasing number of older people, in proportion to our total population, means that their influence on national policy and legislation will gain in strength year after year.

Meanwhile, however, there are other benefits that can be won before the major goal comes into view.

First among these is the enactment of legislation to provide the elderly with hospital surgical and nursing home care.

This past week I submitted a statement to the House Ways and Means Committee in Washington supporting H.R. 4700. This is Congressman FORAND'S bill to amend the Social Security Act by adding health insurance to the benefits.

If, and when, this bill passes, it will mean that 60 days of hospitalization will be given in any 12-month period to those eligible for old-age and survivors insurance benefits. The cost will be paid from the Federal OASI Trust Fund to the hospital, physician, and nursing home which provides the services.

A duly qualified physician or dentist must verify that such hospitalization is medically necessary. Such referral shall not be required in an emergency where delay would be impractical. Where surgery may be needed, the individual may freely select the surgeon of his choice.

If the patient is transferred to a nursing home from a hospital, and if the services are for an illness or condition associated with that for which he received hospital services, an additional 60 days of nursing home care will be paid for from the Insurance Trust Fund. In no case shall the combined total exceed 120 days in any 12-month period.

This would cover those persons now receiving benefits, as well as those who would be eligible if they applied.

This proposed plan of health benefits would be of great assistance to aged persons, and to widowed mothers of young children who now have difficulty in acquiring private insurance, and are too often crushed by the expense of illness.

Social security is not doing the job when it forces many of its so-called beneficiaries to seek public assistance with its degrading means test and when it fails to provide for hospital and surgical care.

The Consumers League of New York reports that over 1,600,000 residents of that State are 65 years of age and older. More than 900,000 of them are currently receiving OASI benefits. Too large a proportion of these retired citizens must apply for public relief to supplement their undernourished checks, even when these combine OASI payments and other private retirement benefits.

The league found that the relief costs to New York State can be reduced and much unnecessary suffering for the older citizens can be avoided if the earned retirement benefits of the program are increased so that they are more nearly in keeping with changes in the cost of living which have occurred during the past few years.

This reinforces our contention that a national pension of $150 per month is the only fair solution to this problem.

Even when the Social Security Act was being formulated back in 1935, there was an awareness of the fact that health insurance should be provided in addition to monthly benefit checks.

After 24 years it's about time that we made some progress as a Nation toward filling that void.

The mounting number of the aged in our population, and the steady rise in the cost of medical care, will not permit the national conscience to evade its responsibilities to the older citizens.

As so many people must turn to public relief to meet their daily living requirements, it is apparent that the present system of providing for the aged does not meet their needs, or fulfill the Nation's duty to them.

For most of the aged, private purchase of medical care is impossible.

And this financial problem occurs at a time when the infirmities of age require increased medical attention.

Social security is not only a program to provide for the material needs of the aged. It must ever bear in mind their rights to human dignity.

The aged rightly resent any questions by officials as to the resources of their children. They do not want anyone to contact their sons and daughters, and ask what they can contribute to the support of their parents.

This is a matter of personal pride that should never be violated.

With this in mind, social security, pensions, and health insurance for the aged must be a right to which they are entitled because of the Nation's obligations to them.

Through organizations like the Senior Citizens and Associates of America, the general public is never permitted to forget that so much remains to be done before we develop a social security system that is worthy of the name.

Not every one upon retirement can pack up and move to Florida.

Most of us prefer to live in Massachusetts among the scenes and the people that we know best.

After health insurance for the aged becomes an established fact, Congress will then face the responsibility of providing more special housing units for the aged, where they can enjoy peace and quiet among those who share their interests and their hobbies.

It is a pleasure for me to be a guest at your annual outing.

I wish you every joy at this outdoor social, increased by the knowledge that Congress is working on further improvements to social security legislation. At times, the rate of progress appears to be slow.

But of this you can be sure: Social security is developing.

Thanks to your efforts, it will become a bigger and better program in the not too distant future.

Health insurance is the next forward step in promoting happiness with security for our senior citizens.

Table Rock Dam

EXTENSION OF REMARKS
OF
HON. CHARLES H. BROWN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. BROWN of Missouri. Mr. Speaker, a whole new era is beginning in the picturesque Ozarks. Table Rock Dam is initiating a new growth and development unparalleled in our history; and it could not happen to a finer group of Americans or to a finer, more beautiful areas.

Many words have been spoken in this House about the tourism and recreational values of flood-control projects; but the Table Rock story is a case history that is worthy of study. No one has told this story more vividly than the reporter who wrote about it in the Springfield Leader and Press under the heading "The Table Rock Land Story: She's a Big Ol' Girl."

I include this article in the RECORD today for the consideration of those who are interested in the dollar values of recreational facilities that accompany flood control projects like Table Rock Dam:

THE TABLE ROCK LAND STORY: SHE'S A BIG OL' GIRL

The big boom of Table Rock is on.

From Blue Eye to Branson, Cape Fair to Cassville, Hollister to Hideaway Golden to Gobbler's Mountain, a new era—the Table Rock era—has been born after a gestation period of almost half a century.

And neither the land nor most of its people will ever be the same.

All across its 837 miles of shoreline, sweeping its thousand arms like a friendly monster across the I-told-you-so faces of Barry, Stone, and Taney Counties, Table Rock Lake has become the most talked-about new reservoir in America.

A dozen years and several million dollars from today, it stands a good chance of being one of the most popular.

In the eyes of many, the development so far has been "absolutely fantastic." Early activity certainly has been feverish.

Real estate prices have sky-rocketed; some 50 resorts and numerous recreation areas are currently being carved out of lakeside property; hundreds are buying land for retirement homes or weekend cottages; speculators and promoters have latched on to other desirable tracts with an eye toward the future; complete new towns have been mapped out.

Despite it all, only the surface has been scratched.

"She's a big old girl," said one old timer last week at Cassville. "You come back in 10 years and you wouldn't know where you were."

Everywhere you go in the vast reservoir area, there's talk of a new residential or commercial development, or swank resort. When the lake is full—probably late this year—more of the talk is expected to erupt into the reality of construction.

"Folks are just waiting for the water," is the word over and over again. When the lake finally rises to power pool stage, many will lead you to believe a combination of the Florida land boom and the California gold rush will be on, Ozarks style.

The boom will be there—is there—but in a more subdued manner, other observers allow.

Real estate salesmen, promoters, developers are almost as numerous as the natives. In fact, most of them are natives, some of whom are still sitting on land farmed by their granddaddies and just waiting until the right opportunity—or price—comes along.

Outsiders are flocking in by the hundreds. Wichita residents are buying building lots hand over fist, as are individuals and combines from Kansas City, Oklahoma City, Tulsa, and St. Louis.

Roy Chaffin, Branson real estate broker whose firm probably has handled more Table Rock property than any other company, recently sold lakeside lots to five persons from Caracas, Venezuela.

And a woman now living in Caracas, Mrs. Barnard Houghen, has purchased 176 acres to develop a boys' camp on the Indian Creek arm of the reservoir.

Recent buyers in other areas have included Chicagoans, New Yorkers—and, of course, a great many Springfieldians.

"Outside of Missouri," says Howard Foster, who runs a grocery store at Cape Fair and owns 160 acres near the new Cape Fair boat

dock which he hopes to develop, "I'd say most of the buyers are coming in here from Kansas."

Added another central reservoir resident: "Why, you see more Sedgwick County, Kans. (Wichita), cars here than you do Missouri cars."

What are people paying for their property, a good deal of which still remains undeveloped?

You can pay your money and take your choice.

"Prices," says Leon Fredrick, publisher of the Stone County Republican, at Galena, and a former Springfield and Monett resident, "range from reasonable to ridiculous."

Puts in Means Ray, wily old editor of the Cassville Democrat: "Some of that land—why, you couldn't have got that kind of money for it if you'd scattered gold nuggets on it."

Most real estate people claim prices aren't out of reason—yet.

However, Glenn Hall, Cassville theater owner who has leased the commercial boat dock at Campbell's Point from the city of Cassville, points out that Corps of Engineers officials at Little Rock told him recently that "they'd never seen a lake where land values had increased as they had here."

It's no secret that some of the rocky land, which might have brought $5 to $25 an acre before the $66 million dam was built, is now bringing as much as $2,000 to $3,000 an acre—in large tracts.

Single lots can be bought for anything from $250 to $3,500 each, the higher ones usually offering better roads, easier access to the lake, and sometimes electricity or water.

Earl Hood, who grew up in the Viola area, site of the new central crossing for the reservoir, is one who is selling his land—300 acres of it—in big packages to developers. One tract went for $100 an acre ("I just about give that one away"); and another for $200 an acre.

"Nobody was harder again the dam than I was. We couldn't hardly understand it," Hood says. "It ruined us old boys—our old native way of life is gone—but I've tried to be sensible about it. I'm boosting it now instead of cussin' it. And most of the other boys is, too."

"Besides," he laughs, "I don't give a damn what they do with the land. I bought me a farm up near Cassville."

Actually, one Branson realtor believes the land is harder to sell now than it was a few years back.

He figures it this way: Before the dam was built, land could be sold to speculators who were willing to gamble that there'd eventually be a dam and water in front of the property.

"Now," he says, "we're selling mostly to individuals who want to buy homes or build resorts themselves. They're more conservative with their money, and they don't want to gamble with it. They want to be sure that water is going to be there before they give up their hard-earned cash."

A Cassville man, who has handled scores of transactions involving lake property in the western and central part of the reservoir, believes that only the best bait must be offered before people begin to bite.

"Buyers want water and they want access. By grab," he says, they've got to have good roads if their property is going to move."

Most are happy with the type of development so far. Says Ted Durbin, who runs the Durbin Realty Co. at Cassville and is pushing property in the Shell Knob-Viola area: "We've got some of the finest people coming in here. Real substantial people. And they're planning on building nice homes, too."

Durbin and others agree that a "good lot—one that folks would be happy with" is selling for a minimum of $1,000, with most going for $1,250 to $2,500. Few fishing shacks are going in; most are substantial homes or cottages.

Lyle Chamberlin, whose Hideaway development on the James River arm south of Cape Fair is probably the oldest (13 years) on the new lake, has more expensive lots (up to $3,500), but also is throwing in electricity, water, and roads in the purchase price.

Within a few years, they figure, total investment in reservoir residences and resort property could be $25 to $30 million—possibly even $50 million.

"I certainly don't think all this is a flash in the pan," says investment broker Eiserman.

Adds his partner, Chaffin: "I'd like to live another 20 years just to see how this thing turns out."

There are now 42 homes and weekend cottages in Chamberlin's development, 8 others under construction, 2 motels proposed and a business district laid out.

"Lots aren't moving too well right now," he admits. "The lot season really hasn't opened up yet. And folks are still waiting for the water to come up." Eventually, he hopes to develop Hideaway in an area similar to Rockaway Beach.

You can throw a rock in almost any direction, or from any arm of the giant reservoir, and hit a proposed development. Some of them are fabulous proposals—including hundreds of thousand-dollar lodges, landing strips, private clubs, etc. But only a few actually have homes on them now.

Most of the bigger developments carry colorful names. There's Gobbler's Mountain, Shore Acres, Kimberling Cove, Kimberling Heights, John Q. Hammons' Kimberling Hills, Coombs Ferry, Vista Haven Beach, Valley View Beach, Indian Hills, White Rock Bluff, Coney Island, Trail's End, Sportsmen's Club, Lakeland Addition, W. W. Johnson's Table Rock Heights, Buttermilk Springs, Hideaway, Royle Point, Park Crest, High Dive, Rainbow Shoals, Flying Hoot Owls, Ants Creek Arm, Lakeview Acres, Nichols Heights.

Rainbow Shoals is proposed as a model community of 1,500 homes bordering on White River just below the dam. A group of Kansas City businessmen is developing this tract, although only one home is now under construction.

Other developments are planned in the Eagle Rock, Golden, Shell Knob, Viola and Blue Eye areas, with the Long Creek arm proving to be a popular spot.

In addition to the residential developments, many of which propose shopping centers and a resort area with them, "a world of small resorts is going in," says Bethel Eiserman, a partner of Chaffin's in a Branson development company (Valley View, Vista Haven, with interests also in Rainbow Shoals).

Most activity seems to be centered from the dam down the Long Creek Arm and up around Kimberling Bridge on Route 13. But everywhere on the reservoir, the signs are there: That the boom has started.

Bulldozers are busily scraping off hilltops and carving roads into the development areas. Scores of home are under construction, ranging from fishing shacks of $1,000 or others to sprawling residences costing up to $35,000 and $40,000.

Galena, seat of Stone County (in which about 75 percent of the reservoir lies), is bustling, as are Reeds Spring, Crane, Cape Fair, and other communities.

In a Galena abstract office, two more persons had to be hired, doubling the staff, to take care of the flood of abstracts brought about by land transactions.

"It's just beginning to catch on here," pointed out a Cape Fair resident. "And when it does, it'll really go."

"It's just in its infancy here in Cassville," adds Bob Mitchell, "but activity has picked up a lot in recent months."

Others say, with a twinkle in their eyes, that several people are moving in from such established resort areas as Bull Shoals, Lake Norfolk, and Lake of the Ozarks because of the Table Rock potential.

Courageous Action by Members of Congress Needed To Pass a True Labor Reform Bill

---

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. DENT. Mr. Speaker, labor finds itself in a most peculiar position. In its fight to keep punitive outright antilabor legislation from being passed it finds itself stymied by two significant factors: The charge of the McClellan committee on abuse of power, racketeering, and union leader corruption and the brakes put on normal wage contract negotiations by employees who are getting tough with labor because they feel that the Senate committee and the Kennedy bill have put labor behind the public opinion eight-ball.

This is reflected by the scared to move attitude of a great number of Congressmen. Many of the present Members of Congress, started their political careers as candidates sponsored, endorsed and in some cases, financed by the unions or their political arms, COPE, PAC, or the NPL.

These same Members of Congress find themselves on the proverbial "horns of a dilemma." Do they support labor's opposition to the Kennedy-Ervin Senate passed bill or do they follow the NAM-chamber of commerce lines of "attacking the leaders" and "protecting" the rank and file? They know that the attacks on Hoffa, the Teamster officials by the Senate committee and other racket witnesses is not truly indicative of the normal climate within the ranks of union officials.

They also know that the rank and file can be easily led to believe that, union officials without designating their own particular local and international officers, are crooked and arbitrary, and thus keep the political favor and support of their local area labor groups.

However, it comes down to a basic principle and one that each Member must answer before he votes on labor-reform laws. He must decide whether the bill is one that actually reforms the known evils, or does it, by using reform as a blind, really aim at the destruction of unions as economic as well as political powers.

If it is determined by the majority of the honest and worthy union leaders that the legislation is bad for the future of the labor movement, the politician will have to decide in some cases between loyalty to the union movement which contributed much, in both work, time, and finances to his success or to gamble on the antiunion public opinion of the

moment to insure his own personal success at the polls.

This does not mean that all the votes will be either labor controlled or corporation controlled. There are some Members who will try to do a good and honest job, to evaluate the legislation on its merit and in all probability, this group would decide the issue if labor's friends and enemies stayed in their respective camps.

None of the congressional Members whose allegiance is to the NAM, corporate interests, and chamber of commerce viewpoints, will sway over to labor and give the unions a vote if the legislation is punitive but it looks like a number of labors' friends are ready to walk arm in arm with the group who always opposed labor legislation designed to help labor.

The real answer of course rests in both the House Committee on Education and Labor and the action of Congress as a whole when the bill comes up for a vote.

If an honest effort is made to pass antirackets legislation it should pass overwhelmingly, but if this same antirackets reform bill is made into an antiunion bill, then it should be defeated.

Many of the politicians, especially on the Democratic side, are excusing their lack of courage in the face of this simple issue by saying one of two things; either, "Oh well, I can win without labor," or "I am sorry to do it, it's my first vote against labor, but the people back home demand it and I cannot be elected without the independent voters."

These two statements are heard every day without solicitation. You will note that both statements are made in the interest of the politician with no regard for the interests of labor. Their own elections come first and I guess, that is the right attitude, but one cannot help but think that if this attitude causes bad legislation to be passed, the harm to labor will eventually effect the whole economy, not excluding the weak-livered, spineless politician.

Today labor is on the receiving end of bad publicity, bad public press, and bad public opinion.

Industry has gone through that phase and in the process learned to know its friends, labor will do the same. It will not be too long, if wages freeze or are lowered, if unemployment becomes static for 5 to 7 million production workers, if nonproduction workers find their earning getting lower, if profits continue to soar, if foreign imports keep climbing, and American investors put their money in foreign competitive enterprises, if nonunion workers find out that union efforts benefit them directly in proportion to union contracts, if money becomes tighter and loans more expensive, if all these things happen, on the next swing of the pendulum, the time will come when the "get labor" programs will again become the "get industry" programs.

It is the job of Congress to avert these periodic antisomebody swings. In the interest of present as well as future domestic peace on the labor-management front, this Congress should turn its back on both the hate-labor groups that want to destroy labor as well as the hate-management group that refuses to acknowledge the need for remedial reform legislation in the field of labor laws dealing with racket influences, personal gain and conflict of interests.

Speaking as a Member supported by labor for over 25 years and yet not at odds with management, respecting both the viewpoint of labor as well as industry, I believe the following guide lines should be adhered to:

First. A true reform bill aimed at curing the abuses found, not alone in labor unions, but in almost all other endeavors of a public or semipublic nature.

Second. All union constitutions and bylaws to contain all guarantees as granted by our national Constitution and Bill of Rights.

Third. Give all members the same rights in elections, complaints, right to sue with proper cause and justification union officials with costs of suit to be paid by union if member's case is won in court.

Fourth. Leave all internal handling of union meetings to the locals and any violation of member's constitutional or civil rights to be proper cause for complaint and investigation by the Secretary of Labor and removal of officers found guilty of such behavior.

Fifth. Leave labor-management sections of the Taft-Hartley dealing with picketing, boycotts and hot cargoes within the NLRB and amendments to same to be part of separate legislation.

Sixth. Make reporting of finances, conflicts of interest, and election results mandatory to the Secretary of Labor.

This kind of a bill could pass and stay somewhere within reason as to size, interest and, especially enforcement. Why pass legislation that, as Dean Dugan of the Graduate School of Law, Georgetown University says, "could well create a democracy of minorities in the union hall and anarchy on the building site." The Taft-Hartley Act has been called a "full employment act for lawyers," he continued, but "if this act passes, the cup will runneth over. You'll need a lawyer in front of you, one behind you and one at each side of you every moment of the day."

"What I'm really afraid of," said Mr. Dugan, is the possibility that the bill's complex criminal provisions "will make responsible members of unions afraid to run for office."

Walter Lippmann, well-known columnist, warned that political demagogs had stampeded the Senate. In his view the Kennedy-Ervin bill as it emerged from committee was in no sense a soft or timid affair. Furthermore, "it is not often that a powerful special interest" supports laws to regulate itself and invites public disclosure of its intimate and internal affairs.

"When such an extraordinary thing occurs," continued Mr. Lippmann, "one might fairly expect Congress to seize the opportunity to get the agreement signed, sealed, and ratified."

Responsible labor has supported reform legislation at all stages. However, this is not what happened because on the Senate floor numerous attempts were made to amend the measure, culminating in the McClellan amendment.

It is interesting to note that it only took 4,323 words to make up the Constitution of the United States, but the Kennedy bill requires better than 6,000 words to give labor a so-called constitution for rank and file.

If the Congress wants to create a real issue for the future, let it pass the masquerade bill that came from the Senate. "The Senate through its ill-considered and ill-advised amendments changed the bill into one which we sincerely believe would do grave and irreparable harm to the U.S. trade union movement."

There are forces seeking to capitalize upon the corruption issue and determined to use it as a vehicle for the passage of legislation which would, under the guise of labor reform, do damage to legitimate trade unions and legitimate trade union activities.

"This is exactly the situation today."

The principal objections to the Senate version of the Kennedy bill are as follows:

First. If enacted, this legislation would require unions to accept every person who applies for membership. As a result it would be impossible for unions to deny membership to Communists, crooks, or company spies who might try to infiltrate union ranks.

Second. The bill presumes to guarantee equal rights for members. In practice it would mean that the Government would decide who was eligible to run for union office, since the bill invalidates provisions of union constitutions which prohibit Communists and other destructive elements from becoming candidates.

Third. Federal courts are substituted for normal, democratic trade union procedure, thereby exposing unions to repeated lawsuits by company agents, Communists or disgruntled candidates rejected by their fellow-members.

Fourth. Local union officers are threatened with 2 years in prison and $10,000 fines for such reasonable rulings as denying a drunk the right to speak at a meeting. An entire local union can be jailed for disciplining a worker who led a wildcat strike.

Fifth. Employers are permitted to conceal antiunion expenditures. For example, an employer could maintain a regular, full-time labor spy on his payroll and never have to report it.

Sixth. Federal courts would be given the power to decide for what purposes union funds may be spent. Union officials are exposed to civil and criminal prosecution for carrying out a membership vote to extend strike aid to another union. A single company spy could keep a union or its officers in court all year, every year.

Seventh. New bans are imposed on peaceful picketing. There is an open invitation to unscrupulous employers to escape legitimate union organization by signing back-door, sweetheart contracts with corrupt locals.

One must, of a necessity, keep before him the goal of doing the greatest good for the greatest number. One of the weaknesses of the present Kennedy bill gives the minority power intended by all constitutional law to be reserved to the majority.

The American Legion in its latest bulletin had this to say:

A democratic principle permits free speech * * * the sounding off on ideas, etc., but the majority also rules. In considering resolutions at department and national conventions, let's be sure that majority rule is well founded.

No union can have an agenda, its rules cannot be enforced at a local meeting and a union official is not given a copy of charges against him nor is he allowed any financial support for legal help against unfounded charges, while the accuser remains in secret, but can call upon the union to pay for his costs and expenses.

It is the most cockeyed unreasonable and idiotic approach ever advanced by intelligent lawmakers, and one wonders, if they were actually motivated by a sincere desire to really write reform laws.

There has been so much printed in both the public as well as the private press including the CONGRESSIONAL RECORD that I believe the viewpoint of labor, as expressed by the following editorial from the Allied Industrial Worker's magazine, may be helpful in keeping our balance in this most important issue to be debated soon by Congress:

Free trade unions are a bulwark of democracy. They extend political democracy into economic life by assuring us rights as citizens of industry as well as citizens of the community, the State and the Nation in which we reside.

Dictators have understood this fact well. They have always found it necessary to destroy free trade unions as a first step in ascending to power Yet, while dictators have come and gone the free trade union movement still lives on.

This fact needs to be reasserted now more than ever. There are those today who would have us believe that American unions, rather than preserving democracy, are engaged in wholesale denial of the rights of union members. This is simply not true.

While any aggregation of 18 million men and women will have its Judas Iscariots the facts clearly indicate that unions are still democratic organizations whose members and leaders are devoted to the democratic way of life.

Will the proposed labor reform legislation improve on the existing rights of union members or will it merely put a megaphone in the hands of loudmouths?

Do the authors of a so-called bill of rights for union members seek reform or revenge? Are we supposed to have confidence in Senator MCCLELLAN'S alleged concern for the rights of union members when he showed so little concern for the rights of citizens of his own State during the Little Rock crisis?

Some Senators have described the final Senate version of the MCCLELLAN amendments as "watered down." However, public reports indicate that southern Senators voted for the amended version because they felt that their enthusiasm for the rights of union members might be misinterpreted, not because they were in disagreement with the original measure. Their constituents might think that they supported universal application of the rights sought for union members. This, of course, was not the case.

There is some corruption in the labor movement. There is also corruption in business, industry, politics and other walks of life.

Do we pass one set of laws dealing with corruption in business, another set dealing with corruption in industry and yet another dealing with corruption in politics? Of course not.

We pass laws against corruption, period.

Violation of the law is violation of the law regardless of who the guilty party is. If violators have gone unpunished then there have been failures in law enforcement, not in lack of law.

The MCCLELLAN committee hearings have destroyed out perspective. The committee's parade of witnesses alleged to be guilty of some evil act has led many to conclude that unions are dominated by corrupt officials.

Let's set the record straight. Senator MCCLELLAN has interrogated an infinitesimal fraction of the leadership of American unions. He has revealed nothing more profound than the fact that a fraction of union leaders are abusing their position of trust.

Unions are still living examples of democracy in action. They will remain that way. Proposed legislation will add nothing to this fact. However, if enacted, it will take away by making it difficult, yes, even impossible for responsible union officers to perform the duties of their office.

Our entire system of Government is based upon rights, and rights of majority, rights of minority, but each must respect the other in their true prospective. Under the Kennedy bill provisions a majority, no matter how great it may be, will be subject to the whims and desires of even a single disgruntled, drunken or just a troublemaking member.

Let us see the will of Congress in action. Shall it be the will of Congress to reelect itself at any cost or shall it be the will of Congress that right shall prevail?

It will be interesting especially to watch the four divisions of Congress operate on this delicate political subject. The divisions as I see them are as follows:

First. Republicans. For political reasons, vast majority for real tough law against unions.

Second. Democrats. Natural leanings to soften approach with punitive features left out.

Third. Southern block. Strong leanings toward GOP position for a tough bill going beyond racket control and getting into Taft-Hartley labor-management features.

Fourth. Ultra-Liberals, and so forth. Want any bill, good or bad, prefering good, but will take bad since their interests are all contained in the fight for self preservation in the political arena. They want labor support, but not the label.

In this atmosphere the danger to labor is serious and one not to be discounted by any slogans or catch phrases.

No one wants to protect the crooks in or out of labor, but all fair-minded persons in or out of labor recognize the danger in the present situation. It will take hard, courageous action and work by the Members of Congress to undo the Senate action and to pass a true reform bill protecting all the people no matter what their fields of endeavor and activity may be.

The Shield of Privilege

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Boston Globe on July 15, 1959.

The editorial follows:

THE SHIELD OF PRIVILEGE
(By Uncle Dudley)

Attorney General Rogers has warned Federal officials that they have not been licensed to libel and slander people, despite recent decisions of the U.S. Supreme Court.

In these cases Government executives were declared invulnerable to suit for statements made in line of duty. An admiral was accorded "absolute privilege" in circulating a letter which explained why he had withdrawn recognition from a union at the Boston Naval Shipyard. So was an agency head for issuing a press release denouncing two discharged employees.

The Attorney General has reminded officials that statements, to be protected, must be in the discharge of their duties. Mr. Rogers added that any who might make irresponsible use of the privilege could be disciplined, even discharged.

The right under certain circumstances to publish or speak without fear of civil or criminal action is essential to the functioning of society. That is why privilege attaches to certain statements, which can be safely made, repeated and printed. This protection is broadly extended in Massachusetts.

Here, as elsewhere, no damages can be collected for speeches in the legislature, though members can be disciplined by their fellows, even expelled, if what they say violates the rules. Privilege covers not only legislative committee hearings, but also meetings of religious societies, and, within certain limits, those of corporation stockholders.

As everywhere, what is said in court is protected, though any statement which disturbs the propriety of proceedings can bring punishment for contempt. But charges contained in a suit filed with the clerk are not privileged; they become so only when there is action on the case before a judge.

Like Federal executives, State officials can speak and publish without fear of being sued in carrying out their duties. Protection extends down to a fire marshal's statements, but not to remarks of police officers, which can be safely repeated in New York.

The broad coverage of privilege in the Commonwealth has not resulted in widespread abuse of immunity for purposes of defamation. What deters most people from libel and slander is not fear of court action, but respect for public opinion.

Like the gossip in private life, the public man who specializes in slander gets a bad name. Whatever initial successes he appears to achieve, he is almost always caught up with eventually. Wild accusations are seldom believed. "I don't mind them making charges against me," said an old-line political boss. "What I object to is when they prove them."

When an officeholder uses his immunity as a shield against suit, that fact is called to public attention. Once challenged on

this point, after he had made charges in Congress, the late Fiorello La Guardia repeated his speech on the unprivileged steps of the Capitol.

Public officials need certain protection. The Supreme Court's decisions should produce no widespread abuse of speech, but the Attorney General's word of caution is of value, just the same.

Calvin Leichtman, of Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Hazleton Plain Speaker of Monday, July 20, 1959, which reports the passing of one of Hazleton's leading businessmen at the age of 91, Mr. Calvin Leichtman.

CALVIN LEICHTMAN, 91 TAKEN IN DEATH—FOUNDED ICE CREAM FIRM

Calvin Leichtman, founder of the Leichtman Ice Cream Co., of Hazleton, died yesterday in his apartment at the Hotel Altamont, this city, at the age of 91 years. He succumbed to a heart attack.

Mr. Leichtman was born in Austria-Hungary, November 25, 1867. He came to the United States when he was 15 years old. He traveled West and located in Spokane, Wash., where he established a general store. It was in Spokane that Mr. Leichtman founded the first B'nai B'rith lodge, an organization with which he was actively associated during his entire lifetime.

He came to Pennsylvania in 1895 and settled in Freeland where the groundwork was laid for the ice cream manufacturing business that carried the Leichtman name far and wide. He located in Hazleton in 1905. The modern plant in Hazleton is the result of over a half century of growth under the guidance of Mr. Leichtman.

In recent years, the business has been conducted by members of his family with Mr. Leichtman acting in an advisory capacity.

ACTIVE IN B'NAI B'RITH

His civic and fraternal associations were numerous. Outstanding were his services to the B'nai B'rith.

In June 1958, Mr. Leichtman was honored by the 400,000-member Jewish service organization during its annual convention at Lake Kiamesha, N.Y. Mr. Leichtman was cited at the convention for a "lifetime of unselfish devotion to his community and fellow men."

Mr. Leichtman was a past president of B'nai B'rith District 3; vice president of the Eastern Pennsylvania Council of B'nai B'rith; he was a life member of Local Supreme Lodge, which honored him by changing its name to the Calvin Leichtman Lodge No. 887. Since he entered the organization's work 70 years ago he helped to establish 15 lodges, all but 1 of these in Pennsylvania.

The local manufacturer was president and founder of the Anthracite Association of Ice Cream Manufacturers and a honorary member and director of the Pennsylvania, New Jersey, Delaware Association of Ice Cream Manufacturers.

When the Leichtman Ice Cream Co., celebrated its 50th anniversary two golden jubilee celebrations were held in honor of Mr. Leichtman. The first was staged by the Hazleton Kiwanis Club, which dedicated its meeting to the man who was a charter member of the club. The same evening the Ice Cream Manufacturers Association of Pennsylvania honored Mr. Leichtman and his two sons, Milton and the late Alfred at a banquet.

MEMBER OF CHAMBER OF COMMERCE

Mr. Leichtman was a past-president of the Hazleton Chamber of Commerce and a member of the board of directors for many years.

He served as a member of the Hazleton Public Library Board and as a director and active member of the United Charities of Hazleton.

He was a charter member of Beth Israel Temple and served as a president of the Temple.

In May 1956, Mr. Leichtman was honored by the Hazleton community through the Hazleton Unico Club as a naturalized citizen for his philanthropic deeds and his great contribution to the economic life of Hazleton for over 50 years.

WIFE DIED IN 1951

He was married to the late Mamie Gross, of Philadelphia. She passed away in 1951. A son, J. Alfred Leichtman, died last December.

Surviving are a son, Milton J. Leichtman, president of the Leichtman Ice Cream Co.; daughters: Mrs. Elsie Marlin, Sharon, Pa.; Mrs. Ruth Alexander, Hotel Altamont, city; Mrs. Lucille Neuman, Bethlehem; and one sister: Mrs. Rose Leichtman, Cleveland, Ohio. Nine grandchildren and 10 great grandchildren also survive.

FUNERAL ON WEDNESDAY

The funeral will be held Wednesday at 11 a.m. from Bachman Bros. funeral parlor. Interment will be made in Beth Israel Cemetery, Laurel Hill, with Rabbi Martin S. Rozenberg officiating.

Friends may call Tuesday afternoon and evening from 2 to 4 and from 7 to 9 p.m.

Women's Page Editors and TV-Radio Commentators on Homemaking News Should Alert Consumer to Proposed End of Federal Grading of Lamb and Mutton

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mrs. SULLIVAN. Mr. Speaker, I am disappointed that so little has appeared in the newspapers' homemaking sections, or has been used over radio and television, on the proposal of the Department of Agriculture to end its present program for quality grading of lamb and mutton carcasses. The St. Louis newspapers, I am happy to say, have carried news stories on this matter, but I have not seen a word on it in any other newspaper, or heard a thing over the air about it.

It is, of course, not the most serious issue facing America—that I will grant. But I do think it is important to the homemakers of the Nation to know of the proposal and what it will mean to them in shopping for lamb. And if lamb grading is now eliminated, at the demand of the sheep raisers and the big packers, many of us wonder how long it will be before the Federal grading program for beef is also killed. These grading programs are voluntary—they are paid for by the processors wanting the service—so they do not cost the taxpayer a cent. And they are intended to help the consumer to get fair value—to know the quality of the meat she buys.

The women's sections of most newspapers are full of food advertising and recipes of all kinds, plus some information on foods in good supply, but I seldom see any news in them which could possibly be considered critical of any part of the food industry, and I think that is a mistake. I am proud that our St. Louis papers do not hesitate to include in the sections containing articles primarily aimed at women, news which is of importance to them as consumers, such as information on the food-additives law we passed last year, or on use of color additives containing coal tar colors of doubtful safety, or, in this instance, of the proposed elimination of Federal grading of lamb. I suggest that other metropolitan newspapers would similarly do well to put news about food where it can readily be seen by the food buyer of the household in skimming the papers.

Only a few consumers have apparently raised their voices in opposition to the end of lamb grading, and the reason for that, I am convinced, is that most housewives just do not know about it.

The Department of Agriculture made the original announcement late in May of its intention to end lamb grading by August 1, but it was the end of June before it came to my attention. I never saw a word in any newspaper about it up to that time. On July 1 I wrote to Secretary Benson, urging that the proposal not be adopted, and further urging that the July 6 deadline for comments on the proposal be set back to a later date to give the consumer a chance to learn about the issue and register her views on it. I released my letter to the St. Louis newspapers which carried news stories on it. In the meantime, other Members of Congress have written or spoken on it, but very little, if anything, has appeared in print about it.

This does not mean there is any conspiracy of silence. I certainly do not charge that. All it seems to mean is that most newspapers apparently have felt there is very little public interest in the matter.

Yesterday, on July 21, I received a reply from the Department of Agriculture to my letter of July 1. It informed me the Department had set back to July 20 the deadline for receiving comments from the public on its proposal to end lamb grading, and had delayed the effective date of the proposed suspension to September 1.

Outside of the fact that it took the Department 3 weeks to inform me of an action decided upon the day after I wrote to them, and outside of the fact that I was advised on July 21 that comments would be accepted from the public up to July 20 on this issue, I congratulate the Department for at least holding off on its final decision.

I now urge, regardless of the July 20 deadline set by the Department of Agriculture for comments from the public, that the women's editors of the newspapers of the Nation, and the radio and television commentators on home issues, alert the housewives to this proposal and encourage them to write to the Secretary of Agriculture in opposition to the proposal to end grading of lamb.

Mr. Speaker, my letter of July 1 to Secretary Benson on this subject is as follows:

The Honorable EZRA TAFT BENSON,
Secretary, Department of Agriculture,
Washington, D.C.

DEAR MR. SECRETARY: I am very anxious to go on record in opposition to the proposal now being considered by the Department of Agriculture to end the voluntary program for grading of lamb and mutton carcasses as urged by the National Wool Growers Association. I would like to think that there will be widespread public protest over the proposal, but, frankly, I am afraid very few consumers have heard of it.

It is my understanding that protests on this suggestion must be received in the Department by July 6. Is there any reason for such an early closing date on such an important matter when the suspension of grading—if carried out— would not go into effect before August 1? May I urge that the decision be delayed until the public can be heard from?

While it is true the proposal was inserted in the Federal Register, I have not seen a word on it in any newspaper and I have not heard from any of the consumer groups, so I assume they are just not aware of it. One meat packer in the St. Louis area has written to me about it and he makes these excellent points in opposition to eliminating the grading program:

1. The grading program is self-supporting, in that users of the service pay all costs.

2. The Department in earlier years went to much trouble to educate the public on the value of selecting graded meats, and now that the public looks for and wants this protection it is to be withdrawn at the demand of producer interests unable or unwilling to "put the proper finish to their animals."

3. Instead of discontinuing grading because so many carcasses fail to qualify for "Choice" grading, help the producers to do a better job of raising lambs. "With the proper buying and handling," this firm's spokesman adds, "we have approximately 90 percent Choice." He believes discontinuance of grading would be detrimental to the smaller packers and a definite disservice to the consumer.

Sincerely yours,
LEONOR K. (MRS. JOHN B.) SULLIVAN,
Member of Congress, Third District,
Missouri.

Dr. Ahmed Benabud

EXTENSION OF REMARKS
OF
HON. THOMAS F. JOHNSON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. JOHNSON of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on April 24, 1959, at a testimonial dinner in Baltimore, Md., honoring Dr. Ahmed Benabud:

Mr. Toastmaster, my good friend Dr. Benabud, ladies and gentlemen, I am privileged to laud a young outstanding diplomat who recently served with distinction as Minister of Morocco to the United States. Dr. Ahmed Benabud's talents, his devotion and loyalty to his King and country merited his appointment as Minister Plenipotentiary of Morocco to the United States. Almost 3 years ago, Dr. Benabud came from Morocco to establish his nation's first Embassy in America. His friendly and forthright manner, his knowledge of and friendship for the people of our country did much to facilitate the beginning of diplomatic relations between his nation and ours.

Dr. Benabud worked diligently to present Morocco to the United States and the United States to Morocco, and his efforts have created a strong bond of friendship and understanding.

Morocco, one of the first countries to recognize the independence of the United States in 1778, has maintained friendly and cordial relations with our Nation. In this trying period of history when our country is confronted by many international crises and problems, Dr. Benabud tactfully advises that we cannot turn our attention entirely away from the problems and needs of nations like Morocco which has recently regained its independence and is laboring to reconstruct the country on a stable foundation. Morocco, during the past 3 years, has been working quietly, but diligently, to achieve stability and realize its national aspirations. Through its own inspired national effort, Morocco has covered its expenditure budget and contributed from its own resources 60 percent of its development budget. I say Morocco deserves and should have our continued cooperation in her praiseworthy endeavor. It should be noted that Morocco has recently passed an investment law encouraging and welcoming foreign investments. This law offers unusual facilities, opportunities, and protection for the foreign investor. Already a number of American companies have started working in Morocco.

For almost 3 years Dr. Benabud has ably represented his country. Dr. Benabud has pointed out that there are two outstanding problems between our two countries: (1) The presence of American military establishments on Moroccan soil; (2) the Algerian war. The Moroccan diplomat feels that negotiations between our two countries with respect to American military bases on Moroccan soil will produce a satisfactory settlement. The Algerian war is having a devastating effect on all the countries of north Africa and Dr. Benabud hopes that our Nation will use its influence to find an early and equitable termination to this conflict.

Morocco is working hard at home to build a nation on the solid foundation of a strong and expanding economy. In the field of foreign diplomacy, men like Dr. Benabud have displayed outstanding leadership in establishing amicable relations with other nations.

Dr. Benabud labored in our Nation for nearly 3 years to bring us an accurate picture of his country's purposes, its needs, and its determination to meet its goals. His talents, his courtesy, and understanding have elevated the stature of Morocco in the eyes of the family of nations. We have found him a valuable and worthy friend of the United States.

Recently Dr. Benabud was appointed Ambassador to India. Our Nation wishes him success in his new post. India's gain is our loss.

Reduction of Foreign Aid

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following excellent statement represents the thinking of a majority of the American taxpayers:

STATEMENT BEFORE HOUSE FOREIGN AFFAIRS COMMITTEE RE FOREIGN AID, APRIL 27, 1959, BY MRS. M. D. LEETCH, EXECUTIVE SECRETARY, AMERICAN COALITION OF PATRIOTIC SOCIETIES

Mr. Chairman, the American Coalition of Patriotic Societies by resolutions adopted in annual meetings of 1958 and 1959, urged a reduction of annual foreign aid appropriation, so that our existing commitments may be terminated at the earliest possible date. In support of the resolutions and in respect of the question of appropriations for fiscal year 1960, we urge you to consider the nature of the program itself and determine if it is justified upon its merits in its present form and management.

The foreign-aid program at its inception shortly after World War II was an emergency operation, first to feed and then to rehabilitate Western Europe. It was restricted to economic assistance extended to 14 or 15 countries in Western Europe, plus Greece and Turkey. In 1950 as a result of the NATO Conference, foreign aid became a mixture of military and economic assistance, which was divided between the original Marshall plan countries and certain countries of southeast Asia and Korea. Since that time, the program has extended and expanded to a great number of countries and in the total amount of aid that has been granted by projects.

As of January 1, 1959, a total of some $70 billion has been expended on military aid and economic assistance in over 70 countries and their dependencies. The total amount expended is equivalent to approximately one-quarter of our total national debt. The interest on this large sum at present rates averages about $2½ billion a year. Current expenses are estimated by the Department of Commerce to run to approximately $5 billion a year. Therefore, the total present and past cost of foreign aid is $7½ billion annually, which in turn is equivalent to 20 percent of all personal income taxes collected by the U.S. Government.

Because of the conflicting views of proponents of the program, it is fair to say that it is doubtful if we have any definite policy regarding foreign aid which is understood by the people who are paying the bills. Taxpayers do know that to borrow money to give away, when our public debt exceeds the combined public debts of all other nations of the world, will wreck the economy of this Nation; in which tragic eventuality freedom will have been lost to all people.

ON THE ECONOMIC SIDE

What are we supposed to be doing?

We are carrying out a series of projects, over 2,000 in number, in 70 countries which attempt to do a little something of everything in almost every conceivable field of human activity. We build steel mills, we finance fertilizer plants, we have projects to instruct the Iraq ladies in industrial sewing, we grow pigs, we have kindergarten classes—as a matter of fact there is nothing you can think of that we have not done something about in at least one of these countries.

Thus committed we are faced with the problem of building up a staff of competent people to run these programs successfully. We have failed to do this, in part, because enough competent technical people are not available and in other cases because it is impossible to plan, manage, and run from Washington, a vast number of individual undertakings going on in 70 or more countries by remote control.

WASTE AND EXTRAVAGANCE

The result has been a history of waste and extravagance unparalleled in the records of American Government operations. The defenders of the program say that those instances of waste are only exceptions and that by and large the programs have been highly successful. The evidence fails to bear this out. There are thousands and thousands of pages of testimony taken by Government commissions, congressional committees, private investigators, and other responsible observers that show very clearly that these stories, this record of bad management and extravagance is the rule rather than the exception.

CONGRESS SHOULD LAUNCH AN INQUIRY

In 1956, seven out of the nine members of the Hoover Commission Task Force on Overseas Economic Operations petitioned Congress to set up a joint committee or Hoover-type commission to make a 2-year survey to determine these things to which we have referred. This was not done. Today Congress is being asked to appropriate $4 billion of new money on top of all the money already spent. Today Congress knows just as little about the way past appropriated funds have been spent as it did in 1956 when the Hoover Commission task force attempted to bring this matter to light.

What justification is there, then, for Congress to accept at face value the self-serving presentation submitted by the executive agencies in support of this fantastic amount of money which is being sought from the Congress this year?

In 1956, the Hardy subcommittee of the House Government Operations Committee conducted a study of the management and planning of foreign aid in Iran. They examined witnesses and took over 1,200 pages of testimony. At the conclusion of the hearing, the committee prepared and drafted a report, the substance of which was that we had spent approximately $250 million in Iran over a 3-year period and that it was impossible for the committee, in view of the slipshod and loose operation of this program, to tell where all the money had gone and who had received it, not to say what good it had done to anyone. The committee recommended that the Department of State and the International Cooperation Administration make a complete investigation of the persons who were charged with the responsibility of the management of the Iranian program and that when responsibility was fixed, the persons in charge of the program be deprived of ever occupying any other post of trust and confidence in the U.S. Government. Unhappily, both State and ICA ignored this recommendation and the Director of the Iranian program was promoted and sent to Korea where, until recently, he has been directing foreign aid in that country. Others responsible for the Iranian waste were transferred to better posts, or confirmed in their old posts which seemed to amount to a vote of confidence.

Another instance of the same story was in the little Kingdom of Laos, one of three independent countries carved out of Indochina after the armistice of 1954. In 4 years the United States poured in almost $200 million in military and economic aid. This primitive little country of about 2 million people, 85 percent of whom are illiterate, could not absorb the amount of money we poured in. It was impossible to put the money into the country in conventional form, that is to say through the exportation to Laos of commodities which would then be sold and the local currency resulting from the importation being made available for domestic expenses. So in order to make up for our inability to put commodities into Laos in ordinary form, we added huge cash grants of dollars, which were converted into local Laotian currency at an artificial rate of exchange imposed upon us by the beneficiary country at a rate that made it necessary for us to spend three times as many dollars as we should have spent in order to accomplish our objectives. When the money was made available to the country, it fell into the hands of speculators, politicians and local merchants and virtually none of it filtered down to the poor people in the country whom it was designed to assist. This was accompanied by a public works program, heavy roadmaking machinery, etc.

The Hardy subcommittee has been examing into the Lao program. At the recent hearing, the Chief of the Industry Division of ICA confessed under pressure, that he had accepted over $12,000 in gifts from a favored contractor who had been made responsible for building a road which is now passable only 2 months of the year and for the care of machinery and equipment which upon investigation proves to be only about 15 percent usable at this time. The Director of the ICA in Laos, after being recalled to Washington, was appointed Deputy Assistant to the Director of ICA for liaison with the National Security Council, a post of trust and confidence.

These illustrations are mentioned because they do establish a pattern which runs through the program all too often and which illustrate the manner in which funds are badly planned and wasted and in which graft is all too prevalent. Obviously what has taken place in the past indicates that before we commit more money, we should take stock of what we have done and insist on getting a degree of control and the installation of new policies which will prevent a repetition of such disastrous performances.

HAVE WE CONTAINED COMMUNISM?

Far from saving a large number of countries from communism as has been alleged, we have too often only strengthened unpopular governments or enriched an already privileged group of people thus widening the margin of well-being that exists between the upper crust and the submerged classes in each one of these countries. An excellent example is Iraq where we put in some $18 million of economic aid and over $50 million in military hardware, all of which is now lost to us as a result of the revolution. But the fact is that we were held responsible for giving all of that military equipment to an extremely unpopular government and when that government was overthrown, the onus fell upon our shoulders. We were accused of having done things that assisted tyranny to continue.

We believe that what we are attempting to do by way of foreign aid is something that is beyond the capacity of any government to do. It is impossible to administer this vast number of programs with any degree of efficiency. What we are doing does not really help people to help themselves. What it does do is to impose upon these backward countries a huge local bureaucracy of Americans who are trying to make other people over in their own image and to plan and organize the lives of everyone all over the world.

GROWTH OF THE BUREAUCRACY

In 1948 at the inception of the Marshall plan, ICA had a total of 458 employees. Today, 13 years later, there are over 13,000 employees, Americans and nationals of other countries scattered all over the world who are on ICA payroll. In addition there are over 9,000 people employed in the military program which is administered by the Department of Defense. Naturally these people can only justify their existence by finding more projects upon which to spend money which will perpetuate their jobs and promotions over the years.

INDIAN PROGRAM HIGHLY CONTROVERSIAL

Responsible Indian sources question their own second 5-year plan, taking exception to many phases of it, yet we have stepped in to underwrite a large part of the foreign exchange cost for its completion. Last year we advanced by way of Export-Import Bank and development loans, over $200 million. Apparently we made these loans, not on the basis of preengineered projects, but often we picked up checks for machinery and equipment that had already been ordered abroad by the Indians in fulfillment of this program without looking into the basic facts related to the plants in which this machinery was to be placed and the sufficiency of the equipment that had been ordered. It is said that some of these plants are badly designed and never will be efficient producers. Yet we are committed to follow this program to its conclusion, regardless of what the bottomless pit may be, or be accused of welching and bringing about the failure of the 5-year plan.

APPROPRIATION REQUEST FOR 1960

With regard to requests for appropriations this year, it should be remembered that there are presently between $6 and $7 billion of previously appropriated funds that are now in the pipeline, unexpended. It is alleged by the Department of Defense and by ICA that most of this money is already obligated. It seems clear that a great deal of the money in the pipelines of the military program is not validly obligated in the sense that it has been committeed under contracts between the Department of Defense and manufacturers for the actual delivery of specified items. On the contrary, we think Congress will find that under the existing regulations, a great deal of that money is merely earmarked under a reserve clause, but has not yet been converted into final contracts, and could, therefore, be deobligated and used for current expenses without any great prejudice to the program as a whole.

MILITARY PROGRAM

We support a realistic and reasonable type of military aid for countries like Korea, Nationalist China, Turkey, etc., but the time has come when a prosperous Western Europe, especially the United Kingdom, which has recently reduced its taxes by 8.6 percent, France which uses our military equipment in a costly Algerian war and West Germany with one of the world's largest gold reserves, should carry the load of their own military expenses without further contributions from the overloaded American taxpayer. Our willingness to assume a heavy defense role in Western Europe has encouraged our allies to rearm reluctantly. The time has come to let them know we do not intend to garrison Europe forever. Their populations—50 percent larger than those of the United States, must provide replacements for American troops.

Incidentally, the waste in the military program has been as bad, if not worse than in the economic program. This is borne out by many illustrations and the question was thoroughly ventilated by a subcommittee headed by Congressman FASCELL, of the House Government Operations Committee, only a year ago. The General Accounting Office has also written some very scathing reports that had to do also with the way money was obligated and the way in which it was actually spent.

MUST CONTRACT PROGRAM OR IT WILL SWAMP US

What we must do at once as a first step in contracting these wasteful and inefficient programs, is to cut down these appropriations by at least one-third and force the planners of both military aid and economic assistanec to develop some degree of efficiency in the use of the funds. Instead of voting increased administrative funds each year, let us reduce those administrative funds and thus get rid of some of the useless bureaucracy now creating more projects that will require expenditure of more money.

DEVELOPMENT LOAN FUND

The Development Loan Fund makes possible loans for projects in all parts of the world that would not be eligible under the strict banking requirements of the World Bank, the Export-Import Bank, or private banking institutions. It provides also that the loans may be repayable in soft currencies. Mr. Benjamin Fairless, former chairman of the United States Steel Corp., who headed a committee appointed by the President to investigate the future of foreign aid, criticized the soft-currency loan program and recommended that the scheme be dropped and no soft-currency loans be made.

It is our understanding that virtually all of the $700 million made available during the last 2 years, has been obligated or loaned. Some 30 percent of these loans are repayable in dollars, the remaining 70 percent are repayable in foreign currencies. Another $700 million is now requested and the suggestion is voiced that the Fund be sweetened each year to the tune of between three-quarters of a billion to a billion dollars. In payment the United States will receive local soft currencies which cannot be reconverted into dollars. The question then arises, what happens to this money? Are we laying ourselves open to charges of economic imperialism as we build up economic power over a country with a large fund of local currency? On the other hand, if the United States does not attempt to use the money, it does no good to anyone. The alternative seems to be inevitable, that the United States, when the loans come due, will either relend the soft currency on an ever-revolving basis, or make an outright gift to the borrowing country. This would seem to be in violation of the legislation which created the Fund and authorized the loans and would amount to the creation of a device for making concealed gifts. However, it is figured, the American taxpayer is going to be left holding the bag.

INFLATION

The greatest danger to our country is inflation. The heart of the matter is waste and extravagance in the foreign aid program. So long as we condone waste and extravagance abroad, we are never going to get the people to support an austerity program at home. Our people say to their Congressmen, "You build a public powerplant in India, why not in your own district?" We must first control inflation through a restriction of foreign aid, then perhaps we can get some control at home.

If we continue to borrow money to give away, when our public debt exceeds the combined debts of all other nations of the world, we will wreck our economy and with it the last hope of freedom for all people.

RECOMMENDATIONS

(1) We recommend that Congress create a bipartisan congressional committee or Hoover Commission Task Force type of committee to make a comprehensive field check over a period of 2 years, of the manner in which appropriated funds have been spent and what the result of those expenditures has been in terms of effective programs and benefit to the United States received. This committee should also be a sort of watchdog with responsibility over current operations until all foreign aid can be terminated.

(2) We recommend that until such a postaudit is completed by a joint committee so that Congress is really in a position to understand intelligently what funds are needed, Congress should reduce actual appropriations of new money by at least one-third of the total asked.

(3) We recommend that all lending facilities be consolidated in a single banking agency, preferably the Export-Import Bank and that loans should only be made on a dollar basis.

(4) We urge the Congress to take steps to supervise, reduce, and control foreign aid until finally terminated in the interest of survival of this Republic.

Centennial of the American Civil War

EXTENSION OF REMARKS
OF

HON. CHARLES H. BROWN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. BROWN of Missouri. Mr. Speaker, we in Missouri are vitally interested in the Civil War centennial celebration which is scheduled for 1961–65, and we hope to be permitted to contribute our full measure to its success.

Now pending before the Congress is proposed legislation to preserve the Wilson Creek battlefield near Springfield, Mo., as a national memorial.

And in conjunction State and community leaders are trying to memorialize other historical sites in our area. State Representative Robert Young tells me great effort is being made by citizens of Carthage, Mo., to commemorate the Battle of Carthage, July 5, 1861.

This is a great thing these people are doing, and I call the attention of the Congress to a resolution passed in the recent session of the Missouri State Legislature, commending their efforts, cosponsored by Representatives George Young, of Howard County, and Robert Young, of Jasper County.

The resolution is as follows:

Whereas the years 1961–65 will mark the centennial of the American Civil War, the supreme experience in our history as a nation; and

Whereas the sacrifice of our people in that great ordeal was severe in Missouri and all sections of the land; and

Whereas the farreaching events of the Civil War established that the United States would remain permanently one Nation; and

Whereas the Civil War, the greatest internal crisis through which this Nation passed, forged the unity of this country and the sons of both the Union and the Confederacy have subsequently fought side by side for human freedom, justice, and the dignity of the individual among people everywhere; and

Whereas Public Law 85–305, 85th Congress, House Joint Resolution 253, September 7, 1957, established the Civil War Centennial Commission because it is incumbent upon us as a nation to provide for the proper observance of the centennial years of this great and continuing force in our history; and

Whereas the Honorable James T. Blair, Jr., governor of Missouri, has established by proclamation the Civil War Centennial Commission of Missouri to develop a program to commemorate the significant role of Missouri in the Civil War; and

Whereas the Carthage Chamber of Commerce, in cooperation with the Carthage City Council and the Jasper County Court, has created the Civil War Centennial Committee of Carthage in honor of the late Col. Ward L. Schrantz, noted Missouri writer and Civil War historian; and

Whereas Colonel Schrantz suggested the erection of memorials at Carthage to honor the officers and men of both the Union and the Confederacy; and

Whereas these memorials will be dedicated on the 100-year anniversary of the Battle of Carthage; and

Whereas the Battle of Carthage July 5, 1861, was an important military event in the struggle for Missouri; and

Whereas the memorial to the Union will be a statue of the late Maj. Gen. Franz Sigel, formerly of St. Louis, who was a distinguished leader in many Civil War battles including the Battle of Carthage; and

Whereas the memorial to the Confederacy will be a statue of the late Claiborne Fox Jackson, distinguished public servant from Howard County, who was speaker of the Missouri House of Representatives, member of the Missouri Senate, Governor of Missouri, and champion of the Confederacy; and

Whereas the Carthage City Council has appropriated $1,500 toward the expense of the memorials; and

Whereas the memorials will be the work of the Honorable Carl Mose, of St. Louis, a sculptor of great fame; and

Whereas the Civil War Centennial Committee of Carthage will conduct a public subscription campaign, plan a Civil War memorial dedication program, and arrange other suitable commemoration; and

Whereas the Honorable John Flanigan, Jr., a distinguished Missouri attorney, is committee chairman, and the Honorable Robert N. Eddy, mayor of Carthage, is honorary chairman: Now, therefore, be it

Resolved by the Missouri House of Representatives, That the citizens of Carthage be commended for conceiving and supporting a magnificent program in splendid cooperation with the National Civil War Centennial Commission and the Civil War Centennial Commission of Missouri;

That members of the Carthage City Council and members of the Jasper County Court be commended for launching this program as proposed by the Carthage Chamber of Commerce;

That all citizens of Missouri join in appreciating and understanding the Civil War efforts of Governor Jackson and General Sigel as symbolic of all the officers and men who fought and sacrificed in Missouri and other States between 1861 and 1865;

That the Honorable Robert Eddy and the Honorable John Flanigan, Jr., be especially commended for their leadership on behalf of the program of commemoration at Carthage;

That the late Col. Ward L. Schrantz be gratefully remembered for his contribution to the content of the program and his scholarship on the Missouri role in the Civil War;

That all citizens direct interest to plans and programs of other Missouri communities for commemorating the 100th anniversary of the Civil War;

That Missouri citizens make available books, manuscripts, miscellaneous printed matter, memorabilia, relics, and other Civil War materials to the Civil War Centennial Commission of Missouri for permanent preservation in libraries and museums within the State; and be it further

Resolved, That suitable copies of this resolution be furnished by the chief clerk of the Missouri House of Representatives to the

following officers of the National Civil War Centennial Commission, 700 Jackson Place NW., Washington, D.C.: The Honorable Dwight D. Eisenhower, honorary chairman; the Honorable Richard Nixon, honorary vice chairman; the Honorable Sam Rayburn, honorary vice chairman; Maj. Gen. U. S. Grant III, chairman; Mr. Karl S. Betts, executive director; and be it further

Resolved, That copies of this resolution also be furnished to Dr. Bert Maybee, of Kansas City, Mo., chairman of the Civil War Centennial Commission of Missouri; the Honorable Carl Mose, of St. Louis, Mo.; the Honorable Byron Fly, of Joplin, Mo., presiding judge of the Jasper County court; Mrs. Ward L. Schrantz, of Carthage; Col. Robert S. Dale, president of the Carthage Chamber of Commerce and assistant publisher of the Carthage Press; the Honorable John Flanigan, Jr., chairman of the Civil War Centennial Committee of Carthage; and the Honorable Robert N. Eddy, honorary chairman of the committee.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Sesquicentennial of Giles County, Tenn.

EXTENSION OF REMARKS
OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. BASS of Tennessee. Mr. Speaker, last week the fine people of Giles County, Tenn., whom I have the honor to represent in this body, celebrated the sesquicentennial aniversary of the establishment of the county by the Legislature of the State of Tennessee.

During the week-long observance of this anniversary, Giles County was visited by the Governor of Tennessee, the Honorable Buford Ellington; the two Senators from Tennessee, the Honorable Estes Kefauver and the Honorable Albert Gore; our colleague, the gentleman from Tennessee, Mr. Evins; and many other distinguished personages including former Governors Browning and McCord, many of whom also made addresses to the people of the county.

The remarks of our colleague, JOE L. EVINS made on Friday, July 17 were particularly apt and well received. Prior to 1954 Giles County was apportioned to the old Fifth District of Tennessee, represented at that time by our colleague [Mr. EVINS] and he spoke, therefore, from a personal and intimate knowledge of Giles County and its progressive residents. Under leave to extend my remarks in the RECORD, I include the address as follows:

REMARKS AT GILES COUNTY, TENN., SESQUICENTENNIAL CELEBRATION BY HON. JOE L. EVINS, MEMBER OF CONGRESS, JULY 17, 1959

Mr. Chairman, distinguished guests, friends of Pulaski and Giles County and ladies and gentlemen, I am certainly pleased and delighted to be present on this significant and historic occasion—the celebration of the 150th anniversary of the establishment of Giles County.

I have received several invitations from your celebration chairman, John R. Stephens, and other citizens of Pulaski and Giles County, to visit and to be in attendance at some part of your celebration. I have read with interest the many newspaper and magazine stories surrounding this great occasion and certainly have looked forward with great anticipation at being able to be with you.

I am pleased to be able to get away from Washington and return again to Tennessee and Giles County to be with friends—to meet old friends and new friends—and join with all in enjoying this feast of friendship and fellowship.

Occasions such as this, such as you of Giles County have been participating in throughout this week, are not only occasions for renewal of friendships; but the celebration holds forth even greater purposes and far-reaching effects—namely, that of renewing and refreshing in our minds the growth of many of our traditions and ideals.

The growth of our democracy.

The progress and well-being of our citizens.

The growth and progress of our agriculture, our commerce, and the development and sense of dedication and devotion of our people to preserving, promoting, and perpetuating the heritages of our past—the ideals and liberties of our citizens.

I want to commend the members of your centennial committee, your county and city officials—and all of your citizens—all whom have had a part in promoting and furthering this most worthwhile, historic and significant celebration.

Each year on July 4, we as a nation celebrate Independence Day as the birthday of our freedom and independence, and appropriately so, to recall to our minds and to instill into our youth the trials of our forefathers and the sacrifices they made that we might enjoy in prosperity, the blessings of freedom, independence and liberty of this the greatest Nation on earth.

Just 2 years ago this summer we, as a Nation, celebrated the 350th anniversary of the settlement of our first pioneers at Jamestown, Va. This was a great occasion in which the citizens of the immediate area locally, together with State and National Officials and representatives of our allies, significantly marked the founding of the first permanent English settlement in America.

We as a nation have grown from 13 weak, insecure and loosely connected colonies on the eastern seaboard of this country and with less than a million people to a nation today of 50 States, strong and united, reaching across the width and breadth of this land to the ice and snow caps of Alaska to the balmy climate of Hawaii in the Pacific with 177 million people.

In this growth and in this progress, Pulaski and Giles County, to my mind, stand out as typical and representative of the heart and growth of America. The spirit of cooperation, of friendship and of helpfulness have been expressive of the character of the people of Giles County—from its early beginning—throughout the years and even until this very day.

I have never forgotten how warmly the people of Giles County received me in 1946 when I first ran for Congress—when Giles County was a part of Tennessee's great Fifth District. I came in your midst unknown and unacquainted and you people received me warmly and were exceedingly nice and gave generously of your friendship and support and we carried the county and won my initial campaign for elective office. I still feel indebted to you for the support you gave me in that first campaign—and for the warmth of your friendship over the years.

I not only remember with pleasure how kind you were to me, but I also remember that I met for the first time two men whom I have grown to respect and admire while visiting in your county some 10 years ago. Both of these men were also running for elective office at that time. One of these men was in his first statewide race—I believe I met him at Prospect—or maybe at Elkton. But anyway, he won that race and was elected to the railroad and public utilities commission. I have admired Andrew "Tip" Taylor through the years and have watched with interest his fine record of public service as commissioner and judge and soldier—since our first meeting.

The other young man was just out of the Army, and I think he was wearing his veteran's service button when I first met him up near Lynnville. He was a fine, clean-cut young man and ambitious—in fact so ambitious that he was making his first bid for elective office against one of the most beloved and respected citizens of Giles County, Gilbert Abernathy. The voters returned Gil Abernathy to the courthouse and his job as county court clerk. However, I liked this clean-cut young man and you people of Giles County seemed to like him; and when there was a vacancy in the office of postmaster here in Pulaski, I was happy to nominate and recommend Ross BASS for the position.

This young man not only served as an efficient postmaster, but was so energetic and ambitious that he went to the State legislature in Nashville and had this great county moved into another congressional district so he could run for Congress. And, of course, you know that in 1954 Ross BASS did run for Congress and was elected—and since then he has been one of my highly respected and esteemed colleagues in the Congress of the United States.

Ross, I sure hated to lose Giles County from the district I represent, but it is certainly good to have in Washington such a distinguished and capable colleague with whom I can confer and work together for Tennessee.

As a former Representative of this county, I share with you the glory and joy of this celebration. The history of Giles County glows with stories of rugged pioneers, courageous soldiers, energetic farmers, and hardworking friendly citizens. We are proud of this past because these people worked for the things they wanted; they were not easily discouraged and didn't hesitate to fight—whether it be with gun against the Indians or with plow and hoe against the forest and cane brakes. Yet the early settlers of this area did not work and fight only for the betterment of themselves, they helped their neighbors and were interested in the betterment of the community as a whole. James McCallum, who came here in 1809, and is apparently Giles County's first historian, has written how all the neighbors would assemble and help build houses for newcomers in the early Giles County community, and how if the new settlers happened to arrive late in the spring and were not likely to get enough ground cleared to raise enough corn, the neighbors would all work a few days chopping or making rails for them, as McCallum wrote. From the very beginning this county has been endowed with the spirit of helpfulness, cooperation, and friendship, on which our great democracy has been built.

This fine county was named after a man who shared these ideas of helping others for the betterment of the Nation as a whole. Senator William B. Giles was a freedom-loving Virginian who helped Tennessee in its fight for statehood. This distinguished gentleman had nothing to gain personally by his efforts except the joy of helping others and of contributing to the strengthening of the democratic tradition. He realized that a healthy and properly functioning

democracy must grant self-government to peoples as soon as they are ready and able to govern themselves. He also knew that freedom-loving people must rise to help their neighbors and friends in securing and protecting this freedom and the privileges it holds.

Count Casimir Pulaski, the noble Polish general after whom this city is named, is one of our greatest examples of an individual willing to work—and to fight for the ideals he believed in wherever the call for liberty might be heard. This young aristocrat fought well for freedom in his native Poland and realizing that tyrants must be opposed whenever and wherever they raise their mighty hand to challenge liberty, he joined this Nation in its struggle for independence and freedom.

Had not such noble patriots as young Pulaski come to the aid of this Republic and the democratic principles upon which it was founded, we might never have known the complete and individual freedom we share today.

Each year in Congress a special day is set aside for debate and eulogy of the life and character of Count Casimir Pulaski, and on several occasions I have participated in these programs, advising our colleagues that in Tennessee we have a fine town named for this great patriot.

It has always seemed appropriate to me that the people of Giles County should have Pulaski as the name for its county seat. For the name Pulaski has increasingly grown to symbolize the spirit of strength, of character and purpose—for which this patriot gave his life. We all know the story—Hawthorne's story—of the Great Stone Face—the boy continued to look upon the image in the mountains in his midst—until he became to look like the great stone face himself.

Giles Countians have also looked upon the mountain, as it were, and have acquired the strength of character which distinguished Senator Giles, General Pulaski, and their pioneer ancestors. They are among our finest stock of Tennessee folks—rugged individuals and patriots to the core. Like Pulaski and Sam Davis of a later day, they fight for what they want and believe in as right.

Pulaski is a milestone in the TVA story for this was the first Tennessee municipality to utilize TVA power. I mention TVA as Giles Countians have not only been pioneers in this field but constant and present-day fighters to preserve and perpetuate TVA's principles.

The fight for TVA was not over when it was established. We in the Congress and those of you on the homefront have had to fight to preserve it again and again over the years. We have been recently successful in steering the self-financing bill through Congress during this session and we hope it will become law within the next few weeks. However, there are always those who are willing and waiting to sabotage this project. But with constant vigilance, and continued support from our friends, TVA will be of even greater benefit to our people and the Nation.

The actual preserving of TVA was a work of democracy in action in itself. When the enemies of the TVA began their devious planning to thwart and eventually destroy TVA, we found friends all over this great Nation. They were willing to fight for an agency they knew would benefit the people and in whose purposes they believe even though it offered no direct benefit to their particular area. As Senator Giles came to the aid of Tennessee in its struggle for statehood, and as Pulaski left his native country to fight for freedom in a strange and faraway land, these people came forth in defense of an idea and were vital in winning the victory.

But this has not been a one-way street. We who represent the TVA area have supported the principle of development of our natural resources in projects throughout the Nation—the St. Lawrence, Great Lakes Seaway, the upper Colorado, Columbia River basin, the Bonneville Power Administration, and other great resource development programs.

Here we have heard the call of an ideal in which we believe and have answered with firm support, helping other areas develop their resources and in return receiving their help on the TVA. In a great Nation such as ours we cannot take a regional or provincial or selfish attitude but must support those ideas which we know to be good and of benefit to our country throughout the country.

Today we are faced with an even broader problem—that of supporting our ideals of democracy and freedom on an international scale, and helping other people throughout the world to obtain and retain their freedom against the threat of Communist tyranny.

In this task, too, we need the same spirit of helpfulness and cooperation—of helping others as the people of Giles County have always exhibited.

We must help our friends and neighbors throughout the world defend themselves against the cancer of communism. We cannot be provincial. When a fire is spreading in a neighbor's house or field—we all must join in to put it out before the fire spreads to engulf us all.

I am confident that just as working together has built up this fine county and this fine city, so working with other nations for the ideals in which we believe will in the end result in a triumph of democracy over the spread and onrush of communism and tyranny.

So we see, my friends, here in the history of Giles County we have an example of the way in which our democratic processes and ideals can work successfully to bring us a better life. We also have a wonderful example of how dedication to these ideals and the willingness to work together and with others will contribute to preserving and furthering our ideals and our way of life.

I am sure that continuing in this great tradition, Giles County and Pulaski will continue to move forward, will continue to grow and to build a progressive, forward-looking community—that expresses the best features of our way of life. Certainly, the best advice that we can give the coming generation of residents of Giles County and indeed the entire Nation is to continue in the same traditions that have made Giles County what it is today. That is the best road not only to a better community but also to a better nation and a better world.

I salute you all, my friends, of a great county, a grand citizenship; as you celebrate your 150th anniversary. I wish for you another 150 years of growth and progress—and more.

I congratulate you—all those who have helped to make Giles County the great county that it is—and commend your noble heritage as we salute those who will in the future, defend, promote, protect, and perpetuate your great heritage and the ideals of freedom, liberty, and democracy which your county represents and her citizens cherish.

New World Markets for Grains

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1959

Mr. JOHNSON of Texas. Mr. President, the problem of finding new and expanding markets for this Nation's production of farm products constitutes one of the great challenges of our day.

The search is being pressed on many fronts for new markets for farm products both at home and abroad.

A timely discussion of this vital phase of the Nation's economy is presented in the magazine, West Texas Today, in an article entitled "New World Markets for Area Grains."

In view of the importance of this problem, I ask unanimous consent that this article by Bill Nelson be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW WORLD MARKETS FOR AREA GRAINS

(By Bill Nelson)

The great challenge of our era is to find satisfactory markets for farm products—markets commensurate with the capacity of the American farmer to produce food and fiber. The roots of agriculture that have gone deeper and deeper into improved production practices, soil and water conservation, new technologies and improved efficiencies now are going even deeper and reaching for expanded markets for farm products at home and abroad.

New outlets may be developed for grain sorghums and other feed grains as the result of a market development agreement executed recently between the Grain Sorghum Producers Association and the Foreign Agricultural Service. Producer-directors of the three-State Amarillo based organization for research, market development, and service authorized the signing of the agreement at their December 1958 board meeting.

Since then things have happened fast: A four-semi-trailer mobile "Balanced Feed Exhibit," featuring grain sorghum, has started its tour of Italian agricultural fairs; several west Texas county agricultural agents have served as feed grain consultants to the exhibit and held feed conferences relative to the use of grain sorghums; a west Texas banker and the executive officer of the association have conferred with financial and agricultural leaders in several European countries relative to potentials for further expansion of markets for grain sorghum and other feed grains; over 300 individuals from 14 States and three nations participated in a grain sorghum research and utilization conference in west Texas; and a west Texas industrial firm has prepared the conference papers presented by internationally recognized grain sorghum authorities into a booklet which has been distributed to 52 countries and will be translated into several languages under the sorghum producers program.

Even with all this activity under way Frank Moore, the Grain Sorghum Producers Association president, emphasizes that foreign market development is not the answer to the current feed grain situation or certainly is not a substitute for workable farm legislation, but rather it is one available tool which will permit us to share our continuing productive abundance with other nations while lessening the effect of adjustments in price and production facing us now and in the future. Moore is a Hale County farmer and agricultural leader.

GRAIN EXPORT

Feed grains represent one of the brightest spots on the horizon as regards U.S. exports of farm products. Of course, as is true of most foreign trade movements in any agricultural commodity, Government policies in both the importing and exporting countries affect the situation tremendously. But, if we go on the basis of trends and indications as of the moment, we are inclined to

believe that world feed grain trade may become much more important over the next few years.

Since the United States is both the world's largest producer and largest exporter of feed grains, we have every reason to think that much of the benefits of this increased world trade stand to be incurred by the United States—and particularly west Texas. Historically only about 40 percent of the total U.S. feed grain production is sold off the farm which produces it. In the case of grain sorghum nationally about 74 percent is sold off the farm and it has been estimated that in some west Texas areas over 90 percent of the local production moves into the commercial market channels. Percentagewise then, grain sorghum producers have a larger stake in developing and maintaining markets for their product than any other grain group, based on present market patterns.

Signing of the market development agreement by the area grain group paves the way for extensive promotional and educational programs relative to gain sorghum in Western Europe and other areas. Such programs are made available by the Agricultural Trade Development and Assistance Act of 1954—Public Law 480. The law provides for the use of foreign currencies derived from the sale of agricultural commodities under the act to help develop new markets for other agricultural products. Efforts are being directed toward developing permanent demands for grain sorghums rather than a surplus disposal or sales campaign. Grain sorghum producers are administering the program providing personnel, goods, and services which may involve "dollar expenditures." FAS is making available the necessary foreign currencies to carry out the projects within the individual countries.

Grain sorghum association funds for this as well as a balanced program of research, market development and service are derived from voluntary deductions of 2 pounds per 1,000 pounds from farmer deliveries of grain sorghum at local elevators.

The first project promoting area grain sorghum has been initiated in Italy. Grain sorghum producers and several segments of the feed grain industry and USDA have cooperated in assembling an elaborate mobile display depicting "balanced feeding" and the proper use of grain sorghum. After a recent showing at the 61st International Agricultural Fair in Verona the Italian Minister of Agriculture cabled this message: "U.S. exhibit is most impressive, interesting and original. It will have maximum impact with our farmers and farm groups. Appreciate opportunity for our farmers to learn of latest techniques in planned feeding of poultry and livestock."

ITALIAN EXHIBIT

Reports indicate that 15,000 Italian farmers, feed manufacturers and grain trade people viewed the exhibit on its opening day. Similar crowds have been on hand during 2-week showings at Bologna and Trieste. Further exhibition will be made at Cremona and Foggia in Italy, and at Solonika, Greece, and Lima, Peru.

Provisions were made for a conference room and a library of American farm publications to be available at the exhibit. In addition a feed grain consultant familiar with fairs and shows, used to working with farmers and livestock producers and aware of diplomatic responsibilities were needed to accompany the exhibit.

The association arranged for local west Texas county agents to staff the exhibit on approximately 30-day assignments at its various showings. In accepting this privilege and responsibility and in authorizing the assignments of the agents, V. G. Young, State extension agent said, "It is felt this opportunity not only will benefit Texas agriculture and the agent, but will be of a most worthwhile benefit to the extension program. It should broaden his knowledge of world agricultural and social conditions and at the same time give him a deeper appreciation of the opportunties in his own country and area."

Agents assigned to the exhibit to date have included: Gene Southall, Potter County agent of Amarillo; Joe Jones, Parmer County agent of Farwell; Lee McElroy, Lubbock County agent; and Robert Sheets, Texas County agent of Guymon, Okla. Other agents and area agricultural leaders are expected to be named for similar assignments during the coming months.

In order to establish working relationships with U.S. foreign office officials, representatives of other American commodity groups and with local government officials in selected areas, a grain sorghum team went a calling in Europe. Team members were John McCracken, grain marketing specialist of USDA's Foreign Agricultural Service; Frank Arnold, vice president, First National Bank of Amarillo; and Bill Nelson, as executive officer of the association.

The assignment took them to England, Germany, Belgium, Netherlands, France, Switzerland, Greece, and Italy. In addition to conferences with the agricultural attaché staffs in the many countries relative to the feed grain situation and the use of grain sorghums, other U.S. agricultural group representatives abroad were contacted included Great Plains Wheat Market Development Association, Soybean Council of America, Cotton Council International, American Farm Bureau, and Institute of American Poultry Industries.

INTEREST SHOWN

It was encouraging to find agricultural and trade groups in most of these countries eager to assist in benefit from grain sorghum market expansion activities.

To launch a worldwide (or local) program nothing is needed more than facts—authoritative facts backed by research and experience of recognized leaders in their fields. We have such facts relative to the utilization of grain sorghum—they were assembled in March of this year at a gigantic conference in Amarillo, attracting sorghum production, marketing and utilization authorities from 3 nations and 14 States. Papers presented at the conference have been assembled into a 60-page booklet by the Agricultural Development Department of the Southwestern Public Service Co. and made available for distribution in connection with both domestic and foreign market development activities for grain sorghums.

The conference and resulting availability of concentrated information might not have been so timely except for the action of the agricultural and livestock department of the West Texas Chamber of Commerce which called the initial meeting, planning such a conference over a year-and-half ago. Conference sponsors and planners included Texas A. & M. College, Texas Technological College, West Texas Chamber of Commerce, and the Grain Sorghum Producers Association.

A representative of the producer's organization will establish European market development offices in the near future. It is then expected that action programs dealing with trade and tariff practices, research and education programs, and promotional activities in interest of grain sorghum and other feed grains will be working full time for area farmers.

Yes, new markets may be developed for grain sorghums—if we work at the job. We are after permanent markets for a permanent, sound west Texas grain economy for farmers and businesses and industries serving them. The job cannot then be temporary or haphazard. It will demand continuing aggressive programs of research and information by our colleges and universities, and strengthening of organized efforts by farmers, businessmen, and industrial leaders.

An article in this magazine just a year ago was ended with the following paragraph—it is even more timely today.

"We are reminded that 'the roots of agriculture are not founded in the soil alone—but in the vision and attainment of men.' This same vision, that has attained production beyond that ever dreamed of, can create new demands and lead to an ever more prosperous west Texas agricultural economy and further development of grain sorghum as an economic resource.

Eulogy on the American Flag

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1959

Mr. BYRD of Virginia. Mr. President, a very distinguished former Senator, the Honorable Albert W. Hawkes, recently delivered what I regard as a great eulogy on the American flag.

This was delivered at the opening of the first session of the Imperial Council of the Shrine at Atlantic City on Tuesday, July 7.

I ask unanimous consent to have this eulogy printed in the Appendix of the RECORD.

There being no objection, the eulogy was ordered to be printed in the RECORD, as follows:

Imperial Sir, Imperial Sirs, and representatives to the imperial council, fellow nobles, and ladies and gentlemen, I salute our beautiful American flag, emblem of each of our citizens and symbol of liberty, justice, and human dignity.

In this dark hour of history, when the ungodly, brute forces in man are seeking to impose their evil will, on people of good will, thereby destroying life, liberty, the pursuit of happiness, and equality under a rule of laws—your stars and stripes shine out more beautifully than ever.

Your silence is golden—you do not speak in words, but in the deeds which created you. Your 13 stripes of red and white, with a star in the blue background for the sovereignty of each State, stand for decency in human relations, unity and strength, honor, loyalty, and courage to make the supreme sacrifice whenever necessary to preserve the principles announced in the Declaration of Independence and recorded in our Constitution, then guaranteed by the Bill of Rights.

Our flag, speaking as it waves aloft, says to each citizen:

"I represent you all in honesty, justice, and the spirit of the golden rule. I can be no more, than you, by your deeds, make me. Remember, up to date all nations which have ascended to leadership have ultimately failed and their governments have disappeared on the horizon of history. Perhaps, because they put the mad race for money, place, and power in first place, and relegated character, morals, adherence to principle and their trust in God to second place.

"I will remain with you always, if you keep faith with the principles under which I was born, and if you and each succeeding generation teach the next to do the same. Teach

them never to forget the little white markers all over the world, and to keep faith with those men, and the millions of others, who offered to make the supreme sacrifice. Teach them the only way to keep faith with those who created our blessings and freedoms is to exercise their right of suffrage intelligently and have eternal vigilance, coupled with action on time.

"You will survive to do good on earth in perpetuity, only if you follow the rules of equity that flow from God's Commandments and the Golden Rule; only if you make our way of life good enough to impel any fair-minded citizen to make the supreme sacrifice, when necessary to preserve it.

"Never forget individual freedom and opportunity, and the acceptance of individual responsibility are inseparable. Failure to perform duty on time permits freedom and opportunity to perish.

"We have been blessed with fine neighbors to the north and to the south, whose announced objectives are similar to ours.

"God grant us, and others, the power to put first things first—avoid temptation—and in His name help humanity to rise to higher levels and better standards in freedom's institutions here on earth."

Botch of a Botch

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial under the caption "Botch of a Botch," which appeared in the Washington Post and Times Herald on July 17, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BOTCH OF A BOTCH

The ruling of the U.S. Court of Claims that the firms participating in the ill-starred Dixon-Yates contract are entitled to damages is an unsatisfactory remedy for an impossible situation. The Dixon-Yates contract was concluded in 1954 between the Government and the Mississippi Valley Generating Co., which had been set up by two private utility groups in order to furnish power to the Tennessee Valley Authority and thus enable TVA to continue to serve Atomic Energy Commission plants without construction of new TVA facilities. The present decision is unsatisfactory in our opinion not because it orders restitution to the Dixon-Yates firms of money that no doubt was spent in good faith, but because it makes altogether too little of the conflict of interest involving Adolphe H. Wenzell. In this it sets a thoroughly unwholesome precedent.

Much of what the three-man court majority says about the ambivalent role of the Government in the case, to be sure, is all too pertinent. The Government undertook to prosecute the guests after inviting them to partake at the table. The Dixon-Yates firms were, if not innocent bystanders, at least victims in part of the Eisenhower administration's own ineptitude. There is something decidedly malodorous—the court calls it cynical—about the performance of the administration which devised the idea of the contract, persuaded the private firms to participate, and then after protracted harangue when the affair went politically sour in 1955 attempted to deny them recovery of funds they had spent, on the ground that as a consultant to the Bureau of the Budget Mr. Wenzell had a potential interest in the financial arrangements.

Thus when we criticize the decision, we think at the same time that the Dixon-Yates firms are not the major targets. By general consensus there was nothing illegal about the form of the contract itself, however convoluted may have been the administration's maneuver. The case of Mr. Wenzell, however, is something else.

As vice president of the First Boston Corp., a large investment banking concern, Mr. Wenzell had been "borrowed" by the Bureau of the Budget at the suggestion of the First Boston president to make a study of TVA subsidies. Later he was asked to serve as a consultant to the Budget Bureau, while still drawing his salary from First Boston, in working out the background of the Dixon-Yates contract—even though First Boston was a potential and even probable participant in the financing. The possibility of a conflict of interest was called to the attention of the Dixon-Yates firms as well as of Mr. Wenzell.

From his own standpoint Mr. Wenzell's role may have been entirely guileless. But the conflict of interest statute is explicit, and an otherwise valid contract entered into a violation of this statute is void. In our view the court majority dismisses Mr. Wenzell's involvement much too lightly. More impressive is the dissenting conclusion of former Supreme Court Justice Stanley Reed, who sat on the case: "If the statute in question is to perform its intended function in the protection of the Government against prohibited actions that might influence contracts by public agents with private connections, courts must carry out the legislative purpose."

As Chief Judge Marvin Jones observed in his own forceful dissent, "the conclusion of the majority seems to stem from an understandable desire to avoid a harsh result." Probably the decision will be appealed to the Supreme Court. Meanwhile, however, it is too bad that there is not some way in which to reimburse the Dixon-Yates firms without sanctioning a violation of principle. The real blame in this affair in which the Government looks very bad indeed belongs to those top officials of the Bureau of the Budget who ignored warnings and bulled ahead with their eyes open, seemingly as indifferent to propriety as to the political liability they created.

Losses to the Government Because of Overcharges on Defense Contracts

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. PROXMIRE. Mr. President, recently the Milwaukee Journal published an editorial—as a matter of fact, it was the lead editorial in the edition of last Sunday—which was most alarming, because it pointed to the findings of congressional subcommittees and of the General Accounting Office in regard to overcharges made to the Government in connection with defense contracts. In connection with just a dozen or so contracts, approximately $12 million of overcharges were made.

The editorial quotes a statement by Representative HARDY, of Virginia, that in constrast to this sorry record by the Defense Department "in private indusary a contract negotiator who lost even $100,000 for his firm wouldn't last a week."

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THEY LOSE YOUR MILLIONS

Wherever they look they find it—incomprehensible carelessness and waste in defense contracts. The house Armed Services Subcommittee and the General Accounting Office (GAO) have been teaming up to show how the Government is losing money in overcharges.

Latest GAO reports to come before the subcommittee have to do with audits of Navy contracts over the last 2 years. It is just a partial audit. But GAO uncovered $2,596,000 in overcharges. In a dozen or so other defense contracts, GAO has revealed, the Government has paid out more than $12 million more than it should have.

Yet when GAO informed the Navy about excessive costs its investigators were told that present procurement procedures are adequate.

If the procedures are adequate, then certainly the officials using them aren't. As Representative HARDY, Democrat of Virginia, says, "In private industry a contract negotiator who lost even $100,00 for his firm wouldn't last a week."

But our Defense Department contract negotiators lose millions and stay right on the job. And they'll keep right on losing our tax money unless the taxpayers—who in the end are certainly "the boss"—protest enough.

When the Chips Are Down, You Can Count on Us

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by A. L. Valencia, Director, Philippine Information Agency, Washington, D.C., entitled "An Open Letter to America: When the Chips Are Down, You Can Count on Us," which appeared in the July issue of Bataan magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO AMERICA: WHEN THE CHIPS ARE DOWN, YOU CAN COUNT ON US

(By A. L. Valencia, Director, Philippine Information Agency)

On this Fourth of July, 23 million free citizens of the Philippine Republic join 178 million Americans in commemoration of Independence Day—the 13th anniversary for the Philippines and the 183d for the United States.

The fact that our independence day coincides with yours throws the strongest possible light on the relationship between our two countries.

We Filipinos think there is a singularity about those relations. Most Americans probably also think so, although they take their own and our goodwill so much for granted that they hardly give it a thought.

Perhaps it is just as well for both of us. You don't go around every day proclaiming that you love your brother or sister. You take it for granted as the natural, normal thing and you come to the rescue without palaver or hesitation if it is needed.

There have been numerous reports of a rising feeling of anti-Americanism in the Philippines in recent months. These reports are exaggerated and should be discounted. There will be ups and downs in Philippine-American relations. There will never be any major cleavage between our peoples.

The Filipino loves freedom, as you do. That is our unbreakable bond.

We of the Philippines have long placed our confidence in the American concepts of decency and fairplay—and in your strong right arm—and we have not been disappointed.

PHILIPPINE-AMERICAN FRIENDSHIP

Our two countries have stood side by side in the face of gravest perils and have come through our ordeals with a heightened appreciation of the friendship which binds us.

When the chips are down, you can count on us. And we know that we can count on you. Remember Bataan. We fought for you, as well as for ourselves.

You can count on us to stand firmly with you in resisting the menace of Godless communism which is so alien to all the ideals shared by our two peoples.

We have no illusions concerning the wily enemy we face. Our campaign which eliminated the Communist-led Huks in the Philippines bears witness to our determination to resist the siren song of peaceful coexistence which is trapping many of the unwary in our part of the world.

In the broader struggle against Red expansionism you have found us firmly with you in debates at the United Nations and other international forums. And in Korea you found us among the first to heed the call to stem the Red tide that threatened to engulf the entire peninsula.

Bataan and Corregidor are hallowed names which testify to our solidarity against overwhelming odds in the past. This solidarity, we are certain, will never change.

You can count on us, in the military and strategic sense, as a key point in the far-flung defense system thrown up to hold the lines against the Kremlin and Peiping.

Our mutual defense arrangement with the United States is a valued and sacred relationship which provides the sinews of our defense and, at the same time, affords you valuable bases near the territory of the enemy. We may argue, question and negotiate the details of the arrangement but we will never question the necessity for the close partnership.

You can count on us, too, because our two countries share the same political, cultural, and social institutions. We live under the same type of constitutional guarantees. We both believe fervently in a completely free press.

MUTUAL UNDERSTANDING

Our two peoples and governments share the same approach to the solution of any problems which may arise between us. We believe in sitting down in friendship and frankness to explore the field of misunderstanding in full confidence that men of goodwill, in a free society, can always work out their differences without hurt or harm to either side.

One of the greatest and healthiest things about Philippine-American relations is that we are not afraid of you. We have no chip on our shoulder as far as you are concerned. We have no inferiority complex. We do not believe that we are going to be pushed around. We want the same things—peace, freedom, and prosperity. We know we can get them better and sooner working together than we could working separately.

Our past relationship shows that such attitudes are well grounded on both sides. We had you as our guests for some 48 years. We learned that you really did want to promote our interests, that you were devoted to good government, to the promotion of health, welfare, education, and economic well-being for all. We found that you really meant what you said about individual and national freedom.

You can count on us, too, in the field of economic cooperation. We need you and at the same time we are able to offer you something.

MARKET FOR U.S. PRODUCTS

We offer, as the Philippines achieves greater prosperity, an ever-expanding market for American products, which will always be preferred to those of other foreign countries.

And we offer, too, a huge field for venture capital under more favorable conditions than you can find almost anywhere else. We even amended our Constitution to make certain that American nationals would find a most hospitable climate for business ventures in the Philippines. This was one way of showing our gratitude for the relationship which has been so mutually beneficial.

However, we shall need your friendly hand in the future, too. We must count on America's wise assistance if we are to go forward along the road to real economic stability and self-sufficiency.

We believe that the independence, economic well-being, and intense loyalty of the Philippines constitute one of the greatest assets of the United States in the Far East. They are evidence to the teeming millions of Asia—many of them groaning under the Communist yoke—of the advantages of the partnership of freemen under God and democratic institutions.

You can count on us to bend every effort, through the long years ahead, to preserving what we consider a priceless heritage from the past—a partnership in war and peace between two proud and sovereign states.

Eleventh Annual Upper Missouri Basin Conference

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a letter I have written to Mr. Harold Lorenz, president of the Chamber of Commerce of Sidney, Mont., on the occasion of the 11th Annual Upper Missouri Basin Conference on July 23, 1959. I also insert a copy of an address to the conference by Commissioner of Reclamation Floyd E. Dominy on that occasion.

These insertions reflect my views with respect to reclamation in Montana, and I call attention of the Senate to the urgency of continuing the reclamation program with such examples as the lower Yellowstone project before us.

There being no objection, the letter and address were ordered to be printed in the RECORD, as follows:

JULY 17, 1959.

Mr. HAROLD LORENZ,
President, Chamber of Commerce,
Sidney, Mont.

DEAR MR. LORENZ: On the occasion of the 11th Annual Upper Missouri Basin Irrigators Conference at Sidney on July 23, I extend my congratulations to the participants and especially to the water users of the lower Yellowstone project, as well as the good folks of Sidney who are so closely associated with this reclamation development.

You are indeed fortunate in having as your principal speaker the Commissioner of Reclamation, Floyd E. Dominy. No man in the active service of reclamation today is better qualified to handle this important job. I have so told Secretary Seaton of my views when he promoted Mr. Dominy.

I have read advance copies of the Commissioner's speech and I thoroughly agree with his recognition of the contribution the lower Yellowstone project had made to the economy of eastern Montana. The example it has set should be the forerunner of other reclamation developments.

Just now we are pressing for appropriations to start the East Bench unit in the Beaverhead Valley and the Yellowtail power and irrigation unit in the Big Horn. We are pressing for favorable action at this session of the Congress to provide funds to start these two units.

We do not propose to stop there. We will press for reclamation developments elsewhere when justified.

In our efforts we appreciate the fine cooperation from persons such as the water users of the lower Yellowstone project, who realize the great value of this important resource development.

Sincerely,

JAMES E. MURRAY,
U.S. Senator from Montana.

THE GOLDEN YEAR OF GOLDEN WATER

(Address by Commissioner of Reclamation Floyd E. Dominy before the project tour session of the 11th Annual Upper Missouri Basin Irrigators Conference at Sidney, Mont., Thursday, July 23, 1959)

The opportunity to join with you in celebrating the golden anniversary of the lower Yellowstone project is an honor which gives me great pleasure. We are here today to commemorate "the Golden Year for the Golden Water," a slogan very appropriately selected by the Sidney Chamber of Commerce.

The Yellowstone was once the thoroughfare of the explorers, the fur trappers, and the fur traders. It was on a summer day, like this, more than 150 years ago, that Captain Clark, of the Lewis and Clark expedition, visited this valley. He wrote in his journal on July 24, 1806, when a short distance upstream, "* * * for me to mention or give an estimate of the different species of wild animals on the river, particularly buffalo, elk, antelope, and wolves, would be incredible. I shall therefore be silent on the subject further."

But on July 31, as his men descended the Yellowstone—the area that is now the lower Yellowstone—the captain could not be silent as he watched the immense herds of buffalo. "I was obliged to let the buffalo cross over, notwithstanding an island of half a mile in width over which this gangue of buffalo had to pass," he wrote in his journal, "* * * the herd stretched as thickly as they could swim, from one side to the other,

and the party was obliged to stop for an hour." Below their night's camp, "two other herds of buffalo, as numerous as the first, soon crossed the river."

The wilderness, with its incredible number of wild animals that Captain Clark observed in 1806 disappeared many, many years ago. The fur traders and fur trappers have become only pages of western history, and the hundreds of thousands of cattle that trailed northward from Texas to Wyoming and Montana, the era of the open range, are but a remembrance. Today we are recalling another later era in the history of the Yellowstone. From sagebrush to green irrigated fields is the accomplishment we are celebrating on the occasion of this golden anniversary.

There are many milestones associated with the growth of the 56,000-acre lower Yellowstone project. There is a story of its own in each and every individual farm within the project. There is an equally interesting story in the establishment and growth of the business communities serving the project area.

Irrigation, with its intensive development and use of the land, has been an important factor in creation of thriving urban centers built on the increased need for services for the rural areas.

All that we see today as we view this pleasant valley has taken place because of the availability of water. "Golden Water" is the story of reclamation throughout the West, and it is particularly true of the Yellowstone River Basin which has pioneered much irrigation development. There are 10 Bureau of Reclamation projects within the Yellowstone River Basin, with a total irrigable area of about 280,000 acres. Last year, the water users of the Shoshone project, in Wyoming, celebrated their 50th anniversary; the year before, the irrigators of the Huntley project, near Billings, commemorated their golden birthday, and today we are observing the Golden Year of the Golden Water for this project.

In celebrating this important observance we are, in part, commemorating the efforts of the thousands of men and women who developed the irrigated lands of the Yellowstone Basin. Your prosperity is not solely the result of the efforts of these dedicated people, but irrigation has perhaps been the most important single factor in the economic growth of the valley.

The lower Yellowstone project has provided one of the most fascinating chapters in the history of the Yellowstone Basin. I realize you are well acquainted with your project but, if I may, I would like to recall very briefly some highlights of its past.

The Reclamation Service, as the Bureau of Reclamation was then known, began its investigation of the lower Yellowstone Valley in 1903, only a year after passage of the original Reclamation Act of 1902. A board of consulting engineers examined the proposed project and submitted a report on April 23, 1904. This report served as basis for the authorization of the project by the Secretary of the Interior on May 10, 1904. An organization known as the Lower Yellowstone Water Users' Association was formed during the fall and winter of 1904 and 1905, and, on May 30, 1905, members of that organization entered into a contract with the Secretary of the Interior to repay the entire cost of constructing the project. Construction activities began in the summer of 1905 and first irrigation water was available April 30, 1909.

Expansion of the project was relatively slow for several decades. One of the reasons was a widespread reluctance to forsake the saddle and cowboy boots and take up work on foot, with long-handled irrigation shovel and a pair of rubber boots. Then, too, during the second decade of the new century there was a great opportunity to homestead larger acreages of dryland which seemed more attractive to the man seeking a farm of his own. At that time there was little knowledge of the advantages of irrigation farming, including greatly increased yields under irrigation and the insurance against occurring drought.

Many of the irrigators and dryland farmers were starting a new life in agriculture. They had been laborers, clerks, white-collar workers, and even professional men. But all had a single goal. They were seeking new opportunities in the West. They were ambitious and eager but they lacked farm know-how. The land was there and the water was available for the irrigation of that land, but there were no tractors, trucks, or automobiles, or the other equipment that has made modern mechanized farming considerably easier on the man's back and a woman's patience. There is still a lot of hard two-fisted work connected with farming today, but when the lower Yellowstone project was started it was all hard work, as I am sure you pioneers who are seated at the table with me can testify.

The 1,800 residents who live on the 322 farms of the 56,000-acre lower Yellowstone project, the 6,000 or 7,000 people who live in Sidney and Fairview, and their predecessors on the farms and in the cities have made this area the self-reliant and confident community that it is today. To these people go the honors for the success the project has enjoyed and is enjoying. And just what is this success? What are these positive accomplishments?

During half a century of operations, the project has produced crops having a cumulative value of $75,515,000, or about 21 times the net cost of constructing the project which was $3,585,928. And I might add, with great gratification, the project's success is also typified in another manner—the landowners of the project have repaid nearly 83 percent of the reimbursable irrigation allocation.

As all of you know, the cumulative gross value of crops grown on the project is but a portion of the full production that has occurred on the project. The lower Yellowstone project has become widely noted for its production of sugar beets and its large and expanding livestock feeding operations. The project and the concomitant sugar factory operation are a solid base for permanent success and prosperity of this thriving and progressive community.

The fattening of lambs and beef cattle, which contributes so greatly to the success of the project, is one of the principal occupations on the lower Yellowstone project. It is a remarkable story. Tens of thousands of feeder lambs and feeder cattle, grown on rangeland extending from western North Dakota to near the Continental Divide in Montana, and into northern Wyoming, are fattened on this project. The complementary use of irrigated land with dry-farmed land and ranged land, even as far as 300 miles away from the irrigated farms on the lower Yellowstone project, is one of the significant agricultural developments in the Missouri River basin.

A study made recently by the Bureau of Reclamation, entitled "A Half Century of Progress, Lower Yellowstone Project," provides some interesting information regarding the project, and particularly the facts concerning the livestock feeding activities of the project. The report shows that the total numbers of livestock fed for the market in the last 5 seasons were 41,000 cattle and 539,000 sheep.

In 1956, the American people ate 83 pounds of beef and 10 pounds of lamb and mutton per person. The lower Yellowstone project shipments of fat beef and lambs in 1956 therefore provided sufficient beef that year for 74,000 persons and enough lamb and mutton for more than 1 million Americans living in many States of the Union. The production of sugar beets on the lower Yellowstone project in 1957 was 160,830 tons on 11,198 acres, producing enough sugar that year for 523,000 persons, on the basis of 100 pounds per person.

The fattening of lambs and beef cattle surely has contributed to the success of the lower Yellowstone project. This operation provides a local market for the subar beet tops and most of the sugar beet pulp. The beet tops and dried and pelletized beet pulp are supplemented by alfalfa hay, grown mainly on the project, and by feed grains grown both on the project and on dryland farms within a wide radius of the project. The nutrient content of the crops, and necessarily the food product made from them, is a direct function of soil fertility and is dependent on the annual restoration of vital plant nutrients in the soil. More than $60,000 worth of manure is hauled from feedlots to field annually to help maintain fertility and organic content of the soil, thus making for permanently successful agriculture.

While the expanding livestock feeding operation, with its allied activities, is such an interesting success story that it is difficult to stop, it would be well to emphasize other positive accomplishments of the lower Yellowstone project. For instance, the study made by the Bureau of Reclamation shows that:

The irrigated land of the lower Yellowstone project outproduces adjacent nonirrigated land by about six times.

Irrigated land values are 12 times the value of grazing land and 4 times the value of dry cropland.

The more intensive use of resources, and concentration of population, both brought about by irrigation, have improved community development through expanded hotel and motel facilities for the convenience of travelers, construction of a good hospital which serves ranchers and project farmers, and better schools.

Retail sales are four times as great in Richland County, Mont., in which two-thirds of the project is located, as in the nearby nonirrigated county, an area of equal size.

The lower Yellowstone project has increased local employment in business and professions twentyfold.

Personal income in the irrigated area is three times greater than in the nearby county of equal size. Residents of the irrigated area enjoy a higher level of living than in the comparison area and pay one-third less non-Federal taxes per capita, because of the much wider tax base provided by the agricultural economy.

The project is responsible for providing employment to many persons residing in other parts of the country in the manufacture, transportation, selling, and servicing of project-produced commodities and in those industries that produce goods and services to meet the needs of project residents, such as farm machinery, automotive equipment, furniture, clothing, to name only a few. Merchandise shipped into the area comes from 32 States.

Federal tax revenues from the project area since 1940 alone equaled nearly twice the Federal cost of project construction.

The story of this project has been repeated, of course, over and over elsewhere all through the West, and each project has a success story of its own made possible through the efforts of each and every water user.

Today, irrigators and prospective irrigators from Montana, North Dakota, South Dakota, and Wyoming are gathered here to take part in a project tour session of the 11th annual meeting of the Water Users' Irrigation Conference, an organization spon-

sored by region 6 of the Bureau of Reclamation.

The water users attending this conference represent about 2 million acres of irrigated land within the northern tier of the Missouri River Basin States. Within that area there are 17 projects constructed by the Bureau of Reclamation, serving nearly 500,000 acres, or about one-fourth of the total.

They are, in the main, managers and irrigation district officials who operate and maintain one of the largest and most important businesses in this area. Annually, they spend millions of dollars to operate and maintain the irrigation systems that deliver water to these many large and small projects, the most productive agricultural land in this region. The problems they discuss, the solutions they obtain as the results of their discussions, are the ends whereby full and needed production can be reached. I am sure this conference will be as useful and productive as the past 11 meetings have been.

It is appropriate that this conference is being held here during the golden anniversary of the lower Yellowstone project. This project has a particularly interesting history in the field of operation and maintenance. An operating agency known locally as the board of control, not only operates and maintains the two irrigation districts of the lower Yellowstone project but also the nearby adjacent Intake project and the Savage unit of the Missouri River Basin project.

During today's morning session, officials of the lower Yellowstone project explained to you the mechanics of their operating agency, and how such an organization is designed to serve you and your neighboring water users. The operating agency concept, whether you call it a board of control, the water users' round table, or any other name, is not some superagency dictating to the irrigation districts.

It is a servant of the districts, created by them and holding no power and no authority not granted by them. It has no hard and fast organizational structure but can be tailored to the individual needs of a given group or area. And in these days of rising costs and the attendant need for skillful, qualified personnel, it offers an opportunity for savings and improvement.

As water users, you have a full realization of the overwhelming importance of water in our lives and the necessity of taking positive steps to conserve it and use it wisely. Today's national demand for water—250 billion gallons a day—will be double that amount in 20 years. As you know, a possible remedy close to you is the urgent requirement for reducing water loss attributable to seepage, weeds and other growths, as well as any other water wastes that may take place. To the water user, the conservation of irrigation water and the production of needed food are inseparable subjects.

We can anticipate that the irrigated acreage in Montana, Wyoming, South Dakota, and North Dakota will increase in years to come. Completion of the mainstem storage system on the Missouri River and the continuing construction of storage reservoirs on the tributaries will insure the availability of water.

During recent years, hundreds of future potential water users of the proposed mammoth 1 million-acre Garrison diversion unit in North and South Dakota, have visited here and have become acquainted with the accomplishments of the lower Yellowstone project. There are, no doubt, many of you here today from these same areas, and we are glad to have you with us. Your observations of the lower Yellowstone project will be important in determining the value of irrigation in your communities. The Garrison diversion unit, with its prospect of intensive irrigation farming, feedlots, and service and processing industries, will provide opportunities far beyond the fondest hopes of the western homesteader of half a century ago.

Over and over again, reclamation projects have developed and prospered in all parts of the West and the miracle of opportunities, such as shown on the lower Yellowstone project, will happen again as the Garrison diversion unit and other potential irrigation projects throughout the Missouri River Basin are developed.

Golden water is the wand whose touch brings golden harvests. Golden water is the creator of homes, farms, and industries. The creation of future irrigation projects within the basin, similar to the accomplishments so definitely emphasized by the water users and other businessmen of the lower Yellowstone project, is a challenge that must be met.

Democratic Crisis Growing

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. HARTKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very stimulating article that appeared in the Washington Evening Star, on July 22, 1959, written by Mr. William S. White.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRATIC CRISIS GROWING—BUTLER'S ATTACKS BELIEVED INVOLVING PARTY MEMBERS OUTSIDE CONGRESS

(By William S. White)

The amazing venom of Democratic National Chairman Paul Butler's continued campaign against the Democratic congressional leadership is raising a crisis within his party.

For the fire upon his own party troops, which he had heretofore centered upon that leadership, has now fallen upon other powerful, and noncongressional, Democrats. Some of these are those whose help he had most sought.

In a word, his behavior has become unexampled in national politics. The Democrats thus for the first time are being reluctantly forced to consider an ugly and destructive washing of their own linen in public only a year ahead of a climactic national convention.

In spite of recent Butler intimations to the contrary, no faction—least of all the moderate faction he has been discrediting—has wished thus far to move for his ouster. If for no other reason, none wanted to give him opportunity to play again his consistent role of a querulous martyr.

Now, however, Mr. Butler's dismissal is being demanded by some voices quite outside the ranks of the moderates. These, instead, are within the liberal group whose favor he has particularly attempted to court.

The point is this: Everybody in the party knows that to fire Mr. Butler would be a messy affair, probably beneficial to the Republicans. But things have reached such a pass that some believe he must go anyhow, lest he simply wreck the party.

For Mr. Butler has now been shown to have adopted a technique of distortion quite similar in principle to that used by a few violent rightwing Republicans in the past. This sort of thing was repudiated by the bulk of the Republicans, specifically in 1950. Mr. Butler's use of it is being repudiated now by the bulk of the Democrats.

Mr. Butler is revealed to have wholly misrepresented Gov. Edmund (Pat) Brown, of California, as a Butler backer in his long denunciation of Senator LYNDON B. JOHNSON and the rest of the congressional leadership.

The full text of a Brown statement, angrily hurried here by the Governor to put the record straight, shows that on the central issue between Senator JOHNSON and Chairman Butler, the Governor supported Senator JOHNSON instead of Mr. Butler.

This has been the Johnson-Butler argument: Should Congress get such half-loaf liberal legislation on housing, for instance, as it can, rather than invite Presidential vetoes and get nothing? Or should Congress simply invite a series of such vetoes and thus create issues for 1960 but no legislation in 1959?

Governor Brown's own comment on this basic question, a comment never mentioned by Mr. Butler in proclaiming that he had a Brown ally, was this: "I believe, for example, we must build actual houses, not just prefabricated issues." This is almost word for word what Senator JOHNSON and many other congressional chiefs had already been saying to Chairman Butler.

The first responsibility of a Democratic national chairman is to raise funds for the party. The present committee is $600,000 in the red. But Mr. Butler has so far always turned discussions away from such affairs and onto himself. Specifically, as liberal committee members from the North have privately said, he has answered objective criticism of his work by suggesting that it all must be a southern or a pro-Johnson plot, even when the critics have been nonsouthern and anti-JOHNSON.

His presumed aim in all this is to force the 1960 convention to choose a presidential candidate who is adequately liberal, in his personal definition. But the effect of what he is doing is to hit at far more than the despised moderates. It is to hit at the essential unity of all his party. And his methods can hardly be called, in any definition, very liberal methods.

Development of Sulphur Springs, Tex.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. JOHNSON of Texas. Mr. President, unity of spirit, determination to do a job, are factors that have made this Nation great.

A prime example of this achievement at the community level is being displayed at Sulphur Springs, Tex., where citizens have united in a civic improvement and beautification program.

The success of this program is detailed in a story carried July 20, 1959, in the Greenville Herald Banner, and I ask unanimous consent that it be reproduced in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"NEW LOOK" SHINES IN SULPHUR SPRINGS

(By Herman Scott)

SULPHUR SPRINGS.—It's taking a while to get the job done, but gradually the fronts of the business buildings in this county seat

of Hopkins County are springing out with a "new look."

Property owners and tenants alike are falling in line with a unique program of store front beautification that was launched just about a year ago. Many of the fronts have been improved to the extent that a hometowner coming back home after a year's absence might be astonished.

DAIRYLAND

In this "dairyland capital of Texas," there are more than 200 business buildings of importance. It is estimated that the fronts of approximately fifty percent of them have been improved since what was known as the Downtown Improvement Association endorsed the program.

Latest building fronts to be improved include the City National Bank, Foster's Dry Goods, and Daniels Ready-to-Wear.

As a result of the well-planned program which had the attention of expert engineers, the business district of Sulphur Springs is getting the "shopping center" appearance. Buildings that once were sort of drab looking—and every town has them—are showing up bright and fresh.

The redecorating program is moving along in accordance with a carefully mapped plan prepared by the color engineering department of the Cook Paint & Varnish Co. Whacker Barton is the company's representative here.

STORE FRONTS

When Mr. Barton came up with the idea of brightening Sulphur Springs store fronts it was accepted by the steering committee of the Downtown Improvement Association. Now that group is the beautification committee of the Hopkins County Chamber of Commerce.

Phil Sartin was chairman of the committee, and for his service in this connection he got the chamber of commerce award as the outstanding citizen of the year.

FREE SERVICE

The city planning service offered by the Cook Paint & Varnish Co. is free for the asking, and leaders here were quick to take advantage of the offer. A company representative came here, took pictures of the buildings and streets, and planed a varied color scheme for each street, with the idea of making all buildings on the same side of a street appear as nearly alike as possible.

In Sulphur Springs everything above the awnings of buildings is being painted with the color known as Raleigh peach. Below the awnings the store fronts themselves are painted a different color (all the same, if possible). The colors that have been used include Raleigh peach, brown orchid, butterfly yellow, beige, green, huron blue, stone gray, turquoise, arctic green, mesa coral, and morocco brown.

TALL BUILDINGS

"The color scheme has a tendency to shorten tall buildings and heighten the shorter ones to provide a one-elevation look," said Mr. Barton.

When the improvement plan was adopted an all-out campaign was launched. Block meetings were held with the merchants to explain the idea, and at least 95 percent of the businessmen were not only on hand but accepted the program.

Although one company drew up the beautification plans and designs, all paint dealers in Sulphur Springs have access to them. Painters bid on the projects as they come up.

When the program first started 30 building fronts were painted in 24 days. That was in August 1958 when a hot sun was beaming. Some of the painters avoided the heat by working at night.

STEERING COMMITTEE

Members of the steering committee of the Downtown Improvement Association, who adopted the plan were: Phil A. Sartin, chairman; Raymond (Wacker) Barton, Billy Jones, Jr., Mrs. Claude Milligan, Harold Arnold, Bob Forte, Burt Weits, J. W. Pratt, Jr., E. L. Ashcroft, and F. W. (Bill) Frailey.

Cooperation of the merchants in following the program is fairly equally divided, however the improvements seem to be more uniform on the north side of Connally Street. Some of the larger buildings have been sand blasted, giving them a more modern looking appearance.

Also designed by Cook, but not acted on officially, is a handsome parking lot planter for the square which would claim very little if any parking sections. The entire redecorating scheme takes in light standards, parking meters, traffic markers, mailboxes, trash containers, and stoplight housings.

Balanced Budget, Mutual Security, Less Farm Control Win Top Support in Completed Second District Poll

EXTENSION OF REMARKS

OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. NELSEN. Mr. Speaker, over the last 3 months, I have mailed out a questionnaire to many of the residents of the Second Congressional District and the tabulated results show some very significant trends, which I now call to the attention of the Congress.

The Second District of Minnesota is one of the most prosperous in the State, and the citizens have a fine reputation of being sound, sensible and progressive. The 14 counties involved make it a big District. In 1950, our population was 321,397. By the census of 1960, it is expected to exceed 375,000 and to approach 400,000. Following the 1954 census of agriculture, the Second Congressional District emerged as among the 15 richest districts in the Nation in the value of farm products sold. Today, with the farm population decreasing nationwide, the Second District is showing one of the lowest percentages of decrease in farm population anywhere in the State of Minnesota.

The active interest that the residents of the Second District have taken in answering this poll shows that they follow very closely the decisions and the actions that we take here in the Congress of the United States.

I personally believe strongly in public opinion questionnaires. It helps the people back home and it helps those of us they have elected as representatives. The voters have an easy way to inform their Congressman of their thinking on some of the more important issues facing Congress. At the same time, it enables us to have the views of a wide cross section of the voters on the issues we discuss. Certainly, each Member of Congress has the vitally important obligation to inform himself of the many views of the people whom he strives to represent.

There are, however, several pitfalls in interpreting opinion questionnaires. First of all, since the replies are not taken from a scientifically selected sample, they cannot be touted as foolproof measures of opinion. Only general trends can be regarded as significant.

Secondly, it is not the sole duty of a Congressman to pile the "yes" answers on one side and the "no" answers on one side and vote for the biggest pile. The citizens always expect a Congressman to do more than find out which way the wind blows and vote accordingly.

The Second District questionnaire was mailed early in this session to all the rural boxholders in the district, and several months later to the townspeople who have boxes in their post office. As a result, a breakdown of opinions by rural people and townspeople has been possible. Many of the newspapers in the District also cooperated by printing the questionnaire for their readers. A total of approximately 50,000 questionnaires went out. Among rural residents we had exactly 1,200 replies; from townspeople there were 1,243 replies for a grand total of 2,443 responses.

Mr. Speaker, I feel that these replies are very noteworthy. The extremely high percentage of support given for example to the President's emphasis on a balanced budget is, I believe, highly significant.

On the question, "Do you agree with the President's pay-as-you-go emphasis on having a balanced budget," 82 percent of the respondents answered "yes," 6 percent said "no," and 12 percent "not certain."

I also call your attention to the questions on farm legislation, where the replies from rural boxholders only represent the point of view of the rural people themselves.

The questionnaire asks whether Federal farm policy should take the general direction of lower payments of farmers, with fewer controls. Of 1,200 replies from rural boxholders 66 percent answered "yes," 10 percent answered "no," and 24 percent were "not certain."

When the question was turned around to ask whether Federal farm policy should tke the direction of higher payments with more controls, the answers were 17 percent "yes", 40 percent "no", and 43 percent "not certain."

With respect to education 68 percent of the voters thought the Government should consider it a local and State problem, 16 percent did not think so, and 16 percent were uncertain.

Asked specifically about Federal aid to school construction, 31 percent said they favored it, 42 percent opposed it, and 27 percent were uncertain.

There was less support for Federal aid to help pay teacher's salaries. 12 percent were for it, 59 percent opposed it, and 29 percent were uncertain.

The principle of mutual security won a solid endorsement. In answer to the question, "In general, do you favor continued U.S. assistance to other countries in the free world's struggle against Communist aggression and subversion," the results were, 70 percent "yes," 15 percent "no," and 15 percent "not certain." I must add, however, that there were many who wrote in comments on this question,

expressing concern for the number of abuses of the program.

On small business, the opinion expressed by the townspeople deserves attention; 51 percent believe the Federal Government has not given sufficient attention to the problems of small businessmen; 18 percent think it has; and 31 percent are uncertain.

Regarding an increase in the gas tax to provide necessary funds for Federal highways, 36 percent favor it, while 50 percent are opposed, and 14 percent uncertain.

Regarding amendments to the present Federal minimum wage law, there was general opposition to raising the minimum from $1 to $1.25 per hour; 23 percent were for it, 60 percent were against it, and 17 percent uncertain. On extending coverage to more workers, 42 percent said "yes," 30 percent said "no," and 28 percent were "not certain."

The following tabulation shows the complete replies, by percentage, first for the full 2,443 returns, then for the rural people in the district, and finally for the townspeople:

The Second District questionnaire

Questions	Percent Yes	Percent No	Percent not certain
1. Do you agree with the President's pay-as-you-go emphasis on having a balanced budget?			
Total	82	6	12
Rural	82	7	11
Town	82	4	14
2. To provide necessary funds for Federal highways it is suggested that the Federal gas tax be increased from 3 to 4½ cents per gallon. Do you favor?			
Total	36	50	14
Rural	38	51	11
Town	35	48	17
3. With respect to education, should the Federal Government—			
(1) consider it a local and State problem?			
Total	68	16	16
Rural	72	15	13
Town	64	17	19
(2) aid school construction?			
Total	31	42	27
Rural	29	46	25
Town	32	38	30
(3) help pay teachers' salaries?			
Total	12	59	29
Rural	10	64	26
Town	14	54	32
4. Has the Federal Government given sufficient attention to the problems of the small businessman?			
Total	19	48	33
Rural	20	45	35
Town	18	51	31
5. Please check the general direction which you believe Federal farm policy should take:			
(1) lower payments with fewer controls?			
Total	69	8	23
Rural	66	10	24
Town	72	6	22
(2) higher payments with more controls?			
Total	13	39	48
Rural	17	40	43
Town	10	37	53
6. Do you favor amending the present Federal minimum wage law to—			
(1) raise the present $1 hourly rate to $1.25 per hour?			
Total	23	60	17
Rural	19	66	15
Town	27	53	20
(2) extend coverage to more workers?			
Total	42	30	28
Rural	37	36	27
Town	46	24	30

The Second District questionnaire—Con.

Questions	Percent Yes	Percent No	Percent not certain
7. In general, do you favor continued U.S. assistance to other countries in the free world's struggle against Communist aggression and subversion?			
Total	70	15	15
Rural	71	15	14
Town	69	15	16

Hog Men Determined

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. BROCK. Mr. Speaker, forecasts of national agricultural economists predict lower prices for processed pork in the very near future. Naturally, this is good news for the American housewife and her family. However, the depressed hog market is not good news for the hog producer, who must of necessity start to figure out his loss on this year's pig crop Since the hog market may be unstable for some time to come, he must also plan to see what he might salvage from his present holdings that is not quite ready for the market.

The hog farmer is a man blessed with a certain grain of philosophy that enables him to take the good years with the bad. Above all, he is more concerned with the quality of his product than the quantity. He is equal to the task of adjusting his production to the market trends and is willing to accept his loss while waiting for the more favorable day. While waiting for that day, he will devote his talents and energy to better breeding, better quality and improvement of his lot.

This could not be better illustrated than in the editorial entitled, "Hog Men Determined," as printed in the Omaha Daily Journal-Stockman issue of July 20, in this year and period when the fortunes of the hog producer are at a low ebb.

[From the Omaha Daily Journal-Stockman, July 20, 1959]

HOG MEN DETERMINED

Probably never before has a turn in a livestock production cycle been as widely publicized and expected as the present numbers buildup phase of the hog production cycle. This was obvious to us from a recent Corn Belt Farm Dailies survey of stockmen in which practically all of those interviewed spoke with a knowledge of the overall situation, forecasts of leading economists, and factors accounting for market changes.

This is very encouraging in itself, of course, but what really impressed us was the reaction of leading stockmen to what is expected to be an unfavorable price situation on hogs in months to come.

Determination to accept the problems of the industry as they come is the most prevalent attitude of established hog producers. Like the good businessmen that they truly are, the majority of sound producers believe that adjustments in production are warranted, but no comprises with established principles of good management are possible.

One prominent hog man has decided to reduce his operations by 50 percent. By far the largest number of established stockmen we interviewed have decided to stand fast for the most part, reducing operations only slightly. Others who have invested large amounts of capital in farrowing and feeding equipment and facilities, feel that good business methods require them to use those facilities to the fullest. They are relying on average prices to keep them solvent until the next favorable cyclical change.

But whatever adjustments they make in the size and timing of their operations, all emphasized these points: (1) Swine improvement will be more important than ever with lower prices; (2) sound rations for greatest feed efficiency are more of a must with cheaper hogs; (3) sanitation and disease control measures may well mean the difference between profit and loss when margins are close.

It hardly needs saying that we agree with these businessmen-stockmen who think conditions call for adjustments, but that principles of good breeding, good feeding, and good management will be more important than ever in coming months.

Political Blackmail

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Tuesday, July 21, 1959.

[From the Wilkes-Barre Times-Leader, July 21, 1959]

POLITICAL BLACKMAIL

It is open season again locally on candidates for public office and incumbents by countless groups seeking handouts through programs and the sale of tickets and chances.

Rarely a day passes that these men in public life are not besieged by individuals with outstretched palms. It is becoming increasingly burdensome to satisfy their demands.

For some reason, individuals, who would not think of holding up a business place or neighbor with a gun, do not hesitate to blackmail men in office or aspiring to posts in the county or community. For that is what they actually are doing under guise of raising money, no matter how worthy the cause.

The man in politics seems to be regarded as legitimate prey by these unthinking and ruthless opportunists who drop hints, often none too gently, that their members can account for a lot of votes on election day.

Now the average candidate or officeholder might not object seriously if he were asked to buy one ticket for himself, but that rarely is the case. The unscrupulous peddler tosses 10 or even 25 at him, knowing full well the purchaser will shove them in a desk drawer if he can find the room; otherwise, they will have to go in the wastebasket.

Many an individual in public office or campaigning for one winds up with a terrific financial headache for his efforts to serve the public because of the invasion of these chiselers.

Both major parties ought to get together and call a halt to this practice by refusing

to make any purchases or to set up a clearing house for this purpose, so the individual will not be made a sucker.

It is not only unfair, but it is dishonest in the sense that these sales and contributions are forced, not voluntary.

Unemployment in West Virginia

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. BYRD of West Virginia. Mr. President, lest we in the Congress forget that there still are economic trouble-spots in America, despite all the cheering indications of improving times, I should like to call attention to the July 15 issue of the Charleston Gazette, of Charleston, W. Va.

On page 1 of that edition of the newspaper there are two adjoining headlines regarding unemployment. One of them is: "Greatest Number in U.S. History Had Jobs in June." The other headline is: "Unemployment Claims Spurt Upward in West Virginia."

In order that we of the Congress may see the entire picture—which shows that America still has nearly 4 million out of work, despite a record-breaking number of people working—I ask unanimous consent that the two adjoining articles from last Wednesday's Charleston Gazette be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Charleston (W. Va.) Gazette, July 15, 1959]

GREATEST NUMBER IN U.S. HISTORY HAD JOBS IN JUNE

WASHINGTON.—The greatest number of Americans in history had jobs in June. Quickened factory, farm and building activity pushed civilian employment up to 67,342,000.

The employment gain was 1,326,000 in the month, the Labor Department announced. It climaxed an unprecedented spring upsurge which opened up 4,600,000 jobs in 4 months.

Unemployment rose, too, as it always does when the school year ends. Two million young jobhunters hit the labor market, and not all of them found work.

Joblessness rose by 593,000 to a total of 3,982,000. This was still about 2½ million below the recession level of a year ago. After allowing for seasonal factors, unemployment remained at 4.9 percent of the civilian labor force.

The outlook for the rest of the year is for some additional decline in unemployment, Labor Department officials said.

It appeared therefore that Secretary of Labor James P. Mitchell won't have to eat his hat this fall. In April he promised to do so publicly if joblessness had not dropped below 3 million by October.

The Department's unofficial guess is that there will be 2,600,000 unemployed in that month. This forecast is based solely on the usual seasonal pattern. Officials said it could be upset by an economic setback, such as the effects of a prolonged steel strike.

The gain in employment was largely seasonal, reflecting the pickup in farming, construction and other outdoor occupations. Mitchell noted with satisfaction continued recovery in the manufacturing industries, which were the hardest hit by the recession and the slowest in rehiring.

Employment in hard goods manufacturing—such as metals, machinery, autos, and appliances—gained 120,000 in June, a month when it normally does not rise. The glass, stone, and clay industries also added to their working forces.

The previous high mark of employment was 67,221,000; it came in July 1957 shortly before the onset of the business recession.

During the recovery period, employment did not pick up as rapidly as production and income until early this year. But, since February, the rapidly expanding economy has made room for more than 1 million jobs each month.

The average factory workweek rose by one-tenth of an hour in June and stood at 40 hours and 36 minutes. This was the highest level for June since 1955.

As a result of the comparatively small increase in the workweek, average earnings of factory workers rose by 22 cents to a new record of $90.54 a week in June. Hourly earnings remained unchanged at $2.23.

Dr. Seymour Wolfbein, Deputy Assistant Secretary of Labor for Manpower, said the increase in unemployment in June was concentrated in the younger age groups—young people of 14 to 24. Joblessness among adults actually declined, especially among the adult male breadwinners holding factory jobs.

There was a decline also in long-term unemployment, that which has continued for 15 weeks or longer. The number of long-term unemployment dropped by 200,000.

UNEMPLOYMENT CLAIMS SPURT UPWARD IN WEST VIRGINIA

Claims under the State's regular unemployment compensation program spurted upward again last week, with initial filings numbering 2,770 against 2,395 in the period ended July 4.

All claims, including those of a continued variety in which filings are required only each 2 weeks, numbered 17,480.

Government Secrecy To Hide Imprudence, Mismanagement, and Fraud

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. PROXMIRE. Mr. President, Comptroller General Joseph Campbell has complained that executive agencies are withholding information expressly required by law to be made available to his auditors. He has pointed out that to conceal substantive evidence of waste and extravagance, improvident management, poor procurement practices, and other adverse conditions can result only in loss to the taxpayers.

The Milwaukee Journal has emphasized this situation in an excellent editorial which was published on July 18. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AFRAID OF EXPOSING WASTE?

President Eisenhower grew visibly angry when he was asked at his news conference whether he had taken any steps to end Government secrecy that has been used "to hide imprudence, mismanagement, fraud, and in same cases material that has later resulted in indictments."

The President asked the reporter to put the question in writing "because you start right off the bat with the premise or implication that someone is guilty of fraud, and I don't believe it."

Yet the charge is being made. And it is based in the main part on the complaint of Comptroller General Joseph Campbell that executive agencies are withholding information "expressly required by law to be made available to his auditors. He has protested that refusal to make such information available brings the opportunity "to conceal substantive evidence of waste and extravagance, improvident management, poor procurement practices, and other adverse conditions."

The General Accounting Office which Campbell heads has managed to show enough waste and bad management with the limited information it does get to justify the suspicion that refusal to give him more information could very well prevent uncovering even more scandalous matters.

A recent executive witness told a House committee that his agency feared giving information to the Comptroller General because it would get to Congress and into the public prints. Why shouldn't legitimate information get to Congress? The Comptroller General is watchdog of Congress. Congress has to pass upon policies and appropriations and should have all the proper information on which to base judgments.

And why shouldn't information get to the public unless it would damage national security?

We trust that the President, when he gets the question in letter form, will realize that this is not a matter for anger at the question being asked. It is a matter of waste of the tax dollar and the public's right to know.

Liberia Celebrates 112th Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. POWELL. Mr. Speaker, when I returned from the Bandung Conference I announced that I would address the U.S. Congress each time there was an anniversary of one of the 29 nations participating in the Asian-African Conference who are on friendly terms with the United States.

Today it is my pleasure to pay tribute to one of our stanchest friends on the continent of Africa—the Republic of Liberia which celebrates the 112th anniversary of its independence on Sunday, July 26. I wish to extend greetings to President William V. S. Tubman, to the Government and people of Liberia and to His Excellent George Arthur Padmore,

Liberia's Ambassador to the United States.

Founded in 1822 by freed American slaves under auspices of the American Colonization Society, Liberia declared her independence as a free and sovereign state on July 26, 1847, thus becoming one of only two republics in the world governed by Negroes.

Since then she has quietly and thoroughly engaged in the great task of nation building, erecting what was until a few years ago the lone Republic in all Africa.

In many respects, as Ambassador Padmore has said often, Liberia is an extension of America onto African soil. Founded by Americans, her political, social, and economic systems follow closely those of the United States.

In war and peace she has been our unquestionable ally in Africa.

Over three-fourths of her exports are shipped to us. The United States, in turn, has aided materially in Liberia's economic development.

To repeat what I said in a previous salute to this valuable ally: "The Republic of Liberia—land of great contrasts between the primitive and the modern—may be the pivot on which will swing the future of Atlantic Africa."

Under the courageous, dynamic leadership of President Tubman, Liberia stands today as a monument to free world achievement.

Seeking investments, not alms, the country opened wide its doors to foreign investment with a liberal policy that has brought vast benefits to both investors and Liberia alike.

With its great store of natural resources being developed by some of the world's largest and most respected businesses, including our own Firestone Rubber Co.; B. F. Goodrich Rubber Co.; and Republic Steel, the country is afire with industrial activity.

New roads, harbors, airfields, communications lines, businesses, hospitals, and schools are rising throughout the land. National income has multiplied. Social legislation has been enacted protecting the weak. Its diplomatic missions stand majestically in the major countries of the world.

With industrialization underway, the country embarked upon a program of national unification—uniting in firm, amiable bonds the Republic's estimated 2½ million people, including 23 tribes with 23 different tribal dialects.

Of these programs, President Tubman has said:

> Because of the success of the unification and other development programs, Liberia has become a place where all Liberians and foreigners alike can live freely under the law without discrimination, fear or hindrance. While these programs have brought to our shores persons of all races and nationalities, I am happy to state that side by side we have worked to achieve satisfactory results. Over the years this nation has made progress in health and sanitation; transportation and communication; agriculture; education and other related fields. But there is yet need for greater, more extended and expanded development.
>
> We are not content with our accomplishments; for until the whole of Africa is linked by first-class roads, bridges and other means of transportation; until there are hospitals, clinics, schools and hotels fully equipped and staffed by trained personnel; until our communications system spans the entire continent and world making contacts easy and speedy; until cheap and modern power is made available to attract and encourage more large-scale industrial activities; until our agricultural products are sufficient not only for local consumption but also to reach the world markets and yield adequate returns; until the peoples of our continent are free and independent to enjoy their inherent rights in common with the peoples of other continents, we of this continent cannot be contended. Neither can be relax our efforts.
>
> This is therefore a great task which requires hard work and earnest strivings. It requires patience, tolerance and understanding, not rash and hasty actions. We must learn to work and live together with all races and people as brothers.

Liberia's program of domestic industrialization and unification referred to by President Tubman is now bearing fruits. So is her insistence on freedom and independence for the whole of Africa.

When Liberia was the lone African republic she consistently voted for and sponsored resolutions and measures in the United Nations condemning the oppression and subjugation of her fellow Africans under colonialism and imperialism. Liberia sponsored resolutions for the liberation of Libya, Morocco, Tunisia, the Sudan, and Ghana. She recently welcomed into the community of nations the Republic of Guinea and is ready to extend the same welcome to Nigeria, the Cameroons, Togoland, and Somalia.

Though, as Ambassador Padmore has put it, "Liberia's century-old vigil as the lone sentinel of African freedom is ended," not so her African leadership.

In free Africa, where the cry for independence has been replaced by the cry for unity, Liberia is playing a leading part in achieving this solidarity. The Liberian Government has proposed an immediate beginning of cooperation in all fields where cooperation is possible now. It feels that the precise political framework within which this cooperation can be strengthened and continued should be left for later discussion.

President Tubman has said that his aim is cooperation without controversy. He does not wish to see the aspiration of the masses for united action foundering in a sea of argument over sovereignty, leadership, frontiers, and constitutions.

A stanch advocate of African unity, President Tubman was the only chief of state to attend the conference of independent African states at Accra, Ghana.

Because of certain artificial barriers which have kept African nations apart, Mr. Tubman has said, economic, cultural, social, and political intercourse between Africans has been negligible.

As a start toward rectifying this forced estrangement, he has proposed the formation of the Associated States of Africa, an organization in which each nation will be free to retain its autonomous status and its peculiar identity, but in which all of them will be bound together by a single convention of friendship, commerce, and navigation, workable for the common good of all concerned.

In a signal tribute to President Tubman and his government, the Liberian people recently went to the polls and almost unanimously reelected him to an unprecedented fourth presidential term—an honor befitting so great a servant of his people.

While the Liberian people were in the midst of honoring their servants, they themselves were being honored in a Nigerian newspaper—as the silent servants of Africa.

On this, Liberia's 112th independence day celebration, I too salute President Tubman, his government, and people—for endurance as a nation under adverse circumstances, its lone star beaming a ray of hope to all Africans—for developing and offering to the free world indispensable raw materials that are rapidly becoming depleted in other parts of the world—and for aiding the continent of Africa to regain its inherent and inalienable right to freedom and independence.

I salute Ambassador Padmore for outstanding performances in representing so creditably the Republic of Liberia in our country.

May Liberia continue to enjoy God's blessings of progress and prosperity.

Federal Preemption in the Field of Labor Law

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. WHITENER. Mr. Speaker, at a recent meeting of the Labor Law Institute sponsored by the North Carolina Bar Association and the law schools of Duke University, the University of North Carolina, and Wake Forest College, an address was delivered by Hon. Whiteford S. Blakeney, an attorney of Charlotte, N.C. Mr. Blakeney is a practicing attorney in my State, giving his special attention to matters relating to labor law.

It is my feeling that the scholarly address of Mr. Blakeney will be of interest to all Members of the House, regardless of their views on labor legislation. I, therefore, insert it in the Appendix of the CONGRESSIONAL RECORD as information to all who are interested in this important subject.

LAW

(Address at Labor Law Institute—Sponsored by North Carolina Bar Association and the Law Schools of Duke University, University of North Carolina and Wake Forest College)

In the labor field the law pertaining to damage suits in both State and Federal

courts and the law pertaining to injunctions in Federal courts is susceptible of being outlined in a fairly clear-cut way. The law relating to State court injunctions in the labor field is, however, in a state of uncertainty and complexity due to the increasing impact of a doctrine which involves fundamental problems of law and Government—the so-called doctrine of Federal preemption.

Before coming to this vexatious subject last mentioned, let us first sketch out those matters which are more clear and definite.

As to suits for monetary damages in the labor field, both the State and Federal courts are entirely open to private litigants—upon the ordinary principles governing torts and breaches of contract and subject to the usual rules of State and Federal jurisdiction. (Note—Even this is no longer true since the decision of the U.S. Supreme Court in the case of *San Diego Building Trades Council* v. *Garmon*, 3 L. Ed. 2d 775 (1959), which holds that State courts may no longer award damages for infringements of State labor laws unless the offense is accompanied by violence.)

As to injunctions in the labor field, we find the Federal courts largely closed to private litigants. The Norris-LaGuardia Act virtually disqualifies Federal judges from issuing injunctions in private litigation involving labor matters.

If I may digress for a moment—it has always seemed to me unwise legislation to declare that in certain fields courts shall not be trusted to judge or to wield the normal and traditional powers of a court. Today there is a considerable hue and cry to deprive the U.S. Supreme Court of jurisdiction to handle certain types of cases. I doubt the wisdom of such action for the same reason that I think the Norris-LaGuardia Act unwise. I notice, however, that a great part of the present opposition to the circumscribing of the Supreme Court's jurisdiction comes from the same sources which sponsored and supported Norris-LaGuardia's circumscribing of the injunctive power of the Federal courts in labor disputes.

At any rate, this we can set down as a definite feature of the picture we are now outlining, namely, that in private litigation in the labor field, Federal court injunctions are, with a few exceptions, unavailable.

As to proceedings in the labor field initiated by Federal Government agencies, however, Federal court injunctions are, of course, the normal and prevailing means of enforcement. Thus, the National Labor Relations Board regularly seeks enforcement of its decrees by petition filed directly in the U.S. courts of appeals, and is authorized to seek enforcement of special sections of the Labor-Management Relations Act by petition for injunction in the Federal district courts—for example, coincident with the issuance of an unfair labor practice complaint or in cases of alleged violation of the secondary boycott provisions of the act. But again, private litigants may not seek to obtain such injunctions in the Federal courts.

We come now to the more difficult problem of State court injunctions in the labor field. It is not only the U.S. Government which has laws and statutes in the increasingly important realm of labor relations. The States which make up our Federal Union also have their respective policies and laws in this field—both court declared and legislatively enacted. The Supreme Court of the United States, however, in ever-widening degree is ruling that the State courts may not by injunctive decree enforce their own laws and statutes in this field—even though the State law be in no way contradictory of or in conflict with Federal law. The doctrine upon which the U.S. Supreme Court rests these rulings is called, as you understand, Federal preemption.

There is, of course, nothing new in the proposition that on any matter as to which the U.S. Congress has the constitutional power to legislate, its acts prevail over and oust any contrary or conflicting State laws or statutes. This, to be sure, is conceded on all sides.

Legal problem is held to arise, however, even when harmonious and nonconflicting Federal laws and State laws exist in the same field. Though the Federal and the State laws be mutually complimentary and serve a common end or purpose the question nevertheless, says the Supreme Court, is whether the State law must depart from the field, leaving the Federal law alone and exclusive.

Upon such question it would seem that the primary inquiry is: What was the intent of Congress? For if Congress in fact did not intend to take over the field exclusively nor to eliminate the operation of harmonious State law in that field, there would seem to be no ground upon which the Supreme Court could take it upon itself to say that the State laws must nevertheless get out of that field. Ever and again the Supreme Court avows that it has no authority to shape policy on such matters but that it seeks only to discern the intent of what Congress has enacted.

This being so, it would further seem that a congressional intent to rid a field of State law, which is entirely harmonious and nonconflicting, should not lightly be presumed. Since Congress can so readily make clear such an intent, should not the presumption or implication be against such an intent in the absence of its being expressed? Just as in construing, for example, a contract of insurance, the interpretation in case of ambiguity is against the draftsman who had the power and the opportunity to express, if he desired, a contrary intent.

The justification generally presented by the Supreme Court for holding in a given case that State law has been preempted, though Congress has in that case expressed no clear intent to preempt, is that the subject matter is such that it ought to be uniformly dealt with over the whole Nation and that varying State actions in different States would be undesirable. But is this not a consideration for Congress? Is this not a decision of policy which the Supreme Court elsewhere emphatically declares not to be within its province?

Nevertheless, the Supreme Court moves at accelerating pace and with widening sweep to rule that where the Federal law is anywhere present in a field, the enforcement of State law in that field is preempted—no matter that the Federal and State laws do not conflict and no matter that Congress has expressed no intent to preempt.

Now it must be noted that this doctrine is not by any means a new conception with the Supreme Court. It has a long history. Discussion of various aspects of this theorem may be seen as far back as the landmark case of *Gibbons* v. *Ogden*, 9 Wheat. 1, 6 L. Ed. 23 and it has been applied in a number of fields through the years, for example, in the field of railway safety appliance regulation, *Southern Railway Co.* v. *Indiana*, 236 U.S. 439; in matters of extradition, *Innes* v. *Tobin*, 240 U.S. 127; in cases of alien registration, *Hines* v. *Davidowitz*, 312 U.S. 52; in pure food and drug regulations, *Cloverleaf Company* v. *Patterson*, 315 U.S. 148; and most recently in cases of subversive activities, *Pennsylvania* v. *Nelson*, 350 U.S. 497.

But it is in the labor field that this doctrine has had its greatest flowering. Even in the labor field, however, the decisions of the U.S. Supreme Court have been on both sides of the fence. In fact, the Supreme Court decisions, on the issue of permitting State action or striking down State action in the labor field, cannot truthfully be described as anything other than intricate, inconsistent and confusing.

Justice Frankfurter stated this more euphemistically when he observed in the recent case of *Teamsters Union* v. *Vogt*, 354 U.S. 284 that "examination of these adjudications" discloses "an evolving, not a static, course of decision." An equally apt phrase might have been "revolving" instead of "evolving."

On this subject of the Supreme Court's invalidating State action, on the one hand, and permitting State action, on the other hand, we might outline and tabulate some of the principal decisions as follows—commencing about 1940 and taking them in chronological sequence:

U.S. Supreme Court decisions invalidating and striking down State action in the labor field: *Thornhill* v. *Alabama*, 310 U.S. 88; *AFL* v. *Swing*, 312 U.S. 321; *Teamsters Union* v. *Garner*, 346 U.S. 485; *Weber* v. *Anheuser-Busch*, 348 U.S. 468; *Guss* v. *Utah Labor Relations Board*, 353 U.S. 1; *Meat Cutters Union* v. *Fairlawn*, 353 U.S. 20; *San Diego* v. *Garmon*, 353 U.S. 26; *Electrical Workers Union* v. *Farnsworth*, 353 U.S. 969.

U.S. Supreme Court decisions permitting or affirming State action in the labor field: *Drivers Union* v. *Meadowmoor*, 312 U.S. 287; *Carpenters Union* v. *Ritter's Cafe*, 315 U.S. 722; *Bakery Drivers Union* v. *Wohl*, 315 U.S. 769; *Algoma Plywood Company* v. *Wisconsin Employment Relations Board*, 336 U.S. 301; *Giboney* v. *Empire Storage Company*, 336 U.S. 490; *Hughes* v. *California*, 339 U.S. 460; *Teamsters Union* v. *Hanke*, 339 U.S. 470; *Building Service Employees* v. *Gazzam*, 339 U.S. 532; *Plumbers Union* v. *Graham*, 345 U.S. 192; *Construction Workers Union* v. *Laburnum*, 347 U.S. 656; *Teamsters Union* v. *Vogt*, 354 U.S. 284.

Now by way of studying Federal preemption and its operation a little more in detail let us consider this doctrine in relation to the so-called State right-to-work laws. In the Supreme Court adjudications regarding these State right-to-work laws and the application of Federal preemption to them, we find graphic example of a basic trend in the evolution or devolution, according to your viewpoint—in the Government of our country.

The right-to-work laws exist in almost 40 percent of the States, North Carolina being one of the States which have such a law. North Carolina's statue is typical. It provides that neither membership or nonmembership in a labor union can be made a compulsory condition of employment within the bounds of this State. The validity of this law has been expressly upheld, both by the North Carolina Supreme Court and by the Supreme Court of the United States.

The statute has two fundamental purposes and justifications: (1) To assure freedom of choice to the individual in the matter of joining or not joining a labor union, (2) to prevent labor unions from acquiring monopoly control over employment in the State.

Now all of the State right-to-work laws have been expressly overridden by Federal statute in the field of railway and airplane transportation. In 1951 by amendment to the Railway Labor Act, Congress specifically enacted that employees could be required to join and pay dues to labor unions in order to work in these industries—and that any State statutes providing otherwise should be, to such extent, invalid. In *Hanson* v. *Railway Unions*, 351 U.S. 225, the U.S. Supreme Court held this Federal enactment to be valid and effective for purposes of overriding the contrary State statutes.

There is, however, no Federal statute expressly overriding State right-to-work laws in any other industrial areas except that of railway and airplane transportation. But the labor unions point to the fact that there is

Federal statute, namely, the National Labor Relations Act which deals with the subject of coercing employees. Upon this they raised the argument that State courts should be barred, that is, preempted from issuing injunctions to enforce State right-to-work laws whenever there is alternative recourse of a Federal nature, that is, before the National Labor Relations Board under the National Labor Relations Act.

Since the U.S. Supreme Court has held ever since the middle thirties that whatever affects interstate commerce is within the "commerce" power of Congress and since the Supreme Court has also ruled for the last 25 years that practically everything affects interstate commerce, it follows that in virtually any and every situation there is, theoretically, access to the National Labor Relations Board. Therefore, under this argument, State court issuance of injunctions to enforce State right-to-work laws would be preempted or barred in practically all cases.

In the group of cases commencing with *Teamsters Union* v. *Garner*, 346 U.S. 485, about 5 years ago, and culminating, last year, in the case of *Electrical Workers Union* v. *Farnsworth*, 353 U.S. 969, the U.S. Supreme Court accepted this argument and made the ruling that where there can be recourse to the National Labor Relations Board, there can be no injunctive enforcement of State right-to-work laws. And this year our North Carolina Supreme Court bowed to this ruling in the case of *Douglas Aircraft Co.* v. *Construction Union*, 247 N.C. 620.

I would like to present for your consideration a few thoughts which occur to me with respect to this ruling of the U.S. Supreme Court. In the first place, I submit that since there is in the National Labor Relations Act no expression by Congress of any intent to override State law, as there is for example in the amended Railway Labor Act, and since the central purpose and theory of the National Labor Relations Act and of State right-to-work laws is the same—namely, to assure to the employee freedom of choice in the matter of belonging or not belonging to a labor union—that these things being true, there should be no presumption that Congress intended to preempt the States' enforcement of their own right-to-work laws.

Another aspect of the matter is this. In other U.S. Supreme Court decisions, for example, the Laburnum case, it is made clear that although State court injunctive enforcement of right-to-work laws is preempted, still such laws may be invoked by way of damage suits and criminal indictments. These, to be sure, are often too laggard to be of any practical value. It seems ironical that in cases of labor controversy the U.S. Supreme Court should preempt the State courts of their effective process and leave to them their ineffective process.

The Supreme Court says that it must declare such preemption, for otherwise there might be too much variation in the remedies fashioned by State court decrees as compared to the remedies extended by the National Labor Relations Board. As to this it might first be observed that there is often more virtue in variation than in conformity. Moreover, is this not a consideration of policy which is by all means within the province of Congress, not the Court, and on which Congress had ample opportunity to express preemption if it intended such—as it plainly did, for example, in amending the Railway Labor Act?

Here is another inconsistency—the Supreme Court holds, though over dissent, that State courts may still issue injunctions in situations where riots or danger to safety exists, even though there be access to the Labor Board in such situation. Yet where one is deprived of liberty and property in violation of a State right-to-work law, the State court can issue no injunction to protect them. In the situation of danger to safety the traditional power of the State is involved, says the Supreme Court. Yet the policy and law of the State are just as truly set forth in a right-to-work statute. Is State sovereignty any the less present in a positively enacted statute than in the police power? And is liberty any the less to be protected than safety—whether the citizen invokes a statute of the State or the general police power of the State?

Here is a further irony—in the days of yellow-dog contracts, that is, the agreement which made it a condition of employment that an employee should not join a labor union, the States enacted statutes against such contracts, and the U.S. Supreme Court struck down such statutes. Now in the day of the yellow-dog in reverse, by which it is made a condition of employment that an employee must join a labor union, the States enacted statutes against such contracts, and the U.S. Supreme Court, having swung full circle, now emasculate these statutes and prevents their effective enforcement. In each instance it has been the States which have sought to insure freedom of choice for the individual. In each instance it has been the U.S. Supreme Court which has blocked this road to freedom.

Nor have we yet recounted all the incongruities of this matter. The theory of the preemption doctrine, as we have seen, is that the State courts may not issue injunctions because there is access to the Labor Board. But the Labor Board has the discretion to set its own jurisdictional standards and it may choose not to accept jurisdiction over a given case. Even so, says the U.S. Supreme Court in *Guss* v. *Utah State Labor Board* (353 U.S. 1), the State court is still barred from issuing injunctions. At this point the litigant finds himself in a legal vacuum—with no injunctive protection whatever available to him in any direction whatever—no matter what the crying needs or complete merits of his case may be. This is preemption with a vengeance—indeed, it would seem, to the point of judicial stultification.

We come now to the final and perhaps most amazing aspect of this subject. I have called your attention to the fact that in the National Labor Relations Act there is no expression of intent to preempt State right-to-work laws as there is, for example, in the amended Railway Labor Act. I have tried to show why the situation is, therefore, not one calling for a presumption of preemption—but rather the opposite. I now show you this crowning aspect of the matter. The National Labor Relations Act, as amended, actually contains a provision, its section 14(b), affirmatively specifying and stipulating that State right-to-work laws shall not be overridden. But the U.S. Supreme Court does not note or mention this section 14(b). Thus, it is finally to be seen that not only is the case one in which an inference of preemption is unjustified. In substance, the case is one in which Congress has expressly declared that it intends no preemption—that preemption is forbidden. Yet, nevertheless, the Supreme Court preempts.

This whole matter, I submit, presents a conspicuous and revealing example of an ominous trend in this country today—a widening and accelerating trend toward the expansion of Federal authority and the shriveling of State power. The chief architect of this process is, and for the past 20 years has been, the U.S. Supreme Court. For it is the U.S. Supreme Court which expounds the Constitution.

The men who wrote that Constitution had personal knowledge and a deep apprehension of an all powerful Central Government. The States which established that Constitution did so only upon the condition that it should specifically stipulate that the Central Government would have no powers save those expressly given to it and that all other power should remain and abide in the respective States and their citizens.

Whether that solemn covenant is being violated—whether that Constitution is being miscontrued—is for each man to form his own opinion. For my part, I am deeply of the conviction that the trend toward the expansion of Federal power is inflicting vital harm upon the destiny of this Nation.

The Recent U.S.A.-U.S.S.R. Dual Track and Field Meet at Philadelphia, Pa., Sponsored by the Philadelphia Inquirer Charities, Inc., in Cooperation With the Amateur Athletic Union of the United States Is a Splendid Example of the Unceasing Efforts Being Made To Promote International Good Will Through Athletic Events

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. VAN ZANDT. Mr. Speaker, the U.S.A.-U.S.S.R. track and field meet held at Philadelphia on July 18 and July 19, 1959, and sponsored by the Philadelphia Inquirer Charities, Inc., in cooperation with the Amateur Athletic Union of the United States is another fine example of the AAU's people-to-people program in action.

For more than 40 years the Amateur Athletic Union of the United States, which is the national governing body of 19 sports in the United States, in carrying out its people-to-people program has sent many thousands of track athletes, swimmers, boxers, wrestlers, weightlifters, basketball, and other teams to all parts of the world. At the same time the AAU has brought hundreds of foreign athletes to the United States for athletic contests such as the U.S.A.-U.S.S.R. track and field meet last week in Philadelphia.

It is of interest to state that in the program to encourage international relations and promote peace and good will among the nations of the world, the AAU in 1958 sent more than 300 athletes to over 30 different countries, several of which are behind the Iron Curtain.

At the recent U.S.A.-U.S.S.R. track meet in Philadelphia President Eisenhower in a message extending his warm greetings sounded the keynote of the international contest between United States and Russian athletes. The message which was printed in the official souvenir program is as follows:

Last summer I followed with interest the competition between the track and field teams of the Union of Soviet Socialist Republics and of the United States at Lenin Stadium in Moscow. As these teams meet for their return match at Franklin Field in Philadelphia this July, it is a pleasure to send greetings to each contestant.

A common interest in the field of sports helps form a bond of understanding among athletes throughout the world. Meetings of

this sort provide an opportunity for strengthening that bond through travel, observation and the hospitality of host nations. As this understanding among individual citizens is increased, we can hopefully assume that better international relations will also result.

I am delighted to add my best wishes for a fine meet and for the success of every effort to promote the ideals of good sportsmanship and good will.

Sincerely,

(Signed) DWIGHT D. EISENHOWER.

Following the recent U.S.A.-U.S.S.R. track meet, in Philadephia, Dmitri Postnikov, director of the Russian team expressed the Russians' sentiments when he said:

We believe this track meet and other cultural and sports exchanges between our two nations contribute to friendship and understanding. We hope such exchanges will continue.

Philadelphia, the host city for the international event, fully lived up to its traditional role as the "City of Brotherly Love" by sparing no pains in providing a hospitable and friendly atmosphere.

The Amateur Athletic Union and the Philadelphia Inquirer Charities, Inc., responsible for the 2-day track and field meet added to their laurels as a result of the successful and enjoyable programs which attracted thousands of athletic-minded enthusiasts from all over the Nation.

Mr. Speaker, it was my privilege to be in attendance at the two-nation competition in Philadelphia at which time some of the world's outstanding athletes gave convincing evidence of their ability and skill. The event was heralded as a warmup for the 1960 Olympic games to be held next summer in Italy and judging from the performance of individual stars at Philadelphia, interest in next year's Olympics is certain to increase as a result of the highly enjoyable Quaker City program.

Mr. Walter H. Annenberg, editor and publisher of the Philadelphia Inquirer, who plays an important role in the successful operation of the Philadelphia Inquirer Charities, Inc., deserves a large share of the credit for the fine contribution the 2-day program made in promoting international friendship through better understanding among the peoples of all nations and especially the United States and Russia. Mr. Annenber, who for years has been a stanch supporter of all forms of athletics, has a special fondness for track and field meets with the result that he never misses an opportunity to witness such events regardless of time or distance.

From the vantage point he enjoys as editor and publisher and as the moving spirit in the Philadelphia Inquirer Charities, Inc., Mr. Annenberg saluted his home city of Philadelphia for its traditional hospitality in the following article titled "Thank You, Philadelphia," which appeared in the July 21, 1959, issue of the Philadelphia Inquirer:

THANK YOU, PHILADELPHIA

As host city for the United States-Russian track and field meet sponsored by the Amateur Athletic Union of the United States and the Philadelphia Inquirer Charities, Inc., Philadelphia has displayed again its traditional warm hospitality.

The thousands who crowded Franklin Field on Saturday and Sunday naturally had the Americans as their sentimental favorites, but they cheered individual performances on their merit. They were rewarded by close and thrilling contests; not even a heavy downpour of rain could keep most of them from staying on while a great athlete, the Russian team captain, Vasily Kuznetsov, sought valiantly against handicaps to break his own decathlon record.

Sports events like this can be most helpful in promoting better understanding between peoples, and out of better understanding can come improved international relations, and mutual trust in place of tensions.

The friendliness shown the visiting Russians in Philadelphia, the sportsmanship demonstrated by spectators as well as participants at the meet, will surely not be lost upon these young men and women. The dividends in goodwill can be very great.

To Philadelphia for its generous hospitality, I wish to extend my personal thanks. To all those who made our vsiitors' stay here pleasant and agreeable, including particularly officials of the AAU and the University of Pennsylvania; the management and staffs of the Warwick, Sheraton, and Barclay Hotels; and my associates in Triangle Publications, Inc.: "Thank you."

WALTER H. ANNENBERG,
Editor and Publisher, the Philadelphia Inquirer.

Mr. Speaker, the following interesting article, titled "U.S. Youths Pays Off," also appeared in the July 21, 1959, issue of the Philadelphia Inquirer and reveals the ages of the winners in the men's running and field events at the Philadelphia track meet. It discloses that American winners had an average age of 23.6 years while the Russian winners averaged 26.3 years. The article follows:

U.S. YOUTH PAYS OFF

Youth paid off for the American men's track and field team in its 127–108 victory over the Soviet Union at Franklin Field. America's 11 individual winners (including sprinter Ray Norton who scored a double) had an average age of 23.6. The Russian winners averaged 26.3.

The full list of men's winners in running and field events:

Event	Winner	Age	Performance
100	Ray Norton (United States)	21	0:10.3
200	Ray Norton (United States)	21	0:20.7
400	Ed Southern (United States)	21	0:46.2
800	Tom Murphy (United States)	24	1:48.5
1,500	Dyrol Burleson (United States)	19	3:49.4
3,000	S. Rzhishchin [1] (U.S.S.R.)	26	8:51.6
Steeplechase:			
5,000	A. Artynyuk (U.S.S.R.)	24	14:17.8
10,000	A. Desyatchikov (U.S.S.R.)	24	31:40.6
110 hurdles	Hayes Jones (United States)	20	0:13.6
400 hurdles	Josh Culbreath (United States)	26	0:50.5
Pole vault	Don Bragg (United States)	24	15–2¾
High jump	R. Shavlakidze (U.S.S.R.)	27	[2] 6–9
Broad jump	Greg Bell (United States)	28	26–7
Hop, step, jump	K. Tsygankov (U.S.S.R.)	28	52–4
Shot put	Parry O'Brien [1] (United States)	27	[3] 63–2½
Discus	Al Oerter (United States)	22	188–9
Javelin	Al Cantello (United States)	28	262–5
Hammer	Vasily Rudenko (U.S.S.R.)	28	219–0
Decathlon	Vasily Kuznetsov (U.S.S.R.)	27	8,350 points.

[1] Won last year in Moscow.
[2] Decided on number of misses.
[3] Broke world record.

New White Fleet Is Sound Idea

EXTENSION OF REMARKS
OF
HON. DENVER D. HARGIS
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. HARGIS. Mr. Speaker, I was very favorably impressed by Comdr. Frank Manson's proposal for a new White Fleet, as outlined in the July 27 issue of Life magazine, and I am happy to endorse and support such a potentially worthwhile venture. Life's graphic and dramatic presentation of the idea should capture the imagination of a great many readers, and thus assure widespread popular approval.

Certainly the relatively low expenditure required for preparing and operating such a fleet should be a sound investment, not only from the standpoint of invaluable services rendered to people in distress, but as a means of boosting American prestige abroad. The use of inactive Navy ships and stored surplus foods for this purpose would, in my opinion, be an extremely practical approach to the problem of assisting the needy peoples of the world. I am in full agreement with the quoted comment of my Oklahoma colleague, Congressman ED EDMONDSON, that this "makes a lot more sense than some parts of our foreign aid program."

I intend to do my full share in helping to make the new White Fleet a reality.

Executive Privilege: A Convenient Device

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. HARRISON. Mr. Speaker, the frequent resort of the executive branch to the theory of "executive privilege" in denying public information to the public—and to the Congress as the representatives of the public—should be a matter of genuine concern to all citizens.

It is recognized, of course, that, in this period of extreme world tension, certain matters bearing on national security should not be discussed openly in detail.

On the other hand, bureaucrats should not be permitted the easy refuge of "executive privilege" to avoid the annoyance or embarrassment of public disclosure of their activities.

In this connection, and under leave to extend my remarks in the Appendix, I include an editorial appearing in the Richmond (Va.) Times-Dispatch of July 20, 1959:

Somebody is going to have to explain to President Eisenhower that the "executive privilege" dogma, which originated during his first term some 5 years ago is being perverted into a device for "covering up" and denying the public the facts concerning the government.

The President showed indignation when questioned at his latest press conference as to whether "imprudence, mismanagement and fraud" might not be concealed through the use of "executive privilege." Yet the fact remains that there are real perils here, as exemplified in the recent concealment by the International Cooperation Administration, through this same device, of corrupation, profiteering and mismanagement in Laos.

Mr. Eisenhower would never knowingly condone dishonesty in his administration, but the fact remains that "coverups" are made relatively easy through the use of "executive privilege."

Under it, a Federal official can withhold information concerning practically any of his official acts, whether or not they have any relation to national security. He can not only withhold such information, from the public and the press, but also from Congress and the General Accounting Office.

As an example of how dangerous this is, it has been pointed out that if "executive privilege" had been dreamed up at the time of the Teapot Dome scandal of the 1920's, the late Senator Thomas J. Walsh who uncovered that sordid deal would have been practically helpless in getting the facts.

So it would be advisable for Mr. Eisenhower to look into this "executive privilege" thing much more carefully than he has done so far. He will find that it carries within itself the seeds of scandal, and offers needless temptation to department heads.

It should be abolished.

Chairman Paul Butler's Criticism of Congressional Leadership and Attacks on Southern Democrats Is Resented

EXTENSION OF REMARKS
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. BURLESON. Mr. Speaker, a few days ago, on July 16, to be exact, our esteemed colleague from Tennessee, the Honorable CLIFFORD DAVIS, wrote a letter to the chairman of the Democratic National Committee, the Honorable Paul Butler, regarding the latter's attitude toward the Democrats in the Southern States, and particularly with reference to his recent attacks on the leaders of the Congress.

Mr. Speaker, the sentiments so ably expressed by Mr. DAVIS is shared by many of us who feel the injustices of Mr. Butler's actions. I personally wish to associate myself with Mr. DAVIS in serving notice on the Democratic chairman that his criticisms of the leadership in the Congress and his unjustified attacks on southern Democrats, is resented to the fullest extent.

Mr. Speaker, with the consent of my distinguished colleague, Mr. DAVIS, I include in my remarks his letter referred to:

JULY 16, 1959.

HON. PAUL M. BUTLER,
Chairman, Democratic National Committee, Washington, D.C.

MY DEAR PAUL: I have been shocked at your continued attacks on those of us in the Democratic Party who live in the South. Over all of these years you know full well what southern Democrats have meant to the party.

You have gone a long way in reflecting on Speaker SAM RAYBURN and Senator LYNDON JOHNSON. You have never heard Speaker RAYBURN publicly criticize you, but on the contrary you know how he has been your friend in the past.

I work hard at this job and believe I am a sincere Democrat. You know that my wife, Carrie Davis, has given much time assisting Katie Louchhein.

In the last campaign I asked Carrie to remain in Washington, which she did. During all that time I was doing everything I could in my own State and in my part of the country.

With your repeated attacks on the South, I must state with all frankness that my wife will no longer be interested in spending her time, talent, and money helping you.

Very sincerely yours,

CLIFFORD DAVIS.

Labor's Support of Our Position in Regard to the Berlin Crisis

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of this body to the following text of a letter with enclosures which I recently received from Mr. Jay Lovestone, Department of International Affairs of the AFL–CIO. I know this strong reaffirmation of American labor's support of our position in regard to the Berlin crisis will be of interest to all Members of this body:

AMERICAN FEDERATION
OF LABOR AND CONGRESS OF
INDUSTRIAL ORGANIZATIONS,
Washington, D.C., July 17, 1959.

HON. ALVIN M. BENTLEY,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN BENTLEY: Thank you very much for your letter of July 14. I received it with much appreciation, especially the tearsheet of the CONGRESSIONAL RECORD which contained a reprint from the AFL–CIO Free Trade Union News.

Because of your interest in American labor, I am enclosing for your information a letter written on July 14 by Mr. George Meany, president of the American Federation of Labor and Congress of Industrial Organizations, to U.S. President Dwight D. Eisenhower, and President Eisenhower's reply to the same.

In his letter, Mr. Meany refutes the glaring distortion, concerning the position of American labor and its support of the American Government's policy in regard to the Berlin crisis, which Soviet Premier Khrushchev presented to Averell Harriman during the latter's recent trip to Russia.

I am sure that both letters will prove worthy of your attention.

With kind regards, I remain.

Sincerely yours,

JAY LOVESTONE,
Department of International Affairs.

AFL–CIO President George Meany today released the text of the following letter to President Eisenhower, dated July 14:

"DEAR MR. PRESIDENT: According to press reports, Soviet Premier Nikita Khrushchev has told Mr. Averell Harriman that, though the leaders of both parties supported your position in regard to the Berlin crisis, the American workers did not.

"In view of the reconvening of the Foreign Ministers' Conference at Geneva, I deem it necessary, Mr. President to write you regarding the above.

"Mr. Khrushchev's statement is a deliberate misrepresentation of the facts rather than a mere misconception concerning the United States. Khrushchev knows very well that several months ago, American labor publicly pledged its support of every effort by our country and its NATO allies to save the freedom of West Berlin. On February 20, 1959, the AFL–CIO Executive Council considered the Berlin crisis and unanimously adopted a statement declaring in part:

"'The Executive Council welcomes the fact that the United States, Britain, France, the German Federal Republic, and the other NATO powers have rejected unequivocally the Soviet ultimatum that the Allied Forces get out of Berlin. * * * Neither the freedom of West Berlin, nor the freedom of the 50 million people of West Germany, can be objects of international bargaining. In the interest of their own security and self-preservation, the democracies cannot accept any reunification of Germany which is not reunification in freedom, through U.N.-supervised free elections.'

"In line with this assessment, the AFL–CIO Executive Council presented a 6-point program and called for 'the strongest Western unity and preparedness for any eventuality * * *' to 'preserve world peace, save Berlin's freedom, and hasten the day when the German people will be united in freedom.'

"Arrogance rather than ignorance also explains the Soviet dictator's telling Mr. Harriman that the American working class had no voice in the political affairs of the United States. Only last November, the Soviet press recognized the important part played by American labor in the last U.S. congressional elections. Khrushchev knows that through its independent political activities American labor has become increasingly influential in the political life of our Nation—not only in regard to social and economic legislation but also in respect to foreign policy. Surely, Khrushchev has not forgotten that it was American labor which prompted the United Nations–ILO condemnation of forced labor behind the Iron Curtain. Nor has he yet forgotten the vital role played by American labor in the U.N. condemnation of the savage Soviet aggression against the Hungarian people.

"When Khrushchev speaks of the American working class he thinks of the Communist Party in the United States. Despite its enjoying all the privileges and rights of democracy, the Communist Party in the United States has been declining and is of no

serious consequence in the American labor movement or political life of the Nation. When Khrushchev made the above false assertions, he undoubtedly had in mind the insignificant Communist organization in the United States and not the American working people.

"Furthermore, no American citizen or organization has authorized or requested Mr. Khrushchev to speak in behalf of labor or any other section of the American people. In fact, we are completely convinced that free elections in the U.S.S.R. would show that Mr. Khrushchev does not speak even for the workers of his own country.

"Mr. President, it is not so much ignorance or misconception of our democratic way of life and its free institutions which prompts the Kremlin to wage the cold war against us and to threaten humanity with an atomic conflagration. Khrushchev and his Communist regime fear and hate democracy, because they know and understand it is to be the obstacle to their drive for conquering the world and remolding it on the Soviet pattern.

"In this critical situation confronting our country and all mankind, I assure you, Mr. President, that American labor is solidly with you in seeking to rally our own and all other liberty-loving nations for joint all-out efforts to preserve the freedom of the people of West Berlin, to promote the reunification of Germany in freedom, and just and lasting world peace.

"Sincerely yours,

"GEORGE MEANY."

Following is the text of a letter received today by AFL–CIO President George Meany from President Eisenhower:

THE WHITE HOUSE,
Washington, July 15, 1959.

Mr. GEORGE MEANY,
President, American Federation of Labor and Congress of Industrial Organizations, Washington, D.C.

DEAR MR. MEANY: Thank you very much for your letter of yesterday. For a long time I have been keenly aware and appreciative of the firm stand taken by the AFL–CIO in support of the Government's refusal to abandon either the free people of West Berlin or our rights and responsibilities respecting that city.

Your present letter should convince everyone, including the Soviets, that in the United States labor is free, and because it is free, it is part of the decision-making process in our country. When free citizens form their conclusions and convictions on matters that affect America's international position, they cannot be divided on the basis of vocation, creed, or partisan politics. The efforts of any outsider to divide America are bound to fail when the basic beliefs and the vital interests of this Nation are at stake.

I am grateful for your letter, because even though I have had no doubt in my own heart or mind of AFL–CIO solidarity in this matter, I salute your entire membership for reaffirming this solidarity before the entire world.

With warm regard.

Sincerely,

DWIGHT EISENHOWER.

Mrs. Alice W. I. Williams

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks I include an editorial from the Paterson Evening News, Paterson, N.J., on the recent passing of Mrs. Alice W. I. Williams:

MRS. ALICE W. I. WILLIAMS

The grandeur that was traditional of the America of our forebears and of the Paterson of the pioneer days of strength and stability was an innate characteristic of Mrs. Alice Winslow Ingham Williams, who passed away last night in her 90th year.

A native of New Jersey whose family was part of early America, Mrs. Williams was a gracious and charming lady whose life was steeped in Americana and who throughout the years, held unwaveringly to a strict code of refinement, gentility, and courtliness. To her sons she strove always to communicate the same high idealism which she and her late distinguished husband, Robert Williams, had followed in their social and business activities.

For many years, Mrs. Williams had continued to participate actively in the policy-making of the Call, which her late husband had stewarded, but in recent years, because of waning health, her interest had naturally diminished while her principal divertissements revolved around her grandchildren. A severe blow to her had been the passing of her two sons, Robert, who had been publisher, and Henry, former State senator, who had been editor of the newspaper.

Mrs. Williams traced her family lineage back to early Revolutionary days and in the true tradition of the 18th century, she was a member of the New Jersey Society of Colonial Dames of America, and the woman's branch of the New Jersey Historical Society among others.

A grand lady of Paterson has been called to her last reward after a life rich in fulfillment of her own family traditions of sturdy uprightness and rectitude. Her passing marks a sad closing to a rich chapter in the history of the Paterson of Alexander Hamilton and those who followed in his pioneering path.

Trinity River Power Facilities

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. UTT. Mr. Speaker, the editorial page of the July 21 issue of the Washington Daily News, under the title "$12,540,700,139," includes these words:

That's the amount of dollars—$12,540,700,139—that the Federal Treasury went into the hole in the fiscal year that ended last June 30. That's the Federal Treasury deficit for fiscal year 1959, just announced. That's the excess of money the Government spent that it didn't have—$12,540,700,139. Somehow, through inflation, through taxes—maybe higher taxes—and less spending, or all three, that deficit will have to be met. It can only be met through your pocketbook.

The Manteca (Calif.) Bulletin points out that—

The Government has no money and creates no wealth—it has only your money to operate on, and it should be apparent to every taxpayer by this time that for every $4 you send to Washington, you are lucky to get $3 back. All of which leads up to the myth of cheap power, as offered by the Federal Government. When the Government builds a dam and power facilities, it does not have to have any particular formula for establishing power rates—and, in fact, could give it away if it chose to do so. Obviously, however, there is no such thing as something for nothing so somebody must pick up the tab—in all cases it is the taxpayer.

The Bulletin editorial continues—

This power has a certain market at its source, and maximum profit can result only when this power is sold at market value. In this Trinity River project, the Government proposes to sell this power to preference customers at less than market value. A preference customer means those few cities in northern California which own their own power systems, and constitute about 5 percent of the population. Perhaps you can think of a good reason why the other 95 percent of us should pay our own electric bills, and then also pay a little more in taxes so these few cities can enjoy lower rates. We can't think of any sound reason.

The joint development proposal providing for construction of the Trinity River power facilities by the Pacific Gas & Electric Co., with its own money, will be considered Friday by the House Interior Subcommittee on Irrigation and Reclamation.

The Manteca Bulletin then explains the company's offer, as follows:

The Pacific Gas & Electric proposes to build this powerhouse, thus saving Uncle Sam some $56 million capital outlay immediately. The Pacific Gas & Electric will also pay the Federal Government some $165 million in extra revenue for use of the falling water over the 50-year life of the project. In addition, during the 50-year period, the Pacific Gas & Electric will pay the Federal Government $83 million in taxes, and $62 million more to State and local governments. This totals up to $310 million in revenue to government at various levels. * * * The only question here is which method will be of the greatest benefit to the greatest number? We think the partnership plan is the answer.

The same sentiments are voiced by the North Sacramento Journal:

Partnership is a good deal for the Government, good for the individual citizen and good for the power and water users. It is the logical and businesslike way of getting a big job done.

The Caruthers (Calif.) Gazette, near Fresno, states—

We are convinced that the public interest best will be served if the committee gives its endorsement to Secretary Seaton's recommendations and speeds them on their way to approval by the whole Congress.

From the Colfax (Calif.) Record:

The partners in this case would be the Federal Government and Pacific Gas & Electric Co. The project has been endorsed in strong terms by both the California Farm Bureau and the International Brotherhood of Electrical Workers (CIO–AFL), as well as by a long list of other groups.

The Dixon (Calif.) Tribune adds:

As taxpayers feeling the pinch of Government spending, we can only give our blessing to the proposal of letting a private concern handle the power and give us downtrodden taxpayers a welcome respite from the left hooks and jabs of a government opponent that swarms and smothers without letup. Here's a chance to save a few dollars on our tax bills, and at the same time see something flow into the public coffers instead of out.

We believe that the development and distribution of electricity—

States the Humboldt Times, of Eureka, Calif.—

is the job of private industry. We feel it can, does, and will do the job better and cheaper than Federal agencies which all of us, already burdened with heavy taxes, will have to dig still deeper in our frayed pockets to pay for. We submit that the Trinity project, which Congress has decided to be a program urgently needed to promote the general welfare of our people, should also be the handiwork of cooperation and teamwork—for therein, we feel, lies the real meaning of democracy.

I submit, Mr. Speaker, that these excerpts are representative of the many newspapers which have supported joint development of the Trinity River power facilities. Over 230 organizations of water useres, irrigators, labor, business, and taxpayers groups have also endorsed the partnership proposal, whereby the utility would put up the money, construct and operate the generators. The hearing tomorrow, on whether the company's offer to save the Government $60 million in building costs while adding some $230 million to the Federal Treasury in water payments and taxes, will be of major importance in trimming the public works appropriatons bills of the next 3 years.

For a Regional Market in Latin America

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. CARTER. Mr. Speaker, on May 20, 1959, under leave to extend my remarks in the RECORD, I included an item entitled "How We Stand From Tiajuana to Tierra Del Fuego." This item included an editorial by William S. White and pointed up the ever-increasing complexities of inter-American relationships.

I submit as self-evident the fact that there can be no lasting political solution in Latin America until her economic ills are remedied. In this connection, I found that the following article from the latest edition of Foreign Affairs entitled "For a Regional Market in Latin America" makes a very constructive analysis of this problem. I might add that its author, Dr. Galo Plaza, is preeminently qualified for comment in this particular field. I have sent a reprint of this article, which I sincerely believe contains the first step in any real solution to the Latin American problem, to the leadership of both Houses and to each member of the House Foreign Affairs Committee and the Senate Foreign Relations Committee. I urge the remainder of my colleagues to read the article that appears here in the RECORD.

The increasing frequency of political crises and the success of Soviet economic and political penetration in Latin America makes it imperative that Congress institute corrective policies in that area. To borrow Churchill's term, this is the "soft underbelly" of our hemisphere, and Soviet activities there indicate they are acutely aware of this vulnerability. Our efforts to stem political unrest and Communist expansion in Europe and Asia are indeed admirable, but certainly what can be more important than tending to this same problem right at our very back door? I feel the Congress should immediately provide the initiative so that a program such as is proposed in Dr. Plaza's article will be brought into existence before our losses in Latin America cease to be recoverable. The article follows:

FOR A REGIONAL MARKET IN LATIN AMERICA
(By Galo Plaza)

We are on the threshold of a new era in the economic development of Latin America. The newly awakened aspirations for a better standard of living of a fast-growing population cannot be satisfied by our inadequate economic system, which today is as dated as the Model T Ford. In order to make more efficient use of our natural resources we must apply technicology to agriculture, develop sound industrialization and create a common market, without which any program for development of agriculture and industry would have very limited possibilities.

To understand why a common or regional market is an essential part of a master plan for the acceleration of our economic growth we must look backward for a moment. After World War II the economic development of Latin America was progressing at a highly satisfactory rate; overall production, income and consumption showed a constant upward trend. Economic growth during the decade 1945–54 exceeded the U.S. performance for the same period. In the United States the gross national product increased about 30 percent, while that of Latin America rose 50 percent. Although the population of Latin America increased by 24 percent in the same decade (compared to 16 percent in the United States), nevertheless the availability of goods and services grew substantially even on a per capita basis.

We were able to attain this remarkable rate of economic development in spite of the fact that we are mostly producers and exporters of raw materials and foodstuffs. There were two principal reasons: first, with the war came a tremendous demand for our raw materials at prices unheard of in the past; and second, we were at last—through education, sanitation and better communications—breaking away from retarding factors of a social and cultural and geographical nature that for centuries had kept our economic growth at a painfully slow pace.

Unhappily, we have not been able to maintain this rate of development beyond the first postwar decade. In 1956 the rate of economic growth slowed down and gross income increased no faster than the population; since then the trend has been downward. The extremely favorable conditions for our exports have gradually changed as prices of metals, foodstuffs, and other raw materials have dropped substantially. But there are other factors of greater significance that will retard our rate of development if we are to remain chiefly producers and exporters of primary commodities.

There is every reason to believe that the present rate of 2.4 percent yearly growth in population will continue. A parallel increase in gross national product will be necessary just to maintain present levels of per capita incomes. But treading water will not be enough. The postwar prosperity which made possible the enjoyment of better living conditions for a growing middle class hardly touched the great underprivileged masses, which are awakening to the fact that there is a better life and that they have a right to enjoy it.

The rapid increase in population, plus the upgrading of living standards for a very large segment of it, will make greater demands on an economic system which, even with much greater efficiency, would still be a low producer of goods and services. I have frequently asked myself this disturbing question: How can we improve the lot of all our people if there is not enough production to go around regardless of how it is distributed?

Nearly 60 percent of the total population in Latin America is dependent on agriculture, which in most cases is primitive. We could increase our production substantially by opening up new lands to production and by introducing better farming practices. Modern technology could bring us greater yields per acre, per machine and per man. Doubling our production with half the labor force would be quite feasible. Greater efficiency in agricultural production to serve a larger population would release an important segment of our labor force that would have to seek gainful employment elsewhere. The process of industrialization will be the only way to absorb this excess manpower. The following figures give a vivid picture of the problem: In 1955 the population of Latin America was about 175 million and it is estimated that this figure will have increased by a further 100 million by 1975. Of this number, approximately 38 million will be added to the labor force. If the trends registered in the last 20 years continue, we can estimate that only 5 million of these will be absorbed by agricultural activities—and fewer still if, as is greatly to be desired, technical progress in agriculture is expedited. Thus, about 33 million workers will have to seek productive employment elsewhere.

Industry in Latin America must therefore fulfill the dynamic function of absorbing surplus manpower from primary producing activities. The second task of industry is to supply all those manufactured articles which the underdeveloped countries cannot afford to import because exports of primary commodities and foodstuffs tend to increase at a much slower rate than the demand for imports.

The problem of Latin America is therefore to import what it can pay for abroad with its own resources and to meet the remainder of its growing demand for manufactured goods from domestic production. This is already being done to a limited extent. And as long as this process involved only staple consumer goods for which there is a large national market, the industrialization of Latin America in 20 watertight compartments caused no great concern. But now that our countries are entering the more complex fields of producer goods and consumer durables, involving heavy capital investment, we must have markets of wider scope than those offered by individual countries. The need for a Latin American common market is thus evident.

The establishment of the European Common Market has stimulated our thinking on this subject because we feel it will have important repercussions on the Latin American economy. While closer economic integration in Europe should increase the demand for Latin American products, the preferential measures which the European Common Market may establish for overseas territories and the technological revolution to which this project will give rise in Europe, both in agriculture and in the synthetic production of raw materials, will probably have unfavorable repercussions on our economies.

However, there is no intention on our part to imitate what is going on in Europe. Although our goals are similar, there are different conditions peculiar to each region which should be handled in different ways. The idea of a Latin American common mar-

ket actually preceded the European plan. For a long time many Latin American countries have been aware of the weakness of trade between them as compared to their trade with other nations. Moreover, they realize that, besides the European Common Market and the British Commonwealth, the United States, the Soviet Union, China, and India are in fact regional markets of enormous magnitude. Only Latin America remains divided into 20 separate economic units.

We believe that by breaking down these watertight compartments through economic integration we will accelerate productivity, give the whole region free access to raw materials, and enable the resources of the continent to be better utilized for economic development. There are indirect benefits that may be equally important. Many governments today are aware of the unpalatable remedies needed to cure the economic infirmities of their countries, but for political reasons they are unable to put them into effect. A common market would demand from all member countries certain commitments, and the necessity of abiding by the rules of the economic community would strengthen the hands of individual governments in making needed changes in their fiscal and monetary policies.

What effect will the Latin American market have on the economies of countries outside the region? We believe that they will be favorable, because an increase in per capita income in Latin America will mean a greater demand for products—especially industrial commodities—from the other countries. Undoubtedly, world trade will benefit from the expansion of Latin American production and the new demands to which the common market will give rise. Certainly, at the beginning there will be difficulties of readjustment, but the powerful flow of international trade will eventually receive a new tributary which will swell its volume to incalculable proportions. Only the type of goods purchased will change. Latin America will cease to acquire some goods in order to buy others, which it is in no position to buy today.

Most of the great advances in international trade have followed the exchange of manufactured goods among the industrialized countries; by contrast, the share of less developed areas in total world trade has registered a continuous decline, not only as compared to the prewar period but also to more recent times. Between 1950 and 1956, it dropped from 41 percent to 31.5 percent, and the decline continues.

The Latin American countries must export manufactured goods to one another. However, in my opinion and in the opinion of well-known economists, it is quite possible to imagine Latin America competing in the industrial market with the rest of the world. It can be done through modernization and specialization of our industries.

Another argument in favor of the common market is the stimulus which it would give to foreign and domestic investment. Investors would be greatly attracted where today they are discouraged by narrow markets that are rapidly saturated. Thus the common market would not only provide opportunity for large-scale investments but investors would have better confidence in the future of their enterprises. Such incentives are essential in order to attract foreign capital in sufficient volume.

Present conditions are not conducive to a greater flow of foreign capital to Latin America. In recent years the average of foreign investment has fluctuated annually between $400 million and $500 million. Most of this money is made up of private investment from the United States and part of it is not new capital but the profits of former investments which have been plowed back. About 30 percent of this investment is designed to promote export activities, mainly mining and petroleum. This amount is quite inadequate for the normal economic development of Latin America. Investments designed to develop transportation, energy and other services which form the major part of public expenditure are very low, yet they are essential to pave the way for private investment. This is one of the most serious obstacles impeding economic development in Latin America today. Of course, it is recognized that the development of this region has to depend basically on our own resources, but they are not enough. Foreign capital is urgently needed, until national savings are adequate to sustain a significant rate of growth. We hope that the common market will lead to much more attractive conditions for investment.

The national governments concerned will have to decide on the structure of the regional market but it will be for private enterprise to give it life. The economic development of Latin America depends to a large extent on the action of the private "entrepreneur." It is essential that the Latin American entrepreneur should be given access not only to the sources of international capital but also to international technical knowledge on a footing comparable with that enjoyed by others. International technical assistance should be given to Latin American industry on the same scale that it is being extended to our agriculture. We Latin Americans realize that the main effort will have to come from ourselves. But countries which are now advanced and prosperous should remember that not one of them has been able to develop without the help of foreign capital and technical knowledge during the initial period of their economic growth.

Economic integration within the hemisphere could be a realistic possibility once the Latin American common market is in operation. I believe that breaking down economic barriers within Latin America does not necessarily mean raising barriers around the perimeter. On the contrary, a successful Latin American common market should be able to lower barriers with the rest of the hemisphere and eventually with the rest of the world.

II

The idea of closer economic association among the countries of Latin America is not new. It has been present throughout their history, but it had little practical significance because our economies have been geared toward Europe and the United States. When World War II cut off our traditional sources of imports, the establishment of several consumer-goods industries was encouraged. This in turn served to create a consciousness of the benefits of industrialization.

A renewed and more realistic interest in integration started to germinate in 1949 when the United Nations Economic Commission for Latin America (ECLA) began to explore its possibilities. In 1952 the governments of Central America, with the close cooperation of ECLA, began working on a five-nation system of economic integration which has achieved a large part of its goals. In November 1956 the member governments of ECLA, at the first meeting of its Trade Committee, requested that studies be made of the possibilities of much broader integration embracing the whole continent. The following year the Secretariat of ECLA was requested to appoint a working group[1] to conduct these studies and to submit recommendations to the member governments. The working group held its first meeting in Santiago, Chile, in February 1958 and agreed on certain fundamental bases for a common market. At the group's second meeting in Mexico City last February, it planned the overall structure the common market should assume in accordance with the basic principles that had been set down the year before.

All the members of the group were aware of the tremendous problems involved, of the very real limitations that exist and of the need to develop a broader and more diversied economic base with a reasoned balance between efficient agriculture and sound industrialization. With these conceptions in mind we set forth the following tentative principles for a common market.

First and foremost, membership in the common market must be open to all the Latin American countries. It is therefore essential that conditions acceptable to all of them be established from the outset. This does not mean that countries closely linked by geographical proximity or common economic interests many not enter into direct negotiations among themselves. But these negotiations must be effected within the framework of a general agreement and along such lines that the reciprocal concessions involved are not exclusive and may be automatically extended to other member countries, or to such countries as may become members in the future if all do not accede to the initial agreement.

The same principle of universality must be observed as regards the products to be covered by the common market. The ultimate aim is the inclusion of all the goods produced in Latin America, although the regional market need not become effective for all such goods immediately. What is required is an agreement that will stipulate procedures and time limits for the progressive abolition of those customs duties and restrictions which nowadays hamper or prevent intracontinental trade. In other words, the agreement must be immediate but its implementation gradual.

An essential feature of the common market is that the less advanced countries must be accorded special treatment to enable them, through progressive industrialization and the overall strengthening of their economies, to share fully in the benefits of the regional market. If this were not the case the more advanced countries would be at a considerable advantage compared to the others and in the end would achieve a favored position.

A serious problem is that of the tariff system of the common market vis-a-vis the rest of the world. It is generally desirable to establish a single external customs tariff, but in some countries the tariff has been deprived of its protectionist role and has been superseded by restrictive measures of various kinds. Hence, an interim system will have to be established to ensure the progressive abolition of such restrictions to an extent equivalent to the tariff reductions effected by other member countries.

---

[1] The members of the working group invited by ECLA, besides myself, were José Garrido Torres, Brazil; Rodrigo Gomez, Mexico; Flavian Levine, Chile; Eustaquio Mendez Delfino, Argentina; Juan Pardo, Peru; and Joaquin Vallejo, Colombia. For the second meeting, in Mexico City, Carlos Lleras Restrepo replaced Joaquin Vallejo and Prof. Raymond Mikesell from the United States was added to the group.

The specialization of industry and other activities, which is one of the objectives of the regional market, must be the outcome of the free interplay of economic forces within the market area. The arrangements would not preclude national investment policies that would further the aims of the agreement. In some cases, it may be wise to give specific countries the right to establish certain industries even if this entails some restriction of free competition. Since the Central American countries already have an integration program they should be considered as a single unit, if they so desire.

In the interest of greater efficiency, the regional market must have a special system of multilateral payments which will encourage the highest degree of reciprocity in trade within the continent. It is essential that the member countries be protected against all exchange risks. The working group foresaw that, although basic adjustments must come through monetary, fiscal and economic policies, member countries must also have the right to impose temporary import restrictions, in accordance with agreed rules. Such measures may be necessary, for instance, to combat a large and persistent disequilibrium in the balance of payments of one country with other members of the common market. Temporary import restrictions may also be needed to reduce unemployment resulting from the adjustment of each national economy to changing conditions. If the maintenance of normal agricultural production requires it, countries may be given the right to restrict imports of some commodities, perhaps by limiting them to a certain share of the increase in consumption.

To promote the smooth functioning of the regional market, steps must be taken to avoid unfair competitive practices in exporting. Members must also refrain from discrimination and offer their exports at prices that are the same regardless of destination. The regional market must have an effective credit system and must provide technical assistance, both to stimulate intraregional exports and to help in the establishment and development of industries. Provision is also made in these recommendations for the creation of an advisory body constituted by the member governments, as well as a system of arbitration.

Once the members of the group had set down the basic principles which should govern the operation of the common market they proceeded to crystallize their ideas on its structure, so that nations which are already proceeding with subregional markets will all play the game according to the same rules, facilitating integration into one great common market in the future. Agreement was reached on 11 points which should be briefly stated in order to complete a sketch of what has been done to date.

"The agreement setting up the Common Market is designed [the statement of objectives reads] to help expedite a balanced economic development of Latin America, its progressive industrialization and the introduction of improved techniques in its agriculture and other primary activities with a view to promoting higher levels of living for its peoples, through: (a) the establishment of a preferential system for trade between Latin American countries; and (b) the growth of its foreign trade as a result of the expansion of industrial exports and the promotion of exports of agricultural and other primary commodities, both within Latin America and the rest of the world."

To administer the agreement and facilitate the attainment of its ends, a Committee on Trade Policy and Payments will be set up with all member countries represented. The judicial form contemplated in the agreement is that of a free trade zone to be transformed gradually into a customs union. In order to establish the common market gradually and progressively for all products, the agreement will be carried out in two stages. During the first stage, lasting ten years, a substantial reduction of customs duties and other taxes will take place and other restrictions will be either converted into terms of customs duties or eliminated. Intermediate steps have been contemplated during this first stage so as to reach the established goals gradually. During the second stage the reduction will continue until the organization of the common market will be complete. The rate of progress during the first stage will determine the program to be followed in the second stage.

Products are to be classified in three categories: (1) primary goods; (2) capital goods, durable goods, and other manufactures for which there is a rapidly growing demand; and (3) manufactured goods for current consumption which are in less immediate demand. During the first 10-year period duties and taxes for goods in the first category will be abolished, with certain exceptions (primarily agricultural) to be agreed upon. For products in the second category the tagret will be to reach the lowest possible levels in order to intensify regional trade. Reductions for products in the third category will not be as large or as rapid, so that adaptation of existing industries to the new conditions can be carried out with as little difficulty as possible.

Countries have also been divided into three groups in accordance with their development, so that they may be given differential treatment; this will serve to encourage and accelerate industrialization. The least developed nations will thus gain more rapidly the benefits of the Common Market that the relatively advanced nations will enjoy from the outset. Group A is composed of those countries which are the most advanced economically. Group B consists of those countries which are relatively advanced in the manufacture of consumer goods and whose production of capital goods is incipient or nonexistent. Group C is made up of countries with an incipient capacity for manufacturing consumer goods but undeveloped in respect to the manufacture of capital goods. Procedures were outlined to establish preferential treatment to countries of incipient development in groups B and C. It was feared that if these concessions were not granted, the Common Market might have a harmful effect by making the poor countries poorer and the rich richer.

With certain exceptions, the most-favored-nations treatment will be in effect. Hence all the reductions in customs duties, taxes or other restrictions which a country may make unilaterally, bilaterally or multilaterally will be extended to all.

All the studies carried out so far have been submitted in the form of recommendations to the eighth session of E.C.L.A. held in Panama in May 1959. After approval by this body, the next step for the E.C.L.A. Secretariat is to prepare, in close collaboration with the governments concerned, a draft of an initial agreement for the Common Market in an effort to put into effect as soon as possible.

This concludes what has been done up to now toward the creation of a common market. Latin America is experiencing the beginning of a social revolution as the needs of a growing middle class and the expectations of the masses exert tremendous pressures on an economic system which is not up to the task. Unless we can bring about an economic revolution to satisfy the demands of this social revolution, our problems will overflow into the political field, with serious consequences for the whole hemisphere. Only economic integration through a Latin American Common Market can make more efficient use of our resources and meet the challenge successfully.

Report for Federal Aid for Education

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY

OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a proposal on the subject of Federal aid to education which was adopted by the board of directors of the Rochester, Minn., Chamber of Commerce following a general referendum of the membership on the program. It will be noted that in this proposal such aid would be limited to those States which lack the ability to provide adequate financing from their own resources:

REPORT ON FEDERAL AID FOR EDUCATION, NATIONAL AFFAIRS COMMITTEE, CHAMBER OF COMMERCE, ROCHESTER, MINN., JUNE 1, 1959

INTRODUCTION

The past several years have seen a Nationwide study and evaluation of America's educational goals, accomplishments, methods, resources, and financial needs, both current and projected. This committee has been concerned with these studies as they relate to Federal legislation in the field of education. As a statement of conditions for this report, we quote from the introduction to the President's Science Advisory Committee's report on "Education for the Age of Science":

"No one in the United States denies that we should have a first-class system of formal education. But not everyone realizes that the strength and happiness, even the survival, of our democratic society will be determined primarily by the excellence and the appropriateness of our educational patterns. Nor is everyone aware that learning, though it begins during the school years, is a lifelong venture; that education is a part of life, not merely a preparation for it.

"A modern educational system should not only sharpen the intellectual capacities and curiosities of each new generation; should not only extract the essential core from ever-accumulating stores of knowledge; should not only find ways to produce new leaders equipped to add to these stores and create all the new tools that the civilization requires; it must also produce citizens and leaders who will know how to use the knowledge and tools to advance social and cultural life.

"We ought not speak of our educational tasks solely in terms of buildings or budgets or even curriculums. These, indeed, are necessary means to the end. But we must think of the end itself. The end is clear: to introduce the growing child, the youth, and the adult to the best and most essential elements of the intellectual and cultural experience of previous generations; to do this in such a way that we stimulate curiosity and encourage each individual to look forward, not backward, to develop his own talents to their maximum, and to continue this development throughout his life.

"No social activity is, therefore, more important than education. It is right and it is necessary that we should expend great effort and resources in order that every American child shall have the opportunity for the 10, the 15, or even the 20 years of formal educational experience required to give him full command of his intellectual powers and enable him to live a rich and fruitful life, both as an individual and as a citizen. It is right, too, that we should take stock of our educational achievements from time to time, and especially that we should measure them honestly and objectively against our ideals and ambitions."

This committee concurs with this statement of the importance to our Nation of an adequate educational program. In keeping with our duties to study and recommend a course of action on current legislation in the field of education, we have considered the Murray-Metcalf proposal for Federal aid to education. We have also considered a proposal of a different nature which has been advanced by members of this committee. It is with these two proposals that this report will deal.

PREMISES OF THE AMERICAN SYSTEM OF FINANCING AND DIRECTING EDUCATION

In considering the following proposals, we have kept constantly in mind the fundamental policy that the control and financing of education has always been, and must continue to be, the prime responsibility of the individual States. We recognize the fact that the increased educational needs of a rapidly growing school age population require that many States find new or expanded sources of taxation to support education. The thesis that the States have exhausted their sources of tax revenue and that the Federal Government must provide Federal funds for education is, however, manifestly in error since all Federal funds must originate in taxation of local resources. Any proposal for Federal aid to education must, therefore, meet the following tests:

1. The program must meet a specific need of overriding national significance for the welfare of our Nation and its citizens.

2. The States which would receive aid under the program must be unable to meet the need from their own resources. The same test should apply to individuals for any program of direct aid to students.

3. The program must further the American principal of equality of opportunity for all of its citizens. This must not be construed to mean that every student can attain the same level of educational achievement, but they must have the opportunity to receive the best education that their individual talents will permit.

4. The program must be able to be administered in such a way that there will be adequate safeguards so the funds are spent to achieve the purpose for which they were appropriated. At the same time, and we wish to emphasize this point, the program must be completely free of any Federal regulation of curriculum, course content, and educational policies.

With these premises in mind, we present the following conclusions and recommendations on the two proposals under consideration.

THE MURRAY-METCALF PROPOSAL FOR FEDERAL SUBSIDIES FOR EDUCATION

The Murray-Metcalf bill, as originally presented, wold provide Federal subsidies totaling $11,400 million over a period of 4 years, to be used for teachers salaries and school construction. This aid would be allocated to the States on the basis of $25 per pupil the first year, $50 the second year, $75 the third year, and $100 in the final year of the bill. It has since been changed to maintain the $25 level of aid throughout the 4-year period which would reduce the total cost of the program for the first 4 years to $4.5 billion. It is obvious that either program, once in effect, would have to be continued indefinitely at its maximum level. The result of such a program would be to shift an important part of the responsibility for education from the States to the Federal Government. This shift would be permanent and would, in the course of time, entail a like shift in the control of education from the States to the Federal Government. The proponents of the bill say that the States have exhausted their sources of revenue, but approximately 80 percent of the funds allocated under Murray-Metcalf would return to the same States which provided the tax revenues in the first place. Expenditures under the bill are not made on the basis of need and would perpetuate existing inequalities among the States.

For these reasons we find that the Murray-Metcalf bill would serve to deaden local initiative, waste money on more Federal bureacracy, and provide an open door for the gradual growth of Federal control of education. We, therefore, urge that the Rochester Chamber of Commerce be recorded as being opposed to the passage of this bill and that our Representatives in Congress be so advised.

PROPOSAL BY THE EDUCATION SUBCOMMITTEE OF THE NATIONAL AFFAIRS COMMITTEE FOR FEDERAL EQUALIZATION AID FOR EDUCATION

While it is apparent, as noted above, that a broad per student program of Federal aid is highly objectionable, a study of the efforts on behalf of education and the results obtained by the various States does reveal an area where we believe the Federal Government could justifiably grant equalization aid to education. The following conclusions and proposals will outline such a program.

We have assumed, in formulating this report, that the ability to pass the selective service mental test is a reasonable measure of the educational level of the male population of high school graduate age. While this may not be the ideal measure in this field, it is the only one available on a nationwide, all inclusive, basis. Results of these tests for 1957 reveal that an average of 18.9 percent of those tested failed. In the 12 States which ranked highest in percentage of failures, an average of 35.5 percent failed, while the average for the balance of the States was 10.8 percent.

This high concentration of inadequate educational achievement is clearly incompatible with the objectives set forth in the introduction to this report. Moreover, we believe that these figures reveal the source and a partial answer to some of our most pressing social problems, i.e., race relations, unemployment, and marginal or low income workers, and these problems, in turn, have a direct effect on our Nation's well-being and security. Obviously, a high percentage of those who fail the classification tests are southern Negroes. Completely apart from the issue of racial segregation, it is clear that an uneducated person lacks both the opportunity and the ability to achieve a decent social and economic position, regardless of any legal decisions or legislation which may grant the right to such a position to him. It is likewise apparent that in our increasingly complex society, technological advances have steadily decreased the source of employment for uneducated workers. This trend will continue, and those who lack a basic education must become a burden, rather than an asset, to the Nation. When 49.9 percent of the selective service registrants from Mississippi fail to pass the mental test, it is obvious they are not receiving even the most basic education.

A review of the educational expenditures, in these States which have failed to provide an adequate education for all of their citizens, reveals that, as a group, they are spending well below the national average per pupil. Thus, there would seem to be a definite correlation between expenditures and results in the field of education. Money is not the only requisite for a good educational system, but is clearly an important one. When put to the test of the percentage of personal income spent on public education, these same States rank equal to, or above, the national average in 10 out of 12 cases. It would seem, therefore, that there are some States which do not have sufficient tax base to provide adequate educational opportunities for all of their citizens.

In view of these considerations, we submit the following proposal. The specific percentages and levels of aid are determined somewhat arbitrarily and are subject to more thorough study. It is the basic philosophy of this plan which we recommend for consideration.

1. Any State which provides public education funds amounting to at least 4 percent (national average 3.3 percent) of the States personal income payments would qualify for Federal equalization funds.

2. These funds would be allocated on the basis of a weighted count of pupils in an average daily attendance, multiplying the count of pupils in average daily attendance in each grade by a factor for that grade which increases as the grade increases (i.e. one-half point in grades 1–3, three-fourths point in grades 4–6; 1 point in grades 7–9; 1½ points in grades 9–12), in an amount sufficient to bring the average expenditure per pupil unit to 90 percent of the national average (currently $340 per pupil).

3. The funds provided under this proposal would be entirely free of Federal control. The average daily attendance formula would, however, make it mandatory that the student count used to determine the amount of aid due be based on actual attendance in specified grades and not on school age population.

5. Total annual expenditures under this plan would be approximately $400 million.

The foregoing proposals are presented as a basis for more detailed and authoritative study in the area of Federal participation in a program of equalization aid to the States for education. We recognize that the students, whose selective service mental test scores served as a basis for this report, entered the school system some 14 years ago and that significant changes in school facilities have taken place in the intervening years. Current expenditures by the affected States would indicate, however, that the situation has not been corrected. We further recognize that the time and research facilities available to this committee are limited and there are undoubtedly some errors of degree in the material presented. We believe, however, that the basic premise of this proposal is valid; that there is an existing need for Federal equalization aid to the States for education and that the plan presented would meet all of the tests which we set forth to justify such a program.

CONCLUSION

The United States today faces a grave challenge in meeting the educational demands of an age of soaring population, exploding technology, and vastly more complex governmental and social responsibilities. In 1916 Alfred North Whitehead said:

"In the conditions of modern life the rule is absolute: The race which does not value trained intelligence is doomed. Not all your heroism, not all your social charm, not all your wit, not all your victories on land or at sea, can move back the finger of fate. Today we maintain ourselves. Tomorrow science will have moved forward yet one more step, and there will be no appeal from the judgment which will then be pronounced on the uneducated."

The prophecy of 1916 faces us squarely today. We must provide a thorough basic education for all of our citizens and an extended education of excellence for those capable of attaining the goals of higher education. To accomplish these ends we must dedicate to the cause of education a greater measure of our understanding, effort, and financial resources. The report of the President's Science Advisory Commission states that "doubling our current annual investment in education is probably a minimal rather than an extravagant goal."

The attainment of these goals will entail extremely difficult problems of State and local taxation and planning. We strongly urge that the State affairs, civic affairs, and education committees of the chamber of commerce give the highest possible priority to consideration of these matters. It is essential that State and local authorities assume the responsibility for developing these expanded programs if we are to maintain our traditional separation of the Federal Government from the general support and control of education. At the same time we believe, that in certain limited areas, the Federal Government can and should act to implement these programs.

We have endeavored in this report to give a sufficiently broad picture of the problem confronting our educational system to emphasize the fact that the statements and recommendations contained herein deal only with one facet of the problem. We believe, however, that it is a significant part of the overall problem and one for which a solution is long overdue. We believe the enactment of a program, such as we have outlined, would benefit the entire Nation and would strengthen both its defense against communism and the institutions which make it worthy of that defense. We, therefore, request that the board of directors affirm this report as a policy recommendation of the Rochester Chamber of Commerce and that our representatives in the national chamber of commerce and the State and Federal Government be so advised.

Respectfully submitted.

NATIONAL AFFAIRS COMMITTEE,
ROCHESTER CHAMBER OF COMMERCE.

Flag Raised on Mount Cadillac Presented to Alaska's Governor

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. McINTIRE. On July 4 I had the privilege of participating in the sunrise flag-raising ceremony conducted on Mount Cadillac in Maine, and there was a note of real drama associated with this event that saw our flag with a new star rise to greet the dawn of a new Independence Day.

As an aftermath to this truly inspiring occasion, this flag raised on Mount Cadillac was presented to the Governor of Alaska, and the following article contained in the July 16 issue of the Bar Harbor Times gives an account of some of the details of the presentation:

FLAG RAISED ON CADILLAC JULY 4 PRESENTED TO ALASKAN GOVERNOR BY 11-YEAR-OLD BAR HARBOR BOY

Completing the official ceremonies for the Fourth of July celebration, the new 49-star flag, which was raised at 4:43 a.m. atop Mount Cadillac, July 4, was presented in Juneau, Alaska, this week, to William A. Egan, Governor of Alaska, by Robert Ryle, Jr., the 11-year-old son of Mr. and Mrs. Robert W. Ryle of Bar Harbor.

The flag, the first official 49-star flag to be flown over the United States at dawn, was raised on Mount Cadillac by Commander James Markley of the Charles J. Loring Post, AMVETS, of Portland, who has done praiseworthy work with poor and blind children, qualifying him to be selected to raise the historic flag.

Following the ceremonies in Bar Harbor the flag was taken to Portland where blind Robert W. Branscombe presented the Old Glory to Mr. and Mrs. Ryle Saturday morning at Portland municipal airport.

The Ryles flew to Juneau, Alaska, the capital of the 49th State, and their son, who is partially blind, presented the flag to Governor Egan.

A Crucial Opportunity in Congress

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. WHITENER. Mr. Speaker, I have received from Hon. Whiteford S. Blakeney, Charlotte, N.C., a copy of a memorandum entitled "A Crucial Opportunity in Congress," which he has written. Mr. Blakeney is an outstanding practicing attorney in my State, and his memorandum is of particular interest because of its endorsement of the provisions of H.R. 3 recently passed by the House of Representatives.

I feel certain that the Members of the House will be interested in reading the views expressed by Mr. Blakeney.

A CRUCIAL OPPORTUNITY IN CONGRESS

There is now pending before Congress a bill which, if enacted, would constitute a major step toward maintaining the role of the States in our governmental system. This bill has already reached the floor in the House of Representatives and it is expected to be voted on there within the very near future.

For 25 years we have witnessed an ever-widening and accelerating trend toward the unbalancing of our form of government—a trend toward constant enlargement of the power of the Federal Government and corresponding disappearance of rights at all levels below the Federal Government. During most of this time Congress and the Federal Executive have been the source of drive behind this trend, with the Supreme Court upholding their moves. In more recent years, however, the Supreme Court has itself taken the lead and become chief architect and proponent of the trend.

In a large measure the Supreme Court has accomplished this through what is known as the doctrine of Federal preemption—a legal doctrine which the Court has been rapidly expanding to an extraordinary degree. In the name of this doctrine the Court is now ruling that where both Federal and State laws exist in a given field, though there be no contradiction or conflict between them, the State law is nevertheless preempted, that is, the State law must get out of the field and leave it to be controlled entirely by the Federal law.

It is, of course, a familiar principle that in an area where the Federal Government can constitutionally enact legislation, its enactments prevail over any contrary or conflicting State laws. And where there is doubt or ambiguity as to whether there may be conflict between the Federal and the State law, it has long been held that Congress has power to resolve the matter by declaring that its enactment shall occupy the field to the exclusion of State law.

Now, however, under its new expansion of Federal preemption, the Supreme Court is repeatedly ruling that where Federal and State laws are to be found in the same field—though entirely harmonious and nonconflicting and though Congress has expressed no intent to oust State law from the field—still the Court will presume that Congress intended to drive State law out of the field.

For example, practically all the States in the Union have enacted anti-Communist statutes. Congress also has enacted such a statute, called the Smith Act. This Federal statute and the State statutes in this field were not in conflict with each other. Instead, they were concurrently driving toward the same purposes and objectives. Certainly the Members of Congress who enacted the Smith Act had not the faintest intention to destroy the State anti-Communist laws. Yet the U.S. Supreme Court rules that it will assume that such was their intention and that so assuming, it will henceforth deny enforcement to all the State anti-Communist statutes.

Another example of the extreme to which the Supreme Court is pushing Federal preemption is to be seen in the labor field. Approximately 40 percent of the States have right-to-work laws, which declare that an employee can neither be compelled to join or stay out of a labor union in order to work in these States. But, says the Supreme Court, since the Federal Taft-Hartley Act also contains provisions against the coercion of employees, State courts will henceforth not be allowed to issue injunctions to enforce their own right-to-work laws.

The bill which is now before Congress is short and concise. It reads as follows:

"Be it enacted by the House of Representatives and the Senate of the United States of America in Congress assembled, That no Act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of any State laws on the same subject matter, unless such Act contains an express provision to that effect. No Act of Congress shall be construed as invalidating a provision of State law which would be valid in the absence of such Act unless there is a direct and positive conflict between an express provision of such act and such provision of the State law so that the two cannot be reconciled or consistently stand together."

If this bill is enacted, Congress will in effect be saying to the Supreme Court:

"When this Congress in enacting legislation intends to preempt a field and to oust State law from that field, we will say so, and the Court shall not presume such an intent on our part unless we express it. Thus, an enactment by this Congress shall not override State law in the same field unless we express the intent that it shall do so or unless our enactment is otherwise in direct and positive conflict with the State law."

This proposed legislation is known as H.R. 3. There is a companion and identically worded bill on the other side of Congress known as S. 337, which is, however, still pending in the Senate Judiciary Committee. H.R. 3, as pointed out above, is already on the floor of the House and will soon be voted upon.

This legislation is of vital import to the future of our country. The men who wrote the Constitution of the United States had personal knowledge and deep apprehension of an all-powerful central government. The

States which established that Constitution—and which alone had the power to establish it—did so only upon the condition that it should specifically stipulate that the central government would have no powers save those expressly given to it and that all other power should remain and abide in the respective States and their citizens.

It is difficult to avoid the conviction that this solemn covenant is today being violated and this Constitution miscontrued. As the power of the Federal Government is indefinitely expanded, the framework of our Republic—and the bulwarks of liberty—are being steadily and massively pushed out of line. There is not much time in which to arrest this fatal trend.

To all who so believe, the proposed legislation, H.R. 3, presents a crucial opportunity.

Direct Tax Gifts to Colleges and Universities

EXTENSION OF REMARKS
OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. McDOWELL. Mr. Speaker, one of the country's leading educators, Dr. Clifford C. Furnas, chancellor of the University of Buffalo, recently proposed that a tax credit be given for contributions to higher education.

I have developed legislation along the lines suggested by Dr. Furnas, legislation which is of interest to such great national educational organizations as the Association of American Colleges, and the American Association for the Advancement of Science whose president, Dr. Paul E. Klopsteg, has been a leading exponent of such a tax credit plan.

My bill provides for $1 of tax credit for each $1 given to institutions of higher education within the present limits of the Internal Revenue Code of 1954. Dr. Furnas estimated that such legislation would yield $2 billion compared to the $411 million raised in 1958 by private contributions.

I include here for the information of my colleagues, and all others interested in American education, the text of my new bill together with the New York Times report on Dr. Furnas' proposal and an excerpt from his speech at the 43d annual meeting of the American College Public Relations Association.

TO AMEND THE INTERNAL REVENUE CODE OF 1954 TO PROVIDE FUNDS FOR EDUCATIONAL PURPOSES BY PROVIDING INCREASED INCENTIVES FOR PRIVATE GIVING THROUGH THE ALLOWANCE OF A TAX CREDIT FOR CHARITABLE CONTRIBUTIONS TO INSTITUTIONS OF HIGHER EDUCATION

That (a) part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits against tax) is amended by adding at the end thereof the following new section:

"SEC. 39. Credit for charitable contributions to institutions of higher education.

"(a) Allowance of credit: At the election of the taxpayer there shall be allowed as a credit against the tax imposed by this chapter (subject to the limitations contained in subsections (b) and (c)) the amount of the taxpayer's charitable contributions to institutions of higher education during the taxable year.

"(b) Individuals: In the case of a taxpayer other than a corporation, the maximum amount allowable as a credit under this section for any taxable year shall be—

"(1) in the case of any individual who has elected to take the standard deduction provided by section 141 or to pay the optional tax imposed by section 3, 10 percent of the taxpayer's adjusted gross income, computed without regard to any net operating loss carryback to the taxable year under section 172, or

"(2) in the case of any other such taxpayer, 30 percent of his adjusted gross income, computed without regard to any net operating loss carryover to the taxable year under section 172.

"(c) Corporations.—

"(1) General rule: In the case of a corporation, the maximum amount allowable as a credit under this section for any taxable year shall be 5 percent of the taxpayer's taxable income, computed without regard to—

"(A) section 170,

"(B) part VIII of subchapter B (except sec. 248),

"(C) any net operating loss carryback to the taxable year under section 172, and

"(D) section 922 (special deduction for Western Hemisphere trade corporations).

"(2) Corporations on accrual basis: In the case of a corporation reporting its taxable income on the accrual basis, if—

"(A) the board of directors authorizes a charitable contribution to an institution of higher education during any taxable year, and

"(B) payment of such contribution is made after the close of such taxable year and on or before the 15th day of the third month following the close of such taxable year,

then the taxpayer may elect to treat such contribution as paid during such taxable year.

"(3) Carryover of corporate contributions: Any contribution made by a corporation in the taxable year which, but for the limitation of paragraph (1), would be taken into account in computing the credit under this section, shall (at the election of the taxpayer made for the taxable year) be taken into account in computing the credit under this section in each of the two succeeding taxable years, but only to the extent of the lesser of the two following amounts:

"(A) the excess of the amount of charitable contributions to institutions of higher education which may be taken into account in computing the credit under this section under the limitation in paragraph (1) over the amount of the charitable contributions to institutions of higher education made in such year; and

"(B) in the case of the first succeeding taxable year, the amount of such excess contribution, and in the case of the second succeeding taxable year, the portion of such excess contribution not taken into account in the first succeeding taxable year.

"(d) Institutions of higher education defined: For purposes of this section, the term 'institution of higher education' has the meaning given to such term by section 103 of the National Defense Education Act of 1958.

"(e) Special rules.—

"(1) Amounts taken into account: The determination of whether or not a charitable contribution to an institution of higher education may be taken into account under this section, and the amount thereof, shall be made under section 170; except that in the case of an individual any such determination shall be made without regard to any election to take the standard deduction provided by section 141, or to pay the optional tax provided by section 3.

"(2) Correlation with section 170: No amount taken into account under this section shall be allowable as a deduction under section 170. Any amount taken into account under this section shall be taken into account in computing the limitations provided in section 170(b)(1) (but not those provided in section 170(b)(2)). For purposes of provisions of law relating to amounts allowable as a deduction under section 170, any amount taken into account for purposes of this section shall be treated as an amount allowable under section 170; and any reference in any provision of law to a specific provision of section 170 shall, where appropriate, be treated as including a reference to the corresponding provision of section 39. An amount shall be treated as taken into account for purposes of this section only to the extent that, but for such amount, the amount allowable as a credit under this section for any taxable year would be decreased.

"(3) Credit not to result in refunds: The credit allowed by this section shall not exceed the tax imposed by this chapter, reduced by the sum of the credits allowed by this part (other than this section and section 31).

"(4) Elections: Any election provided by this section may be made only at such time, in such manner, and subject to such conditions designed to insure the effective correlation of this section with section 170, as the Secretary or his delegate shall by regulations prescribe."

(b) The table of sections for part IV of subchapter A of chapter 1 of such Code is amended by adding at the end thereof the following new item:

"SEC. 39. Credit for charitable contributions to institutions of higher education."

SEC. 2. (a) The second sentence of section 170(a)(1) of the Internal Revenue Code of 1954 (relating to charitable, etc., contributions and gifts) is amended to read as follows: "A charitable contribution shall be allowable as a deduction (or taken into account in computing the credit under section 39) only if verified under regulations prescribed by the Secretary or his delegate."

(b) Section 170(c) of such Code is amended by striking out "For purposes of this section" and inserting in lieu thereof "For purposes of this section and section 39".

SEC. 3. The amendments made by this act shall apply only with respect to charitable contributions made (within the meaning of section 170 of the Internal Revenue Code of 1954) during taxable years ending after the date of the enactment of this act.

[From the New York Times, July 14, 1959]

DIRECT TAX GIFTS TO COLLEGE URGED—EDUCATOR ASKS NEW LAW TO LET TAXPAYERS DONATE UP TO 5 PERCENT OF FEDERAL BILLS—PUBLIC SUPPORT SOUGHT—UNIVERSITY OF BUFFALO HEAD ASSERTS PAINLESS PLAN COULD RAISE $2 BILLION IN A YEAR

(By Austin C. Wehrwein)

FRENCH LICK, IND., July 13.—An educator proposed here today that Federal taxpayers be allowed to deduct a certain amount from their tax bills and donate the money directly to private and public colleges and universities.

An immediate national campaign to effect the necessary changes in the tax laws also was urged by the educator, Dr. Clifford C. Furnas, chancellor of the University of Buffalo.

His plan would permit both corporations and individuals to contribute up to 5 percent of their tax bills to institutions of

higher education approved by the U.S. Office of Education.

On the simplest level, Dr. Furnas said, his proposal meant that a person with a Federal tax bill of $100 could give $5 to a college or university and pay the remaining $95 to the Internal Revenue Service.

Dr. Furnas said that this would be a relatively painless way to meet the Nation's rising costs of higher education. He estimated that his plan would yield $2 billion, compared to the $411 million raised in 1958 by private voluntary contributions.

Dr. Furnas, a member of the New York State Council on Higher Education, presented his program to 500 members of the American College Public Relations Association. They are holding their annual meeting here in the Sheraton-French Lick Hotel.

CONGRESSMEN GET PLAN

Dr. Furnas said that he had also sent his proposals to the two New York Senators and to some U.S. Representatives in New York.

With college and university enrollment bound to rise in 11 years from 3,585,000 to 6,376,000 students, Dr. Furnas said, the operating costs will rise even faster, from $3,500 million to $9 billion a year.

To meet the bills by 1970, he said, estimates have indicated that private gifts and grants to higher education would have to jump 450 percent to $1,890 million and that tax support would have to rise 257 percent to $4,500 million.

Dr. Furnas said he also hoped that States would adopt a similar policy permitting the direct donation of some tax money to education.

Under the present Federal tax law, Dr. Furnas noted, individuals can deduct 20 percent from their adjusted gross income for charitable and educational contributions. Also under the law, corporations get a partial tax credit on similar gift deductions of 5 percent of their taxable income in any one year, he went on.

Such deductions do reduce an individual or corporate tax bill, but they are partial rather than full tax credits, he said. As an example, he said that $1 given to education or charity by a person in the highest income group still costs that person 9 cents.

Dr. Furnas conceded that his plan amounted to letting individuals and corporations distribute what would be tax money to education as they saw fit. But he said that this was in the spirit of private enterprise and would lower the direct tax burden for education.

YOU CAN'T FLY ON ONE WING

(Address at 43d annual meeting of the American College Public Relations Association, French Lick, Ind., July 13, 1959, by C. C. Furnas, chancellor, University of Buffalo)

THE THESIS

I. You can't fly on one wing. It is extremely important that American maintain a reasonable balance and cooperative pattern between private and tax-supported institutions of higher education.

II. Enrollment in institutions of higher education will almost double by 1970.

III. By 1970 the cost of higher education will be at least $9 billion per year.

IV. In order to pay the bill, it is going to be necessary to open the valve for voluntary support much more than it is at present. This is vital for tax-supported as well as private institutions. It can be accomplished by easing the tax burden. It would be feasible to revise the Federal tax laws to give both individuals and corporations tax credit up to 5 percent of the tax bill for contributions to colleges and universities.

THE DEFENSE

In the early days of America all higher education was privately financed and privately controlled. For good and sufficient reasons a trend was started well over a century ago for the establishment of tax-supported public colleges and universities. One impelling reason was to increase educational opportunities for all geographical areas and all economic levels. Public colleges and universities also served as a valuable antidote to some innate smugness and excessive ivory-towerishness of the private institutions. The dual pattern which has evolved is most appropriate and entirely in keeping with the American political theory of checks and balances in public affairs. It is unfortunate that the two types of institutions often operate in conflict rather than in harmony. This has been particularly true when there have been struggles for obtaining appropriate shares of inadequate funds.

For at least a century a reasonable balance was maintained between the two types of institutions, as measured by attendance. Recently, however, the trend has been toward a preponderance of public institutions. A survey of this matter has been made by the U.S. Office of Education. Dr. E. V. Hollis, of the Division of Higher Education, reports as follows. Before World War II the percentage ratio of enrollment between public and private institutions was approximatly 50–50. Today 56 percent are in attendance in public colleges and 44 percent in private. Dr. Hollis believes that within 10 years two-thirds of all students will be attending public colleges and universities. He says, "This is a very unfortunate trend. We need our private colleges." Other observers have predicted that within 20 years, 80 percent of all students may be attending public institutions.

If one believes in the virtue of the private, or independent, colleges and universities, this will be a very sad situation, indeed. But how is one to judge the virtues? Inevitably, personal opinion enters into it. In my own case, as student, teacher and administrator, I have been closely associated over the years with two State universities, a private college, two private universities and one university that was half-public and half-private. Hence, I think I am in a position to judge the virtues of each. I am convinced that both are needed, and in a balanced pattern.

Personal convictions, however, by themselves are not necessarily convincing to others. In the long run, how really important is it that private institutions maintain their vigor and cover a substantial portion of the field of higher education? There is no black and white answer. In America there are great tax-supported institutions and great private ones. There are also poor ones of both varieties. The criterion of immediate eminence is hardly sufficient to judge the matter. There are others, subtler aspects.

Foremost in the minds of the proponents of private colleges and universities is the maintenance of intellectual freedom. Thoughtful persons realize that the progress of mankind depends on such freedom. It cannot be absolutely guaranteed under any organizational form or structure of support, but some patterns are more favorable to its growth than are others.

The tax-supported institutions are far more vulnerable to the forces which can destroy intellectual freedom than are the private ones. This is true, almost by definition, for "Who pays the piper calls the tune." When political bodies pay all or the major part of the bill, they inevitably exert control. This control usually is appropriate and beneficial, but there are cases when it is not, particularly when political units fall under the domination of demagogues or dictators. Witness the prostitution of academic ideals and the destruction of freedom in universities in Nazi Germany and in present-day Russia. Although there have never been such gross fatalities in this country, the unwise domination and subservient reactions of an occasional state university occurs just often enough to keep us reminded of the hazards. It is not even necessary to have a dictator in charge to arrive at sad results; a tyranny of uninformed and unsympathetic electorate can be just as stultifying and damaging.

Private institutions are also needed as a modest antidote to bureaucracy. Every organization, of course, has its own brand of bureaucracy, but the larger and the more impersonal it becomes, the greater the cloying effect particularly in the matter of discouraging new approaches to new problems. Governmental units at all levels, from the small village to the octopus at the apex in Washington, work best when there is close collaborative effort between private, public-spirited organizations and the formal governmental units.

This is a matter of experience—not merely of theory. It is probably most evident in Washington where the quasi-public institutions, such as the Academy of Science, the National Research Council and the Smithsonian Institution, which depend for their existence on nongovernmental personnel, play a vital role in our national life. It is also very evident in the mammoth structure of the Department of Defense where a large proportion of thinking, research and the production involved in military materiel is based on the work of private, often voluntary, individuals, institutions and industries. America, as we know it, can hardly survive unless we keep a balanced structure of maximum total strength. You can't fly on one wing. The task which faces the educational world is to find ways and means of keeping both types in a flourishing and healthy condition. The problems of supporting them are joint problems, and joint and mutually satisfactory solutions must be found.

ENROLLMENT WILL ALMOST DOUBLE BY 1970

In the academic year 1958–59 the enrollment in institutions of higher education was 3,585,000. Based on projections made by the U.S. Office of Education, the enrollment in 1969–70 will be 6,376,000.[1] These figures are based on projections made by the U.S. Office of Education on fall enrollments to which are added 10 percent for each total regular session enrollments. Summer school enrollments would be in addition to this.

Various predictions have been made by many organizations and individuals, with different assumptions. However, they all come out with approximately the same answer—somewhere between 6 and 6½ million individuals will be seeking enrollment a decade from now. Hence, considerable confidence can be placed in this approximate figure.

As is well known, there are two major reasons for this remarkable upsurge. The first is that there are many more young people than there used to be. This is a population trend which was unexpected and has not been entirely explained. The simple fact is that, beginning about the end of World War II American families began having substantially more children than they had had previously. In 1955 there were in the United States 11,300,000 persons in the age bracket 18 to 22, inclusive, which I am arbitrarily calling the college age. The statistics show that by 1970 there will be almost 19 million in this age group. The data can hardly be disputed for these young people are with us now.

The second major factor is the increasing proportion of those of requisite ability who

---

[1] Reported in "Where's the Money Coming From?" Council for Financial Aid to Education, Inc., February 1959, p. 12.

desire and demand higher education. The long-term trend is revealed by the experience of the 1st half of the 20th century. Between 1900 and 1950 the population of the country increased by 93 percent, but during the same period the enrollments in the colleges and universities increased by over 1,000 percent. The trend still continues. The tendency for an increasing proportion going to college is now slowing down but there is no indication that it will completely level off or reverse itself within the next decade or so. We must be prepared to handle this greatly increased number.

There are those who contend that we should simply ignore the figures and only provide for the number in higher education that we can conveniently handle. This is an unsocial and naive point of view, not only for national, but for individual, welfare. Since the need and the desire is there, public pressures, political and otherwise, will certainly be brought to bear to see that some sort of higher educational opportunity is afforded for those 6½ million. The basic question is how good an education will the country as a whole, in both public and private institutions, be able to provide?

Address by Hon. Herbert C. Bonner at the Launching of the NS "Savannah"

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. BOYKIN. I ask unanimous consent to extend my remarks in the RECORD and include therein what I consider a wonderful speech made by our distinguished chairman, the Honorable HERBERT C. BONNER, Democrat, chairman of the House Committee on Merchant Marine and Fisheries, at the launching of the NS *Savannah* at New York Shipbuilding Co., Camden, N.J., July 21, 1959. I thought our great Chairman BONNER made one of the best speeches made on this famous day, where our First Lady, Mrs. Dwight D. Eisenhower, christened this unusual and fabulous ship that is not only the United States, but the entire world's first nuclear-powered merchant ship.

How I wish every Member of this House, who represent every human in America, could have been there and not only heard Congressman BONNER'S speech, but so many other great talks by great men; and Mrs. Eisenhower was truly in all of her glory when she so graciously and beautifully christened this the greatest of ships just as it slid down the ways into the waters at Camden, N.J. The men and the women and the boys and the girls all were so thrilled and so happy. In all of my long years in attending similar occasions in many places all over this country and foreign countries, too, I do not believe we have ever had anything just like this.

The President of the United States message said this, and I quote:

I am confident that the ship will be the forerunner of atomic merchant and passenger fleets which will one day unite the nations of the world in peaceful trade. (President Eisenhower, Oct. 15, 1956.)

Not only did this gracious, smiling, wonderful, friendly Mrs. Eisenhower do such a beautiful job, but she was assisted by another great lady, Mrs. Henry B. Sayler, of Savannah, Ga., as matron of honor. Then, too, we had a very unusual and fabulous fellow from way down in the Deep South, the one and only Louis E. Wolfson, chairman of the board of the New York Shipbuilding Corp., that built this ship, and in Mr. Louis E. Wolfson's and Mr. Edward L. Teale's messages they said, among many other inspiring words, to the great group that was gathered there, they quoted what President Eisenhower said about the *Savannah* when announcing plans for its construction, and I quote: "This ship will demonstrate to people everywhere the peacetime use of atomic energy, harnessed for the improvement of human living." And I think we could have had it for the happiness of all mankind.

The master of ceremonies was Mr. Harry W. Pierce, vice chairman of the board of the New York Shipbuilding Corp.

I thought that the Honorable Clarence G. Morse, Chairman of the Federal Maritime Board and Maritime Administrator, as well as Senator Clinton P. Anderson, of New Mexico, also made great speeches, and we certainly could not forget Miss Elaine Malbin, who inspired us by singing "God Bless America."

Again I want to say there were great speeches by our old friend, Congressman OREN HARRIS, of Arkansas, and many other famous people, but to me, Chairman HERBERT BONNER'S speech was the best and I believe made the greatest impression on the multitude of people that attended this great event. I believe when you read this message you will agree with me, but I thought Congressman BONNER delivered it so well, and every one of us—and there were acres on acres of spectators—could hear distinctly every word that you will read in this speech, and we on the Merchant Marine and Fisheries Committee, as well as the entire Congress, I am sure, are very proud of Chairman BONNER and the great work he did there where we had people gathered from the four corners of this earth.

Again I will repeat, I only wish all of you could have been there and have witnessed the entire proceeding that was so inspiring and which I believe means much to peace and prosperity and will truly be a real help to all mankind.

REMARKS OF REPRESENTATIVE HERBERT C. BONNER, DEMOCRAT, OF NORTH CAROLINA, CHAIRMAN, HOUSE COMMITTEE ON MERCHANT MARINE AND FISHERIES, AT THE LAUNCHING OF THE NS "SAVANNAH" AT NEW YORK SHIPBUILDING CO., CAMDEN, N.J., TUESDAY, JULY 21, 1959

Mr. Teale, our most gracious sponsor and First Lady, Mrs. Dwight D. Eisenhower, Mr. Secretary, Mr. Morse, Mr. McCone, and representatives of the governmental departments, my distinguished colleagues in the Congress of the United States, members of the Diplomatic Corps, friends of the American merchant marine, ladies and gentleman:

It is with the greatest pleasure and pride that I am privileged to be here today to take part in the launching of the NS *Savannah*, the world's first nuclear-powered merchant ship.

It is inspiring, indeed, to stand here—a little more than a year since the laying of the keel of this great ship—and witness the fulfillment of a dream made possible through the imagination, the skills, and the energy of Americans from all walks of life. It is incredible to contrast this magnificent work of the mind and hand of man with the single steel assembly that was laid in place on this shipway on Maritime Day, 1958, to mark our first step into the nuclear age on the Seven Seas.

The dynamic development of the idea of adapting peaceful use of the power of the atom to merchant shipping is equally incredible.

We have known that nuclear energy could be adapted to ship propulsion ever since the submarine *Nautilus* proved to be such a tremendous success. But many were skeptical about moving ahead with a merchant ship prototype until years of experience with shore-based plants might indicate immediate efficiency and economy.

The first proposal to build an atomic-powered merchant ship gave no thought to the advancement of our merchant marine. It would have been a floating showcase of nuclear devices demonstrating peaceful uses of atomic energy in other fields.

As the idea grew, those of us responsible for the maintenance and development of an adequate American merchant marine under our national policy urged that we take the idea a step further and build a brand new vessel, especially designed in both hull and machinery, to secure the maximum advantage from this promising new source of power and from which we could learn how to build and operate efficient, working ships for the merchant marine of the future.

Thus, it was, that the authorizing legislation passed by the Congress and approved by the President in 1956 directed the construction of a practical merchant ship, powered by an advanced type of reactor, especially designed for the purpose. The President, the Congress, the Government departments, and the maritime and atomic energy industries, have every right to feel great pride and satisfaction in the part they have played in the construction of this new vessel. Already, lessons learned in the creation of the NS *Savannah* are showing the way to the design and production of fully competitive merchant ships many years earlier than ever thought possible.

Last year, standing in this same spot, I reviewed the unfortunate history of the old steamship *Savannah*, which more than 100 years ago was the first steamship to cross the Atlantic Ocean. I pointed out at that time how this country had ushered in the age of steam on the seas, and then, through failure to follow up what we had developed, and by continued adherence to sailing ships, we were soon left behind and for a half century fell to the status of a third-rate maritime power.

I repeat my admonition of a year ago—"Let us be sure that the lesson of the old *Savannah*—for which this new ship will be named—will be well remembered and studiously observed."

The record is clear that it is not premature to proceed with the next steps in the development of nuclear-powered vessels for peaceful purposes.

Our pioneering here is already being seriously studied by a number of other nations who are proceeding vigorously toward the development and construction of advance nuclear merchant vessels of their own. Under our open policy of sharing nuclear "know-how", these other countries are able to start with all the knowledge we have gained from our our first ship.

Therefore, we in Congress realize that if we do not press forward now with a progressive program we will again be guilty of willful blindness of incalculable cost. We

cannot afford to forfeit the promising progress that has been made to date.

I pledge that the Committee on Merchant Marine and Fisheries will do all within its powers to help retain our initiative in the field of nuclear energy on the oceans with its unbounded possibilities.

With this ship, and with those which I hope will follow soon, we are casting our bread upon the waters, and I am sure the return will be a thousand fold.

God speed to the *Savannah* when she receives the magic of life with the blow of the christening bottle, and the surge of the water beneath her hull.

Thank you.

Secretary Kits Upset Russian Custom Official

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. MICHEL. Mr. Speaker under leave to extend my remarks I would like to submit herewith the second in a series of articles written by the editor of the Peoria Journal Star, upon his return from a recent trip to Russia:

SECRETARY KITS UPSET RUSSIAN CUSTOM OFFICIAL

(By Charles L. Dancey)

Moscow.—The Russian TU–104, their famous jet, took off on schedule from Paris, swooshed to Moscow, came down low under a heavy cloud cover and made a full circle over beautiful open country before landing.

An officer in uniform stood at the plane door and took everyone's passport before anyone could even go down the ramp.

Customs inspection was perfunctory in most cases, but a declaration is required particularly of how much money you are carrying. (You'd better not have more when you leave!)

The customs official who looked at my stuff inquired about a batch of pocket secretaries with ballpoint pens that I brought along from the Journal Star's stock of circulation prizes. I told him I just brought them to give away, which was true, and this did not unduly bother him. Then, he looked in the secretaries which happen to have one of these compartments for cards including a form for normal identification—a place for name, address, telephone number, etc. This upset him a good deal.

He wondered what I wanted with all this information on people. I told him it was just part of the kit and I personally never expected to see what was written there if anything ever was. He dragged over one of the brass hats, a smart young man, who took one look at the setup and laughed like the devil. We all laughed then, and off I went.

About this time, another uniformed gent picked his way through the crowd, walked up to me and without a word handed me my passport. I guess the picture in it is identifiable at that.

They sent me to the Hotel Nationale, across the street from one of the Kremlin walls and within sight of Red Square and St. Basil's Cathedral, where the manager promptly relieved me of my passport again plus all my documents regarding paid for travel, meals, and such.

I exchanged $10 in travel checks, at the hotel, for 400 rubles, 3 of the bills were 100 ruble notes which are about the size of a large blotter.

The first impression of Moscow is a good one, with many modern-looking buildings, a good deal of busy auto traffic (all driving on the right side) and bustling crowds of people not too different from a large U.S. city, except that the people are not as well dressed. The men wear their overcoats, long, and although it was only comfortably cool in Moscow, almost everyone wore coats. The women are not well dressed and apparently never heard of Playtex.

The result is pretty sad.

I only had time for one walk around Red Square, being in Moscow only to change planes.

In due time, the manager handed me my passport, a book of plane tickets, and my other documents, and advised that they were flooded with U.S. tourists in Moscow and proposed to put me on my plane—alone. This was fine with me.

They put me on a plane as different from the Paris to Moscow jet as can be imagined. Our own Ozark airlines would never have put this ship in the air in 1940, much less today. It was old, weatherbeaten, small, with beat-up seats and no safety belt.

We took off for Kiev and Odessa. I found myself on an aircraft where not a soul spoke English and there was no stewardess. A man sitting near me inquired in Russian and I told him I was an American. He smiled and was very friendly, offering me chocolate cookies, pictures of his family, and such. He was dark skinned, dark mustached, in a shirt and trousers, with a great deep voice.

He offered me a cigarette and said it was made in Tashkent. I told him I hoped to go to Tashkent and might get there by July Fourth.

Then I said to him in broken Russian—"July Fourth is a very big day in America."

"Da," he said. "Ya Znayoo." (I know.)

He sat through a long pause with his arms dangling between his legs and head down, and then deep down in his throat said softly, "Svoboda."

It is a touching word in any language.

The English equivalent is "freedom."

What Is Inflation?

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. McINTIRE. Mr. Speaker, each of us is aware that inflation is an economic evil, but too few of us are acutely aware of the precise nature of its negative effects.

The following article from the editorial section of the Packer, a popular agricultural trade paper, serves very effectively to pinpoint this problem of inflation:

WHAT IS INFLATION?

(The Packer, July 18, 1959)

Inflation is spending $2 to do a job $1 would do before World War II.

Inflation is the reason a farmer, who paid $1,000 for a piece of equipment several years ago (and even though he depreciated it properly over the years) must pay $2,000 to buy a new one to do just about the same kind of work as the old did for him.

Inflation in ages gone by occurred when governments indulged in clipping coins. Today even though the methods are more complicated, the results are the same. When the Federal Government goes into the red for $10 to $15 billion it covers all or part of this deficit with new money and issues a statement—something to the effect that "this action is necessary to provide the bank reserves for the Nation's growing monetary needs."

Inflation is the reason fixed incomes from insurance policies, government bonds, pension plans, and social security buy less at the store than they did 5, 10, and 15 years ago.

Inflation has been the compelling force for Congress to raise the debt limit twice in 1958. First to $280 billion; next to $288 billion, and then this year to $295 billion for the period ending June 30, 1960. We are therefore handing an unpaid bill of $1,695 to each member of the on-coming generation as of right now, and the situation is getting worse each day.

Inflation is the reason a person who earned $5,000 in 1946 would have to earn $7,343 today (50 percent more) simply to be as well off as he was before.

Inflation demands that a man work 12½ hours of his 40-hour work week to pay for Government; or, expressed in terms of an 8-hour day, the average $4,500-a-year man must work for his Government 2 hours and 29 minutes, but by contrast to pay for his food he must work 1 hour and 39 minutes, for housing 1 hour and 25 minutes, and for clothing 37 minutes.

Inflation is the condition which keeps some boys and girls from going to college because of the $4,000 parents had saved several years ago to pay the costs has now been inflated to $8,000 on today's standards.

Inflation is the money disease which affects everyone—not just a few, but in particular the 106 million owners of life insurance, the 50 million savings account depositors, the 20 million savings and loan subscribers, the 40 million U.S. bond holders, the 14 million retired folks with private pensions, and the millions of employees not covered under cost-of-living adjustments.

This is inflation.

In a country such as ours—rich in a history of meeting and defeating serious obstacles—we cannot concede that our fiscal problems are insoluble. Inflation, like sleeping sickness, will destroy the economy little by little over the years keeping us unaware of the pain, unless we turn our full attention to the problems of demanding a sound fiscal system and stable economic policies.

This is how to stop inflation.

Americans Should Know the Answers to Communists' False Claims

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, people who have talked with Communists are struck by their ability to uphold the false doctrines of communism. They seem informed and dedicated, and are able to support their side of an argument.

Unfortunately, many Americans are singularly deficient in upholding their beliefs in the ideals and principles of America. They seem to have only hazy

ideas about the American heritage. They are unable to voice their beliefs convincingly.

Americans will surely support and applaud the initiative taken by Richard Cardinal Cushing, Archbishop of Boston, to correct this deficiency. In a television address in Boston on June 21, 1959, he urged that schools should teach about communism and about the answers to its false doctrines. This address appeared in the Appendix of the CONGRESSIONAL RECORD of June 24, 1959, at page A5468, as an extension to the remarks of the distinguished majority leader, Hon. JOHN W. MCCORMACK, of Massachusetts.

Since then Cardinal Cushing has made a further significant statement on the subject. He quotes a chaplain in the U.S. Armed Forces stationed in Berlin, who gives impressive corroboration: "Americans over here in Europe have not the slightest idea of why they are Americans or what a democracy actually is," he said. "Most of them cannot say a word against communism."

The cardinal's statement is in a letter to the Boston Herald, in its issue of July 16, 1959. I believe it should have wide publicity, and include it as part of these remarks. He wrote as follows:

Please permit me to commend you for publishing that excellent letter from Mrs. Pattee that appeared in your esteemed paper on Monday morning concerning the fundamental tenets of communism and the necessity of teaching these to our children. If our school systems refuse to approve such teaching let us never forget that the home is the first, foremost, and greatest school for the presentation of truth to our children.

If the letter from Mrs. Pattee is read by all your readers among the fair sex we have reached the end of the dark road of apathy and indifference toward the mounting threat of communism.

Where the men folks have failed the women will succeed. They have always been effective in every political and moral crisis.

If space permits, you may be interested in the following paragraphs from a letter sent to me by a chaplain in the U.S. Armed Forces now stationed in Berlin:

"I read with great interest your proposal to have communism taught in high schools and colleges. I can certainly add that half the Americans over here in Europe haven't the slightest idea of why they are Americans or what a democracy actually is.

"If you could convince them that tomorrow the Communists could equal or better our American material living standards, the party couldn't handle all the new members they'd have. Apart from parroting a few labels like "freedom to vote" (most of them don't themselves), "dictatorship," "totalitarian," most of them can't say a word against communism, as we have found out time and again with the American lads in character guidance talks here. It's clear that the American schools, while putting out a lot of nonesense, have really missed the basic issues with all those silly civics courses they used to give.

"Your proposal is timely and hopeful. It could start a movement all over the country and maybe the world. The courses should be basic and positive. With statistics available from the State Department and other governmental agencies, communism should be shown in as clear, fair a light as possible, then the conclusions should be drawn in such a way that the student can really be convinced that he is a hundred percent better off living in the poorest democracy than in the most successful Communist utopia.

"One reason why people lost interest in communism in the United States is that it has been hit over the head too often with more heart than head. Intellectually it hasn't a leg to stand on. We are told over here that the only person the Communists really fear is one who thoroughly understands the system. This type can never become convinced or converted. Your proposal certainly can be effective. I for one hope that you will make it a crash project in Boston and set an example for the weak sisters elsewhere."

RICHARD CARDINAL CUSHING,
Archbishop of Boston.

How To Be More Successful

EXTENSION OF REMARKS
OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. OSMERS. Mr. Speaker, Bernard Haldane, career development specialist at Fairleigh Dickinson University, School of Business Administration, in Rutherford, N.J., delivered a very fine address on "How To Be More Successful," before the Society for the Advancement of Management at Albany, N.Y. on May 12, 1959.

Mr. Haldane, who has distinguished himself in the career and executive development field, founded Executive Job Counselors, Inc., in 1947. He has been a consultant on placement for the U.S. Naval Academy. He also founded and directed the first counseling and placement service for war veterans with professional and management abilities; directed personnel development study for the Air Research and Development Command, USAF; testified before the Joint Committee on Atomic Energy on the shortages of engineers and scientists. These are but a few of his many activities in the career development field.

Under leave to extend my remarks in the Appendix of the RECORD, I include these important remarks by Mr. Haldane:

HOW TO BE MORE SUCCESSFUL

(Address by Bernard Haldane before the Society for the Advancement of Management, Albany, May 12, 1959)

All things in nature either grow, or die. Man's search, your search, is for growth, for improvement. There is an evident trend throughout the Nation and the world to seek peace and security through establishing the status quo. Static security leads only to stagnation.

Growth and improvement call for willingness to change, willingness to accept the risks of change. America was established, her greatness was founded by men who were willing to take great risks in order to make great changes for the better.

Now we find ourselves threatened by the cold war. But our greatest enemy is not Russia and the Communists. The greatest threat to our continued national growth is the organization man. He is carefully unexceptional, an inconspicuous contributor to national mediocrity. He is a conformist for safety's sake.

The organization man sees himself in the littlest canoe on a big lake, and he doesn't want to make waves; he's afraid to rock the boat.

Our continued greatness as a Nation depends on individual men, lots of individual men. It depends on our recognizing—and using—the spirit of individual excellence which lies within each of us.

What's stopping us? And what can we do about what's stopping us? In particular, I intend to demonstrate tonight how you can recognize the best that is within you, how you can know your best self, and be your best more often.

First I'd like to ask you a question, and get your response by a show of hands. How many of you have ever made a mistake, just one mistake, or more?

Most of you are laughing, and all your hands are up. Mine is up too, so that means we have all made mistakes. We'll understand each other better for this knowledge.

Now another question. And please answer the same way. How many of you have had an experience you would call a success or achievement?

Your response seems very slow. Over 60 here, and only 2 or 3 hands raised—raised weakly at that. Everybody has a serious face.

Because you are here, you will believe what I now have to say. If you were not here, you would find it difficult to believe. If you were a relative stranger to me, I wonder if you would believe me if I said—most people find no joy in success, and great fun in making mistakes.

You participated in a demonstration of this condition. It happened just a few minutes ago. You were one of those who demonstrated the reality of the condition that is stopping us.

I'll give it a name: false modesty.

The cult of false modesty—which is very different from humility—has served to enthrone mediocrity and its partner, conformity.

Centuries of habit have erected a taboo system against the admission of one's own successes and achievements. Yet the fact of a mistake is no more and no less than the fact of a success. If we are strong enough to face the facts of mistakes, surely we should be strong enough to face the facts of successes.

But we have that taboo system. So we are supposed to learn from our mistakes, and we are not supposed to learn from our successes. In order to learn from our mistakes, we are supposed to study them. And since we learn about what we study—when we study spelling, we learn to spell, when we study arithmetic, we learn arithmetic, etc.—when we study our mistakes, we should learn about how to make bigger and better mistakes. But since a mistake is something we do not like to think about, let alone study, our efforts to study mistakes are made unwillingly and inefficiently.

Let's examine another result of the taboo system. Because it has been made socially wrong to study our successes, to learn from our successes, to learn how to repeat our successes, we have been forced to develop statistical measuring processes that will be socially acceptable as indicators of potential success. These statistical processes have come to be known as psychological tests, aptitude tests, and personality tests. No psychologist who uses them is satisfied with them as reliable measuring indicators. I have used them, too, and I am satisfied that they have usefulness, at the same time as they have the limitations of statistical tools used to measure a few segments of a large whole.

If we get rid of the taboo system, we can study successes directly, instead of indirectly through such statistically removed techniques as psychological tests. I am sure we can agree that when a man does some-

thing he considers successful, he has applied many of his best talents to accomplish the result. In addition he has put his heart into the task.

Since we all have greater and lesser successes throughout our lives, we have somewhere in our memories several experiences which have called for application of many of our best talents.

It should therefore be possible to analyze each of these experiences, break them down into parts or factors, and find out which factors are most consistently repeated in the different successes.

This is the process we call success factor analysis. The factors which are most consistently repeated are called dynamic success factors, and these form what we call your success pattern. Your dynamic success factors are the ones which probably will be found in your future successes and achievements. Accordingly, if you will look for experiences or opportunities which require application of your dynamic success factors, you are most likely to be successful again and again.

Let me repeat this. If you want success again and again, at higher and higher levels, look for experiences that will require the application of your dynamic success factors. I shall demonstrate how you can do this a little later. First I wish to deal with some possible shortcomings which may come to your mind.

First, why study successes alone, and not mistakes? I believe it is more practical to try and get what you want, than to work on avoiding what you don't want. It is true that if your goal is the avoidance of mistakes, you might achieve success; but that would be only by accident. The goal should be growth, greater accomplishment; consequently the study should be of successes, and how to increase them.

In any case, the study of your successes or, perhaps a more acceptable term, your achievements, does reveal potential weaknesses. For instance, if your success factors include sociability and word power, you might find your greatest progress as a politician, hotel manager, or some other activity which uses these and other qualifications. At the same time, the strength of these two success factors could lead to others complaining that you talk too much. I could give more examples, but this will suffice, I believe.

Another possible criticism is that you can never know when a man is telling the truth about his experiences. Consequently, how reliable can you expect the answers to be when you ask a man to talk about his achievements or successes? And associated with this is the question, "Once you get a man started along this line, isn't he likely to show personal bias in favor of himself, and really start to brag?"

There are built-in protections against such forms of exaggeration or bluffing. The success factor procedures I have taught to my associates reveal whatever conscious or unconscious attempts a person might make to deceive himself, as well as the analyst or counselor. In addition, there is a safety factor in the number of successes analyzed, and the span of time covered by them. Two or three should be studied for each 5 to 10 years of a person's life, and more where it seems possible or desirable.

Of course, people are subjective when speaking about themselves. But unless you can get a man to speak about his achievements, how else are you to know what he feels is an achievement? You cannot guess how he feels. Even his closest friends cannot guess, for sure, how he feels about certain experiences. So you have to ask him. If you want to get the best out of a man, you must look for the best that is in him. You have to ask him what he believes is his best.

Incidentally, this is called by some psychologists a nondirective biographical technique. It is also similar to some of the very subjective methods called projective techniques, those which use ink blots and pictures for the client or patient to interpret.

Another question that often is raised relates to the possibility of training others to analyze achievements and successes. I have trained others, and they do it effectively. One of the advantages of success factor analysis is that it requires commonsense and good judgment, rather than a trained psychologist, to use it effectively. Good executives and supervisors can use it themselves in regard to selection, personnel development, and performance appraisal. It is particularly helpful to those self-effacing people in such occupations as engineering, science, and other professions; success factor analysis helps them to know themselves, and gain the recognition and opportunities they should have.

Executives and supervisors can be trained to use this technique, for their purposes, in about 14 hours—in small groups. Top executives can learn enough about this technique in a single morning or afternoon seminar, with the aid of a manual, to be able to improve their judgment of people substantially. Psychologists, who must go deeper into motivations, will require much more time and study and practice. I include personnel men among executives and supervisors; however, if the technique is to be used for deep counseling of employees, considerable practice—almost internship—is necessary.

On occasion, I have been asked about the validation of success factor analysis. My reply on such occasions has been, I am more concerned with the fact that the system works, than with its statistical validation. I have many thousands of files on people with whom the system has worked, and I have interviewed more than 40,000 people over the last 21 years. If you want to validate it, I will be happy to help you; but in order to do this, you must study the system, then test it.

Actually, we have found that success factor analysis works so simply and reliably, that we have not felt it necessary to validate it. The specialists in validation can take care of that, while we concern ourselves with helping people to be more successful by application of the system. This does not sound scientific, of course. But then, gravity was not scientific until after Newton's theory; gravity existed before the apple dropped on his head. We do have a scientific principle we follow, however, so perhaps we are scientific after all.

I have trained some 20 specialists who are known as success therapists. That is because we concern ourselves with the treatment of a wide variety of obstacles to individual progress and success. A success therapist is concerned with helping a man to be his most effective and successful self, more of the time. Before I close, I would like to tell you how you, each of you, can give yourself a limited form of this success analysis treatment. There are three major steps to success factor analysis, and here they are:

1. Think about your achievements of all kinds, things you have done well, and enjoyed, at different times of your life—back to early childhood. These may have meaning only to you, personally, and may seem insignificant to others.

2. Write descriptions of six or more which have meant most to you, perhaps your six greatest achievements. Then, if you haven't already written them, describe a couple of your earliest childhood achievements. If you are to analyze them, you must write them down.

3. Study the descriptions. Look for the qualities of talent and personality that reveal themselves repeatedly, and most conspicuously. These repeated qualities probably are your dynamic success factors. It is difficult to see these clearly, clearly, for yourself; but you can have a good sense of what they are. If you will look for opportunities to apply this combination of your best qualities, you are most certain to find greater and greater success and progress.

When you know your best qualities, you will seek to make them better. In order to know your best qualities, you should study the experiences that have required you to use them. Stop studying your mistakes. Stop yielding to the taboo which blinds us to the facts of progress and greatest success. For your own sake, if for no other reason, study those experiences that have given you happiness and success in order that you may find the ingredients that will bring you more success again and again. These ingredients are your God-given talents. Recognize them, and use them well.

TVA Bond Bill Now on Third Base

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. EVINS. Mr. Speaker, as we once again take up the TVA self-financing bill, it may be helpful to review the circumstances which have brought on the necessity for taking up this matter again, and accordingly I include in the Appendix of the RECORD my newsletter, Capitol Comments, for last week, which reviews the situation.

The newsletter follows:

TVA BOND BILL ON THIRD BASE

Following passage by the Senate of the TVA self-financing bill, this much-needed and battle-scarred measure has reached, in baseball parlance, third base in the legislative game. The bill, however, has again run into hurdles set up by the diehard opponents of the TVA. When consent was requested in the House this week to accept the Senate amendments to the bill, the minority leader of the House objected and blocked action on the bill. As a result it will be necessary to take the amended measure through the Rules Committee again and on the floor of the House for further debate and another vote. Friends of the TVA are confident that the House will again approve the measure; but there will be a delay in its enactment as a result of this last-ditch effort to block the bill.

Meanwhile, the minority leader of the Senate has reportedly urged the President to veto the TVA measure. Your Representative expresses the hope and the belief that the President will be fair and approve this legislation. There are many reasons why this bill should be approved in the public interest, among them:

First. The President himself first proposed this legislation to the Congress in his budget message on January 17, 1955. The President has repeated his request for self-financing legislation for TVA in his budget messages of 1956, 1957, and 1958, and again in January of this year—on five separate occasions.

Second. Committees of the Congress have worked for 4 years to write a reasonable and workable bill.

Third. Extensive hearings have been held—five sets of hearings—on this legislation in both Houses of the Congress.

Fourth. Both the House and the Senate have acted favorably on this bill and there has been 5 years of debate on this measure, both inside and out of the Congress.

Fifth. Both Houses have passed the bill by decisive majorities. Two years ago the Senate passed it by a vote of 61 to 20; this year the House passed it by a vote of 245 to 170, and the Senate by a vote of 73 to 17.

Sixth. The bill represents a reasonable compromise of many views. It is considered satisfactory in the main, not only to the TVA, but also to the private utility companies bordering on the TVA area.

Seventh. The Secretary of the Treasury has expressed his approval of desirable features of the financing phases of this bill—and indeed all approved the measure except a limited few who want TVA destroyed and dismembered.

Eighth. The bill puts a fence around TVA—a territorial limitation is prescribed—and not a kilowatt of power can be sold outside the area.

Ninth. The TVA will make a far greater return of payments into the Treasury than under the present law.

Tenth. TVA is a creature of Congress—will remain under the control of the Congress. The President can make recommendations for changes at any time and the Congress can enact changes at any time.

Eleventh. All three members of the Board—Chairman Vogel, former Congressman Hays, and former Deputy Director of the Budget Bureau Jones, have all been appointed by the President, and surely they can be depended upon to carry out the provision of this legislation in a responsible manner.

With the territorial limitations, with Treasury Department control, and congressional control, and Presidential control through the naming of the Board members, no further control should be desired.

When we are appropriating millions for the development of water resources throughout the country—and billions throughout the world—surely it is just and fair that the citizens of a great area would be given the privilege of voting bonds for self-financing, bonds that are taxable, and bonds that are not included, but outside, the national debt.

I express the hope again that the President will be objective and fair and not disapprove this needed and meritorious legislation. Such approval would permit the TVA to operate in a businesslike fashion, but without undue political and partisan influence and to a large degree eliminate the annual congressional fight over TVA's operations, and would be in line with statements and assurances of the President of his friendship and support for this great agency of the Government.

Full Disclosure in Urban Renewal Project Planning

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. LINDSAY. Mr. Speaker, during debate on the omnibus housing bill recently vetoed, I offered as an amendment a measure which would require full disclosure of the details of any proposed redevelopment of an urban renewal project before any commitment could be made by the local authority and the proposed redeveloper. The House saw fit to adopt that amendment; but unfortunately, it was stricken from the bill in conference.

The new omnibus housing bill recently introduced, H.R. 8181, I am pleased to note, includes a modified version of my disclosure amendment. I should like to include in the RECORD an editorial which appeared on Monday, July 20, 1959, in one of New York's great newspapers, the World-Telegram and Sun. The World-Telegram has been in the forefront of the movement in New York City seeking to review the procedures by which urban renewal projects are brought into being. I am especially happy, therefore, to note its editorial endorsement of my amendment:

ADVANCE FACTS ON TITLE I

With Congress putting together a new housing bill to replace the mishmash measure vetoed by President Eisenhower, it has another opportunity to include an important feature sidetracked last time.

We refer to the amendment by Representative JOHN V. LINDSAY, 17th District Republican. It would require advance disclosure of all salient facts on a prospective title I project before any contract or commitment could be made by a local authority—facts such as the names of all persons having a financial stake in the development, proposed financing, and estimated cost, rents, and profits.

This amendment is something New York badly needs—and it was inspired by scandals here.

In the last housing go-round, the House passed the Lindsay amendment, the Senate did not and it was knocked out of the final compromise version, reportedly as a result of lobbying pressure by lieutenants of Robert Moses, this city's title I maestro.

The Lindsay amendment is now in a new omnibus housing bill in both the Senate and the House. We hope this time Congress sends up a bill the President can sign—and that it contains the Lindsay amendment.

Massachusetts Labor Relations Commission Favors Legislation To Extend Jurisdiction of State Labor Relations Boards

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the comments and arguments of the Massachusetts Labor Relations Commission in support of legislation to extend the jurisdiction of State labor relations boards, as presented by Stephen E. McCloskey, chairman of the commission:

Supplementing my letter of July 17, 1959, relative to the Washington press release that the House Labor Committee had tentatively voted to insert in the Senate approved version of a union regulation bill, a provision that the National Labor Relations Board assume jurisdiction over all labor cases, I have the following to offer:

When the constitutionality of the old National Wagner Act was sustained in 1937 by the U.S. Supreme Court, various industrial and forward-looking States set in motion the machinery to enact State labor relations acts which, in the main, were substantial replicas of the Wagner Act. Up to the present, there are 13 States thus equipped. Among these States are New York, Pennsylvania, Massachusetts, Michigan, Wisconsin.

The adoption by these States of a State labor relations law was no empty gesture but was of a vital significance.

Some of the first States who got in line foresaw a dangerous and disturbing situation which would ensue; i.e., a "twilight zone" or "no man's land", to use the common terms, would develop where labor disputes would be unresolved due to the fact that the business or industry involved was local in nature or that its impact on interstate commerce was trivial and unsubstantial and hence should have its problems and controversies processed and adjudicated by State agencies.

These States foresaw also that Federal handling of these matters, where dispatch was obviously all-important, would become unwieldy, productive of distressing delays and generally unsatisfactory.

By the peculiar character of these small businesses, it is eminently desirable that State boards be in the picture. By this is meant that they have a more intimate, comprehensive and interested stake in the matters in question and a closer knowledge of local setup.

Need it be stated that they can act with vastly greater speed which is always essential?

Under the Federal machinery, long and costly delays are inevitable because it allows and provides for appeals to the Supreme Court of the Nation. This is not met with if the matters are processed by the State boards.

The lawyers tell us of a so-called de minimus concept of the law, often mentioned in opinions of the U.S. Supreme Court. We understand this to mean that the law is not concerned with "trifles" or literally to translate (according again to the lawyers) "the very small things." Thus the Federal provisions not concerned with small matters or businesses could provide for State intervention to handle them.

The Guss case decided by the U.S. Supreme Court in March 1957, put it squarely and unequivocally up to Congress that it (Congress) was the agency or instrumentality to remedy by legislation the current undesirable state of affairs relative to the assertion of jurisdiction as between the Federal and State agencies.

The main functions of most State labor relations—at least ours is the prevention of unfair labor practices and the supervision and investigation of certification of bargaining petitions with a view to certifying bargaining agents to insure industrial peace.

A very simple solution to us seems to incorporate in the new labor law a provision directing the National Labor Relations Board to transfer to the control or supervision of the many State labor relations boards the functions of processing labor disputes in their respective States involving only the prevention of unfair labor practices and the certification of bargaining representatives after investigation, where the effect or impact on interstate commerce would be slight or unsubstantial or where it would be feasible because of the peculiarly local nature of the business involved or because State jurisdiction would effectuate speedily an amicable adjustment. It appears also of simple solution to have embodied in the new legislation an amendment that empowers and directs the State agencies to apply the provisions of the national act if their own provisions governing unfair labor practices and certification procedures are inconsistent with the national ones or have been construed differently.

Such legislation seems absolutely begging to be passed and would be of incalculable

benefit in eradicating the present vexatious conditions that obtain.

Let me assure you that labor and management are wholeheartedly in accord with these sentiments. I have for many years been in close contact with both and I know whereof I speak. Almost invariably they prefer to do business, as the phrase is, with the State agencies.

Mr. Justice Burton, in delivering the minority opinion of the U.S. Supreme Court in the Guss case (mentioned above), deplored in a masterly feat of logic and commonsense the taking over or preemption by the National Labor Relations Board of almost the entire area of labor relations. We believe that a stronger word is usurpation, even though some might find its use intemperate.

So we have as an ally in our opinions expressed above, the said Justice Burton, a brilliant jurist, and the part of the Court that dissented from the majority. We are proud to be in his company.

Is the whole field of labor relations to be made a laughing stock of? Is it to be stultified and hamstrung?

We are not atttempting to be humorous when we state the following might happen:

Let us picture a sturdy and God-fearing citizen. He is imbued with the idea of buying a farm and growing peanuts. He harvests a rich and abundant crop. He hires another citizen to assist him in peddling his peanuts a mile away in the village square. An argument arises between the two over certain aspects of their labor relations. The National Labor Relations Board moves in and takes jurisdiction.

Please accept our deep appreciation for giving this matter your attention.

We earnestly request you to oppose any attempt by legislation to deprive the State agencies of the right and power to process the appropriate labor cases before them.

COMMONWEALTH OF MASSACHUSETTS,
LABOR RELATIONS COMMISSION,
STEPHEN E. MCCLOSKEY, *Chairman.*

JULY 21, 1959.

"Zach" Wheat, Longtime Great Brooklyn Outfielder, Enshrined in National Baseball Hall of Fame at Cooperstown, N.Y., During 20th Annual Ceremonies, July 20, 1959

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. STRATTON. Mr. Speaker, one of the great events in the Nation, both from the point of view of our own history and from the point of view of the whole sports world, are the annual ceremonies conducted at the National Baseball Hall of Fame and Museum in my district in Cooperstown, N.Y. Enshrined in this hall are the great baseball figures of all time.

Here, too, in this beautiful community on the shores of Otsego Lake, where the great American game was invented 120 years ago, is held each year at Doubleday Field a Hall of Fame baseball game between a team representing the American League and one representing the National League. This year the American League Kansas City Athletics and the National League Pittsburgh Pirates played to a 5–5 tie, when the game was called in the fifth inning because of rain. But the highlight of the whole occasion was the ceremony that led to the inclusion of Zachariah Davis "Zach" Wheat, longtime great Brooklyn outfielder, as the 84th baseball immortal to be included in Cooperstown National Baseball Hall of Fame.

Under leave to extend my remarks, I include a newspaper article from the Oneonta Star of Tuesday, July 21, describing this historic ceremony, and also a background sheet about the Hall of Fame prepared and published by the Cooperstown Baseball Committee:

[From the Oneonta (N.Y.) Star, July 21, 1959]

TWO THOUSAND WATCH "ZACH" WHEAT BECOME 84TH HALL OF FAMER

COOPERSTOWN.—A light rain fell intermittently on some 2,000 persons yesterday as Zachariah Davis "Zach" Wheat, longtime great Brooklyn outfielder, became the 84th baseball immortal enshrined in the National Baseball Hall of Fame and Museum here.

The festivities, staged on a platform erected at the front of the national shrine, opened with a brief introduction by Rowan D. Spraker, Sr., Cooperstown, a vice president of the Hall of Fame, who brought to the rostrum Les Biederman, president of the Baseball Writers of America.

Mr. Biederman, of the Pittsburgh Press, "emcee" for the ceremony, then introduced Cooperstown Mayor Alva C. Welch, Sr., who welcomed the crowd, telling them that a formal speech of welcome was too "stilted."

WELCOME HOME

Rather, the mayor said, this is "a welcome home to help us honor this baseball immortal. All of you are here for a purpose," he said. "I'm glad you are here."

Others introduced by Mr. Biederman included Warren Giles, president of the National League; Will Harridge, chairman and former president of the American League; Stephen C. Clark, Sr., president of the Hall of Fame; Baseball Commissioner Ford C. Frick, Joe Cronin, new president of the American League.

One of the more impressive introductions of the day was made by Mr. Biederman, who asked spectators to bow their heads for a moment in silent prayer for Hall of Famers dead within the year, including Mel Ott, Larry Lesieur, Tris Speaker, and Ed Walsh.

Then Mr. Frick took the stand to introduce the two living members of the original 11 players to be inducted into the Hall of Fame back in 1939 in the initial ceremony. Speaking with feeling, Commissioner Frick called to their feet George Sisler and Ty Cobb.

IMMORTALS RETURN

Other baseball immortals on hand for the event included John Franklin "Home-Run" Baker, Mr. Cronin, Frank Frisch, Joe McCarthy, and Harold J. "Pie" Traynor.

Another brief ceremony was the presentation of the Hall of Fame cup to Ozzie Bluege of the Washington Senators for their American League triumph in the 1958 Hall of Fame classic.

Then Mr. Frick opened the initiation ceremony for Mr. Wheat, saying "during his major league career, Zach Wheat got a great reputation as a thief * * * he stole more bases than anyone else in baseball."

He went on to relate some of the records set by the great outfielder who began his career in 1909 with the Brooklyn Superbas. Among them were a lifetime batting mark, covering 29 years, of .317; leading the National League in 1918 with a .355 average, and falling only 116 hits short of the coveted 3,000-hit mark.

ZACH SPEAKS

Coming to the microphone at the front of the rostrum, Zach Wheat shook hands with the commisisoner, then said, "I never experienced anything like this. This is my first view of the Hall of Fame and the things I have seen have brought back memories.

"Thanks to everybody for everything," he said, then seemed lost in thought for a moment while a silent crowd hung on his words and drops of rain began to fall after a brief letup.

After the momentary pause, the baseball immortal grinned at the crowd, said, "I guess I forgot what I was going to say. I goofed," then went on to offer his thanks once more.

Others recognized by Emcee Biederman included the widows of two Hall of Famers, John J. McGraw and Christy Mathewson; Arnold Johnson, president of the Kansas City Athletics; Lou Brissie, American League baseball commissioner; Charles Grimm of the Chicago Cubs; Clarence Rowland, Chicago Cubs; Tom Meany, public relations for the New York Yankees.

OTHERS ON HAND

Joe L. Brown, general manager, James A. Herron, treasurer, and Robert T. Rice, of the Pirates, as well as Manager Danny Murtaugh; Ozzie Bluege, Washington Senators; Cal Hubbard, American League umpire in chief; Harry Simmons, manager of the International League Service Brueau, and many others.

The introduction that drew the biggest ovation from the crowd was that for Harvey Haddix of the Pittsburgh Pirates. Introduced from the rostrum, Haddix was speechless over the roar of applause that swelled as he was commended for the famous 12 innings of perfect ball he pitched this summer.

Throughout the ceremony newsmen and photographers crowded the fenced-off area at the front of the rostrum, television cameras buzzed, flash bulbs popped, and once the photographers gave voice to hold it higher, higher, as Commissioner Frick presented the plaque to Mr. Wheat.

NATIONAL BASEBALL HALL OF FAME AND MUSEUM, INC., COOPERSTOWN, N.Y., JULY 20, 1959

This is the 20th anniversary of an historic event in baseball. On June 12, 1939, the National Baseball Hall of Fame and Museum, Inc., was dedicated and, thus, the village of Cooperstown, N.Y., became the focal point of the entire universe.

An elaborate program that started on May 6 and terminated on September 4 featured the summer's Cavalcade of Baseball. No expense or effort was spared to make the celebration, a century of baseball from 1839 to 1939, nationwide in its implications. How successfully this was accomplished is shown by the fact that players participated from every State in the Union and many points in Canada, and that fans from foreign countries were there to watch at some time during the summer.

The active baseball athletes ranged from amateurs to semipros to high schools to military academies to colleges to universities to each of the 38 minor leagues, and, last, but not least, the all-stars of the two major leagues.

At Doubledady Field where baseball was played by a group of Copperstown boys in 1839, is the imprint of stirring scenes. During the process of the Cavalcade of Baseball, Babe Ruth shouldered his bat at home plate on the historic field and waited for the pitch. In contrast, a lad from Georgia sandlots—away from home for the first time, having his try at amateur honors—reverently, and with bare head, cautiously slid a foot across that sacred spot.

Vieing with Doubleday Field in interest for visitors at the centennial celebration was the dedication of the National Base-

ball Hall of Fame and Museum, Inc. The idea for this historic edifice originated with Ford C. Frick, then president of the National League, now baseball commissioner. Mr. Stephen C. Clark, native of Cooperstown, responded to the plan with deep enthusiasm, giving the entire project his civic and financial support.

The National Baseball Hall of Fame and Museum was sponsored with the view of establishing a shrine for baseball's immortals. Here the fans, young and old, men and women, boys and girls, could live for a brief moment with the legends and the lore of baseball, and with their heroes of the past.

Here would be the lasting monument to the greats of baseball and here also would be inscribed their deeds to remain forever an inspiration and a challenge to all who come after them, and especially to those youngsters from all walks of life who aspire to follow in their footsteps.

In recognition of their contribution to baseball, bronze plaques would be awarded the game's immortals. Five players were enshrined in the first election. They were: Tyrus Raymond Cobb, George Herman (Babe) Ruth, Christy Mathewson, Walter Johnson, and John Peter (Honus) Wagner. Then, year by year, with a lapse here and there, followed other players, plus executives, managers, umpires, and those whose efforts contributed largely to the progress of baseball.

Zachariah Davis Wheat, an outstanding player as outfielder with the Brooklyn Dodgers from 1909 to 1926, was elected in 1959, thus becoming No. 84 enshrined in the Hall of Fame.

The National Baseball Hall of Fame and Museum building was dedicated in 1939. No one believed at that time that the structure would be outgrown within a short period. Baseball memorabilia of every kind began to arrive at Cooperstown. Former stars sent their long unused equipment and cherished trophies; libraries, newspapers, and universities gave books, pictures, and records; many private collections were donated. Attics were invaded in private homes and many trophies came to light—the first catcher's mitt, the first factory-made mask, the bat used by George Wright of the Cincinnati Reds in 1869, etc.

To meet the need of more floor space for the display of baseball's rare relics, an addition, doubling the size of the original building, was dedicated in 1950.

Then, on August 4, 1958, the third unit of the Cooperstown shrine, was formally opened. This distinctive Baseball Hall of Fame became a reality when the directors realized the necessity of an exclusive Hall of Fame for the display of the bronze plaques, carrying a bas-relief likeness of the immortals and a short summary of his achievements in baseball. Heretofore, those bronze awards appeared on pylons in the original building that also contained numerous other baseball exhibits.

The wing is one story and basement, measuring 85 feet, 6 inches, by 43 feet, 6 inches. It is of brick and marble construction, with marble columns supporting lofty ceilings. The central gallery is lighted by clerestory lights. Along either side are raised aisles with alcoves designed to display effectively the plaques of the immortals. These are lighted by sky domes, and special lights bring out details of the plaques.

Special provision has been made for the display of the Baseball Hall of Fame Cup for which a representative of the American League plays a representative of the National League in the annual Major League Hall of Fame Game at Doubleday Field. This series originated in 1940, following the all-star game spectacle on June 12, 1939. The Pittsburgh Pirates, of the National League, and the Kansas City Athletics, of the American League, meet in the 1959 classic.

A record of the teams and scores of these games are inscribed on special panels as a part of the background of the Hall of Fame Cup.

The enthusiastic response of the public to this national institution is indicated by the annual increase in patronage. Over 1,300,000 have visited the National Baseball Hall of Fame and Museum since its doors opened, starting with 25,332 in 1939, and increasing to the high year of 151,388 in 1957.

FACTS ABOUT COOPERSTOWN, N.Y.

Cooperstown is renowned for its scenic setting. Its main industry is selling history. In making history its main business, Cooperstown of late years has evolved into a village of notable museums.

Besides the Baseball Museum, there is Fenimore House, home of the New York State Historical Association, which fascinates visitors with its paintings of the "Hudson River School," and its collection of folk art; while the Farmers' Museum reflects the pioneer way of life. Here are old farm tools and appliances, and a group of buildings assembled in a replica of a crossroads community of a century ago, with its coutry store, one-room school house, village blacksmith shop, printing office, lawyer's office, doctor's office, and so on.

ABNER DOUBLEDAY

Abner Doubleday was descended from an old Otsego County family. Cooperstown is the county seat. Doubleday was born June 26, 1819, at Ballston Spa, Saratoga County. He received a private school education in Cooperstown and was graduated from the U.S. Military Academy in 1842.

General Doubleday was an engineer and in 1870 obtained a charter in San Francisco, Calif., for the first cable railway ever built. He published "Reminscences of Fort Sumter and Fort Moultrie, Chancellorville and Gettysburg," and wrote numerous articles on army matters, engineering problems, etc.

COOPERSTOWN BASEBALL DATA

In 1905 a commission was appointed by major baseball interests of the United States to inquire into the origin of the national game. The commission was composed of U.S. Senator Morgan G. Bulkeley, A. G. Mills, Nicholas F. Young, Alfred J. Reach, George Wright and James E. Sullivan—names prominent in the baseball world of that day. The commission conducted a careful investigation and its findings were reported in Spalding's Official Baseball Guide of 1908.

The decision was that the present game was invented by Abner Doubleday in Cooperstown, N.Y., during the Harrison Presidential campaign in 1839.

It was stated by the commission that young Abner Doubleday had laid out the diamond-shaped playing field for a game he called baseball for the students of a private school in Cooperstown in which he was enrolled as a student, and that this was the beginning of what we now call the national game.

Doubleday's game varied from other games of that era in that he placed an equal number of players on each side.

The field where Abner Doubleday and his fellow students played over a century ago was a cow pasture with a brook running through the middle. The townspeople stirred by baseball's official announcement that the game started there, decided to transform the land into a public playground with a baseball field and stands now seating 8,500 as a permanent memorial to Abner Doubleday.

The annual Major League Baseball Hall of Fame Game is made possible by cooperation of the major leagues, each of which appoints a club and selects a day for the contest.

Major league pennant winners, world series champions, and the game's top stars play in this annual diamond spectacle.

State Taxation of Business Income Derived From Interstate Commerce

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mrs. KEE. Mr. Speaker, today I am introducing a bill to terminate a tax evil that is threatening West Virginia's most important industry. My objective is to establish some uniformity in State taxation of business income derived from interstate commerce.

Under prevailing conditions, the rash of State laws imposing taxes on businesses operating thousands of miles away could become confiscatory. The coal industry is particularly vulnerable because a very large part of all coal output moves in interstate commerce. West Virginia mines ship more than 90 percent of their production out of the State. Being typically small business, the coal industry faces grave economic injury if the present trend toward burdensome income taxation is not blocked.

My legislative proposal has been prompted by the stampede toward the voracious State income taxes on interstate commerce that has followed the Supreme Court decision endorsing the strange and insidious tax innovations of Minnesota and Georgia. My bill provides that no State shall have the power to impose or collect taxes on income derived from the conduct of interstate commerce if the person conducting such commerce maintains no permanent or established stock of goods, plant, office, or warehouse within the State. The purpose of the words "permanent or established," which do not appear in other bills with the same objective as mine, is to distinguish and eliminate from possible taxation the situation where a person sets up a place of business of a temporary or transitory nature, such as a display room in a hotel.

I should like to point out at this time that the inclusion of "permanent or established" was recommended earlier this week by one of West Virginia's very distinguished lawyers, Rolla D. Campbell, of Huntington, W. Va. On July 21 he appeared before the Senate Finance Committee as representative of the National Coal Association's Tax Committee to testify in favor of legislation that would promote uniformity in State taxation of business income derived from interstate commerce. On reading over the colloquy developed during cross-examination, I have come to the conclusion that members of the Senate committee present at the hearing were unanimous in concurring with Mr. Campbell's views on this particular provision. For this reason, I think it would be remiss of the House to consider legislation lacking this specification.

I should like to advise my colleagues at this time that I have today written to the chairman of the House Judiciary Committee requesting that hearings be arranged as quickly as possible to act on my legislative proposal. I emphasize

that immediate action is necessary to halt the hodgepodge of restrictive taxes that States across the Nation are at liberty to impose on coal operators and other West Virginia producers and manufacturers. I am sure that few Members of Congress represent districts in which mining companies, manufacturers, or processors are not faced with the same dilemma. Too many State legislatures have adopted this fanciful approach to their budget problems. Despite the inherent repugnance and unsavory implications of such obstacles to business between the States, serious attempts are being made at enforcement—often at administrative and bookkeeping costs in excess of actual revenue.

U.S. business will suffer progressively unless Congress acts to bar the pirate toll charges imposed by the various States. I ask your support of the bill that I have introduced today.

To Honor the Adamses, Father and Son, Who Both Served as Presidents of the United States

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. LANE. Mr. Speaker, fortunate is the nation that has great traditions and forever honors them.

Massachusetts, the most historic area of our country, has no national highways or parkways to perpetuate the memory of the patriots and the stirring events that inspired the birth and the growth of our Republic.

John Adams was our second President.

His son, John Quincy Adams, served as our sixth President.

No other family in the history of our Nation has equaled this unique and distinguished record of service to the Nation.

It is time for us to properly honor their magnificent contributions to our independence by voting in favor of H.R. 7125, to provide for a study of the feasibility of establishing the President Adams Parkway, a connecting link of 8 miles from Faneuil Hall in downtown Boston, past the old statehouse in Boston, Paul Revere's home, the old North Church, and the home of the two Presidents.

Boston is the shrine of the American Revolution.

Hundreds of thousands of visitors come to this area each year, seeking the famous landmarks that they learned of in their school days, in order to be near and identify themselves with the spirit of those brave and freedom-loving days.

Frequently they have difficulty in finding and parking near these historic spots.

It is our purpose to facilitate their pilgrimage by inquiring into the feasibility of establishing this patriotic parkway.

Some technical objections have been raised, questioning both the precedent and the procedure, but I believe that most Members will agree that this is an honor that is long overdue.

I am happy that this measure will not be considered in the routine and anonymous manner. It deserves to have every Member stand up and be counted by name so that the Nation will know how deep is our gratitude and our reverence for two leaders who helped to win for us the priceless heritage of independence and liberty.

This is a reasonable bill, proposing a survey.

In view of all the circumstances, I cannot see how anyone can object to that.

I am confident that it will clarify the picture, and dispel all doubts, so that the Members will be encouraged to approve the recommendations of this survey when it has been completed.

In the meantime, the proposed memorial in honor of two Presidents is at least entitled to this preliminary consideration as to its feasibility.

A Commencement Address by the Very Reverend Richard H. Wilmer, Jr., at the Graduating Exercises at Prospect Hill School, New Haven, Conn.

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. HAYS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include a thoughtful address by the Very Reverend Richard H. Wilmer, Jr., dean of the Berkley Divinity School, Yale University, given at the graduation exercises at Prospect Hill School, New Haven, Conn.

The address was called to my attention by former Congressman John A. McGuire who served with many of us in the 81st and 82d Congresses and whose daughter Lois was a member of the graduating class. The address follows:

COMMENCEMENT ADDRESS, PROSPECT HILL SCHOOL, NEW HAVEN, CONN., JUNE 10, 1959, BY THE VERY REVEREND RICHARD H. WILMER, JR.

There is a story to the effect that once upon a time there was a college commencement speaker who had the unfortunate habit of mixing his metaphors. He was a very intense and earnest man, and urged his listeners to strive upwards and onwards, and to do everything in their power to fulfill their high calling and purpose in life. Finally he reached the climax of his address, and delivered the punchline:

"Members of the graduating class, I have this final word to say to you: If you have a spark of genius in you, always water it."

To me there is something haunting about this story. All too often this is just exactly what happens in life. The spark of genius gets watered, the idealist of today becomes the cynic of tomorrow, the dream becomes hope unfulfilled. Many would-be realists say: Don't set your goals very high; don't expect much of life or of yourself. Then you won't be disappointed.

Yet something inside us rightly rebels at that. The spark of genius, the flame of life itself, doesn't want to be watered. Certainly life involves disappointments and suffering: all of us know that and we know more of it the older we get. But this is not the last word, and certainly this is not what you are primarily concerned about this afternoon. You who are members of the graduating class are preparing for the next advance: college, marriage, a job. You and your families are deeply appreciative of what Prospect Hill has done for you, and what your associations and friendships here have meant; but you want to get on to the next step. So we have these few moments of ceremony and reflection together, and then the present is over and a new life is yours. Things can never be quite the same again. You will always be members of the school, but you will be alumnae. Others will take your place, just as you will take the place of others in your next step.

Already you have felt the tension between authority and freedom, between dependence and independence. Soon such independence as you have never known before will be yours. Here is where we need to pause and take a good look around. In the next few years the spark of genius has its greatest chance: all of you have it, in some way or other, or you wouldn't be where you are today. One of you may be an artist, another a musician, some of you must be extremely capable in handling people (particularly parents); and somebody has to be the best cook in the class. Each of you has her own special talent and group of talents. What are you going to do with them?

So much of your joy in life, so much of your contribution to life depends on how you solve the problem of authority and freedom. Basically of course this is a religious problem, and perhaps the most vexing of all. St. Augustine said "Love God and do as you please." He was talking about a God whose service is perfect freedom; but the freedom was integrally related to the service. So here is the paradox: freedom under authority, service, discipline. What authority do you believe in? In whose service are you enlisted? What discipline claims you and molds your life?

The tragedy of so many lives is the failure to solve this problem: To recognize the paradox of authority and freedom and to work out our own solution of it. None of us is perfect and will ever solve the problem perfectly; there is always a surd in the equation. But we see all about us the evidences of failure. There is the dominated personality, too much under authority, too little free, unable to think creatively, decide clearly, act decisively. Until this soul can somehow be freed from whatever it is that dominates, its life cannot be fully its own. Too many influences are at work to impede it; its spark, if not watered out burns very low.

At the other extreme of the spectrum is the freed soul which is not really free. It is so undisciplined, so lacking in any sense of structure, that it cannot make its proper contribution to life. For a while its spark may seem to burn brightly and high; then come the days of responsibility and mature decision; and the light suddenly fails. Where did it go? What put it out?

Between the extremes, we try to work out our salvation with fear and trembling. Life with all its joys is precarious and threatening. Those who solve best this deepest problem are not all of one type; one

race, nation or creed. They are all sorts and conditions of men and women. We learn from the experience of others how attempted solutions go wrong: We see about us the closed and rigid mind that permits no change, no new ideas, lest the threatened citadel of self be forced to surrender. We watch the passage of the mind that couldn't care less; the uncommitted, the apathetic, for whom living is really commitment to indecision. We check the vapor trail of the mind that refuses any authority or discipline, and shoots off into unreality, whatever its brilliance. And so we come back home to the problem that must be faced and worked on if we are to be ourselves as God intended us to be: How to handle our dependence and our independence.

Thus far you have been largely dependent on your parents, and deeply influenced by them and your teachers. Each of you has felt the tension of growing up, of becoming yourself, of rebelling against authority, of wanting to express your own personality, of choosing your own way of life. This is as it should be, because without the tension we never do grow up; yet if we choose to break radically with all authority we are just as immature as the person dominated by authority.

In the years ahead you are going to be encouraged at college all along to make your own choices, form your own opinions, think for yourselves. There will be the structure of college life with its schedules and curriculum, hours and examinations, basic courses and departmental major system. Within all this will be the freedom of what you do with your time, how you choose electives, your friends, your extracurricular activities, your weekend dates and the man you marry. So you are free, and yet some authority, some set of values, helps you make your choices. What authority, what set of values, what structure, what world view? It is not fair to demand an answer of you now. Already your principles are pretty well formed. They are a mixture of what you have received from your parents and what you have determined for yourself, with the emphasis on the former. The next several years will be the crucial ones in which your principles of choice will take clearer shape. On the basis of these—intellectual, spiritual, and emotional, you will make the most important decisions of your life.

Involved in all of this is your own growing faith. What do you really believe in? What are you prepared to live and die for?

You are being graduated at a time when it was never more important to have a deep and decisive faith. This is the age of the edge of terror, when man's sharpest anxieties and darkest fears are aroused, and when his very existence on this planet can be snuffed out in a fraction of time. The President of the United Nations General Assembly, Dr. Charles Malik, put it this way in a speech in Washington last week:

"So far as the Western World is concerned, the deepest thing at stake is its faith in its values and its ability to justify and defend them.

"Free representative government, the primacy of the human person, the moral law, the continuity of history, freedom, truth and God—it is these things that are at stake today. They are all rejected and opposed from without and some of them are doubted or compromised from within. Is life worth living without them? And yet if people do not wake up, life will not be worth living.

"A mighty spiritual revival therefore is needed. For much more than peace is at stake. The revival must take hold not only of individuals here and there, but of whole institutions; not only of the leaders, but of the grassroots."

I congratulate you all on your graduation; I wish you and your school and your families well in the years to come. My prayer for you is that you solve creatively, each one of you, the problem of authority and freedom, of discipline and independence, and that through your solution the world will be that much closer to realizing the possibility of freedom under God.

Without Depletion, the "Little Man" Might as Well Give Up

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following article, "Without Depletion, the 'Little Man' Might As Well Give Up," by Marion Cracraft, oil editor of the Tulsa Tribune. This article was written by the Tribune's oil editor at the request of North American Newspaper Alliance:

[From the Tulsa Tribune, July 18, 1959]

WITHOUT DEPLETION, THE "LITTLE MAN" MIGHT AS WELL GIVE UP

(By Marion Cracraft)

While some congressmen talk about reducing the 27½ percent depletion allowed the big rich oil companies, thousands of little producing companies or individuals out here in the oil country argue that without this provision they couldn't exist.

They outnumber a thousand to one, literally, the major companies which receive most of the attention in the press and legislative halls. And they find most of the oil which keeps the Nation's reserves at a safe level, from the standpoint of future supply and national security.

One fact which the general public doesn't know is that comparatively few companies or individuals actually are allowed 27½ percent depletion for tax purposes. A second fact is that the depletion provision is not a tax concession or allowance, it is simply the Government's method of determining how much of an oilman's income is actually income and how much is consumption of his capital.

A third fact is that depletion is not a provision exclusive to oil; it also is applied (though not at the same rate) to other extractive industries such as coal, iron, and various quarried minerals.

Not long ago the writer persuaded a Tulsa oilman—an independent producer—to let him have a peak at his books. An example was made of one well—what it cost, what the oilman may take out of it, if he's lucky, and how it will work out for him as far as taxes are concerned.

Here are some of the results:

No effort was made to find an extra good, or an extra poor well. A shallow well was studied, because the little man usually can't afford to drill the deep ones. This man is a veteran operator; he has been pounding away at underground formations for 30 years, sometimes successful, sometimes not.

This well was drilled to 1,866 feet and he struck oil. The drilling cost was $5,816. That comes to $3.12 a foot. If he had been going to as much as 10,000 feet depth, the cost per foot would have quadrupled, at least. A heavier rig would have been necessary; likewise heavier drilling power and more equipment.

Before he ever started, the operator paid a leasing cost to the farmer who owns the land. This was probably $1 per acre for the whole farm, 160 acres. Had it been in "hot" territory—closer to other production—this cost might have run to as much as $50 an acre. For this story it's immaterial, since the lease cost is not included.

Neither is there included a fee paid to a geologist, who told the oilman in the first place there might be oil there, and on whose advice he purchased the lease.

Once he had a showing of oil, the operator spent an additional $687 for development costs. These were incurred in treating (with acid) and/or "fracturing." The latter is a method of loosening the oil sand so the oil will flow. These two items, $5,816 and $687, come to $6,503 and fall into a class by themselves, as they are the only cost items which can be deducted as a whole from the well's income.

Next expense came in well equipment and lease equipment. Altogether, this totaled $6,426. It cannot be deducted; it must be depreciated at the rate of 10 percent per year. Depreciation: $642.60.

Finally, someone must operate the well. This came to $100 per month, or $1,200. This was cheap, because the same man was tending other wells on the lease and only a portion of his pay is charged to this well. Thus the operator was out-of-pocket first year expense of $14,129.

Our operator was lucky. This was a flowing well. Had it been necessary to install a pump, the equipment cost would have been much larger.

Now, how about income? From this well the operator may take, under State regulations, 14 barrels per day. Assuming it is top-grade oil, it brings him $3.05 per barrel—total, $42.70 daily. Again he was lucky—there was a pipeline handy, to take the oil from his tanks. If there hadn't been, he would have had to have the oil trucked to a pipeline, at a cost of 35 cents per barrel.

Something usually goes wrong—the oil deposits paraffin and this chokes the flow through the tubing; the well flows for a while and then begins to decline, etc. But we'll assume nothing went wrong and this well produced the whole 365 days of the year for a total of $15,585.50.

Of this the State takes a 5 percent gross production tax—$779.82. The landowner gets the customary one-eighth royalty—$1,948.18. The operator's revenue thus is $12,858.04.

Against this he can charge off the drilling and development cost, $6,503, and his lease attendant's salary of $1,200. And, he can charge off that 10-percent depreciation on the equipment, $642.60.

That leaves him $4,512.44. Most steelworkers, plumbers, or bricklayers make more than that, without risking a dime.

Right here is where the proponents and opponents of percentage depletion collide head on.

How much of that $4,512.44 is actual income, and how much is depletion of capital?

To replace the 5,110 barrels of oil he took out of the well, he must find 5,110 more barrels—or, in a few years be out of business. The only way he can find more oil is to drill more wells. The oil he discovers is his capital. He doesn't know how long the well will last or how much oil is in that sand 1,866 feet below ground.

More than 30 years ago Congress decided an oilman could be presumed to take out of the ground the first year 27½ percent of the oil in a given well or on a given lease. The second year, 27½ percent of what was left, and so on.

This depletion was allowed, to leave the oilman something with which to replace his capital—that is, to find more oil. The rate is higher than in other extractive industries because there is more risk.

The oilman may drill one well, or even two or three, all with the foregoing items of cost,

before he again strikes oil, even in "proven" territory. If he goes into "wildcat," or unproven territory, his success rate is likely to be one out of eight or nine.

But there is a joker in the depletion clause. Our producer cannot take 27½ percent of his $12,858.04 gross income. The law says 27½ percent of the gross but not to exceed 50 percent of the net income from a given property. So, this operator may charge off 50 percent of his $4,512.44 net, or $2,256.22. That leaves him an equal amount on which to pay income taxes.

That $2,256.22 chargeoff will save him tax money, but it's a long way from getting him another oil well with which to replace the capital he has exhausted.

This is no attempt to make it appear the great American oil industry is virtually on relief. We all know it isn't.

Even little oilmen make money, if they're smart enough and lucky enough.

How? In the first place, there is always the second year. If that well keeps on flowing, and there is no trouble, we can presume the operator again takes out a $12,858.04 gross income, against which he charges only $642.60 depreciation and $1,200 attendant's salary.

That leaves him paying income tax on half of $11,015.44.

It never works that way in practice. The well needs cleaning out, the machinery breaks down, or the pipeline company gets more oil than it can take and the well is shut down for several days. But assuming nothing like this happens, the second year income can be pretty good, providing the well doesn't give out.

(That phrase, "providing the well doesn't give out," is an extremely important one. The public hears much about the big gushers of the old days, which made men rich. It never hears about the wells which make 3, 4, 9, 10, or 12 barrels, on which thousands of little oilmen actually make their living.)

In the second place, having once found production, the little man can go to the bank and mortgage it for enough to drill another well. The more successful wells, the more income. If, in his search, he happens to drill a dry hole or two, that takes a big chunk of the profit from the first, or maybe all.

Seldom, however, can any oilman charge off the full 27½ percent the law allows. That is because of the 50 percent net income provision of the depletion law.

Depletion applies only to the income from a producing property or lease. It does not affect in any way the large, integrated companies' income from other sources, such as refining, pipelines, marketing.

These other activities' income is taxed at the regular corporate rate. The little man doesn't have these other revenue sources. His money comes from successful oil wells, or not at all.

So, while percentage depletion means something, of course, to the big, rich oil companies, to the little man it often means the difference between staying in business or being forced out.

TVA Self-Financing Legislation, H.R. 3460

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MILLIKEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. MILLIKEN. Mr. Speaker, I am firmly opposed to the proposed so-called TVA self-financing legislation H.R. 3460.

It is not $1.2 billion of taxpayers' money we are concerned with but $1.6 billion, less upward of $250 million which TVA has paid back.[1] The bill in question concerns itself with provision for payment of principle and interest on but $1 billion of this amount and interest payment on an additional $200 million. No provision is made for repayment of the $200 million of appropriated money supplied by the taxpayer. Nor is any provision made for interest to be paid on the balance of the $400 million derived from the use of money provided by the Congress and due the taxpayers, far less the repayment of the principal involved, $400 million in power revenues which was reinvested by TVA for purposes of increasing the power potential of TVA facilities.

On those moneys with which the bill does concern itself the existing legislated obligation of TVA to pay up within a 40-year period is canceled out by providing legislative authorization for an extension of the payment period to 54 years. In substance, it is proposed to partially allay the past criticism that TVA pays no interest on the taxpayers' money by requiring interest payments on part of the money advanced to TVA and apparently in return it is proposed to authorize the extension of the time period for payment of a reduced amount of principal repayment by 14 years.

The argument that more money would be required to be paid by TVA in the next year or so than TVA is now paying does not stack up against the current firm obligation of TVA to pay up a bigger principal in full within the shorter 40-year time period.

I do not believe Congress is safeguarding the best interests of the people when it deliberately sets about to abrogate its powed to initiate annual appropriations for such a controversial and socialistic operation as that of the TVA. Although the bill provides the Congress may disapprove, I do not need to tell you that such disapproval is seldom exercised in other instances where back-door-type financing is permitted. Nor probably do I need tell you that this minor prerogative is a far cry from the direct control over TVA we have constitutionally exercised in the past through the accepted manner of carrying out the people's business by direct annual appropriations.

As you well know many of us believe it is high time that less rather than more loopholes be provided for bypassing the Appropriations Committees of the Congress in funding the carrying out of operations and programs of the executive agencies. This bill will not only abrogate the exercise of our full powers but will legislatively enact a continuing back-door operation in the management of a public enterprise well heeled with some $1.3 billion of the taxpayers' money.

The language in the Senate bill does not effectively close the door to the further expansion of TVA. The Vinson amendment attempted to close the door to further expansion by stipulating that unless specifically authorized by the Congress, the present power facilities and those subsequently acquired by TVA shall not be used for the sale or delivery of power for use outside the service area of TVA as it existed on July 1, 1957, with the one exception that, when economically feasible, it is permissible for TVA to provide service for interconnection with other utility systems for exchange power arrangements which were in effect on July 1, 1957. This amendment has already been abridged in the Senate-approved draft of H.R. 3460 by permitting exceptions in a number of instances. This immediately raises the question, Why just these? Why not others? Believe me, if not now, the pressure will really be on for others in the future if we give the TVA $750 million bond-issuing authority.

Furthermore, the language in the Senate version of H.R. 3460 limits only the "making of contracts" by TVA and does not purport to place limitation or restriction whatever upon the resale or use of TVA power by its distributors. Consequently, insofar as transmission, distribution, and use of TVA power by its distributors and not by TVA itself are concerned, no limitation whatsoever is placed upon the transmission, distribution, resale, or use of TVA power outside of its existing service area. I believe the only effective way to keep TVA from unlimited expansion is to continue to require all appropriations to be made by the Congress.

It is probably safe to say that no Congress is going to be willing to give TVA $750 million or more in additional appropriated funds. A willingness on the part of Congress at this time to give TVA authority to issue up to $750 million in bonds in the face of our lack of enthusiasm for providing additional appropriated funds over a number of years is indicative of the extent to which the Congress would be abandoning its direct control over the scope and direction of the TVA power-producing and distribution system.

While I am willing to concede that there may be some justification for the Government to generate electric power as a byproduct of its flood-control projects in the Tennessee Valley, I am firmly opposed to the further encouragement and uncontrolled expansion of TVA's power-producing activities through steampower production facilities. It is for the expansion of these steampower facilities that we are being requested to authorize the issuance of up to $750 million in bonds and in so doing to relinquish our direct means of control over the activities of the TVA through the exercise of the annual appropriation process.

[1] TVA had paid into the U.S. Treasury, from power revenues, a total of $250,131,519.36 as of June 30, 1958.

Today's Tight Money

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. McCORMACK. Mr. Speaker, it is evident that the "high interest" and "tight money" policies of the Federal

Reserve System, concurred in and with the approval of the administration, is a matter of widespread interest. The people generally are becoming more and more aware of the implications involved in connection with effects upon their own economic life.

I include in my remarks an interesting article by Sam Dawson appearing in the Boston Daily Globe, Boston, Mass., of July 21, 1959:

ARGUMENTS WAXING HOT ON TODAY'S TIGHT MONEY

(By Sam Dawson)

NEW YORK, July 21.—It's harder and costlier now to get the money to build a house or buy a car or run your business. The same goes for running the Government or building a school where you live. And it's also true if you want a loan from your banker to take care of pressing and maybe unexpected bills.

It means that maybe some homes won't be built and some car purchases will be put off and some businesses will wait before starting or expanding.

The U.S. Treasury has to pay the higher price for money because it has payrolls and other obligations to meet. But some school boards and local governments will put off improvements they'd like to make. And some common stock buffs fear that the higher yields on bonds now may lead you out of the common stock market into the bond market.

How serious will all this be to the economy? Will it throttle a healthy growth? Or will it in the long run stave off more inflation—which to most of us simply means will it keep prices from taking off again on a sprint of just a slow, creeping pace?

The argument on this is hot—all the way from Washington where it is taking on ever louder political tones to Main Street where those pinched by rising interest rates live and work.

Even the effects so far are in dispute. Some say they've felt the squeeze already and expect it to get more painful. Others insist that the overall economy has been the gainer and that the majority of citizens also will be gainers, if the purchasing power of their dollars can be bolstered.

In the financial marts the visible effects of tight money are plain. The U.S. Treasury has to pay 4¾ percent on 12½-month notes to keep holders of maturing issues from demanding cash. It's the highest rate since 1928. Only a little while back Uncle Sam could get that kind of money for 2 percent.

Corporations have had to offer 5 percent or more to sell new bond issues. Yields on the best quality of tax-exempt municipal or State bonds have 1 to 4 percent or more, when 1½ percent once did the job.

Businessmen seeking loans at the bank pay from ½ to 1 percent more than a few months back—many now pay 6 percent.

In the consumer section of the economy—installment and mortgage debt—carrying charges on time-payment loans have risen and interest ceilings on Government-backed mortgages have had to be jacked up because builders couldn't find lenders willing to put up funds at the old rates. Six percent is now common in the nonguaranteed market.

To the ordinary citizen this means that monthly payments on what he might like to buy on the cuff are higher now than a year ago. Rising mortgage rates mean that home buyers pay more in the long run for a new house.

Increasingly of late would-be borrowers have been told the bank just was loaned up and couldn't help them.

All of this adds up to a curb on spending.

The money managers say this is necessary, that too easy money at the start of a boom would lead to speculation and an inevitable bust.

Those who think there should be more consumer spending and more outlay by new and growing business firms protest that tight money will keep the economy from reaching the level it should and kill prosperity rather than protect it from the risks of boom and bust.

S. 2014 and H.R. 7391 Should Not Pass

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. MASON. Mr. Speaker, in several recent sessions of the Congress, I have introduced a bill proposing to remedy a defect in the Capper-Volstead Act which was adopted on February 18, 1922. This year, my bill is numbered H.R. 200 and as always it proposes merely that "jurisdiction for determination of undue enhancement of prices by cooperative associations monopolizing or restraining trade" shall be transferred from the Secretary of Agriculture, who might understandably be prejudiced, to the Attorney General, who has jurisdiction in all other matters involving monopoly or restraint of trade.

I have never urged immediate action on this bill, for to the best of my knowledge only one cooperative has willfully taken advantage of the Capper-Volstead Act of 1922. That cooperative, the Maryland-Virginia Milk Producers' Association, has on several occasions defiantly entered a defense that the law urges cooperatives to become monopolies and offers them full protection if they do so.

It may have been, I suppose, in the thought that the protection of this law, which had worked so well before, might work again, that the Maryland-Virginia Milk Co-op bought, 5 years ago, the Embassy Dairy, one of the bigger suppliers of milk to the city of Washington and the District of Columbia. There was loud public complaint at the time, as I recall, for flagrant monopoly is not well thought of when it threatens the welfare of babies by control of their principal food. In time, complaint was lodged by the Department of Justice and eventually, hearings having been held, Judge Holtzoff of the district court declared that the Embassy purchase was in violation of the Sherman and Clayton Antitrust Acts and ordered the Maryland-Virginia Milk Co-op to divest itself thereof.

But, Mr. Speaker, as you probably know, the managers and leaders and attorneys of farmers' cooperative associations do not easily give up the advantages and special privileges that they have been given. Having grown to corporations that rival many big proprietary companies, they still have the colossal nerve to say that they are little, struggling partnerships. Admitting that the rank and file of their farmer members get less than $10 a year in patronage dividends, they still have the effrontery to ask Congress to tax those little farmers on paper that the courts have found without value now or in the foreseeable future. And on fat earnings they pay little or no Federal income tax, though parasitically they expect and demand service and protection and subsidies from the Government of the United States.

You may wonder why I have brought this matter up at this time. Let me tell you.

About 2 months ago similar bills proposing to put farmer co-ops into wholesale and retail business were introduced in the House and in the Senate. The Senate bill, S. 2014, was blindly titled "A bill to clarify and amend the Capper-Volstead Act (42 Stat. 388, 7 U.S.C. 291–292), and for other purposes." The House bill, H.R. 7391, was "to authorize farmers and other producers of agricultural products and/or their associations to own and operate agricultural sales outlets, and for other purposes." Strangely, both bills were referred to the Agriculture Committees—not, as would have seemed much more proper, to the Judiciary Committees.

S. 2014 was considered—God save the mark—by a subcommittee of the Senate Committee on Agriculture and Forestry. No hearings were held, though the matter was one of considerable national importance. And the bill was reported to the Senate, though some members of the full Senate committee had never even heard of the proposed legislation.

Mr. Speaker, to tell most of the rest of the story, let me present the news account which was printed on Monday, July 20, in the Washington Daily News, and, I hope, in all other Scripps-Howard papers from coast to coast. The headline, significantly, read, "Committee Acts Secretly: Retailers Here Fight Co-op Bill."

The article read as follows:

Manager Joseph Cotter of Hyattsville's Harvey Dairy said today his company and other local milk retailers are fighting a bill which might save Washington's big dairy farm cooperative several million dollars.

It sneaked through the Senate Agriculture Committee last week without hearings.

It would virtually wipe out District Court Judge Alexander Holtzoff's ruling of January 30, 1959, ordering the Maryland and Virginia Milk Producers' Association to sell Embassy Dairy of 1620 First Street NW.

Judge Holtzoff held that the big co-op bought the Embassy Dairy in 1954 to eliminate competition from farmers who supplied Embassy under its previous ownership.

The co-op paid about $4 million for Embassy, and according to other retailers here, have not been able to make it earn a profit.

Forced sale (ordered by Judge Holtzoff within a year after January 30) might mean a big financial loss to co-op members, who financed the deal.

But the bill reported July 14 by the Senate Agriculture Committee would get the co-op off the hook.

The co-op appealed Judge Holtzoff's ruling to the Supreme Court, which agreed to review the case promptly. The Senate bill would be retroactive, wiping out Judge Holtzoff's ruling and making Supreme Court action useless.

It would give all farm co-ops almost complete freedom to buy and operate retail outlets for their products with exemption from antitrust laws.

Justice Department opposed the bill in a seven-page letter referring to the Embassy case.

Deputy Attorney General Lawrence E. Welsh wrote the committee that this legislation would "have the effect of legitimizing an acquisition held to have been in violation of sections of Federal antitrust laws. * * * If acquisitions such as this are legitimized, cooperatives can deny actual or potential marketing facilities to other cooperatives or farmers simply by buying the facilities."

Acting Agriculture Secretary True D. Morse also opposed the bill.

Mr. Speaker, Senate Report 528, which was submitted when S. 2014 was reported out of committee, confirms the statement in the Washington Daily News that this proposed legislation is primarily for the benefit of monopolistic action by the Maryland and Virginia Milk Cooperative, though it sets the stage for widespread co-op acquistions.

The decisions of the court—

Says the report

cast doubt upon past and prospective acquisitions of facilities by many and varied farmer cooperatives. * * * The bill would make it clear that they may acquire facilities to carry out such activities from whatever source and would remove any question concerning past acquistions."

The report further states—

It does not appear that enactment of the bill would result in any additional Federal expenditure.

But you may note that no mention is made of the loss from Treasury revenues of taxes heretofore paid not only by the Embassy Dairy, which used to be a big taxpayer, but all other wholesale and retail outlets that the cooperatives can acquire, by fair means or foul.

Mr. Speaker, S. 2014 will presumably come before the Senate for action very soon. It should be defeated: First, because it is iniquitous legislation; second, because it was sneakily offered and was reported in hopeful secrecy; third, because it proposes to set up a monopolistic system under which the Federal income tax rolls can be raided again and again and again; fourth, because it would be at least unseemly for the majority party in this 86th Congress, which is so violent in its objections to even the least approach to monopoly among taxpaying companies, to condone and foster monopoly among the cooperatives.

H.R. 7391 is still in the hands of the House Agriculture Committee. I hope that it will be quietly shelved and forgotten, as the Justice Department and the Department of Agriculture have recommended.

Milwaukee Sentinel Says Factfinding Board Is Needed in Steel Dispute

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. REUSS. Mr. Speaker, it is significant that, across the Nation, there is growing recognition of the need for some kind of impartial factfinding and fact-reporting agency to help bring about a settlement, in the public interest, of such disputes as the present steel strike.

The following editorial, from the Milwaukee Sentinel of Tuesday, July 21, 1959, expresses the view that a factfinding board is needed in the steel strike, so that the public can be given the true facts, evaluate them, and let public opinion influence the settlement of the dispute:

STRIKE THOUGHTS

In an atmosphere of deepening pessimism Federal Mediator Joseph F. Finnegan resumes this week his efforts to bring about a settlement of the steel strike.

Prospects are dismal. The strike is piling up huge losses for the industry and workers. It is already biting into railroads, coal mines, trucking, river barges, and Great Lakes carriers, and causing layoffs of thousands of men.

Public opinion in this country can exert tremendous influence in settling any dispute. In order to exert it fairly, it is important to know the facts. In a matter of this kind, obscured by technological, economic, and financial considerations, it is important not only to know them but to have an impartial evaluation of them. What we have now are two sets of arguments, one supporting the position of the industry, the other that of the union.

For these reasons we disagree with the attitude of President Eisenhower that a factfinding board is not necessary. We think it is.

We also disagree with the suggestion of Steel Union President McDonald that Chief Justice Warren name an impartial chairman of a three-man board, the others to be chosen separately by union and industry.

Justice Warren is a controversial figure, which would limit public confidence in any choice he made, supposing he agreed to make one. In addition he sits on the Court to which litigation in the strike might be appealed and, therefore, he should not be even remotely connected with it.

A reasonable solution would be for the union and industry to name their members of the board and then for these two, each with a veto power over the other, to get together and select an impartial chairman. If one or the other used the veto to stall, it would soon become a matter of public knowledge and rebuke.

It is our opinion the chairman should be outside Government, experienced in labor-management affairs and with a record of fairness in which the public could put their trust. It would be an ordeal—there is no doubt about that—but one undertaken in the service of us all.

Mr. Speaker, while I perhaps might use a different method of choosing a factfinding board, I heartily agree with the Sentinel's basic premise that an impartial agency should be created to get the facts on prices, wages, profits and other factors involved in the steel dispute, and to give the facts to the public so that the weight of an informed public opinion can be brought to bear in this difficult situation whose outcome will affect every citizen of our country.

Furthermore, although the steel strike is today's main matter of economic concern, tomorrow's may be quite different. Clearly there is a need for a continuing, meaningful anti-inflationary policy of which a major ingredient must be an impartial, continuing factfinding body which can give the public the full facts, and let the weight of public opinion be brought to bear, in cases of price increases, and associated wage increases, which may tend to be inflationary or to otherwise disrupt our national economy.

This is a major feature of my bill, H.R. 6263, which has been reported favorably by the Committee on Government Operations and is pending in the Committee on Rules. A companion measure by Senator JOSEPH S. CLARK is before the Senate Committee on Banking and Currency. The need for this legislation becomes more evident as each day passes.

Are These Men Doomed?

EXTENSION OF REMARKS

OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Times News, published at Twin Falls, Idaho, and dated July 15, 1959.

The editorial follows:

ARE THESE MEN DOOMED?

COPE has fired its opening gun in the 1960 campaign. The AFL–CIO's Committee on Political Education has issued its first blacklist of seven Senators it says must not be reelected.

Their sin was voting against plugging what COPE calls some tax loopholes and against some increases in welfare payments from the U.S. Treasury. The loopholes proposals would have put an arbitrary ceiling on expense accounts regardless of the actual expenses, and disposed of some of the highly technical depreciation allowances.

COPE continues to insist that no one should be allowed to sit in Congress unless he is willing to help spend the Government into bankruptcy and help tax business enterprises into bankruptcy. Meanwhile, the unions it represents follow in their own business dealings the principle that you trim your budget to fit your income. They jealously guard unlimited expense accounts for many of their officers.

And COPE is getting ready to wage its biggest political fight so far when the country is making up its mind about the 1960 candidates, reserving its support for the taxers and spenders. COPE has learned nothing from the great public outcry against Government spending that has forced Congress to cut back many pet giveaway projects. It has ignored the several polls which have shown that union members are much concerned about inflation.

All things being equal, we doubt whether the condemned seven have much to worry about as the result of being slated for purging by COPE. The list, bipartisan, contains the names of several senior Senators of considerable distinction.

COPE's blacklist:

WILLIS ROBERTSON, Democrat, of Virginia, STROM THURMOND, Democrat, of South Carolina, CARL CURTIS, Republican, of Nebraska, THOMAS MARTIN, Republican, of Iowa, KARL E. MUNDT, Republican, of South Dakota, LEVERETT SALTONSTALL, Republican, of Massachusetts, and ANDREW SCHOEPPEL, Republican, of Kansas.

We think the voters of their States will prove that other factors weigh more heavily than COPE's condemnation of careful spenders.

In this connection, Mr. Speaker, I would like to invite the attention of Members of this body to my remarks of Tuesday, July 8, 1958, appearing on pages 13178 and 13179 of the CONGRESSIONAL RECORD concerning the activities of this same COPE in my State and the fact that a union member was told by COPE to withdraw from a congressional race because he had not conformed with COPE's constitution.

In view of this latest political activity by COPE, I believe it is of increasing importance that the Members of the Congress acquaint themselves with COPE, its constitution, and its purposes.

Mr. President in Retirement

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article by Frank L. Remington which appeared in the Columbia Knights of Columbus magazine for July 1959.

MR. PRESIDENT IN RETIREMENT

(By Frank L. Remington)

Upon the occasion of the dedication of the Truman Library not long ago in Independence, Mo., the only two living ex-Presidents of the United States were exchanging views. "What," inquired Harry Truman, "is the role of a former President?"

Mr. Herbert Hoover pondered the question thoughtfully for a few moments. Then he replied in half-serious levity: "The only thing for an old President to do is take pills and dedicate libraries."

It is true that Messrs. Truman and Hoover have each dedicated a library in his name, and also both doubtless gulp pills on occasion. It is equally true, however, that these two former White House residents maintain enthusiastic interests during their retirement.

In January 1961, President Dwight Eisenhower will join the ranks of the exclusive ex-Chief Executive of the United States fraternity. He is probably already wistfully contemplating settling down permanently on his Gettysburg farm.

Over the years many ideas have been advanced about what former Presidents should do. Recommendations have ranged all the way from making them nonvoting members of the Senate to relegating them to "dignified decrepitude." Actually, an ex-President's knowledge and know-how are valuable and his abilities should be put to use for the good of the Nation.

Up to President Eisenhower's administration, 25 of the 32 men who occupied the White House have lived an average of 11 years after laying down the reins of Government. This is somewhat longer than the average man has carried on in retirement.

Some of the ex-Presidents have experienced difficulty in stepping from the country's highest position to relative obscurity. Others have made the shift with surprising adaptability. An ex-President faces all the duties of a private citizen without realizing many of his privileges. He is constantly hounded by the public. So many pilgrims beat a path to former President Andrew Jackson's door to obtain autographs and locks of his hair as cherished mementos that "Old Hickory" saved barber's clippings for this purpose.

Souvenir hunters continually dog Messrs. Truman and Hoover. Mr Hoover reports that the avidness of memento seekers reaches ridiculous proportions. "They ask for doorknobs, old socks, spoons, old pipes, even my old spectacles."

At a conservative estimate Mr. Hoover figures he's signed some half-million autographs. Now he gives them only to children. One of his favorite stories, which he likes to tell on himself, concerns a youthful autograph hunter. The youth accosted the ex-President as he stepped from his New York residence in the Waldorf-Astoria hotel and asked for two copies of his autograph.

Mr. Hoover was glad to oblige, but asked, "Why do you want two"?

"Well, sir," the youngster replied rather sheepishly, "a friend of mine said if I get two of yours he'll trade me one of Ted Williams'."

Awhile back ex-President Truman facetiously avowed his intention of running for President again when he is 90. Actually, a number of former Presidents did return to politics. John Quincy Adams served in Congress for 17 years after his presidential tenure.

After the White House, Andrew Johnson—the only impeached President—vindicated himself by his election to the U.S. Senate. In his bid for reelection, Grover Cleveland was so disappointed in his defeat by Benjamin Harrison that he ran again 4 years later and was elected. He remains the only President to serve two nonconsecutive terms.

After the years of preoccupation with politics that usually precede a President's election, he finds it almost impossible to return to his profession or business. Most of the ex-Presidents had their fill of politics and followed other pursuits. Some became best-selling authors. Both Hoover and Truman are widely published writers.

Calvin Coolidge wrote little pieces for the newspapers, though he seldom could be prevailed upon to speak. When asked about his well-known reticence for public utterances, "Silent Cal" replied: "If you don't say anything, you can't be called upon to repeat it."

Some of the ex-Presidents turned to education. Ex-President Millard Fillmore became the first chancellor of the University of Buffalo. Rutherford Hayes was elected a trustee at Ohio State University. Harry Truman regularly lectures at various colleges. William Howard Taft in his 17 years after the White House taught at Yale for a period. Later he assumed the duties of Chief Justice of the U.S. Supreme Court.

A former White House resident who attempts to take an active role in private business is usually charged, however falsely, with exploiting the high office he once held. Ulysses S. Grant, is the only ex-President who seriously tried to make a go of it in private business. His efforts met with dismal failure. Grant was left penniless.

To satisfy creditors, the Civil War hero and two-term President pawned the mementoes of a lifetime: his swords, souvenirs, and gifts. His greatest battle was his final one. Struggling against the ravages of cancer, he wrote two volumes of memoirs to provide his family with funds. He drew his last breath 4 days after reading the last page proof. The memoirs brought close to half a million dollars to his heirs, but Grant died in virtual destitution.

Other ex-Presidents, too, were financially hard pressed in retirement. After leaving the White House, scholarly James Madison lived for 20 years in genteel poverty. Ex-President James Monroe sadly abandoned his debt-ridden plantation in Virginia and lived on the bounty of his son-in-law in New York.

Andrew Jackson left the White House with barely $90 in his pocket. Swallowing his pride, he accepted loans pressed on him by close friends. Haggard and crippled, Woodrow Wilson retired to a debt-free home only because admiring friends paid the mortgage.

Completely dedicated to public service, Thomas Jefferson neglected his private affairs. The generosity of a wealthy widow enabled him to meet the demands of Washington shopkeepers, who might have thrown him into debtor's prison when he left the White House. In retirement, he sold land and mortgaged Monticello, his estate, to the hilt. To obtain additional funds, he sold his priceless collection of books, which became the foundation for the Library of Congress.

Fortunately, neither of the two living ex-Presidents is a candidate for the poorhouse. Mr. Hoover has a tremendous net worth built up in the years when he was the world's No. 1 engineer. Mr. Truman's memoirs and other writings assure him a competence.

Never again will an ex-President of the United States know the grinding, shameful poverty of Ulysses S. Grant or Thomas Jefferson. Federal legislation that went into the statute books in 1958 guarantees an annual pension of $25,000 to all former Presidents.

Some of the ex-Presidents were plagued with bitterness and sickness, while others enjoyed surprisingly good health. For a spell, post-presidential problems so overwhelmed Franklin Pierce that he became an alcoholic. His overindulgences made the former President a frequent spectacle as he wandered about the streets.

Despite his financial difficulties Thomas Jefferson remained in excellent health until death overtook him in his 85th year. He attributed his remarkable physical condition to his daily ritual of soaking his feet in a tub of ice water.

Benjamin Harrison enjoyed a robust physique throughout his life. In retirement, the dignified ex-President frequently pedaled his bicycle along Indiana roads. At the age of 70 he gave the following key to his health: "I have taken but one dose of medicine in 30 years and that was forced on me unnecessarily. * * * I never smoked or chewed tobacco. I never knew intoxication. Throughout all my public life I maintained the same regularity and systematic habits of living to which I have previously been accustomed. I never allowed my usual hours of sleep to be interrupted."

Ex-Presidents Millard Fillmore and Benjamin Harrison, both widowers, found romance and married after the White House. Nearing 63, Benjamin Harrison wooed and wed the 38-year-old niece of his first wife. They had one child, a daughter, born the year after their marriage.

Some of the ex-Presidents have indulged in feuds with their successors, like the familiar animosity now existing between President Eisenhower and Harry Truman. Perhaps John Adams, the second President, set the pattern for this petty pastime when he wrathfully called George Washington, his predecessor, an "old muttonhead."

Ex-President Theodore Roosevelt barraged his successor, William Howard Taft, with letters of advice on every conceivable subject—even to tell him not to allow himself to be publicized as playing golf. Taft usually ignored Teddy's gratuitous counsel.

At an age when many men would choose slippers and the rocking chair, the two living ex-Presidents continue to live busy and fruitful lives. They are retired, but only from the field of active politics. Mr. Truman's office is in the Truman Library in Independence, Mo. At 75, he retains a consuming interest in politics and is much in demand as a speaker. He also writes articles for a newspaper syndicate and carries on a voluminous correspondence.

Halfway through his eighties, Mr. Hoover has slowed down a bit, but carries on a program that would stagger the average man of half his age. Writing, making an occasional speech, and directing work for a host of philanthropic organizations, he still puts in a good 12- to 15-hour workday.

As he plans for his years after the White House, President Eisenhower—or anyone else who faces retirement—can well emulate the leads of Messrs. Truman and Hoover. Mr. Hoover is a prime example of his own philosophy of retirement: "There's no joy to be had from retirement except some kind of productive work. Otherwise you will degenerate into talking to everybody about your pains and pills and income tax * * *."

Mr. Truman continues to live by the formula that has guided him most of his life: "Work hard, walk fast, sleep light, and relax."

Integration in the Army

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Morton Puner, editor of Bulletin, a publication of the Anti-Defamation League of B'nai B'rith. Mr. Puner's article appeared in the New Leader, January 12, 1959, issue.

INTEGRATION IN THE ARMY

(By Morton Puner)

One of the great dramas in the American race relations dilemma has been staged thousands of miles from the United States. Since 1948, the Department of Defense has been integrating installations throughout the world. In the past five years, virtually every single problem, fear and specter concerning integration has been coped with by the Army, Air Force, and Navy:

How can segregated units best be broken into combat-ready integrated ones? Is an integrated force more effective?

Does integration mean forced social mixing of the races; does it lead to such things as interracial dancing, interracial sexual relations, interracial marriage and "mongrelization of the races?"

How does integration affect basic attitudes? To what extent does a law (or in this case, a Presidential order) help whites and Negroes to work together, play together—and like it?

Does officially-imposed integration mean an end to the right of privacy, an end to a man's choice—and his children's choice—of friends?

To find answers to these and related questions, I recently made a two-month, 9,000-mile trip to some 25 U.S. Army bases and their surrounding communities in Europe. Europe, I felt, offered a better laboratory for this kind of study than the United States or other areas of the world where we have troops. For in Europe, while the society about them is white, Americans are relieved of regional stresses and restrictions: they are freer to act as conscience, not just custom, dictates.

All the Americans I met are, in one way or another, affected by Presidential Executive Order 9981 which, 10 years ago, set the policy of equality of treatment and opportunity for all persons in the armed services without regard to race, color, religion, or national origin." In the early 1950's, integration was completed in Defense Department installations throughout the world. Today Negroes, who make up about 10 percent of our uniformed population, eat, sleep, and train with white troops, and attend the same service schools and clubs. About 2.7 million Americans are in uniform; 1.3 million civilians work for the Defense Department. In addition, wives, children, and other dependents have been subject to integration in their education and social lives.

The Army bases I visited in Germany, Italy, and France comprise nearly a tenth of all Defense Department personnel. In Germany, where the bulk of American troops and their families are stationed, the bases I visited were Heidelberg, headquarters of the U.S. Army in Europe (USAREUR), and Stuttgart, Seventh Army headquarters. In Italy it was Verona, headquarters for the Southern European Task Force (SETAF); in France, Orleans, headquarters for the Army's Communications Zone (COM-Z).

I had free access to all unclassified Army facilities, to training fields, and barracks, service clubs, and post exchanges. A large percentage of Army families manage to keep intact overseas; nurseries, schools, hospitals, restaurants, and garden-apartment developments are important Army facilities abroad too. I also had access to all these—and to the emotions and responses of Americans to integration.

Social problems: How does the Army handle interracial dancing, which seems about as disturbing to partisans of segregation as most other social aspects of an integrated society? Officers' clubs are open to all commissioned men regardless of race. At an officers' club dance, is a white officer's wife—no matter what her own feelings—under compulsion to dance with every Negro officer who asks her to? Is a Negro officer compelled to dance with, say, his white colonel's lady?

Colonel Quirey was formerly commanding officer of the now deactivated 88th Airborne Anti-Aircraft Battalion in Southern Germany. Because it included an old segregated unit, almost a third of its officers were Negroes. At the battalion's first dance in Germany, the colonel assumed that all his officers would ask his wife to dance—an Army custom at the first dance at a new base. But not a single Negro officer came up to Mrs. Quirey.

"My wife and I knew what had happened," the colonel said. "She's from Georgia, I'm from Kentucky. The Negro officers had not asked her to dance because they were afraid of embarrassing us." But before the second dance, one Negro officer asked the colonel, in private, whether it would be all right if he asked Mrs. Quirey to dance. "I said certainly, and he did. They danced together and the Negro officers had their cue."

A few white officers who discussed the dance with Colonel Quirey felt that he had imposed a burden on them. Wouldn't their wives now be obliged to dance with Negroes too? Colonel Quirey said there is no such compulsion; each man and his wife are free to do exactly as their taste dictates. This principle seems to apply generally among officers and their wives. Of course, this leaves room for prejudice to operate, but prejudice plays less and less of a role as whites and Negroes serve together longer.

Nevertheless there is no pell-mell, mass social mixing of the races. The pattern of off-duty integration in the Army is directly related to the cultural and social level of each soldier, and to what he is looking for in the way of after-hours fun.

In Paris, GIs rarely integrate when they go to the honky-tonks of Montmartre. At the level of the German gasthaus—where, in venerable tradition, GIs do full-scale research on the quality of German beer—there is little or no integration. Moselstrasse, near the Frankfurt main railroad station, is a street filled with bars with such American names as City, Dolly and New York. At one end, it has three bars whose clientele consists solely of Negro GIs. The rest of the many bars along the street are filled with white soldiers only.

On higher social and cultural levels there is much more off-duty integration. Together white and Negro GIs listen to the summer opera in Verona, together they play soccer against the still-superior European teams, together they walk in Frankfurt's exquisite Palmengarten on a Sunday afternoon.

Such contacts between white and Negro in the Army abroad are far more frequent than in civilian life at home. They develop naturally from extensive association at work and in barracks life. "More and more, these days, you find that a white family will come to a Negro family, a Negro to a white, for help in times of emergency," Colonel Quirey told me.

The last-ditch argument of the segregationist is that integration leads to interracial sex and marriage. "How would you like your sister to marry a Negro?" has become almost a classic rhetorical question. Does integration in the Army—on and off duty—lead to intermarriage between whites and Negroes? The question was much discussed when integration first went into effect, but today it is hardly an issue. To find out why, I sought to determine Army practice and experience with interracial marriages.

I asked Col. Wayne L. Hunter, chief chaplain of the 7th Army, how he and his staff counsel Negro soldiers and white girls who intend to marry. Basically, he said, they treat interracial marriages the same as interfaith marriages, in which the chaplains counsel on matters of baptism, circumcision, and other rites. The Army informally tries to provide Negro chaplains to counsel Negro soldiers when possible. Chaplains, white or Negro, neither encourage nor discourage such marriages. But the white girl will be told about various hazards to successful interracial marriages, for example, laws against miscegenation in Southern States. (The Department of Defense abides by State laws on miscegenation; a Negro soldier returning with a white bride will be assigned to a base in a State where his marriage is permitted.) Then the couple has to wait 6 months before marrying.

During and immediately after World War II, many white European girls became brides of GIs, some of them Negroes. But with European economic recovery, such marriages have become less frequent. In Washington, a Pentagon official, a Negro, told me that interracial marriages in the Army abroad are now rare. "And often there is something sociologically extreme about them—they seem to be end-of-the-road marriages for both parties and they usually don't work out," he said. "In many cases, the girl cuts loose as soon as she gets her bearings in the States. It often becomes clear to the soldier that she married him just to get away from a miserable life."

Formal integration, the records show, has little bearing on the type or number of interracial marriages. For one thing, equal opportunity in education and jobs, as offered in the integrated Army, has given the Negro soldier a new pride in himself and in his race. The question, "How would you like your sister to marry a Negro?," becomes two-edged. In a barracks discussion on the subject, I overheard one Negro sergeant say to another—with only a bit of irony—"How would you like your sister to marry a white man?"

In turn, the white soldier, under integration, has come to accept individual Negroes as his friends. This does not mean that he has any newly awakened desires to marry a Negro or any preference that his sister marry one. It does mean that he has a new understanding of Negroes and is able to put unwarranted fears in their proper place. He is apt to answer the rhetorical "How would you like your sister to marry a Negro?" with

the just as rhetorical "She can say no, can't she?"

Negro observations: I found that Negro soldiers are the best barometer of social changes brought about through integration. They are most affected by it so they are also most sensitive to the attitudes of the majority around them. The observations of two Negroes, Lt. Col. Lester McCants in Germany, and Louis Outlaw in Italy, are representative of what I was told by almost every one of the Negroes to whom I spoke.

Colonel McCants, who has been in the Army since 1941, has gone through the whole desegregation process. Today he commands the 7th Army Air Field base near Stuttgart. More than 470 officers and men, white and Negro, serve under him. Colonel McCants piloted the six-seater L-23 which took me from Germany over the Alps to Italy. His crew consisted of a warrant officer and an enlisted man, both white. The three men had flown together many times and there was no awareness of race. Colonel McCants was clearly the responsible person aboard the plane, the most experienced, and the boss.

Colonel McCants lives in Stuttgart with his family; integration has given them all a new kind of life. He enjoys his tour in Germany and believes that the German attitude toward Negroes is "pretty good, contrary to the effect that Hitler intended."

He had to think hard to recall recent incidents concerning race in Army life. He finally thought of one. Army families often join in songfests. As white and Negroes sing along together, they frequently come to songs like "Old Folks at Home" with its words: "Oh, darkies, how my heart grows weary, far from the old folks at home." He knows that some of his white friends are embarrassed when they realize they are using the offensive term "darkies." An officer's wife once apologized for it. Colonel McCants told her that he knows the song is basic Americana. "No need at all to be embarrassed," he said.

Louise Outlaw is the tall, stately wife of Warrant Officer LeRoy Outlaw, Quartermaster at SETAF in Verona and the only Negro officer stationed there. Inevitably, she says, the subject of race relations in the United States crops up in her talks with Europeans: "Some people say to me, when they learn that I'm an American Negro, 'Oh, I'm sorry for you.' I tell them not to feel sorry for me. I'm glad I'm an American, proud of my race and of the progress we've made in the United States. I try to tell them that the problems of desegregation they read about—if they think them through—are really symptoms of that progress."

Mrs. Outlaw feels that being a Negro gives her an opportunity both to help Europeans understand Americans and help other Americans understand Negroes. One of her best friends in Verona is a white woman from Texas who told her, "Honey, I could hang my head in shame when I think of the things I thought and said about Negroes in the past." She believes that such candor is an American virtue, a basic help in getting Europeans to know and like us. "I visited the World's Fair at Brussels and saw the American exhibit," she said. "I think that one of our smaller displays there was most effective, the one called 'America's Unfinished Business,' which faces up fully to our problems in democracy. This kind of honesty affects Europeans deeply."

The Outlaws have been married 15 of Warrant Officer Outlaw's 17 years in service. They lived in Tennessee and Washington, D.C., before coming to Europe. The integrated Army years have been the best years of their lives. "Now there are no longer the initial barriers and hostilities in making friends," Mrs. Outlaw said. "People have known Negroes before; they're most apt to judge each Negro, to be friendly or not on the basis of his character and personality—not his skin color."

Integration doesn't mean forced and indiscriminate mixing, she pointed out. "I keep an eye on my children's choice of friends; I want them to be with people of certain standards of honesty and goodness. But we just don't judge by the prejudiced values of religion or color." She understands the thousand ways and hurts of prejudice. "Sometimes, I hear a friend refer to the Italians as 'guineas.' I tell her not to, that such terms hurt me as well as the Italians."

Mrs. Outlaw herself offers a case study of the influence of integration on social attitudes. She is the mother of three children, and a member of the SETAF Parent-Teachers Association for the American grade and high schools, consisting of 240 pupils. This spring, the PTA members—almost exclusively white—elected Mrs. Outlaw as their president.

The consequences of integration can be both touching and ironic. A young Negro soldier, on his way from Vicenza to Milan to meet his wife who had just arrived from the States, told me of his concern: In Italy, American soldiers with their families live "on the economy" in apartments or homes alongside Italians, and they share in community living. As a single soldier, the Negro had previously lived only in barracks, sheltered by the benign atmosphere of the integrated Army. Now he would be housekeeping with his wife and living with Italians. He asked me, very earnestly, "How do you think they'll take to a Negro couple?"

Negroes appear to be aware of the educational lag from which they suffer and seem eager to lessen it. They are the most persistent and hard-working students at the various Army schools, technical and general. Above 14 percent of the Army's Negroes are now taking courses with the U.S. Armed Forces Institute; the figure has more than doubled since integration went into effect. The percentage of whites taking such courses is about 9 percent.

Negroes have also achieved a degree of rank and service barely envisaged during World War II. When the war ended, the percentage of Negro officers was 0.99 percent. Shortly after the war as more Negro than white officers chose to stay in service, it rose to 1 percent. Today, under integration, the figure is 3 percent. In the Seventh Army in Germany—our largest peacetime force ever assembled on foreign soil—Negroes represent 4.8 percent of all officers, 10.24 percent of all enlisted men.

There have been cases in the past of a white officer smarting under orders from a Negro and trying to avoid carrying them out. Today, almost universally, there seems to be quiet and complete accepance of the idea that if a Negro officer reaches a command rank, he has earned it thoroughly and is entitled to all its privilges and authority.

Negroes make up about 10 percent of all Armed Forces personnel, but they represent about 15 percent of all noncommissioned officers. To achieve and keep these positions they must attend service schools, diligently and in large numbers. This they do, particularly in the guided missile and other technical fields.

These and related figures on whites and Negroes, incidentally, are hard to come by. Bookkeeping by race is becoming rare in Defense Department installations, and military orders are less apt to make use of racial designations. There has been much Pentagon discussion of the use of records by race in the integrated services. Generally, the attitude is that no basic rights are lost simply by reference to race in service documents; the damage or gain is in the way such references are used. Racial designations are no longer used in reporting statistics of civil or military crimes. But sometimes personnel officials need to know the racial composition of troops in order to institute a form of benign quota; otherwise a unit might be assigned a preponderance of Negroes—or an insufficient number of them—and so take on the character of a segregated unit.

Military performance: How does integration affect military performance? During the Korean war, the Army sponsored studies in depth of the battle performance of mixed units. Nine out of ten white officers in Korea rated integrated units equal to or better than all-white units in morale, courage, and teamwork in combat. Korea was the first great testing-ground for Negroes fighting in the integrated Army and they passed their test superbly. Now, 5 years after the armistice, I found that the veterans of the Korean war decidedly favor integration as a practical necessity. Sometimes, officers are almost evangelical about the military gain of integration.

Maj. Gen. Harvey Fischer, a West Pointer who comes from California, commanded SETAF in Italy. He expressed surprise at the question, "How do you rate integrated units in combat?" "I had the privilege of serving in Korea," he said. "I've seen integrated troops in action. What's the difference if a man is black or white? Heart is heart, blood is blood, muscle is muscle. Of course integrated units are at least as good as all-white ones in combat."

Lt. Col. Wiltz Bethancourt, who comes from Arizona and is now with the Seventh Army in Stuttgart, declared: "Unquestionably, integrated units are better in combat than segregated ones. Because of their environment, many Negroes had to grow up physically tougher, better able to stand combat conditions. Now, under integration, we can pick our noncoms from the best of all races and make up better cadres."

The military being the military, integration in the Armed Forces is a fact and not a matter for controversy. But of 75 officers who had served in Korea, not one doubted the quality of integrated units in combat.

Our allies' reactions: I visited Europe almost a year after the Little Rock school desegregation crisis. The photograph of a Negro being beaten to the ground near Central High School by a mob of howling whites had been featured prominently in most European newspapers in September 1957. A year later, that image still remained in many minds, giving an ugly, distorted picture of American life.

Integration in the Army clearly helps to correct this image in many ways. Many Germans respect the American Army as an efficient, well-disciplined fighting force. But they learn something else about America when they see two American officers—one white, one Negro—descending together to the basement of their Army apartment building, huge bundles in hand. Their Saturday afternoon mission: The week's wash for their families in the basement laundry machines.

In Paris, a woman writer, an anti-Communist intellectual, told me she would never visit the United States because she would be uncomfortable amid "the evidences of the bondage of second-class citizenship in which you keep your Negroes." One day she traveled with me to Orleans to the Army's COM-Z headquarters. She toured the post exchange and snack bars, service and officers' clubs. She saw the easy friendliness among Negro and white soldiers, the casual acceptance of equality on both sides. She was astounded. An intelligent woman, she acknowledged that she had judged without real evidence.

In Italy, SETAF published an Italian personnel manual for its 4,000 Italian employees. It provides identical privileges for Italian and American civilian workers, including maternity leave, a 6-hour day, 13th-month bonuses—and an antidiscrimination clause.

Printed in Italian and English, the manual makes U.S. Army—and Government—policy clear: "In accordance with the policy of the U.S. Government of nondiscrimination for its citizen employees, this same policy to the extent legally possible is extended to Italian employees of SETAF."

The manual sets up machinery for investigating complaints and satisfying all persons who believe that they have been subject to discrimination because of "race, color, religion, or national origin," with final decision to be made by the commanding general. Because of these provisions—and the fact that they are enforced—the people concerned know that the Army means what it says about integration and equal opportunity. The 4,000 Italian employees at SETAF seem to be about the best good will ambassadors for America that I have ever met.

Integration and prejudice: To what extent does integration do away with prejudice, not just during military service, but after it? The answer, I found, depends upon the breadth and type of individual experience. In the end, it is personal knowledge of the acts and characters of people, white or Negro, that lowers the barriers of prejudice.

Maj. John T. Martin, a Negro from New York, cites his experience with a white officer who served with him on court martial boards in Heidelberg. The officer was reared in Greenwood, Miss., attended the University of Mississippi and became a lawyer. After several years in the Army, the officer had a dilemma. The Army had given him new insights and attitudes. He did not know how he could ever again return to Greenwood—fountainhead of the White Citizens Council movement—"where 95 percent of my friends are council members." "As a matter of conscience, I can no longer tolerate and live with their prejudice," he said. His wife agreed and suggested that they don't go back to Greenwood. But a man's roots, spiritual and economic, are strong. The dilemma still faces the white couple.

Major Martin says that from this and many other experiences he has learned a basic lesson. Don't prejudge a white man by his accent or by the name of his hometown or State.

Other problems that result from integration are evident in some parent-child relationships. At Army schools abroad for dependent children, integration is complete. Outside of school, parents can use whatever standards they favor in helping their children select their friends. The result is often confusing for the child whose parents will not let him associate with Negroes after school. He may become baffled and resentful—of his parents, of his school, or perversely, of Negroes in general. The problem is a real one for some few parents and children, an unhappy concomitant of the process of integration.

Integration also engenders vital personal struggles, not only for the prejudiced but also for those who think they are unprejudiced but have heretofore been able to rationalize their own preference for segregation. These are the people who believe in equality of opportunity in the abstract—but who don't really care to live in an integrated society.

The Army experience shows some of the ways that integration will eventually affect the lives of those coming into contact with it for the first time. At present, the armed services are more advanced in their race relations than the rest of the United States. Perhaps it is uniquely fitting that this should be so, that in one of the greatest peacetime battles of our history, the Armed Forces should be leading the way to victory.

Trinity Project: Representative Utt Spells Out Taxpayer's Interest

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. HOSMER. Mr. Speaker, on July 7 the Chico, Calif., Enterprise-Record carried an editorial comment based on views of our colleague, the gentleman from California [Mr. UTT], regarding the Trinity project which is pertinent to consideration of this vital issue and particularly relevant to U.S. taxpayers' pocketbooks.

The editorial follows:

WORTHWHILE READING ON TRINITY PROJECT

A week or so ago, Gov. Edmund G. Brown sent a statement to Washington urging the Senate Appropriations Committee to approve funds to get the Government started on Federal construction of the power facilities on the Trinity River project.

In his statement, Governor Brown assailed President Eisenhower's partnership plan, recommended by Secretary of Interior Fred Seaton, under which the Pacific Gas & Electric Co. would build the power facilities (at its own expense) and buy falling water from the Government to generate power. (Seaton's Department of Interior figures say partnership would save the Government more than $300 million.)

In his statement against partnership, Governor Brown stressed that California is now underway on its vast water resources development program. But he reminded that the State can't do the job by itself.

"This State must continue to seek assistance from the Federal Government such as it has appreciatively received in the past," Brown said. He went on to voice his opinion that, "The State will not receive this assistance to the maximum extent required if the Pacific Gas & Electric Co. constructs the power elements of Trinity."

Along with his statement to the Senate committee, Governor Brown also sent telegrams to Members of Congress urging them to work against the partnership plan.

Representative JAMES B. UTT, Republican, of Santa Ana, was one of the Congressmen receiving telegrams. As coauthor of a measure currently before Congress to approve the partnership plan, Representative UTT is in possession of volumes of testimony which in past sessions have established the partnership idea as proper.

A man who keeps the interest of the taxpayer always foremost in his mind, Representative UTT sent a return telegram to Governor Brown explaining some of the financial angles—and possible consequences—of the Trinity power controversy. UTT's telegram to Governor Brown is worthwhile reading for all citizen-taxpayers:

"DEAR GOVERNOR: Regarding your telegram, I am glad the legislature has approved the California water resources development program. You say California must rely upon and hope for continued and increased Federal participation. That the problem is rapidly becoming critical. This I realize.

"The San Luis project is important to the development of the State program and you are asking the Federal Government for millions of dollars. To implement this overall program will cost near $2 billion and requires not only cooperation of the Federal and State governments but also financial assistance from private enterprise when it is ready, willing, and able to assist.

"Private development of the power facilities at Trinity (partnership) would save the Federal Government $300 million over the life of the contract—and yet you insist that the taxpayers install this facility and give the power away at one-half the cost of production to a few preferred customers.

"The effect of this would be to completely deplete the surplus in the Central Valley project. This surplus was supposed to be used for additional water conservation and to divert it is a violation of the public trust.

"The partnership development of the Trinity power resources would be a cash register which would pay the entire cost of the San Luis Reservoir, which is part of the overall Central Valley project.

"Unless the Trinity power facility is taken off the backs of the taxpayers and made to work in behalf of the taxpayers (through partnership) I intend to oppose the San Luis Reservoir project before the Rules Committee and on the floor of the House as being an unnecessary expense to the American taxpayers when the cost could well be paid from revenues and savings generated from private development of the power facilities of Trinity.

"JAMES B. UTT,
"Member of Congress."

In our mind, Representative UTT's telegram tersely sums up the issue. Federal construction (public power) at Trinity would be a money-losing venture for the taxpayer because the power would be sold to a few preference customers for less than the cost of production. This would frustrate existing Federal law which says that power from projects should help pay the costs of the projects—it is clear that selling power for less than it costs would produce no revenue.

Partnership, on the other hand, would save the Government the cost of constructing the power facilities—and then would provide a steady income over the years through the purchase of falling water. This income would, of course, help pay the costs of the Trinity project and others, such as the San Luis Reservoir.

Governor Brown and others who are pleading the cause of public power at Trinity should examine the issues more closely. Representative UTT's telegram should be must reading for all of them.

Business Week Editors Evaluate Ways and Means Committee Interest Ceiling Bill

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. REUSS. Mr. Speaker, the Federal Reserve's predictions of disaster in the wake of the adoption of the Metcalf amendment to the Ways and Means Committee bill to raise the present 4¼-percent interest ceiling on long-term bonds have been quietly and firmly contradicted by a responsible spokesman for the business community. Business Week, in its July 18, 1959, issue, states that the administration's and the Federal Reserve's stand on the amendment is puzzling in view of the constructive

nature of the amendment's instruction to the Federal Reserve.

The editorial follows:

MORE FLEXIBILITY IN DEBT MANAGEMENT

More heat than light has been apparent since the House Ways and Means Committee approved a bill that would lift the present arbitrary 4¼-percent ceiling on the interest rate the Government can pay on new issues of its bonds. Although the committee bill would give the Treasury substantially what it asked, there is now grave doubt that it will be passed, because the administration and the Federal Reserve are taking strong objection to it.

The administration's attitude is somewhat puzzling. For the committee gave the administration what it most wanted—namely, greater freedom to conduct its debt management operations.

To be sure, the victory was limited, but many experts had been sure that the administration was headed for total defeat. The Democratic majority in Congress is not in sympathy with any more toward higher interest rates; yet it acceded to the administration's request for a lifting of the ceiling, adding the proviso that the President take responsibility for doing so and limiting this freedom to a period of 2 years.

These limitations do not seem too big a price to pay. Under present conditions, the Treasury has been severely handicapped. With the Federal Reserve pursuing an increasingly restrictive monetary policy, and with private borrowers stepping up their demands for credit, the Treasury has been completely frustrated, forced to confine itself to selling short-term obligations. This has not only proved costly but is also potentially inflationary.

The committee, headed by Representative WILBUR MILLS, recognized that failure to act would place the onus for the Treasury's plight on Congress. It decided to give the Treasury greater freedom but placed the responsibility squarely on the White House. Given the political realities, this is an understandable compromise.

But the President has objected both to the 2-year limitation and to an additional amendment which suggests that the Federal Reserve should seek to assist the Treasury by more flexible open market operations when consistent with administering a sound monetary policy.

This amendment has alarmed many faithful supporters of the Fed, who have interpreted it as an allout attack on the independence of the central bank.

There is nothing in the amendment itself to support such an extreme view. It is, in fact, a very moderate statement. It does not seek the restoration of the pegged market that made the Fed an engine of inflation. It does not lessen the Fed's authority, nor does it strip it of the weapons it possesses. It merely points out that it is the sense of Congress that the Fed's open-market operations should show greater flexibility.

The implication is plain that the committee feels the money managers have been unduly rigid in their insistence that in carrying out open-market operations the Fed should deal only in bills and should never buy or sell the longer-term securities. Many observers who can be counted as good friends of the Fed share this opinion of the "bills only" doctrine. Allan Sproul, former president of the New York Federal Reserve Bank, for example, recently criticized the money managers for their unswerving allegiance to orthodox high church policies. Sproul thinks that the Fed should assist the Treasury's debt operations whenever it appears necessary.

This is the practice followed by every other central bank in the Western World. Only the Fed has followed a hands-off policy.

There is some hope that this attitude may be changing. The Fed is now at pains to point out that it really follows a bills usually policy rather than bills only. If this is the case, it can certainly live with the committee's amendment as easily as the Treasury can.

HEART OF THE PROBLEM

But some Fed supporters insist that Congress wants to curb the Fed's hard-won independence. It cannot be denied that congressional critics have frequently accused the Fed of acting as a fourth branch of government, responsible and responsive to no one. For its part, the Fed has taken the position it must remain free of administration pressure; otherwise, it will revert to its position as a handmaiden of the Treasury. It draws support for its position by arguing that its authority derives from Congress, not from the executive.

Now the committee is seeking to make the Fed responsive to Congress. It is not seeking to put the Fed in a subordinate position but is indicating that the Treasury's subordinate position should be replaced by something approaching equality.

We think there is merit in this position. The committee's solution is far from ideal, but even under the best of circumstances, it is doubtful that a perfect solution could be achieved. In recognizing that the U.S. Treasury deserves special treatment, the committee has hit at the heart of the matter.

The fact is that the national debt, which is close to $290 billion, can have an enormous influence on our economic position. To handcuff the debt managers, to treat their problem as if it were the same as that of any private borrower, is to accept a doctrinaire and unrealistic approach. The Treasury must have freedom, and the Fed should provide as much support and cooperation as possible—consistent with carrying out its own policy. The committee's bill seeks to encourage it to do just that.

Puerto Rican Constitution Day

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. MULTER. Mr. Speaker, July 25 is a date of deep significance both for us here in the United States and for our fellow citizens in Puerto Rico.

Just 64 years ago the landing of American forces on that island brought the Spanish control of Puerto Rico to an end. Exactly 54 years later, on July 25, 1952, Puerto Rico adopted the constitution by which it entered into the unique and happy status of a commonwealth in union with the United States of America. On this, the seventh anniversary of the founding of the Puerto Rican Commonwealth, it is indeed fitting that we should pause for a moment to pay tribute to our remarkable neighbors to the south with whom we have experienced such a harmonious and fruitful association.

Few people with so little prior experience at self-rule have managed to rise to the challenge of democracy as quickly. Enjoying the external protection and support of the United States and unhampered by internal interference, Puerto Rico has achieved a record of political, social, and economic progress for which all Americans can be quite justly proud.

In the area of political institutions, Puerto Rico has discovered, under the imaginative leadership of Gov. Luis Muños-Marín, the rich implications of democracy when it is applied to new and unusual situations. Puerto Rico's demonstrated ability at self-government is a striking proof that there is no problem too great for a government dedicated to democratic ideals backed by the enthusiastic support of its people.

Many examples may be cited of Puerto Rico's progress. One important indication of achievement is the 50-percent reduction in illiteracy resulting from a school enrollment comparable to that of the United States. Another example is the fight against poverty which has produced an amazing fourfold increase in per capita income since 1940. Due to improvements in health conditions, medical facilities, and a general rise in the standard of living, the life expectancy of the peoples of Puerto Rico has risen sharply. Operation Bootstrap has taken Puerto Rico a long way along the road of self-improvement. New industries are booming, and advances are being made in employment, housing, and agricultural production.

The key to this success can only be found in the Puerto Ricans themselves. Proud of their freedom, imbued with a deep sense of the dignity of the individual, full of the joy of life which finds expression in music and dancing, our Puerto Rican neighbors have made for themselves a way of life which charms and fascinates the visitor from the mainland. Travelers invariably return home full of enthusiasm for the hard-working, energetic, irrepressible people of that beautiful island.

Therefore, on this, the seventh anniversary of the founding of the Commonwealth, we send our greetings and our good wishes to our compatriots in the Caribbean. May the recent successes of Puerto Rico be merely the prelude to a greater, more prosperous future.

Red U.N. Doubleheader

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks, I include an article entitled "Red U.N. Doubleheader," written by Alice Widener, which appeared in the July 17, 1959, issue of U.S.A. In my opinion, this article deserves the study of every Member of the Congress:

RED U.N. DOUBLEHEADER

(By Alice Widener)

What seemed to be on first reading an innocuous press release issued by United Nations Secretary General Hammarskjold,

June 19, turns out to be, on close scrutiny, a highly important document proving conclusively:

1. The U.N. Secretary General exercises dangerous dictatorial power in the selection of U.N. personnel;

2. The Secretary General feels entirely free to appoint a Red to key posts in the administration of U.N. worldwide welfare, despite the fact that we put up more than a third of the money for it.

The seemingly innocuous press release of June 19, 1959, began: "The Secretary General has accepted with regret the resignation of Mehdi Vakil [of Iran] from the post of Secretary of the Economic and Social Council * * * effective * * * August 20, 1959."

Then, after a few sirupy phrases, came the announcement—bitter as gall to all friends of free enterprise—"Wladyslaw R. Malinowski will succeed Mr. Vakil as Secretary of the Economic and Social Council. Mr. Malinowski is of Polish nationality. * * * He has served with the United Nations since April 1946, and has been occupying the post of Head of the Regional Commissions Section in the Department of Economic and Social Affairs since July 1952. He will continue to exercise his present function together with his new responsibilities."

As anyone familiar with U.N. Secretariat affairs can see, Secretary General Hammarskjold has appointed a Communist Pole to an enormously important new position, which he will hold in addition to the key post he has held for so long as chief of the U.N. Regional Economic Commissions for Latin America, for Asia and the Far East, for Europe, and for Africa.

This takes in a rather large area of the world. But now, in his new post, Mr. Malinowski will exercise his sway as an economic overlord of the globe, having a major voice in policies affecting the use of U.N. aid funds and all kinds of social welfare activities mainly financed by U.S. taxpayers.

This appalling situation highlights once again the fact that though American national well-being depends on the triumph of capitalism over socialism, our country is committed to economic U.N. partnership with Socialists bent on smashing capitalism. Under U.N. rules, we must accept the Secretary General's executive decisions regarding who's who among U.N. personnel.

Mr. Hammarskjold's attitude in personnel matters is nothing if not imperious. Reliable sources say that when U.S. Government authorities bring facts about the extracurricular activities of Red U.N. personnel to his attention, the Secretary General turns a deaf ear to the facts and castigates the U.S. authorities for their interference.

In this bad situation, our Government appears to be helpless. Time and time again, Members of Congress, responsible members of the press, and patriotic businessmen inform the State Department (and its agent, the U.S. mission to the U.N.) of their deep concern over the activities of Socialist personnel within the U.N. Secretariat.

All the protests are wholly unavailing. Mr. Hammarskjold does exactly as he pleases, knowing that his right to hire and fire U.N. personnel is inviolate.

The executive position of the U.N. Secretary General (regardless of the holder's identity) is more and more becoming that of a dictator.

Secretary General Hammarskjold's appointment of Malinowski as Secretary of ECOSOC is a slap in the face of the United States. Mr. Hammarskjold is well aware of American public opinion concerning Mr. Malinowski. For example, the Saturday Evening Post (a magazine well described as an American habit) carried a lead editorial by the Honorable Spruille Braden, August 11, 1956, which was captioned "Why Let United Nations Bureaucrats Dole Out American Foreign Aid?" and which stated:

"The Economic and Social Council (ECOSOC) sets basic policy for economic aid and technical assistance to underdeveloped nations. The heads of the various U.N. Secretariat departments and committees * * * all have a say in distributing the funds. * * * Chief of the regional commissions section is Wladyslaw R. Malinowski, a Polish Communist. * * *

"American taxpayers must decide whether they wish to promote legitimate American interests in foreign lands through private capital investment and loans, or to promote global socialism by permitting the vast sums contributed by American taxpayers to be administered by United Nations bureaucrats. It is difficult to believe that our people have so far forgotten the maxims of prudence as to favor handing over billions of their money to an international organization whose ideas on how to use it are unlikely to resemble ours."

In the face of the news about the appointment of a new Red Secretary of ECOSOC, there are two major developments:

1. Many members of the House and Senate Foreign Affairs Committees and Appropriations Committees are fed up. They vow that the United States will soon take the only reprisal it can—that of cutting down on and eventually cutting out U.S. funds for the U.N.'s economic activities.

2. The Soviet Union, emboldened by its success in the Malinowski affair, is demanding more and more U.N. posts for its minions and its own nationals.

Only 5 days after the public announcement of Malinowski's appointment, Georgi P. Arkadyev, acting head of the Soviet delegation to the U.N., presented a complaint to Secretary-General Hammarskjold charging that Moscow is being slighted in the appointment of high officials to the U.N. Secretariat.

Next day, June 25, Arkadyev issued a 5-page press release at the U.N. charging discrimination against Soviet citizens in the Secretariat.

"Despite the somewhat aggressive tone of the Soviet announcement," reported New York Times' U.N. correspondent Lindsay Parrott, June 26, "official sources said that the conversation between Mr. Hammarskjold and Mr. Arkadyev had been quite friendly. The Russian message to the Secretary-General is not considered as an attack on him."

Mr. Parrott commented, "Current figures show that the Soviet Union has one under secretary, one director of a department, four assistant directors, and various lesser positions. The United States has several hundred nationals employed at the Secretariat, although many are in lesser positions. The same is true of Britain and France."

For obviously practical reasons, most of the lesser positions at U.N. headquarters are indeed occupied by U.S. nationals. For example, most of the maintenance personnel—engineers, elevator operators, guards, etc.—live in Greater New York City, New Jersey, and Connecticut.

Obviously, too, the Soviet Union controls many of the non-Russian top echelon U.N. personnel. It is a fact that many positions in the U.N. and its specialized agencies are held by persons of Canadian, French, British, Indian, Latin American, Asian, and African nationality who are politically subservient to Moscow because of their pro-Communist sympathies or actual affiliation with the Communist Party.

The entire U.N. personnel situation arises out of the fact that the United Nations is an alleged united front organization in which Communists and free peoples are supposed to be working together for peace and progress.

It is an historic fact that no united front with Communists has ever advanced the cause of freedom or achieved even a small measure of human betterment.

Advocates of our partnership with Communists at the United Nations invariably plead: "It is better to be talking and working together than to be shooting one another."

These idealists are wholly unwilling to admit that there is more than one way to skin a cat.

While we talk and work with Red personnel at the U.N., they are undermining us. Unless we prevent it, they will go on undermining us until our capitalist system is destroyed and the United States falls down deep enough into the pit of socialism to be buried alive.

Statement by AFL–CIO President George Meany on the Labor Bill Reported by the House Committee on Education and Labor

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. DENT. Mr. Speaker, in order that the record be correct in regard to the question asked by many on where labor stands on the so-called reform bill squeezed out of the Labor Committee today, I want to present the official statement of President George Meany, of the AFL–CIO:

The bill which the House Labor Committee has just reported is unacceptable to the AFL–CIO.

Despite the valiant efforts of some members of the committee to prevent the reporting of a punitive bill, this bill, under the guise of labor reform, does grievous harm to legitimate unions.

The bill does not meet the test which the AFL–CIO believes must be applied to this legislation.

We have repeatedly made clear our determination to seek legislation which will get at the crooks and to oppose legislation which will do harm to the legitimate trade-union movement. We have repeatedly pointed out that there are forces seeking to capitalize upon the corruption issue and determined to use it as a vehicle for the passage of punitive legislation disguised as a labor reform measure.

The AFL–CIO wants honest, effective labor-management reform legislation. We believe it can be achieved in this session of the Congress. It is a matter of record that we have been seeking this kind of legislation in vain for many years.

The AFL–CIO will not, however, silently acquiesce in injury to the legitimate trade union movement under the guise of dealing with corruption.

We have been urged, advised, and counseled to accept this measure even though we know its specific and inherent dangers. As a matter of practical expediency, we have been told that if we don't accept this package, worse damage will be done to the labor movement. We cannot agree to the doctrine that principle should be sacrificed for expediency.

We have been advised and counseled that the "people demand legislation this year, no matter what kind of legislation it be." This we have been told is a political reality and that politicians must heed the voice of the people.

We do not for a moment consider the public a moronic body demanding a measure which will hamstring free democratic trade

unionism under the guise of getting at the crooks.

We must recall to both parties the fact that the AFL–CIO, in testimony before both platform committees in the summer of 1956, urged the adoption of public disclosure statutes to cope with the possibility of corruption in the handling of welfare funds. This was some time before the McClellan committee came into existenec. In March 1957 we urged the extension of this principle to union funds generally.

Nor have we been content with just urging platform language. We have appeared before the committees of both Houses in support of legislation which was strong, meaningful and enforcible. It was that kind of bill, with some few exceptions, which was reported to the Senate floor after long and careful study.

It is tragic that on the floor of the Senate this measure was transformed into a weapon for the harassment of the union movement—a weapon which the House committee has only slightly blunted.

We share with the distinguished columnist Mr. Walter Lippmann the feeling that "the Senate, which was set to enact a very useful bill, was stampeded by political demagogs who want an issue and not a bill. The result is that unless the mischief can be undone in the House, a brilliant opportunity will have been lost. * * *

"It is still conceivable that the labor reforms can be saved if the leadership in Congress and if the President in the White House want to save them. But they must reckon with the demagogs who do not want a bill because it would deprive them of an issue to beat their breasts about."

To date, the very forces to which Mr. Lippmann alluded have been victorious.

We do not believe the fight is lost. We are convinced that those, who truly believe with us that Federal legislation can meet the problem of corruption and yet not destroy legitimate union activities, will amend this bill on the floor of the House of Representatives so as to achieve a measure that could legitimately bear the title "Reform Legislation."

In principle, we are opposed to writing legislation on the floor. It was exactly this tactic which changed the Senate bill into punitive legislation. But the majority of the House committee failed in its task. In response to pressure, the majority conceived a bill only slightly better than the Senate version and have reported one which could only be classed as antilabor.

Therefore, we believe that it is essential for Members of the House to support amendments designed to improve this measure by restoring it to its proper concept.

So that there will be no misunderstanding of our position, the following is a summary of the AFL–CIO's bill of objections to the measure, reported by the House Committee on Education and Labor.

THE AFL–CIO BILL OF OBJECTIONS

Title I—Rights of union members

The committee has retained, although in a somewhat less objectional form, the so-called bill of rights inserted on the Senate floor in haste, confusion, and ignorance.

While the committee omitted much of the loose and demagogic language as well as the broad, drastic criminal penalties of the Senate bill, it failed to come to grips with the fact that such a title is unnecessary and unworkable.

The rights purported to be protected by this section are already protected either by other titles of the bill or by the courts under doctrines worked out over the years in accordance with the traditional evolution of common law. On the other hand, the committee's proposal injects confusion and uncertainty into the conduct by unions of their own internal affairs which can only be resolved after years of litigation. Every local union official and business agent in the country will be acting at his peril in performing the most routine task in administering the affairs of his union. Every chairman of a local union meeting will be acting under shadow of a court suit each time he makes a ruling on the conduct of the meeting. We, of course, do not object to the principles involved. Most, if not all, union constitutions fully recognize and implement them. But it is one thing for a voluntary association to voluntarily do this and quite another to compel it by law to do so.

Some of these provisions are so general as to be susceptible of almost any interpretation. Others are so detailed as to inhibit obviously reasonable and proper union practices. The most objectionable, of course, is the determination here and elsewhere to make unions responsive to both State and Federal laws even where they conflict and thus create new areas of confusion and potential litigation.

Title II—Reporting and disclosure

The AFL–CIO has repeatedly urged reporting and disclosure—the goldfish bowl concept—as the realistic vehicle for deterring corruption.

For this method to be effective, however, it must be applied with equal justice to all the parties to labor-management relations—union officials and their agents, management officials and their agents, and so-called labor consultants and their agent.

The deterrent would be, of course, the fact that disclosure of all activities would act to prevent corruption. This deterrent power evaporates with each exception to the rule and the House committee has exempted employers and labor relations consultants from reporting everything except that already illegal. In fact, the House committee has made reporting by employers and labor relations consultants the merest sham. The House committee has negated the usefulness of reporting as a deterrent to crime, obviously responding to the will of employers who want to carry on antiunion activities and which have sometimes encouraged, if not inspired, corruption in the ranks of the trade-union movement.

Title III—Trusteeships

While for the most part the changes made here by the House committee are an improvement over the Senate bill's title dealing with trusteeships, a major and unacceptable defect remains. Despite the whole new body of Federal substantive and procedural law established by this title, unions would continue to be subject to the diverse and frequently conflicting body of State rules. Unions should be able to measure their conduct in establishing and maintaining trusteeships according to a single standard, and not be subjected to the sometimes impossible task of conforming to the differing requirements of Federal and State regulation. If Federal rights and remedies apply, they should be exclusive.

Title IV—Elections

In the provisions dealing with elections, which we have long supported, the committee has included a dangerous and self-defeating provision.

By including "the right to inspect and copy" the unions' membership rolls, the committee provides protection for the pro forma candidate for office who is in reality a company spy or a Communist agent, pretending to union candidacy for the sole purpose of obtaining membership lists for nefarious purposes. Less damaging, but nonetheless a problem to legitimate unions, would be the lack of protection for its membership rolls from the pro forma candidate whose only purpose was to sell the list to commercial agents who now regularly and unsuccessfully seek such lists for sales purposes.

The provisions of the Senate bill provide a preferable vehicle.

Title V—Safeguards for labor organizations

The committee has approved provisions to which we take vigorous exception.

Operating from a premise with which we certainly agree and which we have consistently supported, that union office is a sacred trust, the committee has proceeded to establish standards of fiduciary responsibility which could only lead to widespread confusion and the multiplicity of litigation.

There are certain obvious similarities between the obligation for safe, honest administration of funds and property entrusted to the care of a union officer or employee to those obligations which bank or corporate officers owe their stockholders. The dissimilarities, however, are far more important, and it is these which the committee has ignored.

The prime responsibility of the union officer is to advance the interest and welfare of the members. The prime concern of the banking official is to enhance the value of the property he holds in trust.

A union does not exist for the purpose of making money. It exists as a mechanism through which its members can combine to promote their mutual improvement, both as employees and as members of society generally, and both materially and in other ways.

One of our main objections is that the reach of this fiduciary concept as expressed in the bill is not determinable and the property of many union activities now considered as normal union functions is shrouded with the blanket of uncertainty and confusion.

Under this provision, union officers may be hailed into court for making legitimate expenditures, such as charitable contributions, which have been approved by a majority of members. Unions ought not to be thus restricted in using their resources for the betterment of the whole community.

The specifications under which union members are barred from holding union office are not equated by the provisions disqualifying individuals from holding labor relations positions in corporations. Labor history is replete with instances in which employers, especially in heavy industry, have used ex-convicts as goons in labor disputes. The disqualification should apply to all officers, directors, and employees engaged in labor relations activities for an employer.

Adding to the list of specified instances which bar a union member from union office is "assault which inflicts grievous bodily injury." What this means, is subject to variable interpretations for the statutory language of the several States differs markedly. More importantly, injustice would invariably follow if, for example it should be interpreted that a black eye suffered in a picket line scuffle involving excitable individuals could bar a man from union office or from a labor relations position with an employer.

Title VI—Miscellaneous

This title retains a States rights proviso which is, at best, a vague statement of antiunion prejudice and, at worst, a device for compounding the confusion already engendered elsewhere in the measure.

Title VII—Taft-Hartley amendments

The committee's wise choice of a simple, sound solution to the no man's land problem and its wise provision giving voting rights to economic strikers does not mean that the committee's judgment in this title has been uniformly sensible.

It eliminated a desirable provision in the Senate bill designed to make it clear that service assistants in the communications industry are not supervisors excluded from the protections of the National Labor Relations Act.

It made the prehearing election provision illusory by raising an extraneous issue—the

appropriate bargaining unit—and it failed to correct the serious defect in S. 1555 which repeals present consent election authorization.

We have serious reservations about delegating to the general counsel of the NLRB the function of appointing the entire field staff.

Although the so-called "hot cargo" provision has been somewhat improved by making clear that it does not force union members to cross lawful picket lines against their will, the provision still remains objectionable in principle. In the crucial area of transportation by common carrier, it strikes a mortal blow at the long-recognized right of unions to appeal directly to employers to assist the union in removing sweatshop conditions in an industry by refusing to deal with unfair, antiunion employers.

The "hot cargo" provision is simply intended to keep union people from using one of their most traditional methods of improving the lot of the workers. It is another prime example of an attempt to eliminate one of labor's effective economic weapons under the guise of fighting racketeers. The "hot cargo" provision has very little to do with labor reform.

The committee has unintentionally, we are sure, provided an incentive for corrupt and unscrupulous elements on both the union and employer sides to engage in collusive deals and "sweetheart" contracts.

This is done by providing that an employer could prevent picketing by one union simply by recognizing and contracting with another union.

A principal purpose of organizational picketing is to persuade workers to join unions. Such activity is clearly legitimate, since organized workers cannot maintain their hard-won wages and working conditions if nonunion employers are free to depress those standards and labor is prevented by law from advertising that fact.

The picketing provision in the committee bill would prevent such picketing if, within the preceding 9 months, a representation election has taken place. This is unjust. Workers should be permitted to picket if their union did not participate in the election or if their union was forced to an early election without adequate opportunity to organize.

The Supreme Court has repeatedly upheld organizational picketing as a valid exercise of the fundamental right of free speech. The Hobbs Act, a Federal statute, already imposes severe criminal penalties for abuse of the right to picket. The committee bill imposes an additional criminal penalty for extortion picketing. The additional restriction on picketing contained in this bill can only further burden honest trade unions performing legitimate and reasonable functions. It can be of comfort only to those who seek to cripple the labor movement.

CODES OF ETHICAL PRACTICES

The committee chose to kill title V of S. 1555, designed to encourage unions and employer associations to subscribe to codes of ethical practices. It thus discourages the voluntary self-policing efforts of the labor movement to rid its ranks of crooks and gangsters.

Virtually alone, without support from Congress, and often in the face of scorn from other quarters, the labor movement has endeavored to develop its own principles and procedures for dealing with corruption and unethical practices within its own ranks. Certainly such efforts deserve support. Certainly it would serve the public interest to encourage employer associations to take similar action, for unethical conduct, to say the very least, has pervaded the ranks of employers to an unsavory degree.

Such voluntary efforts cannot entirely eliminate the need for Federal legislation, as the AFL–CIO has repeatedly stated. But they can, if successful, considerably reduce the need for such legislation. Certainly recognition of the merit of voluntary efforts is in the national interest. The only purpose served by the committee's destruction of this concept is to conceal the fact that employer associations have refused or failed or been unable to engage in any similar self-policing activities; or, in fact, in any method for putting their own house in order.

The elimination of the tri-partite advisory committee to the Secretary of Labor charged with administering the act is certainly ill-advised. Since this bill represents an excursion by Congress into new and uncharted fields, such an advisory committee, representing employers, workers, and the public, could contribute substantially to constructive administration of the act.

CONCLUSION

During the debate on the floor of the House of Representatives, it is possible that this measure can be restored to its original concept—a bill which would get the crooks and not damage legitimate unions.

We urge every Member of the House to adopt that as his goal. Anything less would be unworthy of the House of Representatives; anything else would be destructive of democratic organizations and voluntary associations which are the very lifeblood of a democratic nation.

We look with confidence to the House of Representatives for the achievement of justice and the adoption of legislation which can honestly be called reform legislation.

South Vietnam a Nation of Outstanding Progress

EXTENSION OF REMARKS

OF

HON. LeROY H. ANDERSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. ANDERSON of Montana. Mr. Speaker, at a time when some sensation-seeking publications are distorting the picture on foreign aid in Vietnam, I think it is worth while to call to your attention the studied, on-the-spot opinions of an impartial and veteran newsman, Ernest K. Lindley. Mr. Lindley's byline appears on his weekly column "Washington Tides" in Newsweek magazine. In the June 29 issue, Mr. Lindley, writing from Saigon, South Vietnam, termed that country "an ally worth having."

His comments support the observations I made while in Vietnam last November, and which I discussed here on the floor yesterday when the Mutual Security Act conference committee report was considered. I commend it to the consideration of my colleagues. The article follows:

AN ALLY WORTH HAVING

(By Ernest K. Lindley)

SAIGON.—South Vietnam has made more striking progress in more ways than any other Asian nation I have so far revisited. For this, credit must go to: (1) A dedicated, canny, indefatigable, invincible man, President Ngo Dinh Diem; (2) an industrious people; (3) effective American aid.

Four years ago when I was here, this southern half of the country divided at the 17th parallel by the Geneva agreement of 1954 was in chaos, a nation in name only. Bridges and rail lines had been wrecked. Much of the countryside was controlled either by armed Communist cells or the independent armies of the quasi-religious sects. The last of nearly 1 million refugees flooding in from the north were huddled in public buildings and doorways.

Diem was then a dim little figure, with only the barest nucleus of a government, hardly known in most of South Vietnam. He was hated, or at best distrusted, by the French, who still had troops here. Other observers, Asian and Western alike—including some important U.S. officials—said he lacked both organizing ability and the flair ever to compete with the Communist Ho Chi Minh as a symbol of Vietnamese nationalism. This despairing view had been widely reflected in the Western press. I accepted the judgment of others—resolute Americans, such as Leland Barrows, head of our ICA mission, Edward Stansbury, local USIA Chief, and Col. Edward Lansdale. On this return visit, high Vietnamese officials told me my report (Newsweek, June 6, 1955) was the first to say that Diem could succeed.

LAND REFORM

In 5 years, these are some of the achievements: The armed sects have been destroyed or disbanded. Most of the Communist nests have been wiped out. The nearly 1 million refugees have been resettled and are earning their living.

More than 52,000 people have been moved into the previously almost empty plateau area where they make Viet Minh infiltration more difficult and produce new fiber crops. The second largest land reform of free Asia, involving the conversion of 300,000 former tenants into small landowners, is two-thirds completed. A nationwide agricultural credit system is operating. Rail lines and bridges have been repaired, and new highways are being built. Rice exports have been resumed. Rubber exports have risen, and new higher-yielding trees are being planted. Schools and other social services have been expanded. A start has been made on assimilating 700,000 Chinese.

The Vietnamese armed forces, 150,000 in all, are American-equipped and American-trained. Diem thinks they should be enlarged since north Vietnam has upwards of 300,000 troops. But the official U.S. view is that Diem has enough to hold a Viet Minh attack until SEATO forces could arrive. (Although not a member, Vietnam is SEATO-protected.) However, we have just agreed, after 3 years of objection, to supply light arms for 32,500 members of the civil guard. This purely internal security force is needed because Viet Minh infiltrators have launched a new campaign of terrorism and sabotage—probably because, economically, south Vietnam has outstripped the Communist "paradises" to the north.

ABLE LEADERSHIP

Diem, well-known and respected through his land, has long since become the authentic symbol of nationalism, although some Vietnamese fret about his semiauthoritarian methods and heavy reliance on his relatives. His biggest problem is how to make south Vietnam self-supporting—our aid is now about $180 million annually. American officials—and Diem's own American adviser, Wolf Ladejinsky—think the gap can be greatly narrowed, if not closed in 5 years, by increasing agricultural exports, and starting new light industries.

In two off-the-record talks, totaling 5¼ hours, Diem impressed me deeply by his grasp of the problems, not only of his own country but of Asia as a whole. He remains, of course, an unflinching foe of communism. On his record, he must be rated as one of the ablest free Asian leaders. We can take pride in our support.

Hospital Insurance and Related Benefits for OASDI Beneficiaries

EXTENSION OF REMARKS
OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a statement which was presented by Prof. Wilbur J. Cohen, representing the American Public Welfare Association, before the Committee on Ways and Means in the course of hearings on legislation proposing to provide hospital insurance and related benefits under the social security law.

Professor Cohen is a fellow Milwaukeean, and has been associated for many years with the administration of our social security law. I am pleased to commend his statement to the attention of the membership of this body.

The statement follows:

STATEMENT OF WILBER J. COHEN, REPRESENTING THE AMERICAN PUBLIC WELFARE ASSOCIATION, BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS, ON SOCIAL SECURITY AMENDMENTS OF 1959, HOSPITAL INSURANCE AND RELATED BENEFITS FOR OASDI BENEFICIARIES, JULY 15, 1959

Mr. Chairman and members of the committee, my name is Wilbur J. Cohen. I am a member of the welfare policy committee of the American Public Welfare Association and am representing that organization here today. I am professor of public welfare administration at the University of Michigan where I am engaged in teaching and research on social security.

THE AMERICAN PUBLIC WELFARE ASSOCIATION: EXPERIENCE AND PROFESSIONAL KNOWLEDGE IN MEDICAL CARE ADMINISTRATION

The American Public Welfare Association is the national organization of local and State public welfare departments and of individuals engaged in public welfare at all levels of government. Its membership includes Federal, State and local welfare administrators, board members, and welfare workers from every jurisdiction. As a result of the discussions in our councils, committees, and conferences our board of directors of 27 persons, representing all parts of the country, adopts official policy positions on issues of current significance.

The agencies and individuals making up the membership of the association are charged with administering the various assistance, medical care, and social service programs in public welfare under the Social Security Act. The public welfare departments of the country, under authority given to the States by the Congress, have major responsibility for meeting the medical requirements of needy people assisted under these titles and in the general assistance programs which are financed by State and local funds. They have broad experience with the health needs of these persons and also are faced daily with the problems of the thousands upon thousands of individuals and families with borderline income who today, in this great Nation of ours, are unable to meet the costs of medical care and who, far too often, have no place to turn for help with these costs other than the welfare department.

Over the years the association has supported strongly all sound recommendations which have advocated broadening and strengthening the social insurance programs of our country. In fact, we have been in the forefront of the groups which have advocated such legislative steps since, as is indicated in the following exeerpt of the association's Federal legislative objectives for 1959, we believe this is a preferable means of meeting income maintenance needs and will keep public assistance expenditures to a minimum:

"The contributory old-age, survivors, and disability insurance program, as a preferable means of meeting the income maintenance needs of people and as a means of keeping the need for public assistance to a minimum, should be strengthened by making benefit payments more adequate; by increasing the amount of earnings creditable for contribution and benefit purposes in line with current conditions; by providing benefits for disabled insured persons of any age and for their dependents; by extending coverage to earners still excluded."

For more than 20 years the association's medical care committee, made up of persons knowledgeable in health and welfare programs throughout the country, has studied the medical care problems of needy and low-income individuals and families, and methods of administering and financing medical services required by them. In recent years the committee has given special attention to the health needs of the aged and disabled. On this committee at the present time are physicians, hospital administrators, State and local public welfare administrators and staff members, and other persons highly qualified in the field of medical care administration. This committee is fully familiar with the present extent of medical care programs in public welfare and with the gaps which still remain, despite recent Federal legislation providing for improvements in the matching formula with respect to medical care in public assistance. Last year, as a result of its studies, the medical care committee reviewed the earlier verrsions of the pending bill and made recommendations to the welfare policy committee which resulted in the following statement adopted by the association's board of directors and embodied in the association's 1959 Federal legislative objectives:

"Health costs of old age, survivors, and disability insurance beneficiaries should be financed through the OASDI program. Arrangements for achieving this objective should take into account the priority needs of the groups to be served; availability of facilities, personnel, and services; and protection and encouragement of high quality of care, including the organization of health and related services to effect appropriate utilization of services and facilities."

MEDICAL CARE IN PUBLIC ASSISTANCE

One of the major services which the association has provided to the field of public welfare, since its inception almost 30 years ago, has been to stimulate and promote the development of programs of medical care of adequate quality and quantity in the public assistance programs. We supported the medical assistance amendments to the public assistance titles of the Social Security Act which were adopted by the Congress in 1950, 1956, and 1958, and which now provide a sound fiscal base on which the country can build more adequate financing of this service so essential in restoring public assistance recipients to the highest possible level of independent living, self-care, and self-support.

Despite the very large expenditures for medical care in these programs, however, and although there has been substantial progress, we find that there are gaps and deficiencies still existing in some States with respect to the provision of medical care for the needy aged and other needy persons. These gaps are often due to a deficient legislative base in the State, to insufficient appropriations, and to administrative complexities. As a result we do not believe there are more than 15 to 20 States in which needy persons, including the aged and disabled, can receive all the medical care they require with the assistance of public funds. There are major variations in the other States, with a number of States providing little or no medical care to public assistance recipients and others financing one or more services but not providing the entire scope of care which is needed by sick people.

On the other hand more and more the new applications for old-age assistance, for example, come from persons who, although they are receiving OASDI, are unable to meet their medical requirements with this limited income. Unless some program—public or private—is inaugurated to assure adequate health insurance coverage to all aged persons, public assistance expenditures will continue to increase.

Medical care payments in public assistance in 1958 are estimated at $400 million of which $300 million is for direct payments to suppliers of medical services. About one-half of this latter total—$150 million—is for medical services to aged assistance recipients. According to the best estimates I have been able to make, if all States were participating fully and providing reasonably adequate medical services at the present time, about $300 million more would be expended just for OAA.

Assuming that hospital costs will continue to rise about 5 percent a year, that OASDI benefits remain at their present level relative to wages and prices, I would estimate that within 10 years medical expenditures in public assistance might reach, or exceed, $1 billion annually.

These totals do not include some $500 million spent for hospital care by Federal, State, or local governments. Nor does it include about $100 million in income tax savings based on medical care deductions for aged persons or $20 million in corporate income tax savings based on employer contributions to health plans.

All of these expenditures will continue to increase as our aged population increases and the need for medical care increases. Voluntary health insurance does not adequately cover the medical needs of aged persons; fails to cover many low-income aged persons; and is not likely to cover all or most low-income aged persons in the foreseeable future. Hence, some new arrangements must be developed to meet the health needs of aged persons.

HOSPITAL COSTS ARE RISING

The number of aged persons is increasing over a thousand each and every day. Both the number and proportion of the aged in the population is increasing.

Since 1947–49, the overall Consumer Price Index has increased about 24 percent. Medical care costs have risen over twice as fast—49 percent. But hospital room charges have risen 105 percent, and are continuing to increase.

Private expenditures for hospital services have increased from 1 percent of per capita disposable income in 1948 to 1.16 percent in 1952, 1.33 percent in 1954, and 1.43 percent in 1956—a 43 percent increase from 1948.

In 1955, public and private expenditures for hospital care in all general and special, short- and long-term hospitals was $4.3 billion, of which 26.6 percent came from general tax sources. If mental and tuberculosis hospitals are included, the total expenditures reached $6 billion, and the portion coming from tax sources was 43.8 percent. From these figures, it can be seen that the issue is not whether public funds shall be used to finance hospital care but in what manner and to what extent.

VOLUNTARY HEALTH INSURANCE IS INADEQUATE

This Committee on Ways and Means already has before it a most comprehensive

and excellent report prepared at your request by the Department of Health, Education, and Welfare, "Hospitalization Insurance for OASDI Beneficiaries." We concur in the validity of the five reasons summarized in the report as to why the Federal Government should act in this field. In a review of the characteristics of the present aged population, particularly with respect to sources and amount of income and assets, the Department of Health, Education, and Welfare report substantiates the following conclusions which we believe demonstrate why congressional action is warranted in financing health benefits for social security beneficiaries through the exitsing OASDI mechanism:

1. The income of older persons is markedly less than that of the general population, both with respect to average income and distribution of income.

2. The medical needs of older persons are greater than younger persons. They have prolonged health problems and, as the age distribution of persons on the OASDI beneficiary rolls shows, more and more this is a progressively older group so that these prolonged health problems become greater in complexity and quantity.

3. Because medical need is greater, expenditures for personal health services are greater. Many aged persons have little or no assets to meet this need.

4. The voluntary health insurance movement in this country has shown great vigor and imagination but despite this it is quite evident that we cannot expect, at any time, in the foreseeable future, development of voluntary health insurance coverage which will meet the major portion of the health needs of the aged, either with respect to services or dollars expended. The type, scope, and period of present voluntary insurance benefits are seriously inadequate and, it appears, will continue so for meeting the health needs of the aged.

RECOMMENDATIONS FOR LEGISLATION

As the association's policy statement quoted above indicates, we are in full accord with the principle of amending the OASDI program to include the financing of certain health benefits for social security beneficiaries. We believe that it is not the wish of the American people that substantial numbers of our aged citizens be required to turn to public welfare for help with their medical needs. Whereas cash benefits under the OASDI program in many instances may be sufficient for the individual's average maintenance requirements, it is rare that medical costs of an unpredictable or large character can be met unless the aged or disabled person has considerable other income and resources. It has been established that only a small proportion of aged and disabled people fall into this fortunate group.

We have pointed out, too, that although there has been considerable improvement in the provision of medical care in the public assistance programs, this is still far from adequate and in many States medically needy persons may be unable to receive help to meet their medical bills. Furthermore, to qualify for public assistance, individuals often must first exhaust insurance and other assets because of the strict eligibility requirements most of the States have established for public assistance. People who do not qualify for public aid or who cannot bring themselves to apply for it must go without medical care since private charity is not generally available for this purpose. All of these alternatives are uncertain and unpalatable to the American people. They want neither assistance nor charity but insurance protection as a matter of right.

We strongly urge, therefore, the establishment of a program of health benefits for social security beneficiaries as part of OASDI.

ADVANTAGES OF THE OASDI APPROACH AS COMPARED WITH THE VOLUNTARY APPROACH

The OASDI approach in the bill has a number of very important advantages over the voluntary approach. These advantages are as follows:

1. Contributions are collected from nearly all persons who work for a living under the bill. This results in a large number of persons contributing, without the adverse selection that tends to accompany voluntary community plans. This reduces the cost per person and assures a strong financial base to the whole program.

2. Contributions are payable under the bill only while the individual is employed. Since contributions are payable in relation to earnings, an individual does not pay for any period in which he has no earnings or is not working. In voluntary plans, contributions must be paid for individuals whether they are earning or not.

3. Contributions under the bill are levied in some measure with ability to pay. In voluntary plans, contributions customarily are on a flat basis in relation to number of dependents. Thus, in a voluntary plan, an individual earning $2,000 a year and an individual earning $6,000 a year both pay the same premium. Unequals are treated equally. In the bill, since contributions are a uniform percentage of earnings up to a limit of $6,000 a year, the $2,000 individual would pay only one-third the amount the $6,000 individual would pay.

4. Contributions in the bill are levied over the individual's working lifetime and are not paid during the period when he is not earning and is retired. Under most voluntary plans, the individuals must continue to pay their premiums after they retire and until they die. Where employers contribute toward the cost of voluntary protection prior to retirement, such contributions usually cease on termination of employment. This is burdensome to many older people whose incomes are sharply reduced when they retire. The result is that as people grow older, they may drop their voluntary insurance in order to conserve their limited funds. If they retain their voluntary insurance, the flat rate premium takes a very high proportion of a small income. The bill aims to solve these difficulties by requiring individuals and their employers to pay small amounts, in relation to their earnings, over an entire working lifetime and then to forego any contributions when the individual has no earnings and is retired. The result is a financing arrangement better adapted to the lifetime earning pattern.

5. Contributions in the bill are not related to the number of dependents. In voluntary plans, the contributions usually increase with the number of dependents. Thus, in a typical plan, there is one uniform rate for an individual, a higher rate for an individual and spouse, and a still higher rate for a family. The result is that the individual with the family has to pay a higher proportion of income for his protection than the individual without a family. From a social point of view, this is not only undesirable, but unnecessary. The individual with the family has the cost of maintaining and educating his family and, since his health costs rise in relation to the size of his family but not in relation to his earnings, he is doubly penalized. In the bill, since contributions are a uniform percentage of earnings, there is no such double penalty on the family earner.

6. The employer is required by the bill to pay one-half of the cost. Under many voluntary plans, the employer pays part of the cost, and in some voluntary plans the employer pays all of the cost. However, this trend is spotty. In many plans, the employer makes no contribution. Under the bill, the employer would be required to pay one-half of the cost. The existing law permits employers to pay a larger proportion—or all of the cost—if the employer wishes, or if this is agreed to by the employer and employee by contract or collective bargaining. Thus, where the employer now pays all the cost, this would not be disturbed by the bill.

7. Benefits are not cancelable under the bill. In many private plans benefits are cancelable at the option of the insurance carrier or the employer. They can be terminated by action of the insured when sufficient income is not available to pay the premiums. Whatever may be the reasons for these actions, they inevitably result in public agencies having to bear the cost of the care of those persons who cannot finance their medical care. This is undesirable. The bill provides for a paidup policy with the backing of the Federal Government. It gives patients and hospitals assurance of payment and protection superior to that of most private plans.

8. Benefits under the bill are not limited during a person's lifetime. Under many private plans benefits are limited not only in terms of days of hospitalization per year but also in terms of total dollars over a person's lifetime. This completely undermines the security provided in the plan. Under the bill, no such lifetime limit is provided nor is it necessary. Thus, the OASDI approach is much superior to the private plan.

9. Benefits under the bill in many cases are more adequate than under many private plans. In many voluntary plans, hospital insurance benefits are limited to 30 to 50 days or have a fixed dollar limit on payments per day of hospital care.

10. The cost of administering the plan in the bill would be less than the administrative costs under existing private insurance plans. Since contributions would be collected as a part of the regular social security contributions, it would not require any new machinery. There would be no salesmen or acquisition costs as in private insurance. The savings in administrative costs would make it possible to pay the same benefits as private insurance at less cost, or more adequate benefits at the same cost.

SUGGESTED PROVISIONS OF A DESIRABLE PROGRAM

Individuals to be covered: The association recommends that OASDI beneficiaries should have health costs financed through the OASDI program. This would not limit the program to aged persons but would include disabled persons, widows, and their dependents, when eligible for monthly benefits.

Scope and quality of service: Medical care of good quality cannot be attained if the range of services is not complete and actually available. It is generally accepted that a satisfactory treatment result cannot be achieved if it is not possible to provide all the services which are needed by an individual.

The association recognizes that there are some problems in developing comprehensive medical services. We should like to place before you, therefore, our suggestions as to a reasonable minimum range of services which might be considered as a starting point in any program relating to OASDI beneficiaries.

It has been established that the need for hospital care for the aged and disabled beneficiaries is greater than that of the general population, whereas their financial ability to meet this increased need is less. Many more aged persons enter hospitals because of need for medical treatment than for surgical treatment. It would be desirable, therefore, if provision were made for meeting the inpatient hospital care costs of beneficiaries, including the cost of medical and surgical services required by them. It

can be maintained that it is more urgent to meet the cost of medical treatment in the hospital by physicians than the cost of surgical services.

In order that there should not be unnecessary utilization of hospital care a number of alternatives to hospital care should be made available in the proposed program. In listing these we have taken into consideration the kinds of services for which physicians might find it necessary to hospitalize patients if the services are not otherwise available:

1. Diagnostic services which can be provided on an outpatient basis;

2. Skilled nursing service in the home, including visiting nurse service, under medical supervision;

3. Surgical services on an outpatient basis in the emergency room of the hospital, in a clinic, or in the physician's own office.

The next priority should be the provision of physicians' services in the home and office, and limited amounts of expensive drugs when prescribed by a physician and required by persons receiving care outside of hospitals.

Duration of hospital care is limited in the bill you are considering. If appropriate alternatives to hospital care are included, we believe this limitation will save relatively little money, but may work a hardship on a number of individuals. If the services we have indicated are included we believe the duration of hospital benefits could be increased.

The proposed amendment provides for payment for skilled nursing home services for persons who have been hospitalized and who require this service for the same condition which required hospitalization. In our opinion there are very few nursing homes that would presently meet the requirement of providing truly skilled nursing home service. But there is a great need for skilled nursing home service and the legislation should encourage the establishment and expansion of adequate skilled services in this area. We urge that the legislation specifically enumerate the basic standards for such homes to qualify for payments and that such homes be connected with or under the supervision of hospitals, or other appropriate medical direction.

Improvement in quality of service and reduction in financial costs: Consideration also should be given to including two other provisions in the bill:

1. Payment of the cost of rehabilitation to be financed from the insurance program by arrangements made with State vocational rehabilitation, health and welfare departments. This would serve to reduce the recurrent need for medical care and disability benefits.

2. Payment of the cost of research and demonstration programs designed to improve the quality of service provided under the legislation and to minimize the costs for health services. Extension of organized home care programs, preventive geriatric care, and similar projects would be encouraged under this authorization.

Administration and quality of service: We believe that, as proposed in the legislation you are considering, any extension of the OASDI program to provide health benefits should be on a service benefit basis rather than a cash indemnity basis. It has been demonstrated in the commercial cash indemnity programs now in operation that this is, in general, a most unsatisfactory means of meeting health costs and places a large share of the expense burden on the patient and his family. The service benefit, on the other hand, would guarantee full payment without regard to the differences in charges and costs which exist throughout the country.

If a broad scope of health benefits is included in the program, consideration might be given to adding to the bill a provision which would permit the Secretary of Health, Education, and Welfare to enter into contracts with appropriate State agencies such as State health or wefare departments which would serve as the State administrative agency for the Department. If there is a broad scope of services in the program this would involve negotiating contracts with a sizable number of purveyors of service. On the other hand, if the program is limited at the outset, with no provision for paying physicians or other practitioners, this would involve contracts only with the hospitals of the country and this could be handled directly with hospitals or their representatives by the Federal agency.

Role of Advisory Council: We endorse the general provisions in the bill for an Advisory Health Council with which the Secretary shall consult in administering the bill. We urge, however, that the Council should have more specific advisory functions including giving advice to the Secretary on methods of assuring and improving the quality of care, assuring full and reasonable payment for services rendered, effective access to the services provided, efficient and economical administration, and any other matters it deems essential to the operation of an effective program. It should also have the duty of making recommendations to the Secretary and the Congress for legislative changes it deems appropriate with respect to benefits, financing and administration.

Financing: We subscribe to the principle of financing the costs of any health insurance benefits to OASDI beneficiaries through the contributory social insurance program so widely accepted by the American people. We believe it is both proper and desirable for all employers, employees, and the self-employed to finance the costs. Moreover, adequate health benefits to aged persons can only be effectively and widely provided if the costs are distributed over a person's lifetime. It appears that voluntary insurance cannot accomplish this for any large number of persons within the reasonably near future.

One of the arguments made by those who oppose Federal action in this field is that it is difficult to estimate future costs of the health benefits with any accuracy. This type of argument has been repeatedly used against old-age and disability insurance amendments but has not prevented this committee from taking action. Nor should it now. To the extent that cost estimates are subject to error, the same problem is faced by voluntary insurance as by social insurance. And social insurance can deal with the problem more effectively since it readily can adjust contributions and benefits on a statutory basis to meet changing experience.

In order to assure the financial integrity of the contributions and benefits for health benefits, a separate account or trust fund could be established for this purpose. Contributions could be collected for 6 or 12 months before benefits were payable. The contribution rates in the early years could be set somewhat higher than current expenditures to reflect longer-run experience. In this way a small reserve would be built up which would assure that the benefits could be soundly financed on a self-supporting basis.

SUMMARY

In conclusion, we reiterate our support of the principle of meeting the health care costs of the aged, the disabled, widows and their dependents through an amendment of the social insurance program which will finance health service benefits to those eligible for cash benefits. We hope that this committee, which drafted the original contributory old-age insurance program in 1935, added survivors insurance benefits in 1939, and disability insurance benefits in 1955–56, will add further to the demonstrated vision and statesmanship shown on these three occasions by taking action which so logically builds upon the sound principles incorporated in the three earlier actions.

Paul Butler

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. DORN of South Carolina. Mr. Speaker, the Communist mouthpiece, the Worker, has projected itself into the Paul Butler versus Lyndon Johnson-Sam Rayburn controversy. As to be expected it is vigorously defending Mr. Butler and viciously attacking Speaker Rayburn and Senator Johnson.

The Worker in its last issue bitterly attacked committee chairmen and accused Senator JOHNSON and Speaker RAYBURN of a "plot against popular elections." This organ of the Communist Party was also critical of Senator GREEN, of Rhode Island, and Senator YOUNG of Ohio.

Mr. Butler claims favorable mail at the rate of 6½ to 1, lately revising this estimate upward to 10 to 1. My mail from out of my State has been critical of me and favorable to Butler. In fact I am surprised that Mr. Butler's mail is not 100 to 1 favorable because a few telephone calls and orders from the bosses can in a moment prompt a flood of favorable mail to Butler and likewise vicious, profane letters of abuse to me. The housewife, busy with children and daily chores, is not likely to write Mr. Butler. The farmer, in the midst of a busy season, is not prone to letter-writing.

The industrial worker is looking to Congress, not to Mr. Butler, for legislation. Mr. Butler can only offer flimsy promises in 1960, while Congress is now acting to solve the evils of the day. It is Congress, not Mr. Butler, that is working long and hard to curb inflation. The workingman is not writing favorable letters to Mr. Butler. He is writing his Congressman.

Mr. Butler could have postponed his attack on the congressional leadership until after the conference on Berlin. He could have waited for the return of our Governors from Russia and for the result of the Vice President's visit to Moscow. If he is sincere about legislation, he could have waited until this international crisis passed and then launch a drive this fall with prospects of congressional consideration next January. Or he could have started sooner in this session. He is well aware that nothing can now be accomplished by his blast except confusion, discord, and strife. My principal quarrel with Mr. Butler is his untimely and unjustified attack on a leadership whose responsibility is more than a party obligation. The Democratic leadership of this Congress shares with the President a grave concern for national and international problems.

The $64 question most Americans are asking is what is Mr. Butler's motive? Does he really plan to leave the Democratic Party and form a third party—a National Socialist Party? Or does he plan to split the Democratic Party and elect a Republican? Or does he plan to seize control of our party and throw out our great leaders who have served the United States with honor and distinction.

The worker has accused me of disloyalty to my party. This is an old story. I have been attacked by the Communists and their fellow travelers many times, including the label of America's No. 1 Warmonger by Russia's late Andrei Vishinsky on September 18, 1947, at the United Nations, Lake Success, N. Y.

I will put my loyalty to the party alongside of Mr. Butler. I have traveled thousands of miles and made countless speeches for the Democratic Party. I will continue to labor for unity and harmony in our party. I will do all in my power to reject agitation, disunity, strife, and discord.

This attack upon me and other congressional Democrats bears a striking similarity to the letters I have received attacking me. The same labels, innuendoes, and attack by slogans is obvious. Our leadership, in the letters I have received, is likewise abused but in no way is an intelligent argument advanced. They abuse and attack, but offer no program.

I believe Mr. Butler is a loyal American and is not connected with un-American organizations. However, I do believe that he is falling for the old, old game of divide and conquer.

Arnold Johnson, author of the following article which appeared in the Worker on July 19, 1959, is reported to be the Arnold Johnson who was the Communist Party nominee for Governor of Ohio in 1940.

DIXIECRATS, NORTH ALLIES GANG UP ON DEM CHAIRMAN

(By Arnold Johnson)

When Paul Butler, Democratic national chairman, hit at the LYNDON JOHNSON-SAM RAYBURN leadership of Congress as jeopardizing the 1960 chances of the Democrats, he drew the fire of the Dixiecrats and the criticism from northern Democrats which proved his point.

Butler charged that "the congressional seniority system lends itself to the buildup of power and influence, control of committees by southern Democrats, when the Democrats are in control of Congress." He also called for Congress to pass progressive legislation, and made an appeal to the country "to influence the Democratic leadership of the Congress to come along with the national program, rather than the conservative and moderate program which they are trying to follow."

The first reaction came from Dixiecrat Representative WILLIAM JENNINGS BRYAN DORN, South Carolina, who demanded Butler's resignation. DORN exposed the fears of the Dixiecrats when he charged that Butler was "masterminding a plan to oust RAYBURN as permanent chairman of the 1960 convention; to unseat Representative JOHN W. MCCORMACK as chairman of the convention platform committee and to appoint a convention credentials committee which would deny seats to several delegates from Southern States." He also questioned Butler's Democratic loyalty. Senate Leader LYNDON JOHNSON did the same by linking Butler with Senator THRUSTON B. MORTON, chairman of the Republican National Committee.

Senator HARRY F. BYRD, Dixiecrat leader of Virginia's interposition against the Supreme Court desegregation decision, called for Butler's ouster "at the earliest possible time." Other Dixiecrats from Virginia, including Senator WILLIS ROBERTSON and State Democratic Committeeman Fred Switzer, joined the attack.

JOHNSON's power in the Senate was revealed by the way in which Senator MIKE MANSFIELD, of Montana, the Democratic whip, and Senator R. VANCE HARTKE, of an opposing faction in Butler's home State of Indiana, came to JOHNSON's defense with speeches that virtually nominated JOHNSON for the presidency.

This much was expected but the surprise to many observers was the support from Senator STEPHEN M. YOUNG, of Ohio, and from the 91-year-old Senator THEODORE FRANCIS GREEN, of Rhode Island. YOUNG put himself in support of views expressed by Dixiecrat Senator SPESSARD HOLLAND, of Florida, who in turn was acting as a spokesman for John C. Davis, Democratic chairman of Dade County, Fla. Obviously, JOHNSON was using all the trickery to force Senators into line that he developed in the opening days of Congress to save his version of filibuster rule 22.

Butler hit back and continued the fight in a reply letter to Senator GREEN proving his charges by reference to housing legislation, civil rights, and other issues.

Much more is involved than an inner party struggle of personalities.

The Dixiecrats realize there has been a growing movement to free the Democratic Party of their arrogant racist domination exercised in Congress through the seniority system and their coalition with the McCarthyite Republicans. Butler's statement is also apparently directed to break up that coalition.

It likewise has major importance in preparation for the 1960 convention and elections as to issues and candidates. It makes clear that the record of Congress is decisive in the 1960 elections. Butler and others held that only a progressive legislative record can help the Democrats win and that the bipartisan conservative and moderation program of JOHNSON-RAYBURN and company plays into the hands of the Republicans and gives the present leadership to Eisenhower.

The danger signal in the present internal struggle is the silence of labor and the liberals. At other stages also, when Senators JOSEPH CLARK, of Pennsylvania; WILLIAM PROXMIRE, of Wisconsin; and PAT MCNAMARA, of Michigan, spoke up against JOHNSON's one-man autocratic rule, too many liberals and labor forces remained too much on the sidelines.

Labor and the liberals could well have taken the Butler statement and the earlier declarations of CLARK and PROXMIRE as occasions to make demands on Congress and the Democrats and win victories on specific issues. But they allowed the Dixiecrats with JOHNSON and RAYBURN to hold the initiative.

The Dixiecrats take full advantage of the division in labor's ranks and push their own program. The Byrds and the Eastlands seek to impose their program on the entire Democratic Party.

While doing this job inside of Congress with their Republican coalition and their position of power on committees, they have also had laws passed in Southern States which seek to make a shambles of popular elections by maneuvering the electoral college into an instrument for their own ends. Six States have passed laws which give their delegates to the electoral college the right to vote as they please regardless of popular vote or party candidates.

That Senators THEODORE FRANCIS GREEN or STEPHEN YOUNG did not rise to denounce this Dixiecrat trickery to rob the 1960 election instead of slapping at Butler is shameful.

The Dixiecrats intend to use the threat of a vote as they please in the electoral college to dictate candidate choice and platform at the 1960 convention. With this device, they intend to keep the nominal status as Democrats to hold their position of power in congressional committees.

That is the plot against popular elections which is one of the underlying factors in the present fight of Butler versus the JOHNSON-RAYBURN Dixiecrats. Labor, the Negro people, and the liberals have big stakes in that struggle. This Butler fight is part of the debate on candidates and platform developing in every State. It is part of the internal struggle raging inside the Democratic Party in every city and election district. The issues and stakes involved as well as the laws of the Southern States and the role of the Dixiecrats in the Congress and in their States makes this fight a major public issue. It is no longer a private affair of the Democrats.

Home Rule for the District of Columbia

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. DADDARIO. Mr. Speaker, under leave to extend my remarks in the Appendix and include extraneous matter, I am submitting the text of a resolution passed by the Connecticut General Assembly endorsing home rule for the District of Columbia. This memorial is an indication of the sentiment of the people of Connecticut.

The Senate has already passed a home rule bill in this session. I am in hopes that we of the House will be given the opportunity to consider this question.

The resolution follows:

HOUSE JOINT RESOLUTION 201

Resolution memorializing Congress concerning home rule for the District of Columbia

(Adopted by the Connecticut General Assembly May 28, 1959)

Resolved by this Assembly:

Whereas there are 826,000 Federal taxpaying residents in the District of Columbia, our Nation's Capital, who have long lacked any voice in the government of the District of Columbia in which they live; and

Whereas the taxpaying residents of the District of Columbia are without even a voteless delegate to represent them in the halls of Congress; and

Whereas the United States Senate has, during the last decade, four times passed legislation granting home rule to the residents of the District of Columbia; and

Whereas such legislation has four times been killed in the District of Columbia Committee and the Rules Committee of the House of Representatives; and

Whereas it is a matter of grave injustice to deny American citizens the right even to govern themselves as to matters of local interest, and particularly so when they are obliged to bear the costs of such government: Be it

Resolved, That this assembly favors legislation to grant home rule to the District of Columbia; and be it further

Resolved, That this body urges the members of the Connecticut delegation in the House of Representatives of the United States to sign a discharge petition to bring a bill granting home rule to the District of Columbia onto the floor of the House of Representatives in the event that such a bill is again approved by the Senate and bottled up in either the District of Columbia Committee or the Rules Committee of the House of Representatives; and be it further

Resolved, That the clerks of the house and senate are directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from Connecticut in the Congress of the United States.

ELLA GRASSO,
Secretary of State.
FRANK J. MONCHUN,
Senate Clerk.
ROBERT J. SULLIVAN,
House Clerk.

Save the Mustangs

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. DADDARIO. Mr. Speaker, under permission to extend remarks in the RECORD, I submit an editorial appearing in the Bristol Press of Bristol, Conn., entitled "Save the Mustangs."

The editorial follows:

[From the Bristol (Conn.) Press, July 16, 1959]

SAVE THE MUSTANGS

Congressman WALTER S. BARING, Nevada, Democrat, has introduced a bill into Congress which would halt the mechanized wild horse roundups which threaten some 20,000 remaining mustangs with extinction. But if passage is too long delayed, it may be too late. The speed with which the mechanized gangs are rounding up the mustangs indicates that they will capture all that they can before any law prohibiting this type of cruelty can become effective.

Under the Baring measure, hunters could not use trucks or planes to catch burros on public lands and take them to slaughter without using even the smallest humane tactics.

Baring, who gave the description of the mechanized roundup in a recent interview, said that once in his State there were 70,000 wild mustangs but the number has now been reduced to 5,000. He said that his bill is aimed at saving the mustangs from extinction and at the same time securing humane treatment for those who are captured for sale as horsemeat.

The Society for Animal Protective Legislation has taken up the cudgels for the Baring bill and is circulating Members of the Congress as well as newspaper editors and others to familiarize them with the practice of mechanized roundups. Their circular contains vivid pictures of the actual procedures to which the beasts are subjected. Planes sweeping overhead scare the mustangs out of their mountain hideouts onto the plains where they are roped by experts riding in speeding trucks whose lassos are tied to heavy tires which eventually anchor the burros until they are picked up and loaded to the slaughter houses.

It is a cold-hearted business proposition for these ropers who are simply interested in making all they can with no thought of the animal's condition. No care is taken of the beasts who are being taken to slaughter.

We believe that the situation is serious enough to warrant the passage of this humane measure and that our representatives in Congress should be urged to support the Baring measure. It might also be noted that time is of the essence in this matter.

Cuba and Communism

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Walter Lippmann which appeared in the Washington Post and Times Herald on Thursday, July 23, 1959:

CUBA AND COMMUNISM

(By Walter Lippmann)

Shortly after Dr. Castro brought his revolution to power in Cuba, the Governor of Puerto Rico, Mr. Muñoz-Marin, came up to Washington. He came to give us advice which he was preeminently qualified to do. For he had been carrying through successfully a peaceful revolution in his own country, he had the personal confidence of the Cuban revolutionists, and he was and is our very great friend.

Even then, at the beginning, he foresaw the troubles in Cuba, the stubborn difficulties against which the revolution was waged and which it then inherited, the inexperience and the emotional instability of its fighting leaders.

Whatever you do, he said in effect, do not let yourselves become enemies of this revolution. For this revolution is the real thing. It is not a mere change of the guard at the top as is so common in Latin America. This is a popular revolution of the sort which, more than 30 years ago, Mexico went through, and after years of blood and tears brought to a happy ending.

It requires great skill to manage our relations with a revolution of this character in a country which is such a very near neighbor. We have to find ways of reconciling our political and economic interests with a revolution which cannot be stabilized until the chief grievances which produced the revolution has been redressed. This can be managed only if the American Ambassador in Havana can work out a relationship with the revolutionary leaders in which they will listen to him, and even seek his advice and his help.

There is a good reason to say that we have such an Ambassador in Havana, one who is capable of carrying out such a delicate mission, who has, one might say, "good hands" when he rides. But of course he has no chance whatever of succeeding if Congress is going to roughhouse our relations with Cuba, as did the Internal Security Subcommittee of the Senate just the other day. This was when it provided a platform and loudspeakers for a disaffected Cuban adventurer to denounce the Cuban revolutionists as Communists. This country, as the President was quick to point out, "has made no such charges." But the damage done by the subcommittee's irresponsible meddling may not be repaired easily or quickly.

The policy which we are following in Cuba is to avoid a break with Dr. Castro and to seek more contact with him. This policy is the product of years of experience in our relations with the other American states. There is no alternative to it, given the fact that we have most solemnly renounced the right of intervention to suppress a revolution. In this century, we have committed ourselves repeatedly and wholly to the principle that each country in this hemisphere has the right of self-determination. This carries with it inseparably the right of revolution, and imposes upon us the obligation to live with the revolutions, when they occur, as best we can.

Beneath these large generalizations and abstractions, there is the substantial fact that in this century, which is seeing the awakening of the submerged masses of mankind, the old style of imperialism and overlordship is not only morally unacceptable but is practically impossible. To put it specifically and bluntly, the United States could not install a puppet to govern Cuba in place of Dr. Castro and his revolutionists. The United States must, therefore, do what it can to keep on good terms with Dr. Castro and his successors.

There are those who think differently. They see Dr. Castro going far to the left in the company of a number of fellow travelers of the Communists. They think the way to deal with what they see is to denounce Dr. Castro who tolerates and associates with fellow travelers as himself a fellow traveler and virtually a Communist. What good will it do, I would like to know. The result of such tactics will not be to cause Dr. Castro and the fellow travelers to abandon their revolutionary program. It will be to cause them to regard us as their enemy, and to become as thoroughly anti-American as they dare to be.

The wiser course and the more practical one is to be patient and relaxed—to remember that Cuba is our nearest neighbor and is far beyond the reach of the Soviet Union. Remembering this, we can rely ultimately on the high improbability that Cuba will drift or be pushed and pulled into the Soviet orbit.

Just as it was a great mistake to treat Egypt under Colonel Nasser as a Soviet satellite, so it would be an even greater mistake even to intimate that Castro's Cuba has any real prospect of becoming a Soviet satellite.

For the thing we should never do in dealing with the revolutionary countries in which the world abounds is to push them behind an iron curtain raised by ourselves. On the contrary, even when they have been seduced and subverted and are drawn across the line, the right thing to do is to keep the way open for their return.

Cross Country With the On-to-Oregon Cavalcade—X

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following story from the July 9, 1959, issue of the Drain (Oreg.) Enterprise which contains the 10th chapter of a series by Robert

(Rudy) Roudebaugh, concerning the cross-country trek. The wagon train was in Idaho while this was written:

RUDY LOCKED IN JAIL WHEN WAGONS STOP IN IDAHO TOWN

(By Rudy Roudebaugh, driver of Drain Covered Wagon now traveling in Idaho)

Sunday, June 28: Mr. and Mrs. Andy Curtright and sons Frank and Ronnie of Yoncalla were here to visit the wagon train. Also Billy Alsup and family of Yoncalla. A few people from Utah, but more from Washington and Oregon than Montana are visiting the wagon train. Janell went to Vicki Jensen's ranch and stayed all day. Ki and I stayed with wagons and passed out the letters from the Drain mayor. We had church sunrise services at 5.

June 29, 5:55: All hooked up and ready to roll, but waiting on Roy Brabham again. The weather is cloudy and cold. Ki and Janell are in bed. They didn't feel too sharp this morning. Must have been something they ate. 6:22: Going west on big, wide oil highway.

I notice after Mr. Blair left the wagon cavalcade for his home at Sheridan, Oreg., they are leading the team he was driving. Dic and Jim are walking right out this morning. 6:55: The valley here is getting narrow. 7:17: Entering Bennington; just a small town. The road is narrowing. 8:12: In rolling country. 8:49: Entering Georgetown, population 404. There wasn't many people out to see us—mostly children. 9:13: Going up a canyon. 9:38: It's starting to rain. 9:57: Stopped to rest. Been pulling a steep hill. 10:10: The elevation now 6,283. 11:13: Stopping for camp.

We were invited out to dinner by the chamber of commerce, and the Daughters of the Utah Pioneers of Camp Meade arranged the whole thing. They also took us to see Soda Springs and Hooper Park and famous captive geyser. We are 9 miles out of Soda Springs, but they came out and picked us up in cars and even hauled us firewood.

June 30, 6:01: We are heading west on Highway 30. 6:29: Leaving Bear Lake County and entering Caribou County. There is snow on the high peaks and it froze last night. Chilly in the morning. This is wheat country. Mrs. Walker (first ranch on our left) served us two plates of hot biscuits for breakfast. 8:27: Soda Springs, population 2,600. Ben and I went to the bathroom in the jail and were locked in. Have been in town 20 minutes and gave out about 250 letters from the mayor. 12:03: Leaving Soda Springs, which is a pretty place. Reminded me of Oregon with all the green grass and trees. 10:25: We're back in the sagebrush on a lava road. Arrived at camp at 10:27. We are parked right under the Great Divide where the water runs southeast into the Great Salt Lake and northwest into the Columbia Basin. We are 5 miles from Grace, Idaho. Sandals were brought to us by the Lowe Drug Store in Grace.

July 1, 5:45: All hooked up and ready to go. The sun is out bright, but the temperature is cool. 5:59: Heading up Fish Creek Road. 6:59: Passing by Central Market way out here in the sticks. Jean Marshal slept in our wagon with Janell last night. We are going through a valley that grows a lot of wheat. 8:24: Passing Lund's Post Office—that's all that is here. 8:40: Stopped to rest on a hill, the steepest we've seen since we been on the trip. 9:44: On top of Fish Divide. 9:48: Just got off the hill and we had to block our wheels to get down: 10:31: Going up a canyon. 10:51: Crossed the Partneuf River and pulling onto Highway 30. 11:16: Arrived in camp at Lava Hot Springs rodeo grounds. I greased my wagons this evening. We had free baths at the spa pool. The chamber brought dinner out to us. Ki is on cook shift again."

July 2, 6 a.m.: Waiting on Roy again this morning. There are a few clouds in the sky. 6:05: Going west on gravel road. They have begun to hay in this narrow valley. The hills are rocky with few small trees growing in the canyons. 6:43: We are pulling on highway 30.

We passed a grandma walking and she stopped to watch us go by. I asked her to ride with us, but she declined. 7:26: Crossed over Porteuf River. 7:32: Going down a canyon. Ki is on cook shift again today. 8:29: Turned off highway to gravel road. 8:46: Going through McCannon. 9:08: We are in sagebrush country again with cactus all in red blossoms. 9:20: Crossed Marsh Creek. 9:45: Going along foothills above Marsh Creek. 11:23: Camped on the Jack Stanley ranch along Marsh Creek.

July 3, 5:50: All hooked up and ready to go. The weather is cloudy and warm. We had a little thunderstorm last night with a shower. 5:58: Here we go. Doc and Jan are doing better each day. 6:45: We are going through Portneuf. Their main industry is cement. They have a large plant. 7:30: Going up a valley about a mile wide along the foothills. Sagebrush on the hillside and hay fields on the other side. It is lightning and thundering like h—. Boy. The rain is here. Doc and Jan are acting up. I guess they don't care for this sort of thing. Ki doesn't either. Janell is asleep so nothing is bothering her. 8:10: We are parked on Highway 30 a quarter of a mile away is the Portneuf River. The sun is coming out. 9:25: The first escort has come out to meet us. The president and some of the officers of the chamber of commerce are out here to come in with us. They are wearing beautiful Indian chief feathers and carrying a peacepipe. They came to our camp last night and gave us gifts from all the business places in Pocatello. Everything you can think of was in the gifts. Also eight watermelons.

We will be here over the 4th and have every minute planned to entertain us. Free laundry, meals, sewing machines, irons, ironing boards, baths, etc. 9:55: Entering Pocatello. 10:58: Went by a home and they came out with ice cold lemonade and cookies. 11:20: Arrived at camp at the fairgrounds. It is pretty here. Lots of trees and shade.

We just got here when Ed Duncan, son of Mr. and Mrs. Richard Duncan of Drain, came up to the wagons. It was sure nice to see someone that at least used to be from Drain. They furnished us with cars here to use until we left. Ed Duncan and family seen to it we didn't need one. They put off crowning the rodeo queen until the wagon train pioneers got there. This evening they put on a small rodeo for us. Mr. and Mrs. Wayne Hutchinson and family of Drain were here today. Also Heb Cogner from Cottage Grove.

July 4, 10: We went over to Ed's for lunch. They have a beautiful new home. They moved in 2 months ago. He picked onions and radishes out of his garden for lunch. The corn isn't quite ready yet. They put in their lawn 3 weeks ago and it is up and looks good. Ed said he had to water often as the sun drys the ground out fast. We had a ham dinner. It seemed good to relax in a home again.

This evening we went to a banquet at the Green Triangle, and then back to the fairgrounds for fireworks. We ended our evening going out to Ed's and visiting and drinking coffee. He has a wonderful family, three children and a lovely wife. He wants us to tell everyone in Drain "Hello" especially his parents and brothers and sisters.

Emma Lazarus

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News of July 17, 1959, commemorating the birthday of Emma Lazarus, authoress of the sonnet inscribed on the base of the Statue of Liberty:

EMMA LAZARUS: 1849–87

(By Harry H. Schlacht)

Wednesday, July 22, we commemorate the 110th anniversary of the birth of Emma Lazarus, the beloved American poetess. Children of liberty will clasp her hand in loving memory.

Emma Lazarus is the author of the inspiring sonnet, "The New Colossus." Her message to the world, all the world may read. It is engraved on the Statue of Liberty. It is standing in the gateway of democracy.

The noble soul and human heart of Emma Lazarus are symbolized in the Goddess of Liberty. It was given to a child of oppressed generations to understand the true meaning of this liberty-loving nation; to pen the immortal lines with such prophetic pathos; to express the spirit of democracy with such eloquence; to welcome the persecuted of the Old World, to the glorious promise of the New World.

And through the years we can hear the echo of Miss Liberty's voice speaking to these pilgrims to our blessed land: As you breathe the free air of our shore homeless wanderer, reaching home, become one with us in freedom's cause, take the riches of our liberties and repay the gift of becoming one with us—an American.

The Goddess of Liberty and Emma Lazarus have become synonymous. No poet of any nation has ever received such worldwide distinction. The "Lady With the Torch" was presented by the people of France to the American people to commemorate the first centennial of American independence.

Emma Lazarus was born on July 22, 1849, in New York City. She was the daughter of an old Jewish family. The story of her literary evolution is the story of the fulfillment of the evolution of a soul. Many women of every race, many men of every race, have evinced literary ability.

But it is rarely given to man or woman to so combine the powerful poetic expression with the clear insight and courage, with the conviction and devotion, as it was in Emma Lazarus. Her poems had power. Her poems had fire.

Since Miriam sang of deliverance and the triumph of the Red Sea, the Jewish race has had no braver singer. Her songs of divine unity repeated on the lips of her own people, in all zones and continents, have been heard round the civilized world.

Her poem, "The Crowing of the Red Cock," written when the Russian sky was red with blazing hatred, is a powerful lyric worthy of the Maccabean age. Her poem, "Banner of the Jew," has the ring of Israel's war trumpet. It sounded the clarion call to all Jews to unite for human rights, for new achievements and for new glories as in the days of the Maccabees.

She was one of the pioneers of Zionism. She was one of the outstanding advocates of a Jewish homeland. It was in that cause

that her character had its fullest flowering.

It is heartening to see that the same poetess who was the first to give expression for the national renaissance of her people has become the symbol of humanity and democracy. She died on November 19, 1887. She was in her 38th year.

On that tragic day no better appreciation of Emma Lazarus was expressed than that of the famous American poet John Greenleaf Whittier who wrote: "Her people will mourn the death of this woman. But they will not be alone. At her grave the tears of the daughters of Jerusalem will mingle with those of the Christians."

As long as liberty shall live in the human heart, as long as the Statue of Liberty shall remain our symbol of freedom, the name of Emma Lazarus will forever be a part of the fame of that symbol as the champion of liberty.

THE NEW COLOSSUS

Not like the brazen giant of Greek fame,
With conquering limbs astride from land to land;
Here at our sea-washed, sunset gates shall stand
A mighty woman with a torch whose flame
Is imprisoned lightning, and her name
Mother of Exiles. From her beacon hand
Glows worldwide welcome; her mild eyes command
The air-bridged harbor that twin cities frame.
"Keep, ancient lands, your storied pomp," cries she
With silent lips. "Give me your tired, your poor
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me,
I lift my lamp beside the golden door."

Health and Hospitalization Program for Federal Employees

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. DOLLINGER. Mr. Speaker, the important subject of a health and hospitalization program for Federal employees is now under consideration by the House Committee on Post Office and Civil Service.

Under leave to extend my remarks, I am including in the CONGRESSIONAL RECORD, my statement to the committee on July 21, 1959.

Mr. Chairman and members of the Committee on Post Office an Civil Service, your committee is considering legislation relating to a health and hospitalization program for Federal employees. Among the bills before you is my H.R. 2326, to provide for Government contribution toward personal health service benefits for civilian officers and employees in the U.S. service and their dependents, to authorize payroll deductions for participants, and for other purposes.

I am pleased that your committee has scheduled action on this long-overdue program for assistance to our Federal employees. We know that employees in the Federal service have always been underpaid; their salaries have never equalled salaries paid by private employers for comparable work; the small pay raises granted Federal workers have never been commensurate with ever-rising living costs, and at this point, living expenses have reached a new high.

Our Federal workers, with families to support or other dependents for whom they must provide, find it barely possible to meet their financial obligations; high living costs plus high taxes prevent saving for the proverbial rainy day or the day when a Federal employee or his dependents suffer a serious illness. A critical illness requiring protracted hospitalization, surgery, costly hospital facilities and medicines, nursing care, doctors' fees, not only wipes out any little savings a low- or middle-income employee may have accumulated through great personal sacrifices over a period of years but also throws him into debt for years to come. Such a burden becomes intolerable, such worry must lower the morale and efficiency of any human being. The cost of personal health service insurance is prohibitive to the millions of Federal employees in the low or middle salary brackets, when procured on an individual basis.

The well-being and efficiency of our Federal employees must be considered and preserved if we wish to keep our Government offices and other installations operating at the peak of accomplishment and effectuality. Large private employers have for many years helped their employees to obtain benefits which this legislation would now provide for Federal employees. To refuse to give this assistance to our Federal employees is to withhold reasonable and sound protection against the high costs of illness. Surely the Federal Government owes to its employees the same consideration which private industry, on the whole, has found it possible to extend to its workers. The legislation before you provides the needed and necessary protection at a cost which employees and the Government can afford.

I urge your committee to take favorable action so that our Federal employees may be accorded this sorely needed assistance.

Nixon's Trip to Russia

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. BOSCH. Mr. Speaker, there has been a great deal of discussion on the trip of Vice President RICHARD M. NIXON to Russia.

Under leave to extend my remarks, I include an excellent editorial which appeared in the New York Daily News on the subject. I commend this editorial to the attention of my colleagues:

NIXON'S TRIP TO RUSSIA

Vice President RICHARD M. NIXON's trip to Soviet Russia (he's due in Moscow this morning) can have almost any number of important effects and repercussions.

For one thing, the trip can profoundly affect Mr. NIXON's own political future—his chance of landing the 1960 Republican Presidential nomination and, if he gets that, of winning the Presidency.

The trip, too, may swell the already sizable stream of U.S. socialites visiting Russia—through passeth our understanding that any American should want to inhabit Russia's dowdy hotels and consume stodgy Russian food after fuming and hour or two before the waiter brings it.

Most importantly, the Nixon trip can affect the Geneva Conference of Foreign Ministers, which shows signs of collapse.

The Big Four powers (United States, Britain, France, Russia) have wrangled for weeks over N. S. Khrushchev's demand that the Western Allies pull out of West Berlin, which is 110 miles deep in East Germany.

TWO PROPOSALS ABOUT GERMANY

The dispute has boiled down to two proposals.

Our side wants a Big Four Commission set up, with West and East German advisers, to study reunification of Germany. The Kremlin proposes an all-German committee to work on German reunification, with Western allied rights in West Berlin undisturbed for 18 months.

The Russian scheme is one to bulldoze all Germany into the Red slave empire. Consent to it, and we'll lose probably the decisive battle of the entire cold war.

Fortunately, as we see it, President Eisenhower goes on voicing determination never to let the Western allies be pushed out of West Berlin without a fight—a first-class nuclear fight, we gather, if it comes to that. Standing firmly with the President are France and West Germany, and, at least outwardly in the last few days, Britain.

Vice President NIXON's scheduled talks with Khrushchev may conceivably help to ease the West Berlin situation.

NIXON is not authorized to make any deals with Khrushchev. But should the latter come up with concrete suggestions regarding the cold war, NIXON is to report them at once to the President, who will mastermind the next moves.

IF KHRUSHCHEV SEES THE LIGHT

Our sub-Chief Executive is a man of proved courage and political "savvy." It may be that he can convince the Red czar that the United States will not be pushed around, and is no more afraid of Soviet Russia and Red China than it was of Hitler Germany and Tojo Japan.

Should those facts penetrate Khrushchev's brain, he may well "crawfish" as most gangsters do when called.

For our part, we hope Mr. NIXON will go even further in his talks with Khrushchev. We hope he will grab the offensive for the West in the cold war.

At a Warsaw news conference Tuesday evening, Khrushchev screeched and screamed about the current Captive Nations Week in the United States, as proclaimed by the President with congressional approval, to remind Americans that nine nations plus East Germany are still slaves of Soviet Russia.

ASK "KHRUSHY" ABOUT THE SLAVE NATIONS

Khrushchev's bellow was enlarged upon in a three-column article yesterday in Pravda, most important of the Russian-kept newspapers. Pravda claimed to be outraged that anybody should think people living under communism are slaves—which is exactly what all such people except the Communist bosses are.

This incident, it seems to us, points up again what many observers say: that what worries the Kremlin most in this group of restless and resentful slave nations.

The West's best single cold-war bet, say these same observers, is to agitate and propagandize in every feasible way for the liberation of the slave nations, thereby keeping the Kremlin worried and off balance.

If Mr. NIXON will hammer on this point as he talks with Khrushchev, we believe his doing so can be utilized as the opening barrage in a Western cold-war offensive which can get real results if pressed without letup.

A Sorry Choice

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an article from todays New York Times.

EISENHOWER GIVES WHEAT VOTE VIEW—SAYS FARMERS HAVE "SORRY CHOICE" IN REFERENDUM ON CONTROLS TODAY

WASHINGTON, July 22.—President Eisenhower said today "it's a sorry choice" wheat growers have to make tomorrow in voting on continuance of Federal production controls for the 1960 crop.

The President made the comment when asked at his news conference if he had any advice for the growers on the eve of their annual referendum.

The President replied that the wheat farmers had faced a hard choice because Congress had failed to pass what he regarded as satisfactory farm legislation.

"So," he said, "they have now the choice between taking the program as it is now, which last year piled up again these tremendous surpluses. The other alternative they have is no program at all.

"'SORRY CHOICE' IS SEEN

"So I think, because of the failure to have something they could vote on that was a little bit more meaningful, it's a sorry choice they have to make."

Earlier, the President listed "a recent farm bill" as one of the major things he hoped Congress would vote for before it adjourned.

The Democratic-controlled Congress passed a bill—which was vetoed—that would have reduced wheat planting allotments and raised price supports. The administration wants instead to move in the direction of lower supports and fewer controls.

Agriculture Department officials predicted a light vote in its referendum in 39 producing States tomorrow.

More than 900,000 growers are eligiole to vote. But seldom in past referendums on the same question have more than a fourth of those eligible cast ballots.

NEVER HAVE BEEN REJECTED

Never have controls on wheat been rejected.

The specific question to which growers must mark "Yes" or "No" on secret ballots is: Do you favor Federal marketing quotas on the 1960 wheat crop?

At least two-thirds of those voting must approve for them to be in effect.

Last year the vote was 84 percent for quotas on this year's crop.

Generally speaking, quotas limit penalty-free sales to the quantity of wheat grown on each farm's share of a 55-million-acre national planting allotment. If quotas are approved, the crop will be supported at $1.77 a bushel, compared with $1.81 this year.

Rejection of quotas would drop supports to $1.18. Supports would be limited, however, to growers who stayed within their planting allotments.

The present program has been criticized by farm leaders in and out of Congress because it has not prevented the accumulation of a record large surplus. Under the law, the national allotment cannot be cut below 55 million acres.

Seaway Progress and Prospects

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1959

Mr. WILEY. Mr. President, the completion of the St. Lawrence Seaway—already fulfilling its promises of increasing traffic into the Great Lakes region—holds even brighter prospects for the future.

Once dubbed an "impossible task," the seaway has become a reality, through the combined efforts of men and machine to transform the "big ditch" into a modern waterway, utilizable by 90 percent of the deep-sea shipping of the world.

Once-rampant, untamed waters of the mighty St. Lawrence River are now effectively controlled and harnessed to carry—and lift and lower, through a tremendously complex lock system—millions of tons of shipping annually. The gigantic hydroelectric powerplants of the waterway, too, will turn out millions of kilowatts of electricity to provide power and light for homes and farms, and job-creating businesses and industries.

Overall, the great waterway will provide new economic opportunity, not only for the resourcefully rich, highly populated Great Lakes region, but also for the whole Nation and our good neighbor, Canada.

Recently the Trade Union Courier published a special seaway supplement edition. Among the fine articles in this publication was a particular one entitled "Seaway Progress and Prospects," by Lewis G. Castle, administrator of the St. Lawrence Seaway Development Corp.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Trade Union Courier, July 17, 1959]

SEAWAY PROGRESS AND PROSPECTS

(By Lewis G. Castle)

The basic purpose of the seaway is that of providing a waterway of 27-foot depth between the Great Lakes and Montreal which can be navigated by vessels having up to 9 or 10 times the capacity of ships that are now accommodated in the existing 14-foot canal system along the upper St. Lawrence River. By the time the project is completed, there will have been excavated a total of about 112 million cubic yards in the construction of new channels and deepening or improvement of existing channels. Approximately 3 million cubic yards of concrete will have been placed, chiefly in the construction of seven new locks which will raise or lower large vessels by a total of 226 feet between Lake Ontario and Montreal. Each of these locks will have a usable length of about 768 feet and a width of 80 feet.

Extensive dikes have been erected in various areas and numerous aids to navigation are being installed. Substantial bridge construction has been required to provide crossings which will have a clearance of 120 feet above the seaway. Included in this construction is a new high-level suspension bridge having a length of almost a mile between Rooseveltown, N.Y., and Cornwall Island on the Canadian side of the boundary.

Two tunnels for highway traffic have also been incorporated in the project. One of these tunnels is contained in the Eisenhower lock; the other passes under the seaway channel near the Beauharnois locks in the Canadian portion of the project. There are other interesting items of construction too numerous to mention on this occasion. All in all, the project as a whole will be an outstanding example not only of technical skill and ingenuity in overcoming great natural barriers, but also of the ability of two nations to work together in carrying out a monumental undertaking for the benefit of their own countries and world trade.

Fundamentally, the seaway will permit the shipping of a far greater volume of freight more expeditiously and more cheaply between the Great Lakes and ports on the lower St. Lawrence River and overseas, than is now possible within the limitations of the shallow St. Lawrence canal system which is being superseded by the new modernized seaway facilities. That canal system was developed to its present form and dimensions about a half-century ago. Its freight traffic recently reached an annual volume of approximately 13 million tons, which represents a marked growth in the course of a decade, and there is no doubt that this volume would have been much greater if there had been sufficient capacity to accommodate somewhat larger ships.

The old canal system has a controlling depth of 14 feet and contains 21 locks which can accommodate vessels having a length of not more than 253 feet or beam not exceeding 44 feet. These limitations have resulted in the development of the so-called canaller type of vessel having a deadweight capacity of something less than 3,000 tons. Seagoing vessels of the general cargo type can transit with about 1,500 tons.

In contrast, the seaway locks will accommodate ships having lengths up to 730 feet and beams up to 74 feet. As a result, large lakers having a deadweight of over 25,000 tons will be able to navigate between the Great Lakes and the lower St. Lawrence River all the way down to Seven Islands in Labrador. Ocean vessels carrying general cargo will be accommodated in sizes ranging up to about 9,000 tons deadweight, in services between the Great Lakes and overseas destinations.

As is well known, the larger the cargo capacity of vessel, the smaller the operating cost per ton of capacity. The much larger vessels which can be accommodated in seaway facilities will not only have lower ship operating costs per ton of capacity, but will permit savings in transportation costs through the elimination of the expense incurred in the transshipment of cargo to small canallers that is now involved in the movement of a considerable tonnage of freight to and from the Great Lakes.

As a bonus, further savings will accrue to shippers through the elimination of the risks of damages to merchandise or weight losses or deterioration which are inherent to varying degrees in the transshipment of many kinds of cargo. Additional economies in transportation costs will be possible as a result of the faster transiting of ships through the seaway facilities. As compared with 21 locks in the present St. Lawrence canal system, the seaway will have only 7 locks between Montreal and Lake Ontario.

The old maxim that "time is money" is very applicable in the operation of ships, and the reduction in lockages on the St. Lawrence River as well as other improvements will by themselves result in savings ranging to more than $1,000 per vessel per trip in terms of ships' time, depending upon the size of a vessel.

Altogether, the seaway will have possibilities for substantial dollar savings in annual transportation costs. In fact, the economies in transportation costs made possible through the use of the seaway will be even more impressive in view of the increase in general price levels and transportation costs that have taken place since 1953.

We are aware, of course, that an initial period of traffic development will be required to build up cargo volume, but we shall not be starting from scratch. During the development period, amortization of indebtedness can be deferred with a consequent book deficit, that will be made up as traffic develops. There will be no out-of-pocket deficit unless some entirely unforeseeable contingency should intervene.

With regard to construction costs, there has, of course, been a considerable increase in price levels in the several years which elapsed between the preparation of original cost estimates and the different times at which contracts were actually placed for various stages of work and equipment. Another factor to be considered with respect to costs is that the seaway project is intended to be a modern waterway which will permit the expeditious handling of ships, rather than merely providing minimum facilities to meet the bare requirements of navigation. In this conection we have coordinated our plans with those of our Canadian counterpart.

For example, our two locks, and the five locks of our Canadian counterpart, have guide walls at lock entrances which are 1,650 feet in length in order to permit the tieup of several vessels while awaiting their turn to pass through a lock. If we had reduced the length of the guide walls of our locks to save costs, our portion of the seaway would at times be a source of inconvenience to waiting vessels and would slow up seaway traffic. We also found it advisable to add a training dike to our project for the elimination of currents which are not desirable from the standpoint of navigation. Likewise, no provision had been made for navigation aids in the original cost estimates.

Our dredging costs have been increased in consequence of channel improvements and excavations made in excess of minimum requirements, in order to provide a waterway having better characteristics for navigation purposes than was originally contemplated. Also, we have had to keep in mind the development of increased lengths and beams of vessels built in recent years, particularly on the Great Lakes.

Other additional cost factors might be mentioned, including the obvious necessity of replacing the existing narrow roads with modern highways, to carry a large volume of traffic on approaches to bridges and other facilities included in the seaway project.

In any project having the magnitude and complexities of the seaway, there would inevitably be problems that arise as the work progresses and I am glad to pay tribute to the splendid job which has been performed by the Corps of Engineers as our construction agent.

In the long run, the improved features of the project will pay off in terms of increased traffic capacity and reduced ship operating expenses. Our latest estimate of the cost of constructing United States and Canadian portions of the seaway is on the order of $450 million and we estimate that the average of annual expenses, amortization of debt and interest for both countries will be less than $26 million. Keep in mind that this investment is not a taxpayer's burden. Toll revenues will retire the total cost advanced by both the Canadian and United States Governments.

Engineeringwise the construction of the seaway and power projects has been coordinated, but they are separate undertakings in all respects. The power project is a joint undertaking of the Power Authority of the State of New York and the Hydro-Electric Power Commission of Ontario. The seaway is, of course, a project of the Federal Governments of the United States and Canada, which was authorized by legislation of each country charging their respective entities, the St. Lawrence Seaway Development Corporation and the St. Lawrence Seaway Authority of Canada, with responsibility for the construction, operation, and maintenance of the seaway works in their respective territories.

It appears that some people are under the impression that the seaway project also embraces the deepening of the connecting channels between the Great Lakes above Lake Erie to a depth of 27 feet. Such is not the case. The deepening of the connecting channels above Lake Erie is a separate program which is being carried out by the Corps of Engineers of the U.S. Army with public funds appropriated by Congress.

In the course of the next 6 weeks a major portion of the U.S. section of the seaway and a part of the Canadian facilities will be opened to 14-foot shipping through the area known as the International Rapids section of the St. Lawrence River. This will be necessary because the raising of the water pool of the St. Lawrence power project will flood out the present St. Lawrence Canal system west of Cornwall, Ontario.

The opening of the seaway for deep draft navigation at a controlling depth of 27 feet throughout its entire length will take place next April. That event will inevitably contribute to the changing of transportation patterns and the stimulation of the economy of large areas in the United States and Canada. The forerunners of these developments are already becoming evident in current programs for the construction of port facilities, industrial plants and ships involving an aggregate expenditure of well over $100 million as a direct or partial result of the prospective availability of the seaway.

This is a good beginning but it is still only an entering wedge in opening the door to the opportunities which can be developed from the use of the seaway if proper initiative is exerted.

In the extensive discussions of the seaway project over many years, there have been differences of opinion regarding the various possibilities of the project, but in general those differences have not been due to doubts that the seaway would have a stimulating effect upon the economy of the Great Lakes Basin and adjacent areas. What has been questioned has been the extent to which the potentialities of the seaway route could be, and would be developed in the light of facilities and conditions on the Great Lakes, especially with respect to oversea trade.

Let us examine factors which should be considered in this connection:

The stimulating effect of low-cost water transportation on commerce has been vividly demonstrated in recent years by the growth of traffic on our inland waterways. That traffic increased from 9 billion ton-miles in 1931 to 109 billion ton-miles in 1956, exclusive of traffic on the Great Lakes.

This represents a 12-fold increase in a period of 25 years. Major waterways in other parts of the world have also had a large increase in cargo movements. Freight traffic on the Manchester Canal in England tripled between 1946 and 1956. Cargo shipped through the Panama Canal increased from 5 million tons in 1915 to 50 million tons in 1957.

In the case of the Suez Canal, the registered tonnage of ships transiting the canal is the only comprehensive index of traffic that is available. Between the first year of Suez operations in 1870 and 1955, the last year of full operations before the Egyptian takeover, the net registered tonnage of shipping through the canal rose from a half-million tons to almost 116 million tons.

Certainly the seaway will provide improved water transport facilities for the Great Lakes Basin, which has economic potentialities as great and as diversified as those served by any major waterway elsewhere. Almost half of the total of U.S. exports of nonagricultural products to oversea destinations originate in that area. And that area is also productive of much of the agricultural exports from this country. On the Canadian side of the border the potentialities are probably even greater in relation to that country's economy.

The State of Michigan is a major part of this highly important region of domestic and foreign commerce. Not only does this State have a broad base of economic capacity for further expansion, but it is in an unusually favorable geographical position to benefit from water transportation.

With the exception of the southern boundaries of the State, Michigan has a Great Lakes water frontage on all its sides. It has the further advantage of having a shoreline on the channels which connect four of the Great Lakes. In these respects Michigan holds a unique position among the States on the Great Lakes. Detroit itself is in the strategic position of having a waterfront on the connecting channel through which an enormous volume of shipping passes between Lake Erie and the upper lakes.

The benefits which can be derived from these natural advantages will be enhanced by the opening of the seaway. In fact, foresighted enterprises are already developing their business in preparation of further expansion when the seaway facilities are in operation. Among the interesting examples is the direct exportation of agricultural products by the St. Lawrence route, which is being developed through the Port of Muskegon, Mich. Savings are also being achieved by the increasing shipment of industrial products over this route.

In the field of shipbuilding, a yard at Bay City has obtained Navy contracts of over $60 million for the construction of four warships which are to be delivered through the seaway. Another Michigan shipyard now has under construction a large cargo vessel of seaway dimensions. At this time we might also refer to the Dow Chemical Co., who will establish its own marine terminal on the Saginaw River.

I do not wish to convey the impression that the mere availability of the seaway will automatically result in a deluge of new business to this State and elsewhere on the Great Lakes. The extent to which the potentialities of the seaway are converted into realities will also depend to a large degree upon the facilities available at ports on the Great Lakes and other factors which affect traffic patterns. There are handicaps to be met in this connection but those conditions are not insurmountable.

For example, it has been said that the closing of navigation on the Great Lakes and upper St. Lawrence River during the winter would necessitate dual traffic arrangements for the off season with resultant inconvenience and expense if importers and exporters were to use the seaway route during the open navigation season.

In this connection I would invite your attention to the fact that the 8-month navigation season on the Great Lakes has not prevented a marked growth in imports and export shipments through the St. Lawrence gateway during recent years. For comparative purposes, it might be well on this occasion to note the development of oversea cargo traffic at the port of Toronto since we find many similarities between the economies of southern Ontario and Michigan.

As you know, Toronto is the center of a highly industrialized region having a widely diversified output of manufactured products, including automobiles, machinery, electrical merchandise, et cetera. It is of particular interest to note, therefore, that the volume of direct waterborne overseas cargo loaded and discharged at the port of Toronto rose to over 200,000 tons during 1957; a substantial increase over the quantity recorded in the preceding year.

Obivously, the exporters and importers of diversified products to and from Toronto have found it economical and efficient to use the St. Lawrence route regardless of the necessity of diverting some of their shipments to other routes during the season of closed navigation.

Of course, some firms on the Great Lakes which have in the past developed traffic patterns and arrangements for the distribution of their exports and imports at or through the seaboard may find it necessary to make some appreciable changes in order to route shipments via the seaway. We believe, however, that with relatively few exceptions there will be compensatory savings in the long run through the use of the seaway route.

It has also been argued that the ports on the Great Lakes will not have the shipping services and facilities or the labor and know-how required to handle a large volume of export and import shipments in an economical and expeditious manner.

Such an argument does not give adequate consideration to the fact that in 1957 there were already 373 regular line sailings on routes between the Great Lakes and Europe, Africa and the Caribbean. In addition, there were 40 sailings of so-called tramp ships. The opening of the seaway will stimulate the expansion and frequency of Great Lakes services to any parts of the world having an appreciable volume of trade with the Great Lakes region and its hinterland. Let me remind you in this connection that the Federal Maritime Board has already demonstrated that it is alert in the establishment of essential routes for the operation of American-flag shipping services between the Great Lakes and overseas ports through the seaway. Two such routes have already been designated.

As to the availability of waterfront services and the experience required for the handling of ocean ships and cargo, it has been alleged that the 8-month navigation season on the Great Lakes will adversely affect the retention of a sufficient supply of trained labor for the loading and discharging of seagoing vessels at ports on the lakes. It has also been asserted that the lack of year-round traffic will render it uneconomical to make the investment needed to provide the up-to-date equipment required for the expeditious handling of ocean ships and cargo at lake ports. These are generalities which convey a distorted impression of the Great Lakes situation as a whole.

Of course, there are some ports on the Great Lakes which are not yet equipped to handle all types of cargo, but there are also ports which have developed the facilities, equipment, labor and experience required to deal with the general run of cargo. They are expanding their facilities and equipment to meet foreseeable additional requirements on seaway traffic. No one has questioned the ability of the Great Lakes marine industry to handle bulk cargoes, nor has anyone questioned the ability of the Great Lakes ports to deal with the requirements of the increased shipments of general cargo. Enterprising communities have shown that they recognize the need of making reasonable preparations to enable their ports to obtain an equitable share of seaway traffic.

At this time may I make mention of a few names out of many who have contributed constructively and actively in port planning as well as stimulation and promotion of shipping trade in the port of Detroit: Carlis J. Stein, port director, and the members of the port commission, Tom Reed, Foster Winter, Mayor Miriani. They are entitled to high praise for their performance.

Navigation authorities are aware that shipping and traffic are attracted to ports which can handle vessels and cargo in the most expeditious and economical manner. They are also aware that the handling of ships and cargoes benefit not only waterfront interests, but also increase the business of the community as a whole. This is so well known by major ports on the seacoast that they devote considerable effort to the encouragement and retention of shipping traffic through their facilities.

There is still quite a bit to be done in order to be prepared for seaway traffic. But I have no doubt that the imagination, ingenuity and initiative which have brought Great Lakes shipping and the handling of bulk cargo to their present high level of efficiency will be capable of dealing with the problems of accommodating increased ocean traffic with equal efficiency. This is already being done at several ports on the Great Lakes.

The seaway is about to become an accomplished fact after a long struggle and the time has now come for positive and objective action by all, to reap the benefits of this new artery of water transportation. This will involve constructive consideration of the possibilities offered by the seaway route. Unless this is done, the inhibitions created by the habit of thinking in old established traffic patterns and arrahgements may well create blind spots that will result in "missing the boat" so far as seaway opportunities are concerned.

The challenge to all interests on the Great Lakes has been well expressed by a prominent shipbuilder who recently stated: "The expansion of marine interests in all phases that will undoubtedly take place is almost inconceivable to the imagination. How much expansion in additional business will be generated by Great Lakes shipyards will depend entirely on the initiative and imagination exerted by the personnel involved."

That statement is applicable to all forms of economic activity in the Great Lakes-St. Lawrence Basin and adjacent areas of the United States and Canada. In conclusion let me say, anyone who endeavors to predict the developments which will take place in the economy of this heartland of both countries runs the risk of underestimating rather than overestimating the possibilities. Let us not forget that the development of industry and commerce which has occurred in this region during recent years has gone far beyond the prognostications made only 10 years ago. The seaway will be an additional element in the bringing about of further economic expansion in the years to come.

Wheat Referendum

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. HOEVEN. Mr. Speaker, today an editorial entitled "Wheat Inflation" appeared in the Washington Post and Times Herald. This editorial deserves the attention of every person in this great body. The editorial follows:

The country witnesses today another wheat referendum in which farmers will choose between disaster by route No. 1 and disaster by route No. 2. If they choose to continue the present program, which they are expected to do, the result is likely to be further excess production. The country already has nearly a 2-year supply of wheat on hand, and taxpayers have nearly $3.5 billion tied up in stored wheat.

If farmers should vote against continuation of the existing program, the national average support price would drop from $1.77 to $1.18 a bushel—a very drastic reduction. They would be relieved of penalties for planting in excess of their quotas but would still have to keep within quota limits to obtain the lowered price-support loans. The choice is thus a dismal one.

Three factors in the present law have contributed to its unfortunate consequences: It forbids the Secretary of Agriculture to cut the total acreage allotments below 55 million acres; it allows every farmer to grow up to 15 acres of wheat without penalty; and it will not let price supports be fixed at less than 75 percent of parity. The result has been to put a premium on overproduction at heavy cost to the taxpayers.

President Eisenhower again voiced hope at his news conference yesterday that Congress will pass legislation to relieve this most critical of the numerous farm problems. This hope must be shared by a vast majority of the wheat farmers and by an even larger percentage of the taxpayers who must pay the bill for the current folly.

Today is decision day for farmers growing wheat. Today there is being held the marketing quota referendum for the 1960 crop of wheat.

Many Members of this body probably are unaware that today is voting day for the wheat program. Probably few here realize that most wheat farmers are prohibited by existing law from expressing their opinions at the polls on what kind of a program they want.

Today 40 percent of the wheat farmers—the bigger ones—can vote in a referendum to decide whether there shall be wheat marketing quotas for the 1960 crop. But 60 percent of the farmers growing wheat—those who do not have allotments of more than 15 acres—are ineligible under existing law to vote. This is the only agricultural crop that discriminates against the small producer. This is made mandatory by the law. It discriminates against the small family farm. This is regrettable.

Under present legislation wheat farmers really do ont have a very realistic

choice to make in the referendum. They have only two alternatives: (a) The present program, which has proven so disastrous insofar as piling up surpluses and excessively high costs are concerned and the likelihood of a continued piling up of even greater surpluses, or (b) they can vote for no program since the law requires price supports at 50 percent of parity if there are no marketing quotas. Farmers still would have to comply with allotments. This, of course, is not a fair or realistic choice to place before the wheat farmers. Charles Shuman, president of the American Farm Bureau Federation calls it "an absurd farce that denies producers any realistic choice."

The wheat farmers should not be blamed for the situation they now find themselves in. They are not responsible for the outmoded and unrealistic laws that are on the books and which have to be administered. Their response to legislation is only what should be expected.

The farmer is not responsible for the inaction of the Congress to provide a workable wheat program. A better program should have been adopted before this—before the wheat referendum was held. We should give attention to obtaining a workable and acceptable program. There has been ample opportunity before this. The President months ago recommended alternative approaches to the wheat problem. Other approaches have been submitted this session, which, if adopted, would have given the wheat producer a sound, workable program to replace the very unsatisfactory one now operating. The Congress should not turn away from trying to get constructive legislation of wheat this session. The wheat farmer should not be let down by no remedial legislation. It is not too late for action.

Harnessing the Yukon River

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. BARTLETT. Mr. President, it has long been the hope of many Alaskans that the mighty Yukon River and its gigantic hydroelectric power potential could be harnessed for the benefit of a vast area of Alaska. This hope has found articulate expression in an article written for Rural Electrification by George Sundborg, administrative assistant to Senator GRUENING. Mr. Sundborg is not only a student of the subject of public power, but in this field is considered an expert, by reason of his widely acclaimed book "Hail Columbia," which detailed the history of the struggle for the Grand Coulee Dam and the Columbia Basin project. Mr. Sundborg was formerly a newspaperman and editor in Alaska and Washington State, and for a number of years was general manager of the Alaska Development Board. I ask unanimous consent that the article, appearing in the July 1959 issue of the magazine, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BIGGEST DAM ON THE MIGHTY YUKON

(By George Sundborg, administrative assistant to Senator ERNEST GRUENING, of Alaska)

Alaska, supplanting Texas as the biggest State, has a lot of other "biggests" and "mosts" to call to the attention of the Nation.

The 49th State has a coastline several times longer than that of all the other maritime States combined. It has at least 15 mountains, all of which are higher than any in the "lower 48." It has the biggest moose, biggest salmon, longest days, coldest winters. It is the home of the largest carnivorous animal on earth—the Alaska brown bear.

Now Alaska comes to the fore with a proposal for construction of the biggest hydroelectric power project in the world—nearly three times as big as Grand Coulee, producing more energy than all of the dams of TVA combined.

Recently the Senate Public Works Committee adopted a resolution calling on the Corps of Engineers to determine the advisability of improvments in the interest of hydroelectric power and other water uses in the Yukon Basin, Alaska, with particular reference to the Rampart Canyon site.

Rampart Dam, if built—and Alaska's congressional delegation would quickly correct that to "when built"—will dwarf any powerplant now in production anywhere in the world. Its installed capacity of million kilowatts would compare with a total of 1.9 million at Grand Coulee, the biggest dam under the American flag. Even the Russians, making rapid strides in the development of hydroelectric energy, do not yet have anything as big as Rampart, though dams as big are said to be on Soviet drawing boards.

The Yukon River is the third largest on the North American Continent, after the Missouri-Mississippi and the Mackenzie. Along its 2,000-mile course within Alaska, not a single dam bars or slows its flow.

Rampart Dam would be 400 feet high and a little more than half a mile long at the crest. It would impound 1.5 billion acre-feet of water covering 10,000 square miles, creating a lake as big as one of the Great Lakes. Meteorologists say the existence of such a lake would substantially modify the climate of interior Alaska.

Harnessing of the Yukon River at the site provided by the rock walls of Rampart Canyon would produce electric power which would cost about 2 mills per kilowatt-hour at the bus bar, preliminary studies indicate. The site is 90 miles northwest of Fairbanks and 300 miles due north of Anchorage, the two largest cities in Alaska, to which needed power could be transmitted from the huge dam.

"There is no question," Senator ERNEST GRUENING (Alaska) stated in a letter to Senator DENNIS CHAVEZ (New Mexico), chairman of the Public Works Committee, requesting the resolution, "that, with the availability of the tremendous amounts of low-cost electric power which could be produced at Rampart, further industrial development of the entire region would be rapid indeed."

The Senator emphasized that it is of greatest importance that studies preliminary to construction be undertaken as soon as possible. He noted that at best many years will elapse before power from the dam will be available, even with the early start envisioned by the Public Works Committee resolution.

The Corps of Engineers, which has had a preliminary look at Rampart Canyon in connection with its interim report on the Yukon and Kushokwim River Basins, estimate the cost of a dam and power facility there at between $900 million and $1.5 billion, depending on the size of the power installation.

Whether the dam would be built of concrete or would be of rock-fill construction with a concrete spillway is a matter to be determined in the course of the investigation which the Corps of Engineers has been directed to make. Some who have looked at the site estimate that a dam could be built there which would produce energy for as little as 1 mill per kilowatt-hour.

Rampart is the largest and key structure in what Alaskans envision as a future power empire, surpassing even the Columbia River in capacity and cheapness of energy. The new State has a total hydroelectric power capacity at known sites of more than 50 billion kilowatt hours annually. Less than one-fourth of 1 percent of this potential has been harnessed.

Noting that the Russians have embarked on a 7-year program of Siberian development which will include building dams twice as big as Grand Coulee, Senator GRUENING remarked recently on the Senate floor that, "What Russia is doing in Siberia represents a specific challenge to the United States to do no less in the area which was once Russian America—for 92 years the district, and then the Territory of Alaska, and now the 49th State.

"In physical terms, Alaska is America's equivalent of Asia's Siberia. It lies in the same latitude. It has corresponding climates. It has vast undeveloped natural resources. It has the greatest undeveloped power potential on the North American continent.

"The construction of a mighty dam and hydroelectric facility at Rampart Canyon on the Yukon, will provide the United States with the largest source of hydroelectric power yet developed."

Rampart is the most promising of the Alaska sites studied so far. But three others also offer prime power of more than 1 million kilowatts each. Two of them, Kaltag and Woodchopper, lie in the same basin as Rampart. This trio of sites offers a prime potential of more than 6 million kilowatts. The fourth site of 1-million-kilowatts-plus is Wood Canyon on the Copper River, near the gulf coast of Alaska.

In addition the Army Engineers list nine more sites with prime potentials of more than 100,000 kilowatts, and seven other sites of between 50,000 and 100,000 kilowatts of prime power.

Just one Federal project exists in Alaska today. That is Eklutna Dam, with an installed capacity of 30,000 kilowatts. This Bureau of Reclamation operation serves Anchorage and its environs through the Chugach Rural Electric Cooperative and the city system. The REA has done a fine job in moving along some of our smaller projects. As of last March 31, REA had loaned a grand total of $43,845,000 for Alaska generation and distribution facilities. An example is Cooper Lake, where a 15,000 kilowatt project is now under construction, financed by a $13 million REA loan. REA financing has accounted for 33,100 kilowatts of installed capacity in our State.

Rampart is obviously of a different magnitude. It is for the future. Under optimum conditions, the Corps of Engineers estimates it can begin to produce energy in 1972. This timetable contemplates 3 years for the studies now authorized, 2 more years to design the dam and then 8 years to build it.

Just to fill the huge reservoir behind Rampart would take nearly 20 years, under a regimen of one-fourth use and three-fourths storage. Some power production would be

possible from the first year, at the end of which the head would be 173 feet. When in full operation, the annual drawdown would be only 2 feet. Because of the vast storage and great depth of the lake, the operation would not be affected even by the 70-below-zero winter cold of the area.

What we know today about Rampart is not much. It is based on reconnaissance-type surveys conducted by the Corps of Engineers and Bureau of Reclamation. But available information is enough to prove that here can rise the biggest dam in the free world. The Alaska delegation in Congress has devoted its energies to bringing that about.

The Economic Development of the Canadian North

EXTENSION OF REMARKS
OF
HON. ERNEST GRUENING
OF ALASKA
IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1959

Mr. GRUENING. Mr. President, on various occasions during this session of Congress, I have brought to the attention of the Senate the importance to the entire United States of continued development of the unexcelled and relatively untapped resources of the State of Alaska. The importance to our Defense Establishment and to our peacetime economic progress of the invaluable treasures which are available in the 49th State cannot be easily overstated. For example, the construction of a hydroelectric project at Rampart Canyon on the Yukon River could produce a larger amount of electric energy than is available anywhere else in the United States. The potentialities of such power, produced at low cost, are stirring to contemplate.

I have, in the past, pointed out the rapid development of Siberia which has been undertaken by the Soviet Union. It is not only our potential enemy which has made energetic efforts toward the development of arctic areas and the resources therein. Our friends in Canada have also been looking northward and are undertaking an exciting program, having as its purpose the opening up of the tremendous resources of the Canadian North.

I ask unanimous consent to have printed in the Appendix of the RECORD, the principal parts of a paper given at the annual meeting of the Ontario Geography Teachers Association at Toronto on March 31, 1959, by Mr. John L. Jenness, chief of the economic division, Department of Northern Affairs and National Resources. The paper is of special interest not only to Alaska, but to our entire Nation, in view of many of the problems which Alaska has in common with Canada in the development of low temperature areas and the importance of Alaskan development to our national economy and to our national security. Of particular import is the discussion by Mr. Jenness of the problem of transportation in Canada.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

THE ECONOMIC DEVELOPMENT OF THE CANADIAN NORTH

(Parts of a paper given at the annual meeting of the Ontario Geography Teachers Association, Toronto, on March 31, 1959, by Mr. John L. Jenness, Chief of the Economic Division, Department of Northern Affairs and National Resources)

I have been asked to discuss presnt trends and future possibilities in the economic development of the Canadian North.

Until quite lately, indeed, the North was remote and isolated. Today, however, we see it in a new perspective. We have learned that the shortest intercontinental air routes follow great circles, that from San Francisco and Vancouver to London or Paris, and from New York to Tokyo or Moscow, the shortest and fastest routes traverse the polar region. In this air-minded age the Arctic has moved from the periphery of things to the center; it is becoming in fact one of the great aviation crossroads of the modern world.

In recent months, too, certain events have focused still more attention upon the most northerly reaches of Canada. Headlines in your newspapers have described the stampede of applicants requesting permits to explore for oil and gas in Canada's Arctic Islands, islands that as we now know, actually lie closer to the hungry markets of industrial Europe than do the oilfields of our western provinces or those of the Middle East and Venezuela. This dramatic oil rush has opened before us a new horizon, one which offers vistas of Arctic ports and submarine tankers, and raises the prospect of a day when the frozen polar ocean will become a mediterranean sea for international commerce. Equally suddenly, our Arctic islands have lost their remoteness; the land as well as the latitude has moved from the periphery of our map to its center.

The point I am making here, of course, is this: our conventional maps may be quite adequate for courses in civics, or for delineating the centers of manufacturing; but they fail us for transpolar travel, and they are rapidly becoming outdated for northern development. What we need is a polar projection map to emphasize our northernmost territories.

In point of fact, geographers or economists should consider our national territory as consisting of two dissimilar entities. Here in the south, along a narrow band stretching from coast to coast, lies the urbanized, industrial Canada, the part of the country which furnishes the economic backbone of our entire national structure. All the rest of Canada—almost nine-tenths of it—is "the North," a vast underdeveloped frontier land that includes the northern half or more of every province outside the Maritimes, and in addition the Yukon and the Northwest Territories. This enormous area is little known, poorly explored, and accessible only with difficulty. It contains, it is true, a few small mining communities, some defense and government establishments, and numerous trading and missionary outposts; but these are mere pinpricks on an otherwise empty map. Taken as a whole, the area remains today what it has always been in the past—the habitat of nature rather than of human progress.

Yet this vast area is our second Canada, "the North" we are really talking about when we refer to northern development. That parts of it are federal territory, and parts come under provincial jurisdiction, should make no material difference.

PROBLEM OF TRANSPORTATION

The vastness of Canada and her limited financial resources have created one fundamental problem: the provision of adequate transportation facilities. Wherever, in the past, no form of transport has been available, economic development, too, has lagged. It is in this field of transportation that the Federal Government is making its most imaginative contribution toward the development of the Canadian north. It has undertaken to spend upward of $100 million of Federal funds over the next 5 to 10 years on a national roads program to stimulate the development of the national resources of Canada. In the Provinces, where Federal and Provincial Governments are working cooperatively and sharing costs on a 50–50 basis, the program has been named "Roads to Resources." If these governments built all the roads it allows for, the total expenditure would run as high as $135 million. In the northern territories the Federal Government alone holds jurisdiction, and must bear the entire cost burden. The program for that area therefore is known as territorial roads and is expected to produce $70 million worth of roads in the next 7 years.

In both the Provinces and the territories the objectives of this vast scheme are identical: to give access to known and potential resources in promising underdeveloped areas, in the hope and expectation that the development and production of those resources will speedily follow. Thus the horizons of settlement and industry will be extended, and all of us, wherever we may live, will benefit through fuller employment, and through the variety of other economic and social gains which accompany an expansion of the gross national product.

Our program, therefore, will produce new roads in both of the northern territories and in 9 of 10 Provinces. Under "Roads to Resources", agreement in principle has already been reached with all Provinces except Quebec, and negotiations between the Federal and Provincial Governments leading to the signing of formal agreements are well in hand. To date, one agreement has been executed between Canada and British Columbia; it covers the construction of a road between Stewart and Cassiar at an estimated cost of something over $15 million. Work actually started on this road during the 1957 season. In the other eight Provinces with which negotiations are nearing conclusion, the Provincial governments have received authorization to commence work on roads already agreed to.

Ladies and gentlemen, our kind of civilization is moving rapidly northward and it is moving into the Canadian north to stay. The Government is alert to the need for positive action. It is doing everything in its power to ease the plight of those natives who are suffering. It is striving, with equal determination, to educate them as rapidly as possible, to absorb them into a viable wage economy. It has accepted the challenge of raising their standard of health; of creating opportunities for honorable and steady employment; of providing them with an opportunity to become an integrated, fully adapted and prosperous part of the Canadian family, able to employ their special talents in the development of our north.

The Government is aware that the economic growth of the north will vitally affect their lives, and with great initiative it is preparing them for the change. But it is private enterprise that must follow up this Government lead as it moves in to develop the physical resources of the area. Private enterprise must assume part of the task of promoting the prosperity, and well-being of our native peoples.

ROLE OF PRIVATE ENTERPRISE

You may ask what part private enterprise has played hitherto in the development of the Canadian North. For many years now private industry has been operating in the underdeveloped parts of the Provinces and in the territories. It was under private initiative, for example, that gold mining sprang up in the Yukon in the late 1890's, and oil commenced to flow at Norman Wells, in the Mackenzie Valley, in 1920. Yellowknife, Flin Flon, and Timmins are

old-established mining centers, all lying outside the perimeter of urbanized Canada. These are but a few instances, selected at random, of the attraction our northern resources have held for industry, and of the communities these industries have sponsored. One could cite many more.

In this context, it is fair to point out that a substantial proportion of the development now taking place in the North is directly attributable to private enterprise. While governments of the past have been deeply preoccupied in consolidating and developing the more settled parts of our country, private enterprise has kept one eye fixed on our northlands. Individual prospectors and numerous companies have probed the wilderness, gradually extending our knowledge of its remoter areas and pushing back the frontiers of settlement. They have staked out and examined many attractive properties, and have brought some of their wealth into production. Thus, past development of our northern resources has made a significant and growing contribution to our national wealth. Nevertheless, that development remains still small, and our vast northern area contains an infinitely greater potential than current production figures would indicate.

Fortunately, during the last few years private capital has shown increased interest in our northern resources, and some of the world's largest companies have actively participated in their development. Alcan accomplished one of the outstanding engineering feats of our time, for example, when it brought its Kitimat plant into production; it withdrew headwater lakes from the upper Fraser Basin and diverted them through lofty coastal mountains to enable aluminum to be manufactured on the Pacific coast, at tidewater. Already it is generating a million horsepower of energy, and possesses the potential for a million more. In British Columbia's interior trench, a Swedish multimillionaire and corporate interests have evolved a grandiose plan for a huge industrial empire. Their project is still at an exploratory stage; but if it materializes it will create the largest man-made lake in the world, will generate twice as much power as Niagara, and will establish a number of industries utilizing timber and mineral resources. In Manitoba, late in 1956, International Nickel began a $175 million operation for mining and refining the nickel of the Mystery-Moak Lake area, 400 miles north of Winnipeg. And on the shores of Ungava Bay in northernmost Quebec, two separate companies—one representing Krupp-Cyrus Eaton interests, the other a Rio Tinto subsidiary—have reached an advanced planning stage that may lead to the mining, the beneficiation and the marketing of immense quantities of iron ore at an early date.

These and other activities of private enterprise in the northern parts of the provinces augur well for further expansion and development in those areas. Yet more spectacular than any of them is the exploratory activity just now materializing far to the north, in territories which come under Federal authority. There, in the Yukon, in the District of Mackenzie and in the Arctic Islands, we are witnessing a land play of almost unbelievable proportions, an exploration surge that directly involves upward of 100 separate companies and individual concerns. By the end of December 1958 the Federal Government had issued exploration permits covering no less than 76 million acres (roughly 120,000 square miles) on the territorial mainland; and more recent applications for permits embrace an almost equivalent area in the Arctic Archipelago.

The magnets exciting this amazing stampede are oil and gas. Geological structures over a major portion of the territories favor the occurrence of these two fuels: we have found there sedimentary formations similar to those that have yielded oil farther south. The Norman Wells Reservoir, for example, occurs in a limestone reef of Devonian age, similar to many oil-producing reefs in the Edmonton area; and in the Arctic Islands. Ellef Ringnes possesses salt domes comparable reportedly to those of the Texas gulf coast where oil is so abundant.

These and other indications incline such companies as Shell, Texaco, and California Standard to believe that north of latitude 60° Canada may conceal tremendously large accumulations of the energy fuels, and that this area may become in the future one of the world's major producers. According to one estimate (admittedly speculative) it could hold in reserve more than 30 billion barrels of oil and 200 trillion cubic feet of gas.

I think these several examples will show that we are on the threshold of exciting and challenging changes in our North. For one thing, it is now the definite policy of the Federal Government to stimulate the development of the region's resources, by itself creating the conditions that will render such development possible. For another, the role of our provincial governments has become more dynamic; on their own initiative they are extending their horizons to the remoter parts of their territories. And finally, private industry has become alerted to the possibilities of the region and seems ready to participate far more actively in the development of its available resources.

Under these circumstances, it is surely not unrealistic to look forward to an increasingly vigorous growth in our north, and to anticipate more change there in the next decade or two than has taken place in the entire 3 centuries of its history. As in the past, we shall witness the unrolling of the frontier northward from southern Canada, but on a larger scale and at a somewhat faster pace. New transportation roads will be carved through the wilderness and will fan out throughout much of the continental interior. New mining and marketing communities will spring up and prosper, stimulating a demand for secondary industries, and public services. Employment opportunities will multiply and become more varied, necessitating more schools and more hospitals. Altogether, the land and the people just beyond the already developed areas of Canada can look confidently forward to an expanding share of our national prosperity.

Mr. GRUENING. I am particularly impressed with the statement of Mr. Janness that "wherever, in the past, no form of transport has been available, economic development, too, has lagged. It is in this field of transportation that the Federal Government is making its most imaginative contribution toward the development of the Canadian north. It has undertaken to spend upward of $100 million of Federal funds over the next 5 to 10 years on a national roads program to stimulate the development of the national resources of Canada." This great program of our Canadian neighbors has been descriptively entitled "Roads to Resources." I commend our Canadian friends on their imagination and vigor in pursuing the development of Canada. I hope it may serve as an example of action which can be taken by government agencies in Alaska which is lacking a highway system to insure the fullest development of all the resources of our great Nation.

Power Facilities on the Trinity River in Northern California

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. UTT. Mr. Speaker, with increasing frequency I find myself actually questioning whether we have reached a point, in the electric power field, where any offer, suggestion, proposal or request for consideration proffered by an investor-owned utility is ipso facto prejudged to be against the interests of the general public, and automatically to be treated with skepticism and suspicion.

I submit, Mr. Speaker, if a feeling exists among any of us that even though we are able to acknowledge an overall benefit to the country through a proposal which also benefits a utility, and that therefore we must oppose it, we are indeed in a tragic rut. If we were to oppose a project which we know is for the betterment of the Nation, simply because it also is helpful to a company, I feel that our action could not be dismissed lightly as being merely politically expedient to do so. The issue rather is one of political morality and conscience.

Probably a number of us have some knowledge of past conduct on the part of a utility which would be subject to serious question regarding its propriety. I believe that many utilities are aware of instances in their histories which they regret had ever taken place. But I also believe that, even granting such instances, it would be manifestly unfair and unjust to condemn every suggested agreement involving a utility, or anyone else, without considering such a proposal on its merits.

Bearing the above in mind, I commend to the attention of my colleagues the joint development proposal of the Pacific Gas & Electric Co. to construct and operate the power facilities on the Trinity River in northern California. After much study of this offer, both as a member of the House Interior Subcommittee, which heard 8 days of testimony last year, and as a present sponsor of the proposed legislation, I am convinced beyond a doubt of its worth and of the benefits to the Nation's taxpayers which it would provide. My unqualified conviction is backed up by that of every segment of our economy—water users, farmers, labor, business and the ordinary taxpayer who is sick of needless Government spending.

The Humboldt Beacon of Fortuna, in northern California, states:

In fact, with all of the bellowing by politicians, no one has ever contradicted the figures that Pacific Gas & Electric will pay $62 million in local and State taxes, $33 million in Federal taxes, and $165 million for the use of the people's Trinity water to produce power, water that will again be sold by the Government to the valley irrigation districts for reuse by agriculture.

Mr. J. D. O'Dell, president and editor of the Beacon, continues—

We have lived in northern California and Oregon now for nearly 32 years and no one will ever convince us that Pacific Gas & Electric Co. hasn't been a good operation for the advancement of this section of the State, nor that it will ever cease to be. We like that kind of partner in any business.

Can Mr. O'Dell be speaking of the "big bad private utility, up to its elbows in the public trough"?

From San Juan Bautista, in central California, speaks the Mission News regarding the chances of cutting the Federal budget:

Here's a suggestion on how to save $310 million as a starter: Go ahead with the Trinity River project which has already been approved by Secretary of the Interior Seaton. This plan advocates a partnership between the Pacific Gas & Electric and the Government. The company would build the power facilities at no expense to the Government, and would pay for the use of the falling water. Over a 50-year repayment period, the Government would gain $310 million.

Concerning the proposal for Trinity joint development, the Santa Rosa (Calif.) Press Democrat states:

Pacific Gas & Electric has to pay Uncle Sam 52 cents out of every $1 it nets, in corporate income taxes. Your electric rates would be much lower if a big piece of them didn't have to be passed on to Uncle Sam in paying this heavy tax. Socialized power, which pays no income taxes, frequently sells for lower rates than does private power. The higher the taxes, the greater the spread between rates—and the greater the urge to socialize more power development.

The Press Democrat continues:

It's a con game, of course, as long as Uncle Sam spends so many billions, somebody has to pay the taxes and the portion not paid by socialized power systems is simply paid by you in your own high individual rates. Regardless of whether you pay it hidden in your electric bill from Pacific Gas & Electric Co., or whether you pay it in withholding from your paycheck, you pay the cost of running the Federal Government.

Comments the Santa Cruz (Calif.) Sentinel:

It's time that approval be given to the Trinity partnership program proposed by Secretary of the Interior Seaton. Despite loud outcries from the advocates of public power, the Trinity "partnership" program between the Federal Government and the Pacific Gas & Electric Co. is the far superior plan for the development of additional power in northern California. Power, the surplus or the lack thereof, has become a political football parlayed into some of the greatest outlays of cash ever kicked off by the Federal Government.

The editorial continues:

In California, we have experienced no shortage of power and the privately owned utility companies have been able to meet the demands of a growing State without delay. We have yet to discover the Government operating a powerplant or any type of business with the same flow of efficiency required by taxpaying private business operations.

The Sentinel concludes:

As long as the utility companies are able to provide adequate power at reasonable prices, the Government should refrain from the favored political pastime of public power.

Mr. Speaker, if the customers of a company feel as these statements indicate, should we not, in good conscience and with open minds, consider the Trinity joint developmnet power proposal with an eye turned toward saving $60 million in construction costs and gaining $175 million from payments for the use of the falling water, as well as picking up $83 million from the company's Federal tax payments?

The Hutton Lottery Plan

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. FINO. Mr. Speaker, I am happy to insert in this RECORD the remarks of Mr. E. F. Hutton, a New York banker and respected American citizen, which appeared in the Voice of the People section of the New York Daily News on Tuesday, July 21. Also, an editorial in the same issue in support of a Government lottery plan. In view of the $12½ billion Federal Treasury deficit for fiscal year 1959, just announced, I thought these articles would make interesting reading:

MR. HUTTON FAVORS LOTTERY

MANHATTAN.—The time has come to find out if the general public would favor a National Government lottery. If inflation is to be stopped, it is necessary to balance the Federal budget and reduce the national debt, now approaching $290 billion.

I believe a nationwide lottery, authorized by Congress, and conducted through the banks, would yield $5 billion, or more, to the Treasury each year it was in operation. Nothing would do more to restore confidence in the dollar than to reduce the debt.

No one would be obliged to participate, but everyone would benefit, as the debt is reduced, through tax savings on their own earnings.

The prizes should be tax-free. With this added incentive, the lottery would divert huge sums of money now being lost in all kinds of shady rackets.

The Treasury, the Congress, and the bankers would have to work out the details. It is certain, however, that neither the Treasury nor Congress will make a start on this until it has strong public support.

Objections will be made. But there is no comparison between a Government lottery, run with complete honesty, and private lotteries and gambling generally.

A Government lottery helped build the first Capitol in Washington, with the blessing of President George Washington. The News would do a great public service by presenting this proposal to the people.

E. F. HUTTON.

THE HUTTON LOTTERY PLAN

Your attention is asked to the letter from E. F. Hutton which leads today's Voice of the People.

The News is glad to print this communication from a respected and outstandingly successful citizen who has thought long and deeply about our colossal national debt and the continuing threat of inflation.

PAINLESS REVENUES

This newspaper has long favored some form of national lottery.

Without going overboard for the Hutton or any other specific plan, we'll observe that this one merits wide public discussion—and if you feel like sending the Hutton letter and this editorial to your Senators and Representative, we're sure neither Mr. Hutton nor the News will object.

Pilot Training Pays Off

EXTENSION OF REMARKS

OF

HON. JAMES C. HEALEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. HEALEY. Mr. Speaker, we are aware of the tremendous excitement which prevailed over Idlewild International Airport 2 weeks ago when a Pan American World Airways jet Clipper lost 2 of its 10 rubber wheels. Since there was no absolute certainty that the plane could land normally with only 8 wheels, emergency conditions existed as the plane, bound for London, returned to Idlewild.

What happened thereafter all of us must view with mixed emotions. Fortunately, an experienced pilot in the person of Capt. Edward Sommers was at the controls, aided by a superbly trained and well disciplined crew. Unfortunately, on the ground, there existed uncontrollable mob psychology, with tens of thousands of persons streaming toward Idlewild, attracted by television and radio accounts of the plane's difficulty.

Mr. Speaker, all is well that ends well. There is little likelihood that police and airport authorities will again be taken by surprise in the event of any similar air emergency. Certainly Pan American and its crew benefited greatly from this experience, if only to make certain that it will not be repeated. And for the public, there must be renewed confidence in the flying ability of our scheduled airlines and the soundness of their equipment.

Mr. Speaker, under unanimous consent, I insert in the RECORD three editorials concerned with this memorable flight experience, taken from the New York Journal-American, the New York Herald Tribune, and the New York Daily News:

[From the New York Journal American, July 16, 1959]

JET AGE TRIUMPH

The appeal of jet air travel has been heightened, not dampened, by the safe emergency landing of 113 persons at Idlewild in the Pan American Boeing 707 last Sunday.

We don't think you have to go far for the reason. Reliability of man and machine always has attracted customers and always will.

It was A–1 airmanship of the highest order that the crew, under the steady skipper, Capt. Edward Sommers, demonstrated for 4 fateful hours.

It was durability of a desirable degree that the airplane exhibited, bringing passengers and crew safely back on the ground though part of its disabled landing gear was gouging a spark-strewn path down the runway.

This performance proves the 707 is an amazingly sturdy jet.

People like to fly with the best that's flying. This latest incident of the jet age gave us all a glimpse of some real class in action.

[From the New York Herald Tribune, July 13, 1959]

NIGHT DRAMA OVER IDLEWILD

Most New Yorkers went through Saturday night unaware of the agonizing drama that was being enacted in the skies above them. Many others heard about it, through broadcast bulletins, and followed its suspenseful progress as best they could. Yet to none could it have held more tenseness or immediacy than to the 113 persons who, flying a crippled Pan American jet through the night skies, knew that their lives would be literally at stake when the plane attempted an emergency landing at Idlewild within a few hours. It was a remarkable tribute to the efficiency of the crew and the coolness of the passengers that the emergency was met with calm, confidence and courage. Hysteria and panic were completely absent; no one even sang songs, that traditional refuge in time of danger. Although fear and doubt must have gnawed at them, although they could have guessed that ambulances and emergency trucks were standing by, the passengers kept their heads and acted outwardly much as they would have on a normal flight to London. Although they knew the consequences of even a minor slip-up, the crewmen, headed by Capt. Edward Sommers, sat tight and did their jobs.

Thus the great plane finally roared in for a landing at Idlewild with two of its eight wing-wheels missing, upon a strip that had been coated with foam to choke off any fires. The principal danger, the pilot said afterward, came from sightseers who inexplicably had been able to crowd upon the field and line the edges of the runway. How this breach of airport safety practices managed to occur must surely be a subject for investigators to study, no less than how the giant aircraft lost its two wheels in the first place.

But the overall reaction to this remarkable incident in the skies must be gratitude and pride—gratitude for the enormous skill and resourcefulness which mastered the danger; pride in the serenity of spirit with which it was met. It was an occurrence which may seem almost trifling in an epoch beset by perils and pitfalls, yet it will be enormously heartening to all who face an uncertain future by quietly carrying on their everyday lives.

[From the New York Daily News, July 14, 1959]

HEROISM ALOFT, SNAFU BELOW

Capt. Edward Sommers, his crew and his passengers looked by far the best of all those involved in Saturday night's and early Sunday's melodrama of the jet liner that dropped two port wheels on takeoff from Idlewild for London.

Sommers showed superb skill. His and his crew's heroic calm communicated itself to the passengers.

On the ground, meanwhile, the Port of New York Authority and the fire department were in a jurisdictional dispute which slowed the lining up of rescue equipment for a possible crash.

Neither agency thought to ask TV and radio stations to add to their newscasts some urgent and preferably threat-loaded advice to thrill seekers to stay away from Idlewild. Some 4,000 of these persons, risking their lives, were allowed to spill over onto the runway, so that rescue apparatus could not have been rushed to the plane. Working newsmen were unnecessarily sprayed with foamite.

We realize we're talking like Monday morning quarterbacks. But we do want to suggest, urgently, that the port authority and fire department work out all possible precautions for similar situations in future—and that next time, if there is a next time, the two agencies at least cooperate rather than fall to fighting over which is boss where.

Hon. Neal Smith, of Iowa, Proposes New Farm Stabilization Program

---

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. COOLEY. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a very thoughtful statement by Hon. NEAL SMITH, of Iowa, embracing a proposal for a farm program intended to prevent bankruptcy prices in agriculture and to open to the farm families of America an opportunity to share equitably in the rewards of this Nation's free enterprise system.

Our colleague from Iowa is serving his first term in the House, but he already has firmly identified himself to this body by his devotion to the well-being of the farm families across this broad land who produce our food and fiber. He has introduced specific bills on agriculture and he has testified before the House Committee on Agriculture, which it is my honor and privilege to serve as chairman.

Although it has been impossible in this Congress thus far to develop sorely needed farm legislation which would meet with the President's approval, our colleague has been hard at work; and I am certain that his studies and activities will be of value to this House as we continue our efforts to deal effectively with the pressing problems now confronting our farmers.

The statement I am submitting for the RECORD was presented by Mr. SMITH to our Committee on Agriculture. I think it is of such a character as to provoke discussion, looking toward constructive action, on one of the most important problems of our times:

STATEMENT OF NEAL SMITH, MEMBER OF CONGRESS, FIFTH DISTRICT OF IOWA, TO HOUSE AGRICULTURE COMMITTEE

BASIC FACTS

Seventy percent of our new wealth comes from farm-produced crops and 30 percent is derived from mining, fishing, and other sources. All of our wealth results from the conversion or reconversion of this new wealth. Unless the standard of living in the United States is raised drastically, or until the population increases by about 35 percent, the new wealth we have the capacity to produce at the present time will furnish more raw products than would be converted at a reasonable profit for our use. Except in time of war, the American people have never been willing to use the Goverment to the extent necessary to assure distribution of all the products that could be converted from the new wealth we are capable of producing.

Through supercorporate combinations, industry has the power to limit the production of their goods to the amount that can be converted and sold at a profit. Through the 40-hour week, overtime pay provisions, and the minimum wage, the work in these industries has been divided to a great extent. Factories where employees worked 60 hours per week during the war now are on a 40-hour week. In spite of the fact that industry is receiving a huge subsidy from the $40 billion per year defense spending, the steel industry, which converts a large portion of the new wealth derived from mining, is now operating at less than three-fourths of capacity. Many years ago, Andrew Carnegie and his associates pyramided the corporate steel structure and so organized the steel industry so that both prices and supplies can be administered, and again following World War II, the reduction in supply to balance the demand available at the administered price was promptly put into effect.

The farmers have no such structure to cut back production. They were asked to and did, during the emergency period, expand their production by using technology that had been known for 50 years but not used and by replacing horses and mules and small machinery with larger machinery. Since there are millions of farmers without any supercorporate structure, they have no way to reduce their production to the amount that can be sold in our economy at a reasonable profit. Farm operators have had no way to divide the production so that they can reduce their average 65-hour week back to a 40-hour or even a 50-hour week. If the farmer's workweek had been so reduced, millions of efficient farmers would not have been driven from the farm to replace city workers or join the ranks of the unemployed. Since unemployment in May of 1959 was 159 percent of the number unemployed 6 years earlier, it is obvious that jobs are not waiting for replaced farmers who average more than 50 years of age. Farmers will not be able to reduce their workweek unless (1) they can make enough profit per unit so an efficient farmer can make a living by working a normal workweek, and (2) there is a way to equitably divide the production so that a farmer working a normal workweek will have such a market for the units he produces.

THE OPEN MARKET

Expecting an open market alone to do this for agriculture is penalizing farmers drastically for increased efficiency by making them give away the abundance they produced and would be expecting too much of an open market. The principal purpose of an open market in the present agricultural situation is to efficiently distribute our abundance. When there is no big shortage or excess of supply of any commodity, the open market can establish a fair price and feed the supply efficiently to the consumers; but to expect the open market to gage supply and establish a fair price for basic agricultural commodities under present circumstances is expecting too much of the open market and giving it a bad reputation in this field that it does not deserve.

OUR ALTERNATIVES

In other words, we have a choice of either finding a way through government for farmers to divide their production and gauge it to the Nation's needs or the alternative will certainly be that a supercorporate structure will emerge wherein a relatively few non-

Government nonelected officials determine the supply and price of our food. We are heading toward the latter alternative very fast. There are now 4 million less farmers than 6 years ago working approximately the same 60-to 65-hour week and for less money. Farm assets are now only 83 cents of each $1 compared to $1.87 for each $1 owed 15 years ago. Thus the farm financial situation has become ripe for an integration drive, and it is well under way.

If we conclude this trend with fewer farmers each working a 65-hour week instead of a full compliment of farm producers each working a normal work week, we will have failed to preserve the capacity to expand farm production with the flexibility needed for national security and to assure a sustained supply of food and fibre at a reasonable price. This is true because farmers working a 60-hour week cannot increase their work week very much, and skilled farmers who have moved to the city will not lose their seniority in a plant to return to farm work.

HUMANS WILL REPLACE THE HORSES AND MULES

In the past 20 years, there has been one principal increase and one principal decrease in the demand for feed grains. The decrease has occurred from the fact that millions of horses and mules have been fed to the dogs and replaced with tractors. The feed they ate must now find a new market that will pay for the gasoline for the tractors.

The increase in consumption has occurred as a result of an increase in population. This increase has been so great that it has absorbed the increased production. The total of food grains and feed now stored is approximately equal to the amount of the same that the horses and mules would have eaten if we had used them for draft purposes instead of feeding them to our dogs.

This would indicate that if population and productivity increases continue at a similar rate, the additional productivity will be absorbed by the increased population. However, almost all agricultural economists agree that the population will increase faster than productivity. The increase in population should be enough to absorb both increased productivity and the food that can be converted from the feed that horses and mules ate when they were used for draft purposes. After that time has arrived, we will have to find new land and farmers or face a food shortage. While we stand amid abundance, we can predict that during this century and during the lives of many of us, American citizens will either be rationed on meats and protein products or they will be so high in price that consumption per person will be reduced. In other words, the cereal diet of many countries will begin to replace our protein diet.

Under all these circumstances, it seems to me that our goal should be to preserve our extra productive capacity and the family farm structure and release it as it is needed to assure an abundance of food. This is especially in the interest of consumers.

The alternative is to have surplus and scarcity alternating just as high profits and bankruptcy would alternate. After each period of bankrupt prices, less farmers would survive until eventually the factory-type, collective farm would emerge as the average farm unit. This would destroy the middle income farm structure and substitute for it a structure such as exists in agriculture in so many other countries; namely, a few high-income persons and a lot of low-income workers. This also would leave agriculture in a position where administered prices could replace competitive prices, and for this the consumer would pay dearly. Violent fluctuations are also hard on consumers who are largely on fixed incomes. An example of this is potatoes which are now just twice as high as they were a year ago. The same thing will happen to protein products unless some program is devised to help give us the reasonably stable prices the President says are in the national interest.

HOW CAN WE ADJUST?

If we are to divide production equitably and provide stable prices, we must withdraw and increase either labor, capital, or land as needed or some combination of the three for those are the three ingredients that produce our food. If we were to withdraw capital, we would not preserve our extra capacity to produce and to expand production when needed. In order to withdraw labor, we must withdraw land.

It seems to me there are two basic ways to accomplish the withdrawal of land and be within the long-term goals for consumers and farmers. One is for the Government to set the production goals and lease the productive land not needed to met those goals. This is the soil bank method. The other way is to set production goals and offer some insurance that if he withdraws some land, the productive land remaining will give an efficient family farmer a reasonable income if he works a reasonable work week.

The soil bank method would mean a continuing large appropriation of Federal money. The latter method would mean a small total cost to the taxpayer if set up properly. The latter method is embodied in H.R. 7710 and in some other bills before your committee.

STABLE SUPPLIES OF FEED GRAINS HELP PERISHABLES

It seems to me that proper division of the production of basic commodities can go a long way toward stabilizing the price of basic perishable items such as meats, poultry, and dairy products—we are now again seeing feed grain prices at only 65 percent of parity wreck the poultry and pork markets. Live hogs are already down to $15 per hundred which is a drop of 25 percent in 1 year and a bigger crop and lower prices are on the way. The consumer is not getting the benefit from the farmers' loss either. Loins are $56 per hundred wholesale while the live animal brings $15 per hundred.

FEED GRAINS

Lowering the support prices as the method of balancing production with consumption has again failed miserably, and the farmer is again paying the bill for the costly retrial of this method. It is also ridiculous to pretend we can advertize our way out of this predicament. On the other hand, the basic laws of supply and demand, when properly applied as in the case of tobacco, have worked. Experience has shown us that some improvements can be made, and so far as feed grains are concerned, I have attempted to insert the needed improvements into H.R. 7710. H.R. 7710 would briefly operate as follows:

1. Corn, oats, rye, grain sorghum, and barley would be tied together as feed grains instead of being under separate programs, and each grain would be given a comparative value according to nutrient value.

2. Production would be equitably divided among farm units and each farmer would be free to raise whichever feed grain or feed grains he pleases so long as the total feed grains raised does not exceed his total nutrient allotment as measured by comparative units.

3. Wheat raised without an allotment would be counted against the feed grain allotment for the farm. This would help avoid hurting the wheat program. Wheat farmers and others should also comply with a similar provision and quit hurting feed grain farmers.

4. Support nonrecourse loans would be limited to the normal production on the acreage allotment for the farm. Bushels raised in excess of normal yields would not be supported. This discourages heavy use of artificial productive formulae but permits some reward for high efficiency.

5. Since it is a voluntary program, an equalization payment is provided for feed grains fed by a producer so that livestock and poultry producers will not have to turn their grain over to the government and buy replacement grain in order to receive some security of price for grain raised within an allotment. This would also encourage farmers who feed their grain to stay within the allotment.

6. Support loans and equalization payments on feed grains fed would be limited to those who stay within their allotment and observe cross-compliance.

7. Feed grains in Government ownership in excess of a 1½ billion bushel reserve would only be sold at the rate of 1 bushel for each $2 spent for meat, dairy, and poultry products purchased by the Government and distributed to the needy, institutions, and the school lunch program. Thus, grain held would pay for more than one-half of the protein foods cost. We wouldn't think of raising pigs without a good protein supplement, but hundreds of thousands of our children are being raised without adequate proteins. The provision would assure the distribution of some of our feed grains that have been converted into proteins to the people who need more proteins.

8. It provides a referendum to let farmers decide whether they prefer this program. Feed grain farmers have never had an opportunity, like many other farmers, to vote for this type of a program.

I believe the application of H.R. 7710 would: (1) Assure an abundant supply of food for a longer time for more stable prices. It would avoid the low productivity and scarcity that follows periods of bankrupt prices for meat, poultry, and dairy products. If stable prices are a national goal as President Eisenhower has said, then this feed grains program is certainly in the public interest. (2) It would permit farmers to divide production so they can make a living on the farm instead of moving to town to replace city workers. (3) It would certainly cost the Government a lot less than the present program; and (4) it would provide for the conversion of feed grains now held in excess of needs into meat, dairy, and poultry products for people who need them. This program applies the law of supply and demand, and while it is set up for a 4-year period, it should need little changing when reviewed and extended.

WHEAT

In looking to a long-term program for agriculture, I believe we should recognize the shift in the importance of support prices under certain conditions. So long as production exceeds consumption, the support price is very important; but when a program is adopted to bring production below consumption, then the market price will be guided by the price at which the commodity in the Government warehouse goes onto the market.

To use an example we have currently considered, I would like to review the wheat situation. The compromise bill turned down by the House provided basically as follows:

1. A 20 percent reduction in acreage resulting in a 16 percent reduction in bushels down to a total production of one million bushels.

2. A payment in kind taking 125 million bushels from the Government bins and making a total market supply of 1,125 million bushels which is in excess of estimated consumption by 75 million bushels.

3. An increase in the support price from 75 percent to 80 percent. The provision in that bill for payment in kind would have resulted in an estimated unbalanced market, and, therefore, much grain would have gone

through non-recourse loans to the Government. Under the circumstances, the support rate would have been the guide for the market price and would have been at about 80 percent of parity.

Let us suppose that the provisions of the bill were the same execpt (1) there was no payment in kind, and thus the market supply outside of Government stocks would be 50 million bushels less than consumption; and (2) nonrecourse loans were left at 75 percent of parity, but section 407 were amended to provide that no wheat can be sold from Government storage at less than 90 percent of parity instead of at support price plus 5 percent (or 79 percent).

Under those circumstances, the price in the marketplace would actually be guided by the price at which Government stocks were available, and therefore, the market price under the latter would be approximately 11 percent of parity more although the support price would be 15 percent of parity less. In the latter example, no new wheat would be going into Government bins, and the CCC would have a market for 50 million bushels of wheat it now has in storage and at a profit. In the latter case, wheat sold directly through regular channels would bring a great deal more than under the compromise bill. Thus the payment-in-kind feature in the bill actually took out of one pocket what it would have put into the other pocket for farmers who do not have storage for all their wheat and who sell to the market, and this is most farmers; and the cost to the Government through unbalancing the market would be far in excess of the value of the wheat it would distribute as payment in kind.

I believe a long-term program should (1) never let a payment-in-kind gimmick unbalance the market; and (2) amend section 407 so the prices received by the CCC for Government-held stocks are set according to a desired market price rather than the percentage of parity at which nonrecourse loans are made.

CONCLUSION

I would urge the committee to adopt long-term programs for basic commodities which would—

(1) Assure an abundant supply of food and fiber at reasonably stable prices by dividing the production of basics needed among farmers so that an efficient farmer can make a living on a 50-hour or less working week instead of moving to the city to replace a city worker;

(2) Depend less upon Government appropriations and more upon the market paying value for goods produced; and

(3) Provide a formula for converting stocks in Government storage into food and fiber for persons in need and for institutions.

I believe the basic provisions of the tobacco program as amended and improved in H.R. 7710 would provide the general formula for all of the basic commodities. At least there should be a referendum to vote on having that kind of a program as an alternative to unstable consumer prices and ragged individualism.

Trinity River Power Project

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. UTT. Mr. Speaker, a bill providing that the Federal Government could take over all private electric utilities upon payment of the net investment therein would get nowhere at this time. Such legislation would not be advocated openly by even the most rabid proponents of Government ownership. To do so would be obviously to tip their hand as to the desired objective.

The alternate method of accomplishing this result is by the much more disarming approach of piecemeal acquisition; biting off a city or small area now and, after a while, another, and so forth, until the remaining fragment is forced to sell out "voluntarily," is undoubtedly a more cunning policy. And the Government power advocates, aware that too many bites or too large bites too fast would give away their goal of total takeover, prefer to prevent companies from developing further.

An apt illustration of this technique is before us now in the pending legislation proposing joint development of the northern California Trinity River powerplants. As the Galt (Calif.) Herald has put it:

A byproduct of almost any water development, of course, is the production of power, and this is a healthy thing. Inevitably, however, there are those—dedicated to the extension of governmental power over our lives—who will seize upon such power production as a means to an ideological end. This is evidenced—

The Herald points out—

in the opposition to the administration's proposal to take advantage of the Pacific Gas & Electric Co. "partnership" offer for development of power in the Trinity River project—a partnership that would benefit the taxpayers by some $365 million.

This editorial concludes with the statement:

There is no power shortage, no need for Government intervention in industry. Today, as in the early thirties when the Central Valley project was approved by the people, water is the want.

Galt lies midway between Sacramento and Stockton, in the heart of the great valley to be benefited by the Trinity project, and is truly representative of the many agricultural areas espousing joint development of Trinity power.

In pointing out that the Bureau of Reclamation Commissioner concurs in the opinion that this proposal conforms to the basic purpose of the reclamation program of developing irrigation water supply and land reclamation, the Grass Valley (Calif.) Union continues—

Electric power is generated as an incident to the basic purposes of the program. Development of the power resources of the Trinity River division under a joint proposal such as that offered here would mean that power would become a better partner of irrigation development in the Central Valley project area than under all-Federal construction.

The Half Moon Bay (Calif.) Review, commenting on a statement that the Trinity partnership proposal would set a precedent to stop the expansion of Federal power in California and end its competition with private utilities, declares:

Indeed it would. That is exactly the purpose of the Eisenhower partnership policy—to take Government out of competition with private industry wherever possible, and to strengthen the sinews of private enterprise for its gigantic task of keeping our economy strong, flexible, and adequate to the challenge of the Nation's growth and the world's demands.

As the Sacramento Union commented recently, the tragedy of those who want big government to do nearly everything is that they lull themselves into a mesmeric state which convinces them these things are free.

They are—

The Review concludes—

of course free neither in the financial sense nor in the even more vital coin of individual liberty and national strength.

The House conferees on the public works appropriations bill, and the members of the House Interior Subcommittee on Irrigation and Reclamation now have the opportunity to cut expenditures by $60 million while increasing Government revenues and benefiting all taxpayers by $320 million—simply refuse to permit needless Federal construction of the Trinity River power facilities and take advantage of the Pacific Gas & Electric offer to build and operate them at its own expense.

Rutgers New University

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1959

Mr. WILLIAMS of New Jersey. Mr. President, since the founding of Rutgers University as Queen's College in 1766, its selection as a land-grant college in 1862 and its adoption as a State university, this institution has been indeed synonymous with the development and growth of New Jersey itself from its earliest colonial days. So today, I think it is fitting that in a State largely concerned with new urban type problems, that the State university has been selected to undertake an experimental program in urban extension.

The Ford Foundation has announced that it will grant to Rutgers a sum of three-quarters of a million dollars to establish such a program. What it hopes to achieve is to apply the university's vast resources to the complex problems facing the State's urban communities. Only one other such grant has been awarded by the Ford Foundation for this purpose and that is in far-off India.

We are honored that such an unique opportunity has been offered our State university. Its unfolding will hold much interest to those of us involved with the complexities of urban living.

I ask unanimous consent to have inserted in the Appendix of the RECORD, an editorial from the Daily Home News of New Brunswick of Tuesday, July 21, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New Brunswick (N.J.) Daily Home News, July 21, 1959]

RUTGERS' NEW OPPORTUNITY

We heard a prominent retired local resident say the other day that "you have to go 30 miles from New Brunswick to realize the greatness of Rutgers University as an American educational institution." We do not entirely agree with this statement, but on the other hand, probably many of us do take this venerable local landmark for granted.

Sometimes it takes the kind of an announcement on our front page today to realize this greatness. This states that Rutgers will receive three-quarters of a million dollars from the Ford Foundation to establish an experimental urban extension program in New Jersey. This is one of two such pilot projects in urban extension. The other is in far-off India where the foundation is aiding the Delhi Municipal Corp., by a $155,539 grant.

Goal of the 5-year program is to apply the university's vast resources to the complex problems facing this State's urban communities. In trying to achieve this goal the project will be a continuing two-pronged process servicing both the university and the communities of New Jersey.

In speaking of this two-way process, Dyke Brown, Ford Foundation vice president, said: "On one hand, the communities will benefit from fundamental and applied research otherwise not available. On the other hand, the university will make its research meaningful through listening posts and outlets in the communities."

When Rutgers became a land-grant college after Abraham Lincoln signed this far-reaching bill in 1864, no one at this small New Jersey institution ever dreamed that a program for urban problems analogous to the agricultural research and extension programs of the Nation's land-grant universities for rural problems would be established almost a century later.

We concur with Dr. Mason W. Gross, president of the State university, who is "both pleased and proud" that Rutgers was chosen for this work. He said he "looks forward to this new opportunity to serve the people of the State."

Living in the center of New Jersey's complex urban area, we will also watch, with intense interest, the unfolding of this unique and untried program.

Current Farm Programs and Policies

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1959

Mr. HUMPHREY. Mr. President, during the recent hearings, before the Committee on Foreign Relations, on the Food for Peace Act of 1959, the committee received some very favorable testimony relating to the use of our surplus foods, and also some important testimony on the so-called farm surplus crisis.

I hold in my hand an editorial entitled "Farm Surplus Crisis," which was published in the July 14 edition of the Des Moines Register. The editorial states very cogently and concisely what has been happening in our farm programs, and at the same time it criticizes very justly the attitude of the administration in attempting to weaken current farm programs and policies.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Des Moines Register]

FARM SURPLUS CRISIS

Though it had been anticipated well in advance, the first official estimate of the corn harvest for 1959 comes as a shocker. Assuming average growing conditions from now on, the Federal Department of Agriculture expects farmers to turn out 4.2 billion bushels of the yellow grain next fall. This would be 400 million bushels more than the record of last year.

The reserve stock of corn on hand also is a record. The Department of Agriculture has predicted a carryover of 1.6 billion bushels just prior to harvest. This would mean a total supply of corn next November of nearly 6 billion bushels—about double what was considered an average supply just a few years ago.

That's only part of the story. With the harvest of another billion-plus bushel wheat crop, the Nation has on hand more than a 2-year supply of wheat. World wheat production is at a record level, too, and stocks are large in all major wheat-exporting countries.

A major farm surplus crisis is in the making. And Iowa will bear the brunt of it.

Grain surpluses are moving into livestock at a rapid rate. Hog production is expanding and prices are falling.

In a letter to the Secretary of Agriculture last week, the Iowa Farm Bureau board of directors expressed concern about the imbalance between supply of and demand for farm products and about the future prospects for farm income. The board said the outlook was for "catastrophic" prices for livestock within the next few months.

The Iowa Farm Bureau indirectly criticized Agriculture Secretary Benson for creating public misunderstanding of the agricultural situation, which it said was "grave." It said it believed the Department of Agriculture has "rightly called attention to the economic inadequacies * * * of existing farm legislation." But it said this effort toward "self-analysis" on the part of agriculture "has produced serious public misunderstanding."

The farm bureau said the chief benefactors of past and present farm programs have not been farmers but the consumers. It said it resented that agriculture was made the subject of public denunciation. This might be taken as a barb at Secretary Benson who has orated incessantly about the evils of farm programs, price supports, and subsidies.

The leaders of the Iowa farm organization said agriculture's bargaining position must be strengthened, and called for an immediate and intensive study into ways and means of helping agriculture develop the countervailing position necessary for successful competition. It suggested study of land retirement sufficient to balance supply and demand, accompanied by an end to price-fixing attempts. It also suggested use of surpluses in a program to benefit U.S. allies and improve foreign relations.

The tone of this letter is quite different from some of the pronouncements by the American Farm Bureau.

The Iowa group did not point out, though it might have, that Secretary Benson's policies were responsible for the expansion of both wheat and corn acreage this year. The acreage reserve phase of the soil bank was abandoned. And the corn allotments were done away with, as a result of a farmer referendum.

Secretary Benson offered a higher corn loan this year if farmers voted to abandon the acreage controls. The farm bureau supported this policy. The result has been a sharp increase in corn acreage—nearly one-fifth more in the Corn Belt. Wheat acreage is up 2 million acres (about 5 percent) as a result of ending the acreage reserve.

There have been inadequacies in the farm programs, to be sure. Acreage limitations have been far from a satisfactory device for controlling farm output. Price supports have often provided the wrong kind of incentives.

But to abandon these programs without substituting anything else—which is the direction of Secretary Benson's statements and policies—could be much worse. The Iowa Farm Bureau evidently is beginning to recognize this.

Address by Juozas Kajeckas at Opening of Lithuanian Pavilion, Chicago International Trade Fair

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by Mr. Juozas Kajeckas, Lithuanian Chargé d'Affaires, at the opening of the Lithuanian Pavilion at the Chicago International Trade Fair on July 3, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY JUOZAS KAJECKAS, LITHUANIAN CHARGÉ D'AFFAIRES AT THE OPENING OF THE LITHUANIAN PAVILION AT THE CHICAGO INTERNATIONAL TRADE FAIR, JULY 3, 1959

As Lithuanian Minister B. K. Balutis spoke at a similar occasion in Chicago exactly 26 years ago, all of those who attended were shocked at the news of the tragic fate of Darius and Girenas. On that day two of our esteemed flyers died, but Lithuania on that day was enriched with the addition of two new heroes. I am happy that I was able to attend the impressive ceremony honoring their memory last year in Chicago. I am glad that this occasion takes place in the month of Darius' and Girenas' great triumph.

At this international fair we do not mourn two Lithuanian heroes. Today we mourn a legion of heroes. We sorrow that a long night has again darkened Lithuania.

Such is our unfortunate destiny. In the words of poet Maironis:

> "In the fate of Lithuania's sons
> Let us no longer seek bright days.
> Misery and tears—their fare."

I consider it a great honor to participate this year in the opening of the Lithuanian pavilion at the Chicago International Fair. During Lithuania's independence this would not have made big news, because free Lithuania participated in many international events. However, a Lithuanian Pavilion at the Chicago International Fair in the present circumstances is a significant event.

We have had a similar case once before. At the turn of the 20th century (in 1900), when

the two-headed eagle was on guard so there would be "neither word nor writing" in Lithuania, to keep it forever dark and blacked out, the idea of having a Lithuanian pavilion at the international fair in Paris was carried out. The Lithuanian pavilion at that time was a matter of Lithuania's honor. Lithuanian determination and donations turned this dream into reality. American Lithuanians supported the idea. The nation has not forgotten and points with pride to this important upholding of Lithuania's honor.

Today, as in that yesteryear, Lithuania is again enslaved. The present occupant is incomparably more cruel. The number of Lithuanian "martyr flowers" on the altar of freedom is incomparably greater. Today, the free and the enslaved Lithuanian are both happy that the honor and the suffering of the Lithuanian nation are so importantly emphasized by the presence of this Lithuanian pavilion at the Chicago International Trade Fair.

The pavilion is a consequence of the diligent and devoted efforts of a group of determined and patriotic Lithuanians. They were determined to restore Lithuania to its rightful place in this fair. I deem it an honor to express a public and sincere thank you in the name of the Lithuanian Legation to the Lithuanian Chamber of Commerce of Illinois, and particularly to its officers, with Dr. Jerome in the forefront, for carrying out such a noble idea. I am especially grateful to the secretary of the chamber and the chairman of the Lithuanian pavilion committee, Mr. Adolfas Baliunas, the untiring motivator of the pavilion idea. The free Lithuanians are of the same bone and blood as their enslaved brothers. They are in general, therefore, one-minded. The feelings of the enslaved Lithuanians are no riddle to us. The sons and daughters of suffering Lithuania are also cheering today because of this pavilion. Their cheering, alas, can be done only in their hearts and minds. Let us not expect a direct and open greeting from the occupied nation. I thus consider it my duty to express thanks to the Lithuanian Chamber of Commerce of Illinois in behalf of the gagged portion of the Lithuanian nation, for this great opportunity to explain to the world its suffering and its aspirations. The nation will forever remember with due respect the initiators and supporters of this grand idea.

Writer Vaizgantas once said that it is possible to torture Lithuania, it is possible to behead Lithuanians, but if even one Lithuanian remains alive he will, at the proper moment, having breathed the air of his native land, shout in the name of the nation, "I am still alive." With the Lithuanian pavilion at the Chicago Fair the nation is saying to the world, "I am still alive."

The general purpose of an international fair pavilion is to portray the achievement of the Lithuanian nation, to demonstrate its products, find a market for them, and to encourage tourism. That is how it used to be in the days of independence. At the present time the Land of Roadside Shrines can portray only its losses, the torture, the backward turn of the wheel of progress.

Let us glance in passing at the record of harm done to Lithuania by the occupant—a record he will most certainly conceal at the New York Soviet Fair. The occupant declares that 2,713,000 people live within today's Lithuanian borders. According to their own figures; before the seizure there were 2,880,000 people living in Lithuanian territory excluding Klaipeda territory, or 3,030,000 with that territory. Thus, their own statistics show a decrease of 317,000 in the population of Lithuania. If the imported Russians are excluded, then the Lithuanian population has become smaller by some half a million people. Adding the natural population growth in approximately 20 years, the total loss in population numbers at least 800,000 people. Deducting the loss of some 200,000 persons during the Nazi occupation, there is a balance of 600,000 Lithuanians lost as a result of Bolshevik acts in Lithuania. This number is made up of those who were annihilated and deported by the Bolsheviks, the youth sent as so-called volunteer workers to develop the Siberian wastes, and those forced to flee to the free countries of the world as refugees. This is the greatest single Bolshevik-inflicted loss to Lithuania. It is comparable only to a loss such as could be caused by a plague. What a plague could not do in the 20th century, the Bolsheviks have done. While the population in Lithuania decreased, the population kept increasing beyond the Urals, partly with Lithuanians. This is a Bolshevik "victory" which the Lithuanians countenance with loathing.

We cannot trust the victories in agriculture proclaimed by the Soviets. The present ruler of the Kremlin at one time belittled the honesty of the statistics on livestock specified by Stalin. We have no confidence in the probity of the present statistics either. The Soviets are known to us not as spreaders of the truth, but as disseminators of the big lie.

The Bolsheviks themselves do not deny the shortages of everyday needs. The Lithuanian actually cannot afford to buy even those scarce goods which do appear on the market. Thus arose the need to help the pauperized Lithuanian with parcels from America. This in turn brought about Soviet efforts to severely restrict aid to the enslaved Lithuanian.

If the production of some consumer goods has been greater than it was before the war, it has not been for the Lithuanian market, but, in Bolshevik jargon, for the "wide homeland." That is where Lithuanian textiles, shoes, and other commodities flow. The Lithuanian worker is merely a serf of Moscow.

The average pay of the urban worker is 400 to 500 rubles per month. The kolchoz farmers, who comprise approximately half of the country's inhabitants, on the average last year earned only 2½ rubles and 2 to 3 kilograms of grain per day. The purchasing power of the ruble is about the equal of 10 prewar Lithuanian cents or 1 American cent. Meanwhile a kilogram of bacon costs 30 rubles; herring, 10 to 13 rubles; sugar, 10 rubles, etc.

In the matter of living quarters it is the same backward Bolshevik progress. According to one Soviet source, each Lithuanian had 6.4 square meters of space for living quarters last year.

The occupant-published data for schools and students speaks about increases. Yet they would have normally increased in independent Lithuania, the more so because Lithuania would not have lost some 600,000 people. Independent Lithuania knew well how to travel the road of progress, and at an even speedier pace than the Soviets. That is one side of the education picture. The other side shows a decided fall in the study of humanities in Lithuania, in comparison with her days of independence. Only a couple of months ago the so-called Minister of Justice, more aptly called the minister of injustice of occupied Lithuania, Litas, complained about the lack of jurists. During the entire period of occupation not one person has received a doctorate. The reason is Moscow considers jurists unnecessary for the Lithuanians, since that profession is reserved exclusively for Russians, as loyal supporters of the regime. This is evident in the recently published regulations setting forth the conditions for entrance to professional schools. In competitive examinations in history, philosophy, law, and cultural-education specialties, the deciding factor is Russian language and literature (oral and written). How can a Lithuanian graduate who majored in Lithuanian win out over a Russian applicant in these specialized fields? So first place invariably goes to graduates of Russian, not Lithuanian schools.

Most of the Lithuanian professional school graduates receive no work in Lithuania. Employment is offered to them only in the depths of Russia. There is no benefit whatsoever to Lithuania from such graduates, and their inclusion in the general statistics is fraudulent. In addition, it is another means to Russianize and Bolshevikize the schools.

Having sifted the Bolshevik claims of progress and welfare through the prism of facts, it is plain that they are in the main a myth and a lie. We had decidedly better conditions in Lithuania on the eve of the last war. One of the reasons why foreigners are not permitted to enter Lithuania is that they would expose the Soviet myths.

The presence of Lithuania's Pavilion at this Fair coincides with two other major events. This is the eve of America's Independence Day. The Lithuanian nation is impressed by this act not only because it brought freedom and prosperity to this Nation and to our emigrees living here, but we are also impressed because the Declaration of Independence solemnly declares:

"* * * the separate and equal station to which the laws of nature and of nature's God entitle them * * *" and that "* * * all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness."

The "all men" emphasized in this act includes the Lithuanians. They too are people. They too are a nation. Lithuania also has a right to the blessings of freedom and independence. That is why this act is so precious to us, and the anniversary of this act so near and dear to our heat. We are happy that our Lithuanian Pavilion saw the light of day on the even of such an important anniversary.

This Pavilion came into being under the sign of another great anniversary. This is Lincoln's year, 150 years from the birth of the great emancipator. Lincoln is a son of Illinois, but he belongs to the entire world, for all time. He particularly belongs to the enslaved part of the world. He belongs to Lithuania as much as does John Foster Dulles, since both of these men were devoted to the cause of the enslaved man. We gratefully remember Dulles on the eve of America's Independence Day particularly, because even in illness he remembered Lithuania on her February 16 Independence Day. He remembered the Baltic States with a splendid statement which was, it seems, his last official act. But let us return to Lincoln.

Speaking about the U.S. Declaration of Independence he said: "* * * [it] grants freedom not only to the people of this country, but gives hope to the whole world, for all time." It was his aim "that all people be free," because, according to him, "freedom is the inheritance of all the people, in all the lands, everywhere [in the world]." On still another occasion he stated what is appropriate for the present-day occupant of Lithuania "Those who deny freedom to others are not worthy of it themselves."

Just 100 years ago Lincoln termed the acts of the czars in the matter of the Hungarian freedom fighters "an illegal and unjustifiable intervention in the affairs of another nation." Were Lincoln alive today he would certainly condemn the seizure of the Baltic States by the Red czars.

The American Lithuanian, in this year of Lincoln and on the eve of America's Independence Day, can say: "Thank you, Lincoln,

for reminding the Lithuanian through your actions of his duties towards Lithuania." The Lithuanian Pavilion is one expression of that pleasant duty.

Darius and Girenas offered the heroic deed of their Lituanica to reborn Lithuania. I believe I will surmise the wish of all of you in stating that the pavilion opened here today is also offered in honor of Lithuania, its suffering nation and her certain restoration to the family of free nations.

I just had the honor and the great pleasure of accepting, from the hands of Mr. Anthony Rudis, the esteemed former president of the Lithuanian American Chamber of Commerce of Illinois, two most beautiful flags which will grace the Lithuanian Pavilion—the Lithuanian tri-colored banner and the American Stars and Stripes. This presentation was made at a symbolic moment, on the eve of the anniversary of America's Declaration of Independence. Both these flags are close and dear to Lithuanian hearts, and it is impossible for a greater gift to have been made.

The enslaved Lithuanian is today forbidden to publicly stretch out his hand to his beloved Tricolor. In his circumstances, he would be deprived, by the occupant of his country, not only of his hand but of his head as well. The Lithuanian nation knows that, in the glorious undulating of the unfurled American flag, independent Lithuania still lives, and that here, the flag of the Lithuanian state still waves. The enslaved Lithuanian knows that the American Lithuanian believes in, and unrestrictedly makes sacrifices for, the resurrection of Lithuania.

May the Stars and Stripes wave gloriously at our pavilion in the company of the Lithuanian Tricolor. May this red, white, and blue banner sustain and fortify the hope of enslaved and free Lithuanians alike.

Oh beloved Lithuania's Tricolor, wave freely and gloriously in this capital of Lithuania's immigrants and refugees, in this friendly country, in the august company of the American banner.

When the Chicago Fair comes to an end, I would appreciate it very much if the leadership of the Lithuanian pavilion would be so kind as to let these flags pass into the custody of the Lithuanian Legation in Washington for safekeeping. When the dawn of freedom will again come for the land of our fathers, may these two flags be duly honored by the grateful Lithuanian nation on the Hill of Gediminas in the capital city of Vilnius.

Once more I proffer sincere thanks for creating this historic pavilion, and express my deep gratitude to Mr. Anthony Rudis for these historic and precious relics, to the leadership and members of the Lithuanian American Chamber of Commerce for their warm hospitality in honoring me, and to all of you for hearing me out so patiently.

The Non-Communist Oath Requirement

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Offensive Oath," published in the Washington Post of July 23, 1959, relating to the offensive non-Communist oath requirement.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OFFENSIVE OATH

The Senate today is to consider Senator KENNEDY's proposal to rid the Defense Education Act of its futile and offensive non-Communist oath requirement. Senators GOLDWATER, DIRKSEN, and PROUTY, while agreeing with the majority of the Labor and Public Welfare Committee that the oath ought to be eliminated, propose to put in its place a provision making it a felony for anyone accepting benefits under the act to advocate or belong to an organization advocating overthrow of the Government by illegal means. We hope the Senate will accept the Kennedy amendment and reject the Goldwater amendment.

Education affords the strongest possible bulwark against subversion. Those who would make orthodoxy a condition of education have lost faith in the utility of freedom, in the appeal of free institutions, and in the loyalty and good sense of American youth. They do a grave injustice to their country and their countrymen.

United States-Soviet Relations

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mrs. ST. GEORGE. Mr. Speaker, the week of July 19–25 has been proclaimed Captive Nations Week. It is not a week that we can celebrate with much pride. We have done nothing to relieve these captive nations as they languish in chains.

As these people see us fraternizing with their oppressors they must sometimes wonder if this Captive Nations Week is not a rather poor joke, by which we may fool ourselves, but certainly fool no one else.

Mr. Speaker, I belong to the American Friends of the Captive Nations and I am placing the following article by our chairman, Mr. Christopher Emmet, in the RECORD. This article appeared, with others on the same subject, in a special section of the New Leader of July 20–27, 1959.

Mr. Emmet has put many problems before us, but he has answered them in a lucid and forthright manner, which may well clear our thinking on what is at stake at Geneva.

UNITED STATES-SOVIET RELATIONS

(By Christopher Emmet)

A curious paradox characterizes the world situation as we await the next Soviet moves in the Berlin crisis. On the one hand, Soviet Premier Nikita Khrushchev has been waging the cold war with intensified brutability. He has given the Western Big Three an ultimatum to get out of Berlin and has repeated it on at least a dozen occasions. At every available opportunity, he has brandished his hydrogen missiles; in particular, he has tried to dislodge the British and Germans from their solidarity with the United States by warning them that it would take only a handful of hydrogen bombs to destroy their countries completely. He has warned Italy, Greece, Turkey, West Germany, and other North Atlantic Treaty Organization countries that they will permit the installation of NATO rocket bases at their own peril.

While all this has been going on, cultural exchange between the Soviet Union and the Western countries has achieved an unprecedented volume. In recent months, there have been the Bolshoi Ballet, the Moiseyev Dancers, the Soviet Exhibition in New York, the Soviet folk singers and dancers, and scores of delegations of various kinds. The entertainment section of the New York Times for Sunday, June 28, devoted three full pages to reviews of Soviet companies of performing artists who were in this country, had just visited, or were about to visit it. In Moscow, huge crowds have turned out to hear the New York Philharmonic Orchestra, to see the Ice Capades and the performances of Porgy and Bess. This increasing exchange is taking place—as is inevitable—to the disarming accompaniment of talk about improved understanding and relaxation of tensions. And there has also been a seemingly miraculous improvement in the parlor manners of Soviet diplomacy.

These two phenomena might appear to run counter to each other, but in reality they complement each other. Nothing the Soviet Union does is accidental—and it is certainly no accident that the vast increase in the cultural exchange program and the improvement in the Kremlin's diplomatic manners coincide with Khrushchev's ultimatums and the critical negotiations on Berlin. The cultural exchange program and the Berlin ultimatum are both part of the same offensive pattern. The purpose of the former is to serve as a smokescreen for the Soviet political offensive.

Ever since Stalin's death, the Soviets have been making a tremendous effort to promote cultural and technological exchange. They attached so much importance to this that it was made one of the four main points on the agenda of the 1955 summit conference, under the heading "Increased East-West Contacts." Clearly they expected an important net gain from such contacts—and their hopes have already been justified in Europe and in the Far East.

The uncritical enthusiasm with which we have responded to the Soviet cultural exchange program, which has now become the chief instrument of the Soviet campaign for "peaceful coexistence" and "relaxing tensions," has been one of our greatest mistakes. These slogans are incompatible with a Western political offensive or the encouragement of resistance in the captive nations, for Khrushchev has made it abundantly clear that he would consider any Western initiative relating to eastern Europe as a hostile act. Thus, any Western diplomatic offensive directed toward a Soviet withdrawal from eastern Europe and the holding of free elections directly conflicts with the relaxation of tensions. Because of this, we have failed to use our greatest political asset.

The only real breaks in the adverse trend for the West since Stalin's death have been provided by the Polish, Hungarian, and Tibetan revolts, which, temporarily at least, shook the Soviet and Peking empires to their foundations. Here is proof that the single greatest hope for peace and freedom lies in the active or passive opposition of the Soviet and satellite peoples toward the governments which oppress them.

The relaxation of tension rules out any effort to take the offensive by increasing or even maintaining the will of the captive peoples to resist. It is equally incompatible with maintaining the political structure of

NATO and an adequate NATO defense. Tension is a healthy reaction to the presence of danger. The only safe way to relieve the tension is to remove the danger. If we relax our sense of urgency, how can we maintain the intensity of effort and sacrifice needed to defend ourselves, or carry out the hard bargaining and maximum pressure necessary to win concessions from the Soviets on such key matters as German unification? Why should the Soviets yield anything if we relax our pressure whether they yield or not?

Democracies are at their best either in time of real peace, when they can afford disunity and glory in it, or in the time of war, when a voluntary unity is forged by danger. Democracy is at its worst in a state of half-war, half-peace. By a great effort, the West forged the necessary unity to fight the Communists to a standstill in the early phase of the cold war. The high point in this effort was Korea, where, despite the over-cautious Western strategy, our successful defense against Communist aggression climaxed the long series of similar Western successes from Iran to Greece and Berlin.

Our decline began with the inauguration of the more subtle Communist tactics, which began after Stalin's death with the signing of the Korean armistice. Under the influence of the new Soviet blandishments, the West, with each passing year, increased the scope of the cultural exchange program with the Soviet Union, stepped up the exchange of trade and scientific delegations and, in the case of most of our allies, sought for ways of enlarging trade with the Communist sphere. In our desire to be friendly and in our naive belief that the Communists will be influenced once they discover what friendly people we really are, we have ignored the consequences of this fraternization on our own foreign policy, on the captive peoples, and on the men in the Kremlin. It tends to obscure the truth that our real friends are the peoples of these countries who hate their Communist rulers, and it tends to strengthen the holds of these rulers over the peoples they enslave. It also increases the danger of war by creating an atmophere conducive to concessions, by further emboldening the Soviets, by making Khrushchev believe the West is soft and effete.

Despite Khrushchev's immediate repudiation of his 1955 Geneva agreement to the principle of unifying Germany by free elections, Western trade restrictions were relaxed, NATO defenses were reduced, and NATO disputes, such as the dangerous quarrels over Cyprus and Suez were permitted to increase. This increase in disputes between the allies was as much a reaction to the new Soviet tactics of "relaxing tensions" as were the reductions in the term of military service in many NATO countries. The prolonged disarmament negotiations directed by Harold Stassen, which continued with frequent spurts of optimistic reports for nearly 2 years, further served to relax the Western defense effort by making sacrifices appear unnecessary. Under cover of these negotiations, the Soviets achieved their missile headstart, dramatized effectively by the launching of the sputniks in the autumn of 1957.

After 4 years of success with their coexistence propaganda, interrupted only by the Hungarian and Polish setbacks, the Soviets began their present policy, which can be described as "working both sides of the street." On the one hand, they continued and expanded their peaceful protestations and their pressure for negotiations at the summit, for increased trade and cultural exchanges, etc. On the other hand, they exploited their missile headstart to intimidate the weaker nations of the West by a series of threats. With their Berlin ultimatum, they are now attempting to intimidate the Western Big Three.

The launching of these threats may have been premature from the Soviet point of view, since it partially counteracted the success of their "relaxing tension" policy. Intellectually, the threats provide a constant proof that the "friendly coexistence" propaganda is insincere. Khrushchev might have accomplished more if he had waited a little longer, but once again the overconfidence of a dictator has given the free world another chance to meet dictatorship head on.

Yet so far the Western response has been ambivalent. While in general we have stood firm in the Berlin crisis, we have made significant concessions on other matters, such as the negotiations on ending atomic tests, the easing of trade restrictions and even the granting of some credits in connection with East-West trade.

Thus the NATO countries have made every effort to maintain their old policies on the defense of Europe in Berlin, while at the same time they fraternize with the Communist leaders. This ambivalent strategy has not worked well in practice because the democratic countries are neither psychologically nor organizationally prepared to understand and implement such a dual policy.

The most typical and highly publicized aspect of East-West fraternization is the cultural exchange program. The idea conforms to the basic Western faith that, in any fair and open exchange, truth will triumph over falsehood, and freedom over slavery. But the program as organized at present is not a fair, open and equal exchange.

Soviet Deputy Prime Minister Frol Kozlov stated Moscow's position in his July 3 speech before the National Press Club:

"Let us take a very simple example: The conclusion of the Soviet-American agreement on cultural and scientific exchange—though it certainly does not settle outstanding international issues—does, in fact to some extent, promote this goal. American theatergoers applaud the Bolshoi Ballet, the Beryozka and Moiseyev dancers. Soviet audiences in their country warmly acclaim the envoys of American art. Thus, the irritation of mutual incriminations gives way to the mutual pleasure of contacts with the domain of beauty. And this is only to be welcomed.

"There might possibly be some jokers who would call visits of Soviet people to the United States Communist infiltration. These visits, however, help us to know each other better. Let someone call the visits of your Senators to the Soviet Union capitalist infiltration into our country. All right, we agree to put up with such infiltration. For visits such as these serve the cause of mutual understanding."

All this is very persuasive, but we must remember that the same man who uttered those words is pressing relentlessly for a Western retreat from Berlin. To get the United States to agree to that retreat is at present the supreme target in Soviet-American relations. Therefore, what Kozlov says about cultural exchanges should be divorced from what he says about Berlin. The two must be considered together as part of the same political operation. It should be quite obvious that the Soviets hope, by all the favorable publicity connected with cultural exchanges and the Kozlov visit, to obscure the fundamental fact of their threats to Berlin and thus reduce Western indignation and psychological ability to react to those threats.

On the record, it would be suicide for the American people to trust the Soviet Government. But the effect of the exchange program is to promote such trust indirectly. Since the Soviet visitors here and the Soviet citizens who officially receive American visitors in Russia are all either members of the Soviet Government or chosen by it, how can the increasing cordiality which the exchanges are supposed to foster fail to increase American trust in the good intentions and trustworthiness of the Kremlin? Does it make sense for our Government to encourage that trust at the very time when it is prepared to ask its citizens to face the supreme danger of nuclear war in order to check Soviet aggression in Berlin?

Many people hope, of course, that the main effect of increased exchanges will be to overcome the Soviet people's mistrust and misunderstanding of the American Government. But the impact of America on Soviet visitors, or of American visitors to the Soviet Union, cannot lead to any action by Soviet citizens to change Soviet foreign policy except possibly in the long-term future. On the other hand, in America every citizen who is converted to a friendlier and more trusting attitude toward the Soviet Government and its policies can make his voice heard in his community and in Washington itself. Therefore, what the United States is inadvertently doing by the exchange program as now organized is to encourage the formation of an American pressure group against U.S. foreign policy. If this does not happen, it will be due to the good sense of the American people and not to the effect of the present exchange program.

No mass exchange of free tourists or students is possible as long as there are no free private citizens in Russia, where everyone works for the Government. They cannot even work where they please, let alone travel where they please. When they are permitted to travel, they are watched by secret police, who are ostensibly members of these various delegations; their families are kept at home as hostages to prevent their defection in the countries they are visiting. Moreover, in contrast to the Westerners who visit Russia, Soviet citizens given permission to travel abroad belong to the privileged Communist elite in the arts, sciences, professions, and Government positions. Of all Soviet subjects, they have the least reason to criticize or defect. Most Soviet visitors are also trained as propagandists, and most of them are trained to speak the languages of the countries they are allowed to visit. There is serious reason, therefore, to question the effect on Soviet visitors of seeing "the truth about America for themselves"—a thing on which the U.S. Government seems to place much hope for improved American-Soviet relations.

But what of the effect of these visits in the United States? Unless these facts are thoroughly explained to the American communities receiving Soviet delegations—and there is no adequate machinery for doing so—it is almost impossible for the average American to imagine how these things are managed in a totalitarian country. When Soviet delegations arrive in a local American community, all our customs of friendliness and hospitality are brought into play. When any important foreign visitor comes to an American town, it is considered a compliment to the town because it puts it in the news. The local civic leaders, chambers of commerce, fraternal organizations, press and radio, do their utmost to publicize such visits favorably. Picketing of Soviet delegations may help to remind the people of forgotten facts, but it may also provoke sympathy for the visitors, unless it is done with dignity, skill, and timing. Moreover, the technical excellence of performances by Communist artists or technicians is bound to give the impression abroad that the Communist regimes which all the visitors represent cannot be so bad if they produce such able and apparently happy leaders in many fields.

A main argument advanced by Americans in favor of the cultural exchange program is

that the Russian people hate the West because they believe Communist anti-Western propaganda, and that exchange visits are a way of refuting that propaganda by showing the Russians what America is really like. But this theory simply does not jibe with such facts as these:

1. The British fleet visited Leningrad in 1955 while the germ warfare charge, which had been featured on every Soviet radio program and movie screen, must still have been fresh in the minds of the Russian people. An estimated crowd of nearly a million gave the British sailors a tremendous ovation and in some cases broke through police lines—an unprecedented event in Soviet Russia.

2. All the earliest American and other Western visitors to the Soviet Union after the "thaw" began, following Stalin's death, were met with similar friendliness. Even Adenauer, portrayed by the Kremlin as the symbol of the German invaders in World War II, was warmly received.

3. Khrushchev first appeared in the streets, daring to mingle with Soviet crowds, in company with visiting French statesmen.

4. There were great cheers for the American Olympic team at a Soviet sports stadium on the very day when the American Embassy in Moscow was being stoned on Kremlin orders.

5. When the crew of an American plane, which went astray and crashed over Soviet Armenia, found itself menaced by angry peasants who seemed prepared for a lynching, the crew saved itself by identifying itself as American—which would have increased its danger had the Soviet anti-American propaganda meant anything to the Armenian people.

Since the reception the Soviet people have accorded Americans and other Western visitors has been amazingly friendly from the beginning, this friendliness cannot be attributed to the effect of cultural exchanges. Cultural exchange merely made it possible to register friendliness which already existed. The extent of the cordiality suggests not only that Soviet propaganda had been ineffective, but that the friendly demonstrations toward Western visitors may have been used as a safe and indirect way of demonstrating hostility to the Kremlin. Since the Western visits were officially encouraged by the Soviet Government, it could not punish the people for cheering them. These facts reveal that the Soviet people were wholly uninfluenced by the anti-Western propaganda of their Government, and registered total disbelief in what their Government told them.

Under these circumstances, the spectacle of American visitors fraternizing with Soviet officials who receive and guide these tours, at all levels, could only have one of two effects on the people. (1) If they are hostile to their Government, it would discourage them to see that the American visitors are being fooled by the Soviet officials into thinking that they really represent and are popular with the Soviet people. Thus the visits would tend to discourage hopes and pressure for a change in the regime. (2) If most of the Russians are not really hostile to their Government, but merely friendly to the West and wholly indifferent to the Government's anti-Western propaganda, then the effect would be to have the popularity of the Western visitors rub off on the Soviet officials. The visits stimulate hope that the Soviet Government's policy is being liberalized. They will, therefore, reduce popular opposition or at least resentment toward the Government—all of which would simply make it that much easier and safer for the Kremlin to pursue its present aggressive and totalitarian policies.

Since only a tiny minority of Western visitors speak Russian and the great majority are dependent on official interpreters; since an equally small minority are experts on communism; and since, moreover, Soviet citizens would never dare express criticism of their government to the official interpreters (and would be unlikely to trust even a Western visitor who spoke Russian because he came there as a guest of the Soviet Government)—the Western visitor is prevented from hearing any political protest, even if it exists. He is received cordially by the Soviet officials as well as by the people, so naturally the cordiality of the two groups seems to merge and suggest to the visitor an identity between the people and the Communist officials. Also, since the officials at different levels are his real hosts and guides, his pleasure and gratitude for the cordial reception will naturally be directed first toward those officials.

Nature—and the human mind—abhors a vacuum. Since the visitor is not permitted to see the bad things in Russia and is guided toward whatever is best, his mind is filled with good impressions as well as pleasant memories. Therefore, unless he is steeped in the study of the Soviet Union and a knowledge of Communist tactics, it will be difficult if not impossible for him to remain completely objective, and to remember that he is getting a one-sided picture. This is all the more true because there is now no special political preparation or briefing for visitors to the Soviet Union to recall some of the terrible facts in the Soviet record, or to warn against its "Potemkin Village" techniques.

Moreover, the time and money which the visitor invests in the trip gives him a vested interest in thinking that he is getting something valuable from it and is really learning something. Of course, he is learning, but what he learns is so one-sided that his view will almost automatically be more unbalanced than it was before he entered Russia. He will think he knows the good because he has seen it, while the bad is remote hearsay. It was the same with the prewar visitors to Nazi Germany. There is also the fact that the visitor has a vested interest in proclaiming the value of the trip and the importance of what he was able to see on his return home, and in making his experiences appear as significant as possible in his conversations with friends and in his reports to his fraternal organizations.

In the case of visiting American artists, to whom applause is food and drink, the gratitude is proportionately greater. Soviet audiences, indeed, generally give them a far more enthusiastic and tumultuous reception than they have experienced in their own country. The cast of Ice Capades, which they have experienced in their own country. The cast of Ice Capades, which was enthusiastically applauded by scores of thousands of Soviet citizens, returned to the United States literally bursting with appreciation and with nice things to say about the Soviet people. The psychological impact is all the greater because before the visitor goes to Russia, he has an imaginative and exaggerated picture of Soviet economic and technical backwardness. His knowledge and understanding of the totalitarian police state is generally so crude that, if he looks over his shoulder and determines that he is not being followed, or if he sees people smiling in the streets, he is apt to conclude that the charges against the Soviet regime are surely exaggerated.

The American visitor may not be crudely propagandized, in a political sense, by the Soviet officials he meets—but the more subtle and restrained the propaganda, the more effective it would be. The reasons for the bad political relations between the U.S.S.R. and the United States must inevitably come up often in conversations in the Soviet Union. Many Russian officials are trained in skillful political propaganda. They are instructed to explain Soviet policies to Americans, with which the average visitor does not have the historic knowledge to cope. This is all the more true when, say, a French visitor is told about Soviet complaints against America in connection with the cold war.

A PLAN FOR CULTURAL EXCHANGE

Because of the fundamental appeal of the cultural exchange program to the best traditions of our free society, it would be unwise to try to abolish it. In any case, it would not be practical politics to do so. What we must do is to see that it is organized on a more truly reciprocal basis. The following safeguards would eliminate all or most of the dangers discussed above.

1. The U.S. Government should set up, in cooperation with the various Russian institutes and foreign policy institutes attached to universities, a briefing service for all American visitors and tourists who go behind the Iron Curtain. Congress would be asked to provide funds for that purpose. Prospective tourists would be given a kit of documents as well as oral briefings and lectures outlining and analyzing the chief features of Soviet communism. The briefing would not, of course, be mandatory, but, if it were publicized, many would avail themselves of it. This briefing should consist of three parts:

Information about the particular Russian field in which the delegation or tourist is interested, and any special pitfalls and Communist tricks which might mislead them in that field; a general outline of Communist history and techniques, especially those of the "Potemkin Village" category; and outline of the facts about American foreign policy on subjects in dispute with Soviet Russia which are liable to be raised in conversation, so that the American visitor can give an adequate answer.

2. The same machinery should be used to brief local officials and leaders of American communities and organizations which plan to receive distinguished Soviet visitors and delegations. Such briefings about visiting Soviet delegations should include an analysis of the personnel and their positions and records in Russia, showing that they are not private citizens, as their American hosts imagine.

3. All oral briefings would be private, but some of the printed material used in the briefings could be distributed to local newspapers and responsible local organizations for their own use. The State Department itself would not, of course, publicly attack or comment upon the visiting delegations unless it should be necessary to refute some false statement. Since the State Department and the institutes with which it would cooperate in the briefing would not and should not engage in propaganda beyond the private briefings suggested above, volunteer anti-Communist organizations could play a constructive role.

4. Every effort should be made to reduce the factor of intimidation and censorship of Soviet visitors to this country by secret members of the MVD attached to the delegation, and to reduce the suspicion of spying in connection with such visits. The State Department should, for example, insist on incorporating a solemn undertaking by both governments in the projected new cultural exchange agreement, to the effect that all members of each delegation must be bona fide members, performing the functions in Russia or the United States as described in their passports, and none other. Such a solemn word of honor from the Soviet Government would mean nothing in itself, but violation of such an agreement would involve a real risk if any member of a visiting Soviet delegation should defect and denounce another member as an MVD agent. This would act as a partial deterrent

against threats and bullying of the members of the visiting delegation. Aside from this, U.S. visas should be refused for known or suspect members of the MVD who accompany Soviet delegations.

5. American interpreters who speak Russian should be provided for each visiting American delegation to Russia, as a check on the Soviet interpreter and to serve as a guide and counselor to expose Soviet propaganda to members of the American delegations.

6. The budget and personnel of the U.S. Embassy in Moscow, and in the satellite countries other than Poland, should be increased to provide such interpreters and to offer other services, such as on-the-spot briefing when the American visitor or delegation first arrives and before it leaves the country.

7. The period of student exchanges should be at least 1 year, for the longer the Soviet student stays, the greater the chance of his coming to appreciate American freedom. Also, it would give Western students in Russia a chance to form real friendships and penetrate, at least to some extent, the Iron Curtain which exists within all totalitarian countries.

The Soviet Government would, of course, resent any and all of the above precautions because they would reduce the advantage it derives from the exchange program. It might carry its resentment to the point of bluffing a refusal to renew the agreement if these safeguards are adopted by the United States. However, Moscow would have no choice but to accept them or to abandon a propaganda maneuver on which it has invested an enormous amount of money and personnel training.

Presidential Veto of Housing Bill—Letter and Resolution

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the mayor of the city of Fargo, N. Dak., transmitting a resolution adopted by the Board of City Commissioners of Fargo, relating to the Presidential veto of the housing bill.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

CITY OF FARGO, N. DAK.,
July 16, 1959.

The Honorable WILLIAM LANGER,
U.S. Senator from North Dakota,
Senate Office Building,
Washington, D.C.

DEAR SENATOR LANGER: You will please find enclosed herein a resolution adopted by the Board of City Commissioners of the city of Fargo, N. Dak., at its regular meeting Tuesday, July 14, 1959.

We respectfully request that you give this matter your serious consideration and that you lend your support and assistance in overriding the President's veto of the housing bill of 1959.

We further request that arrangements be made by the North Dakota congressional delegation to have the enclosed certified extract of the minutes of the Fargo City Commission, together with covering letter, introduced and read on the floor of both Houses of Congress.

Sincerely yours,
HERSCHEL LASHKOWITZ,
Mayor.

RESOLUTION

Commissioner Hagen moved the adoption of the following resolution:

"*Be it resolved by the Board of City Commissioners of the City of Fargo,* That—

"Whereas Mayor Lashkowitz having presented to the Fargo Urban Renewal Agency the matter of President Eisenhower's veto of the housing bill of 1959 and the serious consequences stemming from such unfortunate veto; and

"Whereas pursuant to the request of Mayor Lashkowitz, the following resolution was presented and adopted by the city of Fargo Urban Renewal Agency;

" 'RESOLUTION RECOMMENDING THAT THE CONGRESS OF THE UNITED STATES OVERRIDE THE PRESIDENT'S VETO OF THE HOUSING BILL

" '*Be it resolved by the Board of Commissioners of the City of Fargo Urban Renewal Agency,* That—

" 'Whereas it has been called to our attention that the President of the United States recently vetoed the 1959 Housing Bill passed by the Congress of the United States, and

" 'Whereas it is our understanding that the bill vetoed by the President was a compromise bill, and

" 'Whereas this commission is of the opinion that the federally aided urban renewal program is of vital importance to the cities throughout the United States, and

" 'Whereas at the present time hundreds of applications are being held by the Federal Government pending favorable action towards the adoption of a new housing bill that will provide funds for urban renewals; and

" 'Whereas municipalities in the State of North Dakota together with the city of Fargo are interested in participating in the federally aided urban renewal program, and

" 'Whereas this Commission is unanimously of the opinion that the citizens of the city of Fargo are benefiting from the carrying out of the North Dakota R-1 urban renewal project: Now, therefore, be it

" '*Resolved by the Board of Commissioners of the City of Fargo Urban Renewal Agency,* That we do hereby recommend to the Senators and Congressmen from the State of North Dakota and to the entire Congress of the United States that they override the President's veto of he 1959 housing bill; be it further

" '*Resolved,* That this Board of Commissioners does hereby recommend to the Board of Commissioners of the city of Fargo, that they adopt a similar resolution; be it further

" '*Resolved by the Board of Commissioners of the city of Fargo Urban Renewal Agency,* That we do hereby direct the executive director to forward copies of this resolution to the North Dakota congressional Representatives and to the Board of Commissioners of the City of Fargo': Now, therefore, be it

"*Resolved,* That the board of city commissioners of the city of Fargo, N. Dak., does hereby concur in the above resolution, recommending that the Congress of the United States override the President's veto of the 1959 Housing bill as contained herein; be it further

"*Resolved,* That Mayor Lashkowitz be entrusted to write each member of the North Dakota congressional delegation, apprising them of the wishes of the board of city commissioners, and requesting that they take action to override the President's veto of the 1959 housing bill; be it further

"*Resolved,* That this resolution be spread upon the permanent minutes of the board of city commissioners of the city of Fargo, N. Dak."

Second by Markey. On the vote being taken on the question of the adoption of the resolution, Commissioners Hagen, Lewis, Markey and Lashkowitz all voted aye.

Absent and not voting: Commissioner McCannel.

The President declared the resolution to have been duly passed and adopted.

HERSCHEL LASHKOWITZ,
Mayor, President of the Board of City Commissioners of the City of Fargo, N. Dak.

How To Plan Oversea Operations

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on "How To Plan Operations if the Boggs Bill Is Enacted."

HOW TO PLAN OVERSEAS OPERATIONS IF THE BOGGS BILL IS ENACTED

(By Paul D. Seghers)

(This article discusses the Boggs bill, which is the first comprehensive attempt to make many needed reforms in the jumble of provisions in the Internal Revenue Code for the taxation of foreign-source income. The author is a member of the law firm of Seghers, Reinhart & McCall, New York City.)

If all who would benefit from the Boggs bill (H.R. 5) knew how much it means to the free world, as well as to American business, the tide of support would run so high, that its early passage would be assured. (It is now in the hands of the House Committee on Ways and Means, and early hearings on it are hoped for.)

Closer ties of friendship and understanding between our country and the other countries of the free world are vitally necessary, not only for our own national security, but for the survival of our way of life itself.

The closest ties between nations are those arising out of intelligent self-interest, and today these are best created and strengthened through mutually profitable international commerce. The American businessman is the best ambassador of good will we could have, creating bonds of friendship with the people of every land. He must be, because the American businessman abroad, and the business organization through which he operates, must understand, must be sympathetic to, and win the good will of, the people where they do business, or the business venture in that country will fail and pass from the scene.

Such strengthening of the ties of mutual self-interest and friendly commercial understanding is doubly important for our side today, in view of the increased tempo of the Communist cold war on the economic front.

These are the strongest reasons why our Government should encourage and assist U.S. business abroad. Just how business will be helped by the provisions of the Boggs bill, if enacted, is explained below.

Briefly, H.R. 5 would make possible the use of a domestic (United States) corporation to accumulate income from sales of goods and other business operations abroad, thereby making additional funds available for the expansion of such business, free of U.S.

tax until distributed to its stockholders. Furthermore, when distributed, the maximum U.S. tax rate would be 38 percent instead of 52 percent, and the foreign tax credit will be allowable.

These provisions, and other tax benefits available under H.R. 5, are described in some detail below, with especial emphasis upon the manner in which U.S. corporations may avail themselves of these advantages.

TAX DEFERRAL

The feature of H.R. 5 which has attracted the most attention is the deferral of U.S. tax on business income earned abroad by a domestic (U.S.) corporation until withdrawn from its operations abroad.[1] In order to defer payment of its U.S. taxes, the corporation must qualify (under the provisions of the bill) as a foreign business corporation. For this purpose, the corporation must derive 90 percent or more of its gross income from sources without the United States and "from the active conduct of a trade or business."[2] The latter phrase is defined to include dividends and other income from a corporation in which the recipient owns 10 percent or more of the voting stock, subject to the requirement that the paying corporation would meet (or has met) tests for qualification corresponding to those of an FBC (foreign business corporation).[3]

Having qualified as an FBC, it is subject to U.S. tax on its foreign-source business income only when, and to the extent that, it pays it out as dividends or otherwise withdraws its property from employment abroad.[4] (An FBC is taxable currently on its income from sources within the United States in the same manner as any other U.S. corporation.[5])

In the taxable year in which an FBC pays a dividend and becomes subject to U.S. tax on the portion of its profits (before U.S. tax) represented by the amount distributed,[6] it is allowed credit against such U.S. tax for foreign income taxes paid and deemed to have been paid by it with respect to such profits.[7] (Such credit is subject to the usual percentage limitations.[8])

Finally, when dividends are paid by the FBC to a U.S. corporation owning its stock, a 100 percent dividends-received deduction is allowed,[9] resulting in no U.S. tax on the receipt of such dividends.

SIGNIFICANCE OF TAX DEFERRAL

Now, what does this provision for deferral of the U.S. tax mean to the U.S. businessman? He can (after enactment of H.R. 5) organize a corporation under the laws of one of the States (or use an existing domestic corporation, such as a Western Hemisphere Trade Corporation, which qualifies as an FBC) to conduct business abroad without any U.S. tax being payable on income from such operations until the income is brought home and distributed. Thus, he can use the funds resulting from such profits, undiminished by U.S. taxes, to expand the business of the FBC in the country in which earned, or in any other country outside the United States.

Many U.S. businessmen who have hesitated to make use of a foreign corporation, are now ready to organize a foreign business corporation if the Boggs bill is enacted in its present form. In this way they will be enabled to expand their oversea operations, using the additional capital made available by the deferral of U.S. tax on the foreign-source income of such an FBC.

BENEFITS TO FOREIGN SUBSIDIARY OPERATIONS

Even in the case of a U.S. corporation already obtaining, through the use of one or more foreign subsidiaries, all the benefits of deferral of U.S. taxes on income from sources outside the United States until received as dividends, and the benefit of the averaging of foreign income taxes so as to minimize the loss of foreign tax credits, some benefits can, in certain circumstances, be derived from the use of FBC.

One advantage of FBC in such circumstances is that, being a domestic (U.S.) corporation, it is eligible for International Cooperation Administration guarantees, while a foreign corporation is ineligible for this protection.

Another feature of FBC is that it is subject, as a domestic corporation, to all tax conventions (treaties) between the United States and other nations, and entitled to the benefits thereof.

STOCK TRANSFER BENEFITS

An interesting example of a tax-free transfer to an FBC is a transfer, by a U.S. parent corporation to an FBC, in exchange for stock of the latter, of stock of a foreign subsidiary now owned by the parent.

Such a transaction (between a parent and a wholly owned subsidiary) would not be subject to the provisions of 1954 code section 367, both transferor and transferee being domestic corporations and it being immaterial whether or not the foreign corporation be considered a corporation for the purpose of determining, under code section 351, the tax-free effect of such an exchange. Hence, it would not be subject, under section 367, to the exceptions to the general rules in subchapter C regarding tax-free exchanges.

One of the advantages of transferring stock of a foreign subsidiary to a subsidiary FBC is that such foreign subsidiaries could pay dividends to the FBC (thus removing assets from the country in which said subsidiary was incorporated and/or operating) without resulting in any immediate U.S. tax. The advantages of such flexibility are obvious, and it will be found in many instances, that such a method of operation (with both a foreign subsidiary and an FBC) has other tangible advantages.

Benefit evaluation

In order to ascertain the possible value of using an FBC in a specific case where a domestic corporation already has one or more foreign subsidiaries, all feasible transactions involving the three types of corporations should be imagined. Then compute the resulting deferral of payment of U.S. taxes and the ultimate income tax consequences (United States and foreign) of such transactions. Only in this way is it possible to reach an informed decision as to which transactions and methods of operating would produce the most advantageous overall result. It is probable that some surprising results will become apparent from such tax computations. It will, of course, be essential also to take into consideration local taxes other than income taxes, and all nontax factors which would have a bearing upon the desirability of such transactions.

TAX REDUCTION

Despite the advantages which some see in the deferral provisions of H.R. 5, discussed under that heading, if the stated objectives of the Boggs bill to encourage private investment abroad and thereby promote American industry and reduce Government expenditures for foreign economic assistance are to be attained, much more than tax deferral is necessary.

To encourage American businesses to expand their activities in (or into) other countries, the mere postponement of the time for paying U.S. taxes on income (if any) thus earned outside the United States is not a very strong incentive.

Income earned outside the United States, beyond its jurisdiction and protection, should be taxed by the United States only once—when such profits are received by U.S. citizens or residents. That is enough, rather than taxing such foreign profits when received by a U.S. corporation, and again when distributed to its stockholders. It should not be necessary to advance arguments in support of this view—on the contrary, it is Congress that should have to justify its imposition of two successive taxes, one on top of the other, on income earned outside the United States.

EXTENSION OF WESTERN HEMISPHERE TRADE CORPORATION TAX REDUCTION

A step in the right direction is taken in the Boggs bill—the extension to worldwide business operations of the 14-percentage-points tax reduction presently allowed to U.S. corporations qualifying as Western Hemisphere Trade Corporations.

The Boggs bill would allow this reduction with respect to business income from abroad, including dividends and other income, of a domestic corporation which qualifies as an "International Trade Corporation."[10] To qualify as such, the income of such a corporation must meet the above-described tests applicable to the income of an FBC "for the 3-year period immediately preceding the close of the taxable year (or for such part of such 3-year period during which the corporation was in existence, or for such part of such 3-year period as follows December 31, 1958, whichever is the shorter * * *."[11]

It usually will be found desirable even where not essential, to organize a new corporation (under the laws of one of the States) to qualify as both an FBC and an international trade corporation. No U.S. tax problem under 1954 code section 367 would result from any transfers of properties to such a corporation from one or more individuals or from another existing domestic corporation, inasmuch as no foreign corporation would be a party to the transfer.

An illustration of the potential advantage of the provision for the 14-point reduction may be found in the case of a U.S. corporation now making sales in the Western Hemisphere through a WHTC subsidiary, but selling directly to customers in Europe. Under the Boggs bill, the benefit of the 38-percent maximum U.S. tax rate on income realized by such a corporation from sales in Europe would be available to an international trade corporation to the same extent as is presently the case with the sales being made in the Western Hemisphere but outside the United States. Such operations in both hemispheres would no longer present the same problems as to loss of tax credits where the tax rates in some countries are higher than 52 percent. This would result from another provision of the Boggs bill (mentioned further below) permitting the use of either the overall or per-country method of computing the limitation on the allowable amount of such credit.

It is clear that a domestic corporation which qualifies as an international trade corporation may also qualify as an FBC, thereby obtaining the benefit of both the 14-percentage-point reduction in the tax on its foreign business income and the deferral of U.S. tax on such income until distributed. These two provisions, taken together, afford

[1] Sec. 951. Unless otherwise stated, all citations of code sections in footnotes refer to sections of the 1954 code as proposed to be amended by H.R. 5, 86th Cong., 1st sess. (1959).
[2] Sec. 951(a).
[3] Sec. 951(a)(2).
[4] Sec. 951(b)(2) and sec. 78.
[5] Sec. 951(b)(1).
[6] Sec. 951(b)(4).
[7] Sec. 951(b)(2)(C).
[8] 1954 code, sec. 904.
[9] Sec. 243(c).
[10] Sec. 921.
[11] Sec. 921(1).

sufficient benefit to constitute a strong incentive to American business to expand its activities abroad, thereby accomplishing the announced objectives of the Boggs bill, as well as the broader objectives of strengthening the ties of commercial and friendly relations with other nations of the free world.

The Treasury, apparently without adequate statistics on how much tax (net after deduction of foreign tax credits) it has been collecting with respect to business income from abroad in recent years, "guesstimates" that it runs from $200 million to $500 million, and objects to the effect of these provisions upon its revenue. Even if one of these estimates happened to be approximately correct, the cost would be small, compared to (1) the billions of dollars being poured out in government-to-government aid (the need for which would be lessened by the effects of enactment of H.R. 5), and (2) the increased income tax revenue that would flow to the Treasury as a result of the stimulation of U.S. business as a consequence of acceleration of our international trade if H.R. 5 is made a part of our system of taxing income earned outside the United States.

It is far easier to prove that this would be the effect of enactment of the Boggs bill, than for the Treasury to prove how much revenue loss it would sustain (temporarily) as a result of H.R. 5's provisions for tax deferral and the 14-point tax reduction.

One thing is certain: Business will not be encouraged to any great extent to embark upon and expand operations abroad if the only incentives offered are tax reductions which will not even temporarily reduce the Treasury's tax revenues from such activities.

If business appreciates what it can do for our country through increased business with other countries, and what the Boggs bill can, in turn, do for such business, very desirable results would quickly ensue in both directions.

TAX-FREE PROPERTY TRANSFERS

The Boggs bill will greatly facilitate tax planning because of its provision [12] permitting "tax-free" transfers of "foreign business property" to foreign corporations, in certain circumstances. Such transfers are distinctly different from (1) transfers of property of any kind from an ordinary domestic (U.S.) corporation to a "foreign business corporation"—which may be made completely "tax-free" [13]—and (2) transfers from a foreign corporation to an FBC, which may be made in such a manner as not to give rise to U.S. tax at the time transfer is made [14] but will enter into the computation of the FBC's "reinvested foreign business income" [15] and hence be taxable to the FBC at the time it makes a distribution out of such "income." [16]

Benefits in computing tax credit

Another provision of H.R. 5 which will greatly facilitate tax planning is that which allows, in the determination of the amount of the foreign tax credit, the use of either the existing "per country" limitation or the "overall" limitation, whichever will produce the larger credit.[17]

This would eliminate the present necessity of planning steps to avoid loss of tax credits in situations where, due to operating in countries where the income tax rates are higher than 52 percent, it is desirable (if possible) to effect an "averaging" of such taxes with taxes levied at lower rates in other countries.

INVOLUNTARY CONVERSIONS

Another type of situation, in which the resulting tax burden could be very heavy and inequitable, has likewise been corrected by the Boggs bill. This has to do with situations where, due to local conditions, the U.S. parent company wishes to be the payee of insurance policies covering property owned by a subsidiary.

Those operating in such countries are familiar with the reasons why this is highly desirable, if not practically essential. Under existing law, proceeds received by the parent company in such a situation, even though reinvested in similar property thereafter owned by the subsidiary, are taxable to the parent company in their entirety as ordinary income. This is so because the parent company has no cost to apply against the receipt of such proceeds and, hence, cannot claim that such proceeds are from the sale or disposition of any asset owned by it. Under the proposed provision in H.R. 5,[18] the receipt of such proceeds by the U.S. parent would not be taxable to it provided that the money was reinvested in similar property thereafter owned by the subsidiary. This will protect the U.S. corporation in the event of the receipt of proceeds of casualty losses of property in such circumstances and relieve the existing burden of the tax counsel, although there is believed to be, under existing law, at least one means of achieving approximately the same result.

TAX CREDIT FOR "FORGIVEN" FOREIGN TAX

Finally, one of the great planning opportunities for obtaining both business and tax benefits is offered by the provision in the Boggs bill which would allow U.S. taxpayers—during a maximum period of 10 years—credit for foreign income taxes forgiven by the government of a foreign country as an inducement to render technical, engineering, or like services, or to actively conduct a trade or business in such country, provided the facts as to such forgiveness are certified by our Secretary of State (or his delegate).

This so-called tax-sparing provision is essential to remove the obstacle which presently deters foreign governments from giving U.S. business adequate and effective tax incentives sufficient to justify the risk in investing money, time and know-how in new enterprises in less-developed countries. Under existing law, taxes so forgiven by the foreign government are sooner or later collected from the U.S. taxpayer by the U.S. Treasury, thus depriving the taxpayer of any net tax benefit as a result of the incentive sought to be extended by the foreign government.

This provision would benefit taxpayers without any actual loss of revenue to the Treasury, inasmuch as it would collect as much tax from the taxpayer as if the foreign tax had not been forgiven by the foreign government.

CONCLUSION

In conclusion, it might be mentioned that there is nothing in H.R. 5 which would result in any different method of determining the source of income or place of sale of goods, whether produced in the United States by the parent company or by an affiliate of the taxable entity making the sale, or otherwise acquired.

It is not believed that there is anything in the Boggs bill or its legislative history to date which would indicate that any different rules would be applicable with respect to the necessity of substance in the case of a foreign business corporation or an international trade corporation than are applicable to domestic and foreign corporations under existing law. Hence, the problems of source of income (that is, place of sale) and of substance will still confront the tax counsel.

One last word—it will still be worthwhile to plan entirely to avoid the U.S. corporation tax on income from abroad, whenever possible.

Mallory Rule No Longer Panics the Police

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. DIGGS. Mr. Speaker, under unanimous consent I include in the RECORD a recent article appearing in the Washington Post which clearly refutes the contention that police are and will be hampered in their law enforcement duties by the Supreme Court decision of 1957 in the Mallory case barring confessions obtained between arrest and arraignment, if there had been delay in arraignment. Despite all the predictions of dire consequences which last session and this year in the House passage of bills to nullify this decision have been contended would result from this ruling, actual experience of the Police Department in 2 years has served to show the soundness of the Supreme Court's McNabb-Mallory decisions protecting the rights of individuals. Even, as the article points out, U.S. Attorney Oliver Gasch has frankly admitted that the experience has undermined his position that legislation is needed that in fact would sanction the breaking of the rule against lengthy questioning of suspects in order that the police might solve crimes and win cases. In 2 years, virtually no effect has been had upon the solution of crimes. The practical effect of the Mallory rule has been to eliminate many inequities in the handling of suspects, particularly as they relate to Negroes who in many instances, because of racial prejudice, are brought in disproportionate numbers into contact with the police under suspicion and arrest.

I commend the reading of this article to Members of this body as one example of the baselessness of "blood will run in the streets" arguments against court decisions which seek to protect the rights and privileges of the people and constitutional guarantees to them:

[From the Washington Post, June 14, 1959]

THE MALLORY RULE NO LONGER PANICS THE POLICE

(By James Clayton)

On June 23, 1957, the Supreme Court reversed the conviction of Andrew Roosevelt Mallory for rape because a confession used at his trial had been obtained during an illegal delay between his arrest and his appearance before a judge.

The decision catapulted Mallory into fame of a sort, staggered local police and prosecutors and brought anguished cries that effective law enforcement was no longer possible in the District of Columbia.

"In a relatively short time, thousands of guilty persons will go free," a ranking police official told Congress. Unless police can question suspects and get confessions from them, he implied, the law cannot be enforced.

JAILS STILL BUSY

In the 2 years since, it has become obvious that the decision did not end effective law enforcement here. Perhaps a dozen other persons have gone free because the only evidence against them was contained in statements they gave to police while they were being held illegally. But the decision has given only unrealized dreams of freedom to the 2,000 others charged with serious crimes since that June day. The percentage of serious crimes solved has not changed appreciably.

There are two obvious reasons why the dismal predictions failed to come true:

One is that the Metropolitan Police Department and the U.S. attorney's office discovered that they can solve most crimes and win most cases without breaking the rule against lengthy questioning of suspects. This was a discovery clearly forced by the Mallory decision and a discovery which has reduced cases in which the Mallory decision is a serious issue to a minimum.

The other reason is that the U.S. Court of Appeals here has decided that the sharpest critics of the Mallory decision had not understood what the Supreme Court meant. The critics broad interpretation—which would have invalidated any statements made after an arrest and before a preliminary hearing—has been replaced by an interpretation which is about as narrow as it can be.

Paradoxically, a minority of the judges, composed of the court of appeals' strongest liberals, interpret the decision just as did the strongest critics, who are mostly stanch conservatives. The difference is that the liberals praise this view while the conservatives damn it.

THE DECISION

The Mallory opinion was written by Justice Felix Frankfurter for a unanimous Court. It said that a confession obtained from Mallory 7½ hours after his arrest was obtained during an "unnecessary delay" between his arrest and his hearing before a judge, which came 12 hours after the confession.

At that hearing, Mallory was told of his right to refuse to talk to police. He might not have confessed after that.

To force the police to obey the law requiring these hearings "without unnecessary delay," the Supreme Court excluded the confession from evidence at Mallory's trial. Mallory subsequently went free. Without his confession, there was insufficient evidence to convict him, U.S. Attorney Oliver Gasch said, especially with the rape victim most reluctant to undergo a second trial.

This rule is not new—there are similar rules for evidence seized through illegal wiretaps and unreasonable searches—although law enforcement officials jumped up and down as if it were new. It is merely a reiteration of a rule the Supreme Court laid down in 1943 in the McNabb case. In Mallory, the Court classified 7½ hours as an "unnecessary delay" and announced that it had meant what it had said in McNabb.

DIFFERENT TACTICS

After the initial shock wore off, U.S. Attorney Gasch told the police that they had better learn to live with the decision. He and his staff then worked hard to give the police a series of lectures on how procedures should be changed.

Gasch is convinced that the police have worked just as hard to put these changes into effect. There has been more diligence in complying with the law requiring immediate hearings, and less reliance on confessions in solving cases. This, of course, was precisely what the Supreme Court wanted.

The result, Gasch frankly admits, has undermined his own position that legislation is needed to clarify Mallory-type situations. He knows that the good police record, which he and Chief Robert V. Murray have fostered, makes the need for that legislation harder to prove.

NARROWING THE RULE

At the same time, the court of appeals has been stripping the decision of the broad interpretation. The result is that some critics now frankly admit that the decision, as applied here, is no longer objectionable. They still want Congress to revise it through legislation but only to write into law the present interpretation in case someone decides someday to adopt a different interpretation.

At first, it had looked as if the court of appeals was not going to take so narrow a view. The court banned a confession made at 3:15 a.m. when the defendant was arrested at 6:40 p.m. Then it banned others made at 8 a.m. after an arrest at 1 a.m. and at 3 a.m. after an 8 p.m. arrest.

The best explanation of these was given by Judge John A. Danaher, who said that the suspects had been subjected to inquiry or to a course of conduct which lends itself to eliciting inculpatory statements.

That seemed to mean that any delay between arrest and hearing or any questioning at all by police would invalidate any confession. This triggered a series of midnight court hearings so that confessions would be usable at trials.

Then came a case in which Judge Warren E. Burger wrote that "unnecessary delay" does not mean mere passage of time. It means, he said, "passage of time during which that which should and could be done is not done." The appellate court upheld a confession obtained while police were acting as quickly as they could to get a preliminary hearing.

This indicated that police could ask questions of suspects if, at the same time police were trying to take a man before a judge. That is, questions could be asked during booking procedures, during transportation in police cars and so on, if the police goal was an immediate court appearance.

Last June, the Court went further. It said that "reasonable questioning" is all right until police have had an opportunity to reach "any reasonably accessible magistrate."

This apparently meant that if an arrest was made at night and no magistrate was reasonably accessible, confessions would not be affected by a delay until he became accessible.

Three months later, Burger spelled out what questions the police can ask. He said that they can ask a suspect what he knows about a crime. If the suspect says he doesn't know anything, they can tell him what they know and ask him about that. If he still denies knowing anything, they can ask if he wants to say something or just let the case stand the way it is.

"It is only when the questioning crosses into what can be termed 'grilling' or is continued beyond the brief period allowed, that the resulting confession may be inadmissible," he said.

This is a long way from the view, vigorously presented to Congress last year, that every statement made between a man's arrest and his preliminary hearing is inadmissible under the Mallory decision. This interpretation sanctions the use of statements made during any reasonable delay.

Thus, the court of appeals has approved delays to allow time for booking and for investigation other than questioning. It has approved delays when no magistrate was immediately available and when a suspect was drunk.

All this indicates that its position is much like the position of those who supported a bill in Congress last year to approve reasonable delays after arrest. This passed the Senate but failed during an attempted compromise with a House bill which approved all delays after arrest.

The compromise had to fail because the House bill directly reversed the McNabb-Mallory rule while the Senate bill adopted that rule as interpreted in the court of appeals here.

The House has before it now the same bill it approved last year but there have been no stirrings in the Senate this session.

Throughout this narrowing of the decision's effect, Judges Henry W. Edgerton and David L. Bazelon, of the court of appeals have consistently objected. They argue that the Supreme Court meant to eliminate all confessions obtained during any delay between arrest and preliminary hearing. They also argue that a confession coming after any illegal arrest is inadmissible.

This last point, once a widely accepted reading of Mallory, was disposed of by the court of appeals last year. Judge Walter M. Bastian wrote that the illegality of an arrest does not affect a confession as long as there is a prompt hearing.

One point remains to bother the Mallory decision's critics. In 1948, George Morris Fay, then U.S. Attorney, admitted error before the court of appeals and asked it to upset the conviction of Andrew Upshaw because Upshaw's confession was obtained during an unnecessary delay before a preliminary hearing in violation of the McNabb rule.

The court of appeals said, two to one, that Fay was wrong; that the McNabb rule did not mean a delay invalidated a confession unless the delay was a part of coercion to get a confession. Judge Edgerton dissented. He said his brothers misunderstood the rule.

The Supreme Court promptly said that Edgerton was right and his brothers were wrong. Edgerton thinks now that his brothers are wrong again.

Resolution by Pennsylvania House of Representatives on the Immigration and Naturalization Act

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. TOLL. Mr. Speaker, it is with pleasure that I include in the RECORD, for the consideration of Members of Congress, house resolution No. 45, which was unanimously adopted by the house of representatives of the Pennsylvania General Assembly on June 30, 1959. This resolution relates to the fourth preference quota of the Immigration and Naturalization Act and reads as follows:

HOUSE RESOLUTION 45

There are many Americans who have filed petitions with the immigration authorities of the United States for the entry of their sons, daughters, brothers, and sisters which petitions are classified in the fourth preference quota of the Immigration and Nationality Act;

Of the four preference quotas established by the Federal Immigration and Nationality Act the first, second, and third quotas are

allotted 100 per centum of the total annual entry quota;

As a result those persons who fall within the fourth preference section must depend for entry into this country upon deficiencies in the first three quotas;

There is frustration and despair resulting from the law that gives hope to Americans by permitting them to file petitions, getting them approved, and then compelling them to wait for their kin who may never come;

Thousands of discontented people abroad whose hopes are first raised and then dashed certainly cannot believe in the good will we try to engender through our foreign policy and thus become easy prey to the propaganda of unfriendly Nations;

Congress has recognized and alleviated a similar problem through Public Law 85-316 which includes a provision for reuniting spouses and minor children of aliens legally residing in this country whose petitions were approved prior to July 1, 1957: Therefore be it

Resolved, That the House of Representatives of Pennsylvania hereby memorialize the Congress of the United States to amend the provisions of Public Law 85-316 to include cases which fall within the fourth preference quota in order to provide for entry of the many thousands, petitions for whom have piled up in a backlog in prior years, that in order not to create another problem of separated families those applicants who are married and have families be permitted to bring them, and that a copy of this resolution be sent to each Congressman and U.S. Senator from the State of Pennsylvania.

Paul D. Abramson, Jr., Awarded CAP Scholarship

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, I am proud to announce to the House of Representatives that one of my constituents, Paul D. Abramson, Jr., has won, in the face of heavy competition, a 4-year aeronautical engineering scholarship given by the Civil Air Patrol. Forty thousand young men of the CAP competed in the contest which resulted in this award. The funds to pay the $4,000 scholarship, which will be used to attend the Massachusetts Institute of Technology at Cambridge, Mass., this fall, comes entirely from private non-Government sources.

The scholarship is named the Gen. Lucas V. Beau Scholarship, he having been a former national commander of the CAP.

I am particularly pleased to inform the House of this award as I know this young man and his family well. His father, Dr. Paul D. Abramson, was a personal friend of mine and a very prominent surgeon in Shreveport, La., until his unexpected death this past week.

Young Abramson has been an outstanding honor student at Byrd High School in Shreveport where he ranked 12th in his graduating class of 575. This, in itself, speaks very well of the ability and capabilities of this young man.

I have repeatedly recognized the urgent need for more and better scientific training of the young people of the Nation. I am happy to know that the top scientific award of the CAP this year has gone to one of my constituents.

I would like to point out that listed among young Abramson's hobbies are operating radio controlled airplanes and the study of electronics, photography and astronomy. You must admit these are not the usual hobbies of a young 17-year-old. He has also served as president of his high school science club.

While young Abramson was building his outstanding record in high school, he took time to participate in the CAP program. During his cadet career, this honor student won his certificate of proficiency with the CAP and was named a member of the National Honor Society. He is rated as excellent in every phase of cadet life by the commander of the Shreveport squadron of the Louisiana CAP wing to which he belongs.

He has in the past 2 years amassed such a splendid record that he ultimately was awarded this coveted CAP scientific scholarship which can only be used to further his training in aeronautical engineering.

In the space age into which we are now entering such scientific education will be in great demand and I strongly urge our young men to enter the various scientific fields.

The CAP is doing a grand job in encouraging such study by its cadets and the CAP offers a well-rounded basic program for its cadets. I urge all our young men to take part in the CAP program. I commend the CAP in its selection of young Abramson for the award of this scientific scholarship.

I congratulate Paul Abramson, Jr., on being awarded this scholarship and express my best wishes for his continued success at MIT during his studies there.

The Barter Program Under Public Law 480

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the text of a statement I delivered this morning before the House Committee on Agriculture in connection with the barter program under Public Law 480. My statement is as follows:

STATEMENT OF REPRESENTATIVE VICTOR L. ANFUSO, OF NEW YORK, BEFORE HOUSE AGRICULTURE COMMITTEE, THURSDAY, JULY 23, 1959, ON PUBLIC LAW 480

Mr. Chairman and my former colleagues on this committee, while my anatomy may not be on one of those chairs you occupy, my heart is still in this room. It was not my idea to be taken off this committee, and I sincerely feel that we were making wonderful progress in bringing about better understanding between the producers of agricultural commodities and those who consume them. May I say also this morning that the farmer also needs the businessmen from the cities to help him dispose of his agricultural products by barter, as well as cash sales.

The President of the United States has often expressed himself in favor of barter and so has the Secretary of Agriculture and many in the department who administer the program. Congressional leaders of both parties have told the President and the Secretary of Agriculture that we should do more bartering.

Where then is the opposition which has been so effective as to make those rugged American pioneers, who braved all sorts of dangers to bring strategic materials to this country in furtherance of our national security and defense, look almost like criminals engaged in a nefarious occupation? It comes from those men in very high places in government who sincerely but nevertheless misguidedly, believe that it is wrong for this country to engage in honest-to-goodness competition with our allies; that whenever our competition interferes with the foreign trade of any of our allies, we alone should back down and let their products through even though what they are doing always hurts our taxpayers and many times helps our enemies.

When those who are opposed to barter say that barter transactions interfere with normal trade, what they really mean is that through barter we are disposing of more agricultural surpluses than our friendly competitors.

Foreign competitors naturally want us to relax our barter transactions so that they can do more business through direct sales or barter.

The question then should be asked these well-intentioned men: Is it right for our competitors to undersell us and make use of barter and wrong for us to do the very same thing?

Mr. Chairman, this barter program is a good one. If properly administered, not only will it dispose of surpluses equaling the value of the needed materials which we acquire, but we have had ample testimony before this committee from competent exporters of agricultural commodities to the effect that disposals through barter materially assist in their disposals for cash. And as you, yourself have very eloquently demonstrated, time and time again there has never been one single instance where a barter transaction prevented a cash sale for dollars. In other words, our total disposals have been increased by the barter program operating before the Department of Agriculture decided to curtail it.

The misguided apostles who oppose barter constantly give the argument that barter disturbs normal marketing. I have already told you what they really mean, but let me go further. In title I, which is a program of great magnitude, we carefully wrote restrictions about the disturbance of normal marketings. Title III, even at the level desired by the Congress, is only a fraction of our governmental disposal program. The Congress has felt that in this instance, the danger to normal marketings would never be as great as in the title I program. This stems from its small volume and the fact that at every step of the way, a barter transaction is precisely the same as a transaction for cash. Every step of the transaction is handled exactly the same way as a cash sale. The only difference, Mr. Chairman, is that in barter the sale of the commodity is tied into a sale of a material which has made it possible for our businessmen to sell agricultural commodities abroad on a more competitive basis than if they were merely selling for dollars.

Mr. Chairman, it has already been pointed out by you and others why the nations of

the world with whom the United States competes in the export of cotton and wheat have been vociferous in their opposition to the barter program. It has also been made clear in these hearings and in those we had last year that certain American firms who have large holdings in Mexican cotton have been active in building up support within Government against the barter program. At least one of the large grain companies which, according to the public press, has rental contracts for the storage of our surplus grains totaling $13 million annually, has recently become very active in opposition to the barter program.

Mr. Chairman, I wish I knew, but I don't, why both the Departments of State and Agriculture should be listening to those few who are advancing their own selfish interest to the detriment of our national program.

Mr. Chairman, I cannot honestly find any logic or justification in the arguments advanced against barter. I know that the record shows that as the sales through barter increased, our total exports incresaed and so did our cash sales. I know that as the barter program decreased, so did our total exports and our cash sales until they have sunk to their present low levels. I know that the storage costs for our surplus agricultural commodities now cost approximately $2 million per day, and the Department estimates a considerable increase in the next few years. I know that the materials that we have been receiving in exchange for our surpluses are not only a valuable insurance against a national emergency, but more importantly, they are materials which we will urgently need in our future economy, and are, therefore, valuable national assets. I know that the value of the materials that we have taken in exchange for the deteriorating and expensive-to-store surplus commodities have increased significantly since their acquisition. I know that barter, and barter alone, has permitted us to acquire materials from many of the underprivileged nations of the world which they could not privately sell for dollars to the United States. And, Mr. Chairman, I know, as you so ably pointed out on the floor of the Congress, that since we have curtailed our barter sales the Soviet bloc has moved into the vacuum and increased their exports to the very nations to which the Department of Agriculture and our State Department will not permit us to export through the barter program.

Knowing these things as I do, and recognizing that this committee also knows them and has always, on a nonpartisan basis, supported the type of barter program which all of us advocate, the question is what can we do about it?

There are pending before this committee many bills designed either to set the level of the barter sufficiently high as to force the removal of the restrictions presently on the movement of commodities or through other means to make it mandatory that the Secretary carry out the type of barter program which the Congress intends. Any of these bills, with a little rewriting, would serve the purpose.

I have read carefully the bill, H.R. 7983, recently introduced by the chairman of this committee and believe that the language in section 4 is perhaps the most competent language which has been prepared to require the Secretary to carry out the type of barter program that the Congress wants. It may be argued by some that the Congress should not mandate the Secretary to carry on such a program. However, experience shows that no other alternative is effective, and I sincerely believe it would remove criticism of both the Secretary and those who administer the program if the mandate were clear and unambiguous. Otherwise, Mr. Chairman, we might as well abandon the program.

Now, Mr. Chairman, the history of this program is still relatively new. In 1954, as farm surpluses began to pile up in our warehouses, Congress enacted Public Law 480 providing various methods for disposing of these surpluses abroad. One of these methods was barter for strategic and other materials, and services of value to the United States.

Such authority was not new. It had existed for many years in the Commodity Credit Corporation Charter Act (sec. 4(h)) and had been implemented in various other statutes. Relatively little use had been made of this authority, however, because there was no clear congressional policy for such a program.

Section 303 of Public Law 480 established such a policy by directing the Secretary of Agriculture "to use every practicable means" to arrange and make such barters or exchanges whenever he "has reason to believe" that "there may be opportunity to protect the funds and assets" of the CCC by barter or exchange of agricultural surpluses for "strategic materials entailing less risk of loss through deterioration or substantially less storage charges."

The clear intent of this legislation was to establish the congressional policy that barter did protect the funds and assets of the CCC and to establish barter as a priority method of disposing of agricultural surpluses, second only to cash sales for dollars.

For about 2½ years, until May 1957, the Department of Agriculture carried out a barter program as intended by Congress. During this period it exchanged more than $900 million of surplus agricultural commodities for an equivalent amount of foreign minerals and other materials of permanent value. These materials went into the strategic or supplemental stockpile, from which they can be released only by Presidential proclamation or joint resolution of Congress. Therefore, contrary to the fears expressed by the witnesses from the State Department, these materials cannot be a threat to the market, nor do they affect adversely any domestic minerals market or production and in fact support domestic prices by drawing surplus materials from world markets.

This is the best business we have ever done in disposing of surpluses. As shown in the extremely well-prepared staff study of your committee, during the years 1954–58 we exchanged $979.6 million in essentially worthless farm surpluses for barter materials. On March 27, 1959, these materials were worth $1,035.2 million or $55.6 million more than we paid for them. At the same time, we have been saving more than $100 million a year in storage costs. The Department of Agriculture estimates the annual cost of storing the farm surpluses we have exchanged by barter would be $109.1 million, while the annual storage cost of the materials we have received in exchange is only $4.4 million.

Why in May 1957, the Department of Agriculture suddenly brought this highly successful program to a halt is still a mystery. The announced reason was that it was interfering with cash sales. More recently it has become clear that this means the cash sales of other nations, not ours. In numerous appearances before the House Agriculture Committee, Department witnesses have never been able to submit any proof of significant interference with cash sales. On the contrary, the Department's records as shown in your committee staff study show that our total exports of agricultural commodities have been highest in the years when barter exports were the highest.

As I have previously stated, the real reason for the action was that small groups of employees in the Department of Agriculture and the Department of State who had always been opposed to the barter program had succeeded over the years in impressing their views on those at the policy level.

Committees of both the House and Senate have tried repeatedly to get the Department of Agriculture to reinstate the barter program but without success. From May 1957 until November 1958, after Congress had enacted a new and stronger barter policy provision, there was virtually no barter business done.

The device used by the Department of Agriculture to prevent barter transactions was to require a showing by the proposed contractor that the exports of surplus commodities involved in the transaction would be over and above all possible cash sales of these commodities. Obviously, it was impossible for private contractors to submit any satisfactory proof of such additionality. It is unfair to place the burden of proof upon them.

The insincerity and inconsistency of the Department's position on this matter was demonstrated by the fact that during the fiscal year 1958 the Secretary made agreements to sell surpluses for foreign currencies (under title I of Public Law 480) to at least 12 countries into which he refused to let surplus commodities move under barter transactions without proof of additionality, although he had the burden of proof under section 101(a) of the act to determine that sales under title I will be additional to usual marketings of the United States before approving any such sales.

Over the objections of the Department of Agriculture, the act extending Public Law 480 in 1958 (Public Law 85–931) embodied a revised barter policy section intended to reestablish the barter program at the level at which it was operating prior to May 1957 and undertaking to prohibit the Secretary from requiring a showing of additionality on the part of the proposed contractor before approving a barter transaction.

The policy of Congress that the Department of Agriculture should carry on an aggressive and substantial barter program is clearly set out in the 1958 amendment and is summarized by the House conferees, of which I had the honor to be a member, in the last paragraph of our report on the bill:

"As we have stated above, the substantive changes in the law, while significant, are not nearly as significant as the fundamental fact that the Congress has felt it necessary to enact legislation to require performance of a program which it has previously established by law. This bill is designed to reinstate a barter program of at least the magnitude followed prior to the restrictive regulations issued by the Secretary of Agriculture."

In spite of this clear intention of Congress, this program has continued to be hedged about by restrictions and obstacles which will prevent it from attaining more than one-third of the volume Congress had in mind.

The restrictions are in two general areas:

(1) Designation of most of the major trading areas of the world as markets into which surplus commodities may be exported by barter only with a showing of additionality, and

(2) Arbitrary and unnecessary limitation on the list of foreign materials which may be imported as part of a barter transaction. The Department of Agriculture itself admits that it is more difficult to make a barter transaction under the reinstated program than it was under the regulations in effect prior to the 1958 amendment of the law.

Since the announcement of the reinstated program in November 1958, the Department has received, as of June 30, 1959, some 559 formal written offers to enter into barter contracts for a total value of $854 million. However, it has rejected offers amounting to $493 million and has accepted only offers with a value of some $156 million.

Significantly, the volume of new offers has been drastically reduced so that new contracts will be in a greatly reduced volume.

For instance, while during November through February the new offers averaged over 115 per month, since then they have averaged only 38 per month. This is basically because the materials offered were no longer eligible for barter because quotas established by the materials committee had been reached.

For 3 months the Department refused to accept any offers to barter cotton, although U.S. cotton exports are running 51 percent below last year and American cotton has virtually ceased to move on the world market because of our export pricing policies. Listen to this: It refused to approve the barter of soybeans into West Germany although that country is increasing its purchase of soybeans from Communist China. It refused to approve barter of feed grains into the Benelux countries although their purchases of feed grains from the Soviet bloc are increasing. It refused to approve a barter of cotton and tobacco to France, entering instead into a sale of these commodities for French currency, although the French were willing to pay for the commodities by valuable materials instead of with soft currency, which as times goes on will be reduced in value. It refused to approve a multilateral transaction involving movement of American cotton to Japan, although Japan was negotiating and has since entered into, its first barter deal with Russia for Soviet-controlled cotton.

While our Department of Agriculture is preventing surplus agricultural commodities from moving into European markets under the barter program, while our agricultural exports are at the lowest point since 1955, agricultural commodities from the Soviet bloc are moving into the West European market in steadily increasing quantities. Numerous new trade agreements with the Soviet bloc involving agricultural commodities have been signed by West European countries within the past year.

Under these trade agreements alone, more than an estimated 1.5 million metric tons of wheat, feed grains, tobacco, cotton, and rice will move during the calendar year 1959 from the Soviet bloc into countries where the Department of Agriculture will not permit our surpluses to move under barter without a special and virtually impossible proof of additionality, and I might add that these are the so-called hard-currency countries.

The second major impediment to the barter program is the small list of materials which have been designated for importation under the program. The 1958 amendment broadened the base from which the President may designate materials to be received in barter so that it could include materials others than the approximately 70 on the official stockpiling list. The President assigned the responsibility for recommending such materials to an interdepartmental committee and this committee has done the exact opposite of what the Congress recommended. It has designated only a relatively few materials which can be received in barter, about 25, and, without specific authority from the President, has placed quantitative limits on even these few materials. The effect is that there are at present only a relative handful of materials—at best estimates about 12 in number—which are actually eligible for importation under the barter program.

It is reported that representatives of the Department of Agriculture on the Inter-Agency Materials Committee have tried strenuously to get additional materials on the barter list and to have quantitative limits removed from those now on the list but that their efforts have been thwarted consistently by representatives on the Committee from the Department of State and the Bureau of the Budget. In addition, it is reported that the Bureau of the Budget representatives have put pressure on the General Services Administration, which established the price paid for barter materials, to reduce the price levels they will approve, so as to further handicap the program.

I repeat that the President has expressed himself as favoring a substantial barter program—probably close to that carried on prior to May 1957—that the Secretary of Agriculture is not opposed to a substantial program and that the main impediments to this program are being erected by those below the policy level in the Departments involved. In most instances, those making policy can only accept the reports and recommendations of those working under them and if these reports indicate that a program is being carried out in accordance with the intent of Congress, although this is not the fact, this position will ordinarily be accepted by policymaking officials.

To me, Mr. Chairman, the collateral benefits arising from a barter program such as that carried on by the Department before May 1957 are even more important to the United States than is the primary benefit of disposal of essentially worthless surpluses for valuable minerals. Among these collateral benefits are the following:

Resistence to Soviet trade expansion: Many of the materials acquired under the barter program come from economically underdeveloped countries of Africa, Asia, the Near East, and South America. In many instances, these materials are the major export commodites of those countries. Under the barter program we were providing these countries with a profitable outlet for what they have to sell. We were establishing and cementing their trade relations with the United States. We were making it difficult for Russia to move into this same trade area. With the curtailment of the barter program, we have cut off this trade relationship with many of these countries and in so doing are aiding and abetting the efforts of the Soviet bloc to extend their sphere of economic influence. Don't take my word for this, look at your own committee staff study which shows the countries from which we were acquiring materials under the barter program.

Barter is an effective form of foreign aid: In the case of many of the countries listed in the staff study, the commodities obtained by the United States under the barter program are substantially the only products those countries have to sell to this country and in many instances they are extremely important to the economy of the country involved. Under the barter program we were not only obtaining full value for our agricultural surpluses but we were providing the most effective type of aid to the economies of the countries from which we were acquiring materials. Without $1 of cost to the taxpayers of the United States we were providing these countries with millions of dollars worth of purchasing power and providing it in the place where it does their economic development the most good, in the direct channels of trade and commerce.

Barter stabilized our own minerals industry: Under the barter program, the world price of lead and zinc was stabilized at a level satisfactory to virtually all concerned. Only after the Department of Agriculture discontinued the barter program and acquisitions of these metals under that program ceased, did the world price of lead and zinc drop to the point where assistance had to be provided for the domestic mining industry. The steps which have had to be taken to subsidize the domestic lead and zinc industry would probably not have been necessary had the barter program been continued. It is worth noting that now that there is again a barter program—even on a limited scale—the world price of these two minerals is improving.

Barter is good foreign relations: A large part of the unpleasantness which Vice President NIXON encountered in South America was the outgrowth of the curtailment of the barter program. Although the quantity of materials which had been obtained from South American countries was not large, it had been sufficient to provide an important prop to their economy, not only through direct sales but through stabilization of world minerals prices. In the opinion of competent observers, unrest and hardship related directly to termination of the barter program provided the environment which made possible organization of the demonstrations against the Vice President. It is probable that this situation is being repeated in other countries and other parts of the world.

Barter is good business: No other form of surplus disposal gives the United States as much in return for its surplus commodities as barter. Under barter, surpluses are exchanged at their full export value for strategic and other materials which (considering the effects of inflation) are actually worth more than dollars, and the exporter pays the ocean freight. Under title I sales, the selling price is frequently discounted by a favorable exchange rate, part of the CCC dollars go to pay the ocean freight, and the United States receives in return foreign currencies subject to serious depreciation. Even cash sales take dollars out of the importing countries, while barter transactions put dollars or their equivalent into the countries from which the materials are acquired, and the record is convincing that these dollars are immediately spent in the United States—thus giving us two full-rate commercial transactions for our surplus commodities.

In conclusion, Mr. Chairman, I hope that this committee and the Congress and, for that matter, the executive branch, will not judge the many values of this total program solely in the light of unproven and now shopworn statements that barter sales displace cash sales, or in the light of the objections from friendly foreign countries, who, while doing extremely well in exporting their own agricultural commodities, are most jealous of any exports from the United States. These are relatively minor considerations raised against a proven method of increasing our agricultural exports, reducing our surpluses, assisting friendly nations, and building our economic resources—a method which has strengthened the United States to wage economic war against the Soviet, and enabled us to better protect the very allies who are complaining.

Farben Does Not Renounce Claim to General Aniline

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. ROBISON. Mr. Speaker, on January 7, 1959, I introduced H.R. 1345 to amend section 9(a) of the Trading With the Enemy Act, as amended.

Enactment of this bill would permit the Attorney General of the United States to dispose of this Government's majority stock-control interest in General Aniline & Film Corp., which was vested in 1942 at the outbreak of World War II, as enemy owned.

Following the end of hostilities, a Swiss holding corporation then known as I. G. Chemie and now as Interhandel, brought suit in our Federal court against the Attorney General of the United States, claiming ownership of this majority stock of General Aniline & Film Corp., which has its principal manufacturing operations and over half of its approximately 8,000 employees in my congressional district in the State of New York.

During 10 long years of litigation through the Federal courts, our Government has maintained that I. G. Chemie, or Interhandel, was a cloak for the huge Nazi industrial cartel—I. G. Farben, the major builder of Hitler's war machine.

I. G. Chemie, or Interhandel, for its part has contended in the U.S. courts and through 7 years of congressional hearings in both the Senate and House committees that it had no connection with I. G. Farben in regard to General Aniline & Film Corp. at the time of vesting.

Throughout, since the end of hostilities, I. G. Farben, now in the process of liquidation, remained quiet until late last year when reports were published and statements made here and abroad that discussions were taking place between American representatives of I. G. Chemie, or Interhandel, and our Government to reach an out-of-court settlement. One such published report said that the two parties were on the eve of settlement.

Immediately (on November 5, 1958), this flushed out of the closet the skeleton of I. G. Farben, and its trustees in West Germany filed a motion in the U.S. District Court for the District of Columbia to intervene in the case of I. G. Chemie, or Interhandel against the Attorney General of the United States. The motion asked our Federal court to determine the rightful owner of General Aniline & Film Corp., before any disposition is made of the proceeds from any sale of the vested stock.

On December 19, 1958, Judge David A. Pine, of the U.S. District Court for the District of Columbia denied the motion by I. G. Farben to intervene on the basis of this Government's assertion that since I. G. Farben was a German national it was ineligible to intervene in the suit by I. G. Chemie, or Interhandel against the Attorney General of the United States. The court did not rule on the merits of I. G. Farben's claim to ownership.

Both here and abroad representatives of I. G. Chemie (Interhandel) vigorously opposed the action by the trustees of I. G. Farben in liquidation.

The American legal representatives of I. G. Farben in liquidation, however, stated in the press that they would appeal this decision. They had 60 days, or until February 17, 1959, to do so. As the deadline was reached, they had not done so.

However, regardless of their failure to appeal, the liquidators of I. G. Farben continue to maintain that I. G. Farben has a rightful claim to the proceeds from the sale in the United States of the vested shares of General Aniline & Film Corp. This is evident in the following translation, an excerpt from the report for 1958 of the liquidators of I. G. Farbenindustrie A. G., in liquidation, to the annual stockholders' meeting, scheduled for July 10, 1959:

The intervention in the litigation of *Internationale Industrie-und Handelsbeteiligungen A. G. (Interhandel)* v. *Alien Property Custodian.*

As reported in the daily newspapers on November 5, 1958, the liquidators petitioned the district court in Washington, D.C., for permission to let the I.G.I.L. intervene in the pending litigation between Interhandel and the American Government about the stock of General Aniline & Film Corp.

In view of the importance of this matter and the often confusing and inaccurate publications about the proceedings, a detailed report on the action of the liquidators seems to be appropriate.

As mentioned in the annual report for 1957, the liquidators sometime ago started to undertake an examination of the relationship between I.G., Interhandel and GAF. This examination was difficult because the files of I. G. had been decimated and neither Interhandel nor the Sturzenegger bank were willing to give the necessary information and to permit an examination of their relevant books and papers. In spite of this, the laborious work done succeeded in obtaining information on the relations and transactions between I. G., Greutert & Cie. (later Sturzenegger & Cie.) and Interhandel and in developing a picture which may be summarized here already as follows:

The liquidators gained the conviction that the I. G. was entitled to certain rights concerning the GAF stock at the time of vesting, or its proceeds in the event of a sale.

In 1942, the American Government issued a series of so-called vesting orders by which 93 percent of the GAF stock was transferred to the United States. Most of the vested stock was held by Interhandel, originally called I. G. Chemie A. G.

The vesting orders were based on findings that the GAF shares "were owned by or held for the benefit of I. G. Farbenindustrie A. G., or held on behalf of or on account of I. G. Farbenindustrie A. G."

In 1948, Interhandel brought a suit against the United States in the district court in Washington for the return of the vested GAF shares. This is "the Interhandel suit" which is still pending today. First the district court dismissed the complaint because the complaint had not complied with the order of the court imposing on it a duty under American procedure for the production of all the documents available. The appeal filed by Interhandel from this decision was dismissed by the court of appeals in 1956. Upon Interhandel's petition for certiorari, the decision of the court of appeals was reversed by the Supreme Court of the United States in July of 1957 [sic] and the matter was remanded to the district court.

Soon thereafter there were reports from Washington about the start of negotiations between the American Government and Interhandel about a settlement of the Interhandel suit.

In view of this report, the following considerations had to be made:

The value of the vested GAF shares is extraordinarily high. Their book value as of June 30, 1958, was $109,858,012 according to a report of the U.S. Office of Alien Property. The present stock quotation shows a considerably higher value. How much can be obtained by a public auction cannot be predicted.

"If the I. G. had certain rights at the time of vesting with regard to the GAF shares, or their proceeds in the event of a sale (and the liquidators are convinced of these rights on the basis of their examination, in conformity with the position of the American Government in the Interhandel suit), then the I.G.I.L. has a contingent claim for a corresponding return of such proceeds or a claim for compensation in the event of return legislation in the United States or under a German indemnification law.

According to information obtained by the I.G., the danger existed that a settlement attempted by Interhandel would have thwarted the subsequent realization of the claim of I.G. or would have made it at least much more difficult. Such a settlement, which could have been concluded at any moment, would have led to a serious injury to the interests of the owners of liquidation certificates. By the petition to be permitted to intervene in the Interhandel suit, the I.G. hoped to prevent the threatening damage which a settlement might do to its claim. The liquidators had the choice between such a petition and just marking time without doing anything. After weighing all the circumstances and after consulting with their American counsel, the liquidators in agreement with the chairman of the board took the position that the petition for intervention had to be filed in order to protect the interests of the I.G. stockholders, after all the efforts to come to an understanding with Interhandel had failed.

Without going into the merit of the claims of I.G., the district court refused for purely formal reasons to permit the intervention of I.G. in the Interhandel suit. However, in the course of the proceedings the attorneys of the American Government made some important statements. They declared implicitly that the existence of rights of the I.G. concerning the GAF shares had to be acknowledged and that a settlement with Interhandel would be concluded only on the basis of the rights determined for the benefit of Interhandel regarding the GAF shares. Furthermore, they declared in their reply to the petition of the liquidators for the perpetuation of all documents the production of which the American Government had obtained in the Interhandel suit, that all papers relevant to the case would remain in their custody. Therefore, I.G. did not have to be afraid that later a resort to these papers would be impossible.

In view of these statements, the liquidators after consulting with the board decided not to file an appeal from the decision of the district court and not to pursue any further, for the time being, the petition for perpetuation of documents.

It is understood that the fact that no appeal has been filed does not mean a waiver of I.G.I.L. of its claim based on former rights of I.G.

Occasionally it has been maintained in the press that the court by denying the petition for intervention has made a determination that the I.G. had no rights regarding the GAF shares at the time of vesting. Such statements are wrong. In denying the petition for intervention, the court did not have to and did not make any decision about the rights of I.G.

On the basis of information collected in their work for many years on the relations and transactions between I.G., Greutert & Cie and Interhandel, and the contents of the record in the Interhandel suit, the liquidators are convinced, as mentioned above, that I.G. had rights at the time of vesting regarding the GAF shares or their proceeds in the event of a sale. This result is not in contradiction of the cancellation of the dividend-guarantee-agreement in 1940 because it is based on facts existing independently of the dividend-guarantee-agreement.

The liquidators follow closely the present negotiations between Interhandel and the American Government. In addition, the liquidators continue to examine all possibilities available to them for the protection of the interests of I.G.I.L.

Poison in Your Water—No. 144

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Milwaukee, Wis., Journal of May 17, 1959, entitled "Whitnall Park Stench Bothers Nature Lovers":

WHITNALL PARK STENCH BOTHERS NATURE LOVERS—POLLUTED WATER ODORS CHASE VISITORS AND AFFECT THE AREA AS WILDLIFE RETREAT

(By Loren H. Osman of Staff)

The stench of polluted water is mingling with the perfume of flowering crabapples at Whitnall park.

Beauty still abounds in this Milwaukee county showplace. But the defiled creek areas are in sharp contrast to the spring flower attractions.

Green scum has collected in the lagoons along the North Creek, which meanders through the park to the Root River. From these ponds, odors are so overpowering on a hot day that visitors hurry through the area.

John Voight, the park's superintendent, reported "quite a few complaints" from the public, especially groups on nature hikes. Picnickers are subjected to the smells, as they spread out their food under the trees.

DANGER TO WILDLIFE

Park officials are becoming increasingly concerned about the problem. It has worsened rapidly in the last few years. They are seeking out the sources of the pollution, which is not only offending the park's visitors but endangering its position as a wildlife retreat.

Allied problems also have cropped up. Wash water detergents in the stream have reached a level where they foam up at the dams and falls. Sometimes the foam reaches several feet in depth. It is whipped off by the wind and almost becomes a traffic hazard on park drives.

Sediment slowly is clogging the ponds. The silt has build up from runoff of other areas. Meanwhile, water tables have dropped, as hundreds of wells have been punched in the adjoining sections.

But pollution is the big headache. Its effects were examined the other day by Voight; Howard Gregg, general manager of county parks; Edward Mallonen, county landscape architect; and Leonard Pampel, county acquarist.

POLLUTION TESTS NEEDED

The green in the water, explained Pampel, indicated that the stream was "trying to bounce back." Pollution occurs when deposits of organic matter in the water decay. The process requires more oxygen for the photosynthetic activity. Robbed of its oxygen, the water no longer supports the same level of plant and animal life.

Extensive tests would have to be made to determine just what the polluted water contains, Pampel explained.

Ducks have disappeared from the creek, Mallonan pointed out, as duckweed has vanished. The waterfowl used to nest along the banks. Blue heron also have declined. Even dragonflies are less numerous. Minnows and even bass once were in the waters. Only the foraging carp remain.

"Everything used to be jumping along here," Mallonen said. "Now a good percentage of the nature trail is shot, as activity declined."

WATERCRESS HAS RECEDED

The bloom of algae extends across broad expanses of water. In the backwaters the scum is blackish and hangs over submerged twigs like thin mud. Here and there, bubbles have boiled to the surface. Oil slicks can be detected in some spots.

A spring which feeds into the stream still is operating, despite the decline in water levels. But watercress, which formerly grew around it but which will not stand pollution, has receded.

Much of the work on Whitnall park's waterways was done in the 1930's by work progress administration labor. Extensive planting and landscaping also was done in the early years. Now the entire plan has reached its climax—only to have pollution invade the scene.

"It is hard to put one's finger on what has happened," Gregg remarked. "However, we do know that the woods and fields which once surround the park had a natural filtration action for the streams. The buildup of an area brings more runoff."

CREEK GETS RAW SEWAGE

Rising several miles to the west, the stream enters the park at the intersection of Highway 100 and North Cape Road, Hales Corners. Another tributary of the Root passes through the park farther south. It is less polluted, so far.

Park officials found, on their walk upstream, that raw sewage was being fed into the creek. It came out of an overflow pipe at a sewage pumping station on North Cape Rode, near the park's west entrance.

This was only a temporary situation, according to Elmer Faehrmann, superintendent of Hales Corners public works. He said the pipe had been opened briefly so a valve in the system could be repacked. But it was still open Saturday night, 2½ days later, spewing out garbage, feces, and other matter carried in grayish water.

Faehrmann then explained that the bypassing continued after the repairs had been made, because "someone is giving us an awful lot of water." He said he suspected it was coming from a newly built-up area, or that a new sewer had been opened. A check was being made, he said.

PUMPS CAN'T HANDLE LOAD

The station's two pumps, pumping some 450 gallons a minute, couldn't handle the load, Faehrmann said. The village is planning to add a 600-gallon-per-minute pump, he said. There also is an emergency gasoline pump at the station.

The chlorine content in the effluent also will be doubled, to see if residual chlorine can be built up in the stream to clean it out, Faehrmann added.

Officials mention a combination of possible causes of the park pollution—inefficient septic tanks, sewer overflow, surface contamination such as filling station oils, even runoff of farm fertilizers, notably nitrogen. Faehrmann claimed the stream actually had been a problem as long ago as 1941.

"I don't see why the park should be having so much trouble now," said Faehrmann. "Houses here and there do have problems with septic tanks. That's why we are putting in sewers."

SEWER SYSTEM HELPS

Faehrmann said he believed that as other areas were "sewered in," park pollution would clear up. But he added that "it can't be blamed strictly on our development." Neighboring communities, also rapidly being subdivided, could be offenders, he said.

Faehrmann led a tour through the village's half-million-dollar treatment plant. He pointed to the end product, clear, clean water which is put into the stream. The plant, of the trickling filter type, is designed to handle an ultimate population of 10,000. Present population is 5,400.

Hales Corners officials note that their treatment plant has been rated one of the best by the State board of health, taking out 95 percent of the oxygen removing particles. It is running at less than half of its 1 million gallon a day capacity now.

However, the plant serves only about half of the village. Some 200 homes in 2 sections and 2 schools are to be included in a $400,000 expansion of the sewer lines, to be done within 4 years.

DETERGENTS NOT REMOVED

About 100 of the unsewered homes are in the Hale Park subdivision, west of the park. The others are north of the park, between highway 100, North 92d Street, West Edgerton Avenue and West Ridge Road. The schools to be connected, Valley View and St. Mary's, also are in this section.

The treatment plant does not take out detergents, used in dish and wash waters. No plant has been able to do this successfully, Faehrmann claimed, but they are harmless except for the appearance of foaming, he maintained. A chemical could be added at the plant but would dissipate before it reached the park, he said.

The park commission will work on the pollution problem, Gregg said. But the maintaining of pure, sparkling waters in a metropolitan area appeared to have no easy solution.

Whitnall Park was named for Charles B. Whitnall, who envisioned a system of natural beauty for Milwaukee County. The park recently issued a guidebook to its natural trails. Gregg wryly agreed that a hike through the fumes and past polluted waters offered a lesson not in the book.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Commencement Address by Carl Sandburg

EXTENSION OF REMARKS
OF
HON. HOWARD W. CANNON
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Friday, July 24, 1959

Mr. CANNON. Mr. President, recently graduates of the University of Nevada were honored by having as their commencement speaker one of America's truly great poets and philosophers, Carl Sandburg.

The remarks made by Mr. Sandburg cut deeply into the consciousness of America and, in my opinion, bring a fresh light to the ills of our present society. Yet his address is so valuable because, like a physician, Mr. Sandburg was able not only to diagnose our malady but also to suggest a ray of hope for mankind's salvation.

He has taken the best of the American philosophy from its inception and traced it through to our time.

In his message to the 1959 graduating class of the University of Neveda, Mr. Sandburg states the problem of the jet age, or the space age, clearly. I believe he goes beyond mere criticism. He clearly states the problems, and Mr. Sandburg gives his answers to the deep and challenging questions: Where did we come from? Where are we now? Where are we going?

I believe Mr. Sandburg's wisdom will be of great benefit to everyone who reads his address, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is good to be here. If I can't give the members of the graduating class any advice worthwhile, we can at least have fellowship here today. This morning, for the first time in many years I thought of a little anecdote which a young minister gave one morning at chapel exercises at the prairie college in Illinois, about the boy who came to the minister of his church and said he had been having dreams, this country boy who helped his father work his farm. He said the dream had come over and over again, letters of fire against the sky. There would be the two letters, the capital letter P and the capital letter C. What could they possibly mean? He meditated about it. He told the minister, "Could it mean that I should go forth and preach Christ?" And the minister was very thoughtful, a thoughtful face for a minute or two, and then he said, "It might mean what you think, and then again it might mean that you should stay home and plant corn."

Some of you have chosen your careers, some of you who have chosen your careers and professions may make changes, and that little anecdote may help.

You will hear, across the years, those little questions: Where did we come from? Where are we now? Where are we going? The first two you can do fairly well getting the answers. As for the third, there was never a generation on earth that had a more mysterious and complex future before it. Some of the ancient philosophers may be good for you, some of the moderns may be good, but the new media in education that you will be in contact with, these three new media that have come across the last 30, 40 years, you'll be in contact with them more or less. At times you will have to exercise your willpower to keep away from them and what they might do to you.

Referring to the cinema, the silver screen, the movies, for one. And then, referring to radio, and I'm referring to television. You face any of them and take what they want to hand you, and you are getting education always, either good or bad. They may claim that it's entertainment, but all the time they conceived it they had the subconscious of you in mind. They give you impressions that go deep into the blood and the brain; they do things to you that you have to think about afterward in order to get at really what they did do to you. That book that in its year was a best seller, the Hidden Persuaders, had portentous doctrines, portentous facts and theories about that street in New York. When you address a letter there, you address it Madison Avenue, and some of the inmates of it call it "Ulcer Gulch." They are among the educators in this country. Sometimes you can see something very much worth your time on television, for instance; I could name a dozen plays, I could name panels. The best things on TV are priceless, but even among the best things they have to intersperse. You can't look at the world series in baseball without hearing incessant advice that gives you the impression that there are millions of men running around in this country wondering how they can get a shave.

I wonder at these voices that bawl at you, "Buy this soap today. Get it. It's the best." "All cigarettes are milder than all other cigarettes."

I wonder what's happening to the minds of the young. Incessantly, day in and day out, these lies are told you, these extravagant statements about what a product will do for you, how to help you live your life. The best, the greatest—lies on lies into the ears of the young. I wonder what it does to them? I will point to, say, Socrates or Aristotle, Leonardo da Vinci, William Shakespeare, John Milton, good old Ben Franklin with that fine mind of his, Thomas Jefferson, Abraham Lincoln. Not one of them ever knew anything in their lives about these three media. None of them ever saw a movie or heard a radio cast, or saw a TV screen, but they had books—they had books. I've been told about the large sum, the large, generous sum that's been given the University of Nevada for a new, large library. The book; you can go to a shelf—you can go to a shelf and pick out what is for our mood today. If you want entertainment, it's there, assured and guaranteed. If what you want is for the tough mind and you feel like tackling it, it is there, and you can turn the pages and if you come to passages that seem to you a little stupid you can skip them, and if there are favorite passages that have a thought that you find attractive or even fascinating, given in a somewhat musical style, you can go back to it and read it over and over again.

But before the TV screen you sit there and you take it. You have no choice, you get yourself soaked with it and you're helpless.

I will mention the phrase. I will mention the phrase that goes for all of these great minds and hearts of the past that never had anything to do with these modern media. They had books, and besides that they had conversations with people of their choice who were fruitional and productive and incitatory, but most of all they had solitude and they knew how to make solitude creative. They were not afraid of loneliness. It was in loneliness, it was in solitude, in silent rooms that their minds operated toward the great works that today we revere them for. Creative solitude.

I rode across the State of Michigan one time on the Michigan Central train, the Wolverine. In front of me was a woman who had a 6- or 7-year-old boy who stood at the window and looked out, and he would clap his hands, and he would howl with delight, and he would turn to his mother and tell her to see, too. The man who was seated in front of them, he was bothered; he would turn and give the two of them a dirty look every once in awhile. And finally the woman saw what was the matter, and she had to say to the man, "You must excuse him; he thinks everything is wonderful." I hope that the most of you have learned in your courses, and now that you start out with life, that there's not much that your eyes will meet but which is wonderful.

I asked J. Robert Oppenheimer a few weeks ago a question, a point that had bothered me.

"After years of trying it with your cyclotrons, finally you did divide the up to then indivisible smallest particle of matter, known as the atom. You shattered it, and when it came apart, what were the pieces?

And this learned man, this physicist before whom I am very humble, said, "When it came apart, it didn't come apart in pieces, it came apart in things that never existed before."

It's quite a generation we're living in, the very young having access to these media of information—the newspapers, movies, radio, and TV, and the elders discussing what a time it is we're living in. The atom bomb, the bombers flying in the air at all times, day or night, ready—ready with their atom bombs in case war should be begun against us. So I hear from a friend of mine about an 8-year-old son of his who was asked the question, "What do you hope to do, and be, when you grow up?" And he had a short answer, "Stay alive."

I could offer a short poem perhaps that might serve, an actual incident, but it could serve as a parable to the next war that all of us pray so earnestly will not come:

"In a Colorado graveyard two men lie in one grave.
They shot it out in a jam over who owned one corner lot.
For a piece of real estate they shot it out.
And it was a perfect duel; each cleansed the world of the other.
Each, horizontal in an identical grave, had his bones cleaned by the same maggots.
They sleep now as two accommodating neighbors."

And perhaps I could read lines from Lincoln that some of us regard as truly as important, truly as portentous, and fully as marked by a rhythm and concentrated wisdom as the Gettysburg speech. In the first week in December, December 1 in 1862, he sent a message to Congress. In those days the message wasn't read by the President. He sent a message about the need for funds, the need for a fund by which the slaves in the border States that had not seceded from the Union, the slaves could be bought and freed, and the decisions of the courts and the Constitution as to the slaves being property, the property rights would be respected, and the action would have an effect on the States of the Deep South toward ending the war. He was pleading with them at the end of that message, saying:

"We can succeed only by concert. The darkness of the quiet past is inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. If our case is new, so must we think anew and act anew. We must disenthrall ourselves.

"Fellow citizens, we cannot escape history. We will be remembered in spite of ourselves. No personal significance nor insignificance can spare one or another of us. The fiery trial through which we pass will let us down in honor or dishonor with the next generation. We shall nobly save or meanly lose the last best hope of earth."

Man wants to know. Man has been called improbable animal; you never know what he's going to do next. He has performed so many wonders of valor, discovery, invention, that he has forgotton such things as who made the first wheel or who first dared dream that man could fly. You can repeat, man wants to know, not sure why he wants to know; his hunger and thirst are irrepressible. Will man get to the moon? Of course he will get to the moon, and he will circumnavigate it and he will report what he may see and touch and taste. One daring visionary sees man at a time when, a million years from now, the planet Earth will no longer support the human race. That time is seen, but having found by trips to Venus that he can live there, man moves there, and after another million years or so and when the time comes that he must move again he breeds a special stock of human beings, short, massive, strong, hairy, and able to subsist nicely on another planet, to which man will migrate. And you can take that or leave it, but none of us know what we'll be doing a million years from now.

In his "House Divided" speech in 1858, Lincoln said—the opening sentence—"If we could first know where we are and whither we are tending, we could better judge what to do and how to do it."

In the past 60 years we have seen large-scale slaughters of human beings. Diabolical shames and outrages. Dehumanizations of men and women and children by the millions, almost inconceivable violations of human dignity, of a kind and on a scale never before known in the family of man over the earth. And yet, so strangely it seems, in this same 60 years runs the chronicle of the historians, in transport and communications, in mass production.

An old Chinese proverb: "Everything in the past died yesterday; everything in the future was born today."

There are things being born today that only our children and grandchildren will know. The future, so terribly real, waits where it cannot be seen, and sometimes comes rushing at us like the wind. I wouldn't be surprised at all if a reckoning could be taken 50 years from now of the members of this graduating class more than half of you will have circumnavigated the globe in a swift-moving, high-powered plane of later years to come. And I like it. The Phi Beta Kappa Fraternity has a toast—it goes back many years—"Here's to pure mathematics, may it never be of use to anybody." Don't ever feel sorry for the thinking in abstractions that you have had to do; it makes you more preeminently practical.

Curiously enough now, we can ask: Who is the man of war today? Who is Mars? He ain't in the Pentagon there in Washington; he don't wear a uniform, fruit salad over his bosom. He goes around very plain, dark blue, usually, briefcase, plenty of paper and pencils, and he likes a laboratory or an experiment.

The professor! The professor. I remember the time in the New Deal when the fellow with the briefcase was ridiculed—another one of those professors. But he stands high today. Nuclear weapons. And don't believe that some of them were not sad when they saw the results of their creation. There were those who had moist eyes about Hiroshima and about heroes of the war, and where everything on earth goes up for all time.

And then we've got a production apparatus; we've got a production apparatus. When I'm asked what is the worst thing to look at in this country now, I quote the eminent physicist, Albert Einstein, the man who changed the shape of the universe in our times. We used to say on the earth, up and down; it's no longer up and down. Everywhere there is movement and direction change; no longer up and down. Professor Einstein said that to think of happiness and material comfort is not a desirable goal.

You think too much about happiness or comfort, you're on the wrong track; and we have a widespread, fat-dripping prosperity in this country now. These new media, radio, movies, the TV—they kind of make you feel you're a pauper; there's so many things that you ought to have that you ain't got if you're going to really belong.

There's something a little silly about it. It's healthy to read that foremost apostle of simple living, Henry Thoreau, and his friend, Ralph Waldo Emerson, who said that plain living goes with high thinking. Now, even a book has come out on status; millions of people are seeking status; they want class. They can hardly conceive Diogenes in his tub, having himself a nice sunbath, and Alexander the Great, who had conquered half the world, comes along and asks Diogenes, "What do you want more than anything else?" And Diogenes said, "Will you please stand out of the sun?"

I should mention in connection with this matter of going without that it is no longer a matter of prime virtue. The virtue of thrift—oh, it runs all through McGuffey's readers. Preceding generations, they were taught, as one department store has it in New York, "It's smart to be thrifty." But you get into that store and you don't feel like being thrifty; that's the catch. When Ed Murrow asked Rocky Marciano, "How much weight have you taken on since you retired from the heavyweight championship of the world?" Rocky said he had gained 20 pounds in the 4 months since he had quit the championship, after a career where he was credited with 40 knockouts and never a failure to deliver the knockout. He said to Murrow, "In those days I was hungry, always hungry. To be in good form, it's nice to be hungry."

In connection with these times that we live in, there's a novel remembrance where there's a physicist, a Danish physicist, an affirming character, who says, "Man is a changer; God made him a changer." You young people may become the witnesses of the finest, brightest era known to man. The nations over the globe, it may be that they shall have music, music instead of murder. It is possible. That is my hope and prayer for you, for the nations, and I say it here this morning.

I have somewhere a Lincoln passage perhaps worth our time. This is a paragraph out of a speech of his that you might say was the most majestic interpretation ever given, that old document known as the Declaration of Independence. He quoted the Declaration as having the statement, "All men are created equal." One time, he was asked whether that wasn't a little absurd, that we're born with such diverse gifts, attainments, and possibilities. And he said the framers of that Declaration, that all men are created equal, had the same intention of the Saviour in the New Testament, telling people, "Be ye perfect," knowing very well that they couldn't become perfect, but in trying to become perfect, they would find more peculiar treasures than if they didn't care.

Lincoln said, one August afternoon in Lewiston, Ill., when he was campaigning for the senatorship against Senator Douglas, "This was their lofty, and wise, and noble understanding of the justice of the Creator to His creatures." Yes, gentlemen, to all His creatures, to the whole great family of man. They grasped not only the whole race of men then living, but they reached forward and seized upon the farthest posterity. Wise statesmen as they were, they knew the tendency of prosperity to breed tyrants, and so they established these great, self-evident truths that, when in the distant future some man, some faction, some interest, should set up the doctrine that none but rich men, or none but white men, were entitled to the pursuit of life, liberty, and the pursuit of happiness, their posterity might look up again to the Declaration of Independence, to take courage to renew the battle which their fathers began. I charge you to drop every paltry and insignificant thought for any man's success. It is nothing; I am nothing; my opponent, Judge Douglas, is nothing. But, do not destroy that immortal emblem of humanity, the Declaration of Independence."

In that same year he wrote the meditation that he didn't use in any of the debates with Douglas. It was a private affair between him and his conscience. He spoke of the emancipation of the slaves in this particular memorandum, not knowing that 5 years later he would sign a paper declaring all men, all men and women under pains of involuntary servitude be forever free, forever free. He said, "I have never failed; I do not now fail, to remember that in the Republican cause there is a higher aim than that of mere office. I have not allowed myself to forget that the abolition of the slave trade by Great Britain was agitated a hundred years before it was a final success, that the measure had its open fire eating opponents, its stealthy don't-care opponents, its inferior-race opponents, its Negro-equality opponents, and its religion-in-good-order opponents. But all these opponents got offices, and their adversaries got none. But I have also remembered that, though they blased like tallow candles for a century, at last they flickered in the socket, died out, stank in the dark for a brief season, and were remembered no more, even by the smell."

I am proud that, in my passing speck of time, to contribute an humble mite to the glorious consummation which my own poor eyes may not last to see. So I could say, don't be afraid of lost causes if they go deep in your heart. Deep in your heart if you feel that what looks lost is worth your time, throw yourself into it. There'll be health for your heart, mind, and spirit.

I don't hesitate to call Harry Golden, an apostle of freedom in his book, "Only in America." It embodies the American dream and it pleases me. For more than a year now it's been at the top of the best-seller list. (I wrote a foreword to the book in which I said, "It's the most interesting pro-

Semitic book that I have ever read except possibly the Old Testament."). Mr. Golden told me that he once wrote a letter to Albert Einstein, and had a reply to this effect, "I cannot give you an adequate answer to your question, but I can play it for you on the violin."

And it's a good sign that Edward Steichen's photographic exhibition, "The Family of Man," has been seen by more than 5 million people of the earth. It affirms the unity of mankind more simply and eloquently than any other pictorial or literary production of the past or present. The language of the Family of Man is older than any alphabet; it is in the modern, perfected image-writing of photography. Weddings, births and babies, crops, fish, food, quarrels, fighting, dancing, war, play and fun, death and music, they're all there. In all the countries over the world mankind has likeness, basic likenesses, and that's part of the American dream. It's not important that the Department of State is sending Steichen and myself to Russia this summer to open the Family of Man in Moscow, but it's interesting, and possibly important that millions of Russians are to see this exhibition having as its theme the universality of mankind, how there are kinships that bind all the peoples of the earth.

For the first time in my life, and possibly for the first time at any commencement exercise in North America, I'm going to read from a paperback. This is one of the four novels that constitutes the long novel, "Remembrance Rock." I was thinking as I riffled through the book yesterday, these things are very important. You've probably had them in classes, but they are worth not forgetting. The ancient proverbs: "Woe unto him who believes nothing," "Always the impossible happens," "God works in moments," "For a web begun, God sends a thread," "Nothing happens for nothing," "Everything belongs to others and in time returns to others" (it sounds like the New Deal), "The glutton understands little of the hungry," "Many a famous prince has at last been put to bed with a dusty shawl," "We're born crying, live complaining, and die disappointed," "The praise of self gives forth a stench," "Wait long enough and the most evil gossip dies," "The moon waxes, the moon wanes; the world goes by and life goes by."

And there are here the four stumbling blocks to truth. These were written by Robert Bacon, one of the forerunners of modern science.

The four stumbling blocks to truth: First of all, the influence of fragile or unworthy authority. You are told something and wonder whether you should believe it or not. Much depends on whether it's a fragile authority. Second stumbling block—custom. Status, class, keep up with the Joneses. Look out, people will point you out and say, "There goes a nobody; he looks like he doesn't care to belong." Whereas all progress, all advances of the human mind, they are wrought by men who did not think in grooves of the past, they are not afraid of any kind of ridicule. Third of the four stumbling blocks, and this is very important: the imperfection of undisciplined senses—the imperfection of undisciplined senses. You see something and look at it from another angle; sometimes you're sure you've seen it, and then again it might be the atom. Any time you could take it apart it would consist of parts that never existed before. Last of all, concealment of ignorance by ostentation of seeming wisdom. What do you know?

I want to close off with an old Irish toast, old and Irish: "The best o' luck before ye, bad luck behind ye, an' the grace o' God to guard and claim ye."

Oregon Joins Brucellosis Honor Roll

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, July 24, 1959

Mr. NEUBERGER. Mr. President, the State of Oregon pioneered in the testing of cattle for brucellosis in 1928, and it has continued, with Federal cooperation, a long campaign for eradication of this costly livestock disease. I was highly pleased to learn today that, as a result of the success of this long battle, Oregon has been named a Modified Certified Brucellosis State by the U.S. Department of Agriculture.

Oregon now joins 19 other States, Puerto Rico, and the Virgin Islands on the certification honor roll. To be eligible, a State must have no county with more than 1 percent reactor cattle and 5 percent of its herds infected.

I am proud to have supported the $2.5 million increase in Federal funds for the brucellosis eradication program when it passed the Senate last year particularly because of the outstanding example of my own State in this program.

I ask unanimous consent that a copy of the telegram to Oregon's Governor Hatfield from Secretary of Agriculture Ezra Taft Benson on Oregon's certification be printed in the Appendix of the RECORD, together with an article from the Salem Capital Press for July 10, 1959, entitled, "Brucellosis Freedom Battle Accomplished."

There being no objection, the telegram and article were ordered to be printed in the RECORD, as follows:

JULY 23, 1959.

HON. MARK O. HATFIELD,
Governor of Oregon,
Salem, Oreg.:

Our sincere congratulations to you and all those responsible for Oregon becoming a Modified Certified Brucellosis State. Oregon joins 19 other States, Puerto Rico, and the Virgin Islands that have previously attained this important step toward bovine brucellosis eradication. This is further evidence of the values derived from State-Federal cooperation, demonstrating again the accomplishments possible by State and Federal Governments working together with farmers, dairymen, and livestock producers. We are pleased that through such cooperative effort this significant accomplishment has been made. We look forward to the continuation of Federal-State cooperation for the furtherance of this important program in Oregon.

E. T. BENSON.

BRUCELLOSIS FREEDOM BATTLE ACCOMPLISHED

Oregon's accelerated brucellosis testing program, aimed at statewide certification for the first time in history, ended late July 2, Frank McKennon, State director of agriculture, announced.

Certification for a State means no county with more than 1 percent reactor cattle and 5 percent of the herds infected.

Last reports on the Oregon program will be submitted immediately to the U.S. Department of Agriculture in Washington, D.C., for review.

"We will not know the final outcome of the work here until Washington studies the records," McKennon said.

"If the Federal decision is as we hope, this will mark the end of a battle begun more than 30 years ago," he added.

STATE PIONEERS

McKennon recalled that Oregon pioneered in brucellosis (then termed Bang's disease by which many still know it) testing back in 1928. Varying degrees of testing, first on a voluntary basis and finally on a statewide compulsory basis since 1957, have been in effect since then. Original work was in dairy herds and dairy counties were the first to go after the disease in earnest.

The work was wrapped up in Harney County last week with percentage testing of a 600-cow herd. No reactors were found, the field laboratory reported. (Percentage testing requires the entire herd to be tested if any reactors show on the first 20 percent from which the blood sample is drawn.)

With exception of the one herd in Harney County, testing was completed by the June 30 deadline set more than 2 years ago.

MOP UP RAPIDLY

Twenty-eight of the thirty-six Oregon counties and the Warm Springs Indian Reservation were certified by April 1. In the last 2 months, State and Federal veterinarians, assisted by private veterinarians deputized by the State, have conducted a heavy mopping-up operation in Jackson, Crook, Jefferson, Klamath, Lake, Harney, Gilliam, and Wallowa Counties.

Dr. A. G. Beagle, in charge of Federal veterinarians in Oregon, says "there is no apparent question about any of the county records with exception of Lake County." He anticipates Washington will give this county careful study before making a decision.

"I believe Washington will consider the Oregon work a remarkable record in view of the obstacles placed in the path of the program," Dr. Beagle prophesied. He cited the suit filed by a group of cattlemen, who attacked constitutionality of the 1957 compulsory test act, as a major slowdown to the program. The court decision earlier this year upheld the law.

The contesting cattlemen insisted that calf vaccination alone was sufficient for control in beef operations. Calf vaccination has been in use here since the early forties.

Dr. L. E. Bodenweiser, State veterinarian, and Fred Pope, animal division chief, both with the State department of agriculture, expressed satisfaction and relief at completion of the testing. They said the situation had been "nip and tuck" the last few weeks. They said they would have additional comments when Washington renders its decision. They do not know how soon this will be.

In the meantime, McKennon pointed out that the Bang's program, although long and costly, has reduced Oregon cases of undulant fever—the human aspect of brucellosis—from 183 and 2 deaths as recently as 1945 to virtually no cases today. Nationally, 802 undulant fever cases were reported in 1958.

And Dr. Beagle said, "In my opinion, control of brucellosis through testing and vaccination has raised the average of our range country calf crop from about 50 percent to the present level of between 95 and 100 percent. This has undoubtedly added millions of dollars worth of cattle to the Oregon economy and untold tax dollars to the State."

Between $6 and $7 million have been spent on brucellosis control in Oregon by county, State and Federal governments since 1934, the year the Federal Government started paying indemnities. It was the all-out Federal drive commenced in 1954 which sparked

the cleanup program in Oregon and other States.

The 1957 Oregon legislature gave the final push here in authorizing the compulsory, State-financed program.

The Nuclear Ship "Savannah"

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the launching of the first steamship *Savannah* in 1819 was an occasion of great significance as all of us know from our history books. And Tuesday, July 21, 1959, represented an occasion of equal historic significance. I make reference to the launching of the world's first nuclear-powered merchant ship, the NS—nuclear ship—*Savannah* from Camden, N.J.'s New York shipyard.

This atomic cargo-passenger ship was built at a cost of about $40 million after years of planning and debate. Sleek and modern in design, the *Savannah* will have a maximum power capacity of 74 million watts and will be able to sail 300,000 nautical miles without refueling—that is, for about 3 full years.

No one expects that she will ever pay her way as a commercial vessel. But as an example to be sent the world over to demonstrate American skill and to provide operating experience for ships of her type, no more effective instrument of foreign policy could be found.

Camden, N.J., is proud to have had a part in the construction and launching of this pioneering vessel which President Eisenhower said "will be the forerunner of atomic merchant and passenger fleets which will one day unite the nations of the world in peaceful trade."

Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the following editorials from the Camden Courier Post, the New Brunswick Home News, and the Woodbury Daily Times, of July 21, 1959.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Camden (N.J.) Courier Post, July 21, 1959]

A PIONEER VESSEL IS LAUNCHED HERE

America's gracious First Lady, Mrs. Dwight D. Eisenhower, christens the world's first nuclear-powered merchant ship this afternoon at Camden's New York shipyard.

This is therefore a great day in Camden's history, and an occasion of historic significance to the world.

The United States has pioneered in the field of nuclear-powered shipping and the famous submarine *Nautilus* was commissioned many months ago as the first nuclear-powered Navy vessel. Its voyage under the North Pole and many other achievements have made its name imperishable.

Only a week ago the Navy launched its first nuclear-powered surface ship, the cruiser U.S.S. *Long Beach*, built at the Quincy, Mass., yard of Bethlehem Steel Co.

The Navy also has in operation or being constructed other atomic submarines, an aircraft carrier and a destroyer.

The Soviet Union has built the only other nuclear surface ship thus far, an icebreaker recently launched and outfitted.

The ship being launched in South Camden today will be known as the NS (nuclear ship) *Savannah*. She is being built at a cost of about $40 million. Although years of planning, debate, and negotiation preceded her construction, her keel was not laid until May 22, 1958, and she has thus been constructed in the remarkably short time of 14 months. Up to 24 more months, however, may pass before she is commissioned and puts to sea with her first regular cargo.

There is no expectation that as a commercial vessel the *Savannah* will pay her way. But Clarence G. Morse, head of the Maritime Administration and one of her chief backers, is confident she will perform the function for which she is intended.

That is to provide operating experience for ships of her type, so that nuclear merchant ships of what he calls the second and third generations will prove economically feasible.

Morse says that the atomic ship now is at just about the stage John Watt had reached in development of the steam engine when he was fooling around with a tea kettle. He things that the atomic ships to come will make the NS *Savannah* seem as quaint as the old steamship *Savannah*—one of the first ocean steamers—seems to us now. He points out that while atomic ships may seem economically impractical now, back in 1819 people thought oceangoing steamships would be impractical, too, because salt water would rust their boilers.

Harborough I. Lill, project engineer on the *Savannah*, says that even now, just as the *Savannah* is being launched, ways have been found to make the next ship of its class more nearly competitive with conventional steamships.

Credit for the *Savannah's* construction must be shared by many, many persons, not the least of them being President Eisenhower, who first proposed her being built 4 years ago. Many Government officials and scientists have done their part to bring her into being. New York Shipbuilding Corp., management and men, have magnificently done their part.

Camden is immensely proud that the *Savannah* has been built here by our friends and neighbors.

We join with President Eisenhower in the hope and confidence he expressed in 1956 on authorization of the *Savannah's* construction that this pioneering vessel "will be the forerunner of atomic merchant and passenger fleets which will one day unite the nations of the world in peaceful trade."

[From the New Brunswick (N.J.) Home News, July 21, 1959]

"SAVANNAH" IS EXPECTED TO BE SHOWOFF BOAT

As Mamie Eisenhower wielded the traditional bottle of champagne against the hull of the world's first nuclear-powered merchant ship, the NS *Savannah*, in Camden today, all eyes turn to the future of this boat.

President Eisenhower on October 15, 1956, called this ship "a floating laboratory * * * a forerunner of atomic merchant and passenger fleets which one day will unite the nations of the world in peaceful trade."

The rosy future, however, is a long way off. Viewed in purely economic terms, the *Savannah* will be a seagoing white elephant. The required investment, about $42.5 million, and the poor cargo-to-size ratio, badly overbalance the advantage of relatively low operating costs. Adm. Hyman G. Rickover, asked to evaluate the commercial prospects of atom-powered cargo vessels, answered with one syllable: "Dim."

The *Savannah* should be viewed as a demonstration project, not one to bring a 6 percent return, either in dollars or scientific data. It is something that can be sent the world over to show off American skill and, more important, to prove our sincerity about beating swords into plowshares.

And an impressive exhibit it will be Sleek and modern in design, the *Savannah* will have a maximum power capacity of 74 million watts and will be able to sail 300,000 nautical miles without refueling. That is for about 3 full years. These whopping statistics are likely to make the *Savannah* as effective an instrument of U.S. foreign policy as we've sent abroad since the days of gunboat diplomacy.

[From the Woodbury (N.J.) Daily Times, July 21, 1959]

ANOTHER FIRST

Some 15,000 persons saw the Nation's First Lady launch the world's first atomic-powered cargo-passenger ship. With a broad smile on her face and her hands gripping a bottle of domestic champagne like a baseball bat, Mrs. Dwight D. Eisenhower sent the nuclear ship *Savannah* down the ways at the New York Shipbuilding Corp. yards in Camden, and another first was born in this land of ours.

We wonder what Robert Fulton would have thought of this 595-foot-long craft. What a difference between this and his little *Clermont* which made the trip successfully from New York to Albany in 1807. And what a difference between the original *Savannah*, which was the first steamship to sail across the Atlantic 140 years ago.

The first *Savannah* sailed from Savannah, Ga., to Liverpool, England, and carried a 30-day fuel supply. The *Savannah* launched yesterday will carry enough fuel for 3½ years which is enough to take the big ship 300,000 nautical miles.

Fulton's *Clermont* used wood for fuel and since then coal and oil have been used to create steam to drive ships on the high seas. However, the new *Savannah* will generate steam by nuclear energy and will be far safer than either the *Clermont* or the first *Savannah*.

When Robert Fulton made his first steamboat it was mighty difficult for him to make people believe in his invention. When the first *Savannah* left the city of Savannah 140 years ago there was little faith shown that she would reach Liverpool under her own power. In contrast, the new *Savannah* was launched with the greatest optimism. If there were any doubters as to her ability to achieve what was planned for her they did not make themselves known.

From this it would seem that the thinking of our people has changed a lot during the 140 years of progress. We seem less doubtful as to the outcome of new adventures in the fields of science and invention. Somehow our eyes seem to have opened to vast new conceptions and we do not scoff at those who come forth with new ideas of making and doing things.

There will be other firsts coming our way and from the looks of things the generations that follow us will witness things we never dreamed possible. This generation has seen many firsts but what new things have come to them will seem as nothing compared with those that should be coming our way within the next generation or two. Let us hope that we will continue to strive for more firsts that will do much to lift more burdens from the backs of humanity and give them more joy in their day-by-day living.

American Aid in Free Vietnam

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, July 24, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Our Hidden Scandal—the Magnificent Goof of Radio Vietnam," which was published in the Washington Daily News of July 22; together with an article entitled "The Price of Stupidity and Arrogance—It Is Not a Compliment To Call a Vietnamese 'Pro-American'," published in the same newspaper on July 23, 1959.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, July 22, 1959]

OUR HIDDEN SCANDAL—THE MAGNIFICENT GOOF OF RADIO VIETNAM

(By Albert M. Colegrove)

SAIGON, VIETNAM, July 22.—Today let us take up the magnificent goof known as "Radio Vietnam." It will give you, in one electronic nutshell, the whole fantastic story of what's happening to your tax millions out here.

It includes just about everything that is wrong with our American aid setup in Free Vietnam.

I have pieced this story together from many reliable sources. You will not find it in public records. On phony grounds of "security," much of it has been tucked away in the secret files of the U.S. Operations Mission (USOM), which is what they call the economic aid agency here.

The friendly Americans swarmed into South Vietnam in 1955, intent on conquering poverty, uplifting the masses and keeping communism at bay.

THREE-STATION NETWORK

Naturally, their attention soon turned to Radio Vietnam.

This was the small (three-station) radio chain which he newborn nation inherited from its former French rulers.

In 80 years as masters here, the French had avoided training Vietnamese for anything better than semiskilled jobs. Thus, the director of Radio Vietnam was one Maj. Doan Van Cuu, a veterinarian whose speciality was the intestinal disorders of elephants.

The three chief technicians were non-engineers whose qualifications were that they had friends or relatives at the Presidential Palace.

Then there were the girls—dozens of small-boned, soft-lipped, gently-curved, laughing, trilling beauties with which Vietnam is so happily endowed—and all of them hired and thrust behind microphone or control panel after a couple of hours' training by the admiring Cuu.

The 7 a.m. news often came on at 1 p.m. Saturday night's serial frequently was postponed to Tuesday morning because the leading lady (one of Cuu's little birds) was busy Saturday night.

A MAZE OF IDEAS

Then came the American experts.

Unhappily, each brought to this bedlam his own theories on the salvation of Radio Vietnam. Each had his pet idea on how to revamp the station's news broadcast operation. Each at various times put his plan in action. As a result, Radio Vietnam today has, not one, but three costly teletype reperforating devices it never has used.

Still, some projects were agreed on among the Americans. One was a proposal for a series of low-powered local radio stations around the country, which would take the government's messages to the grassroots level.

A meeting was scheduled with one Tran Chanh Thanh, a convert from the Communist Vietnam Minh who had become (and still is) the high Pooh-Bah of all communications—press, radio, and printed propaganda—in South Vietnam.

Information Minister Thanh opened the meeting by flatly rejecting the American proposal. What his Government desired, Thanh said, was a giant 100,000-watt shortwave transmitter which not only would reach the Communist north; it also would go all the way to America where millions of families, huddled around their shortwave receivers, would be swayed to send more aid to Vietnam.

The Americans coughed nervously and suggested this might be a trifle ambitious for now. The Minister walked out.

Thus, both American and Vietnamese hopes were stymied temporarily, but there were other projects.

STYMIED BY LAW

Under U.S. guidance, it was decided to move the Saigon transmitting station. An American supervised construction of a $25,000 building and drew plans for a lofty antenna tower. Then it was discovered a law prohibited any tower over 90 feet tall so close to the Saigon airport. This eliminated use of the best broadcasting frequency.

Radio Vietnam Director Cuu, the specialist in elephant bellyaches, finally overreached his privileges. A horde of police, acting on information received about Cuu's unique bookkeeping (which never had been open to American inspection) swooped down one day—a trifle late. Major Cuu had just burned his books in the alley. Some $446,000 of the money entrusted to him remains to be accounted for today.

Major Cuu's successor was (and is) Buo Tho. He's former private secretary to President Diem, and former Vietnam fisheries chief.

Tho brought to his job a built-in obsession. He wanted equipment that would jam the Red radio at Hanoi—and not merely make it unintelligible in free Vietnam but all over Asia. This is impossible. (However, in recent months, Tho has been partially appeased. Some U.S. jamming equipment is on the way.)

Tho also ramrodded through a U.S.-financed project to air condition Radio Vietnam's Saigon studios. Seven machines, costing $27,000, were installed. A local contractor, paid in advance, was hired to install the necessary ducts throughout the building. He skipped the country. The air-conditioning machines are still there, idle; and Radio Vietnam's Saigon studios remain uncooled.

However, morale got a great boost soon after Tho took over. The Vietnamese were still unhappy about not getting that powerful transmitter to sway North Vietnan and Americans.

WASHINGTON FOUL-UP

Then came Abbott Washburn of Washington, deputy director of the entire Voice of America program, swinging through Saigon to see how things were getting along.

The problem of the transmitter impasse reached his ears. "Why," said Mr. Washburn, "what a lucky thing I passed by. The Voice of America happens to have a 50,000-watt transmitter it's not doing anything with just now. That may not reach to America, but it will get the message to North Vietnam. We'll give it to free Vietnam, how's that?"

The Vietnamese were delighted.

Later, after Mr. Washburn had zoomed back to Washington, it was discovered that American law positively prohibits even him from giving away Voice of America equipment to foreign nations.

This threw foreign aid officials into a tizzy. What to do? American "face" was at stake. Above all, the boat must not be rocked. So—the 50,000-watt, $100,000 transmitter was quietly sandwiched into the USOM budget for Vietnam.

There was at least one American "expert" in the Radio Vietnam program who seems to have been really qualified for the title.

He is Frank McIntosh, who has supervised the building of more than 400 radio stations in America and abroad. He headed all U.S. electronic development for our War Production Board during World War II and has been a Bell System scientist since. He came here in 1957 and again in 1958 as a temporary consultant on the American plan for putting low-powered stations throughout South Vietnam.

After much travel and study, Mr. McIntosh recommended 11 sites. He drew up detailed designs for equipment at each site. He then returned to America. The Vietnamese rejected most of his designs and all but two of his sites as unsuitable.

As of today, we are going ahead with a program, American-financed, that is partly ours but mostly theirs.

[From the Washington Daily News, July 23, 1959]

THE PRICE OF STUPIDITY AND ARROGANCE—IT IS NOT A COMPLIMENT TO CALL A VIETNAMESE "PRO-AMERICAN"

(By Albert M. Colegrove)

SAIGON, VIETNAM, July 23.—Stupidity and arrogance of the people who represent our Government in Vietnam may be losing friends for America faster than aid dollars can gain them.

Showing rare talent in this department, American bureaucrats and their families have managed to get themselves disliked, not merely by the Vietnamese but also by other Asians, Europeans and even their fellow countrymen here.

There are exceptions, of course—people who individually have gained respect and fondness.

But—

Speaking with typical Oriental restraint a prominent Vietnamese editor unhappily told me: "It is not considered a compliment to call a Vietnamese pro-American, these days."

Added a successful Vietnamese publisher: "Americans in your Embassy and in your foreign aid and propaganda branches do not get out and around. They tend to stick together or, at best, to associate only with the people who they think comprise the upper crust of our society."

But that is only part of the story.

There is, for example, the American movie house.

NO FOREIGNERS ALLOWED

This Government-operated, air-conditioned theater is one of only two places in Saigon where current, popular English-language films are shown. (The other is in the British Information Service building.)

Many intelligent Vietnamese love to sharpen up their knowledge of English by seeing our movies. But they are barred from the American theater, even as guests. So, also, are all other foreigners—in fact, everybody except American Government civilian and military employees and their families.

British employees in Saigon may bring guests—of all races—to their movies on Friday nights.

ISOLATION OF THE COMMISSARY

Then there is that fantastic horn of plenty, the American commissary.

"The commissary has done more to isolate us here than any other one thing," said a perceptive U.S. employee who's been in Saigon since 1955.

"When the Americans first arrived in numbers, 4 years ago, there was no commissary. American wives had to patronize the Vietnamese groceries and drug stores. Then the commissary was built. Now, the wives and husbands go there and let their servants do any other necessary shopping.

"I've actually heard women brag that they haven't been in downtown Saigon for 6 months. Not only has the blending process stopped, but also the local merchants are plenty unhappy, to say the least."

But perhaps the greatest American bid for the ill will of all nationalities and classes in Saigon has been our house and apartment rental policy.

GENEROUS RENT POLICY

All U.S. employees here are provided quarters rent free. Uncle Sam picks up the tab, leasing apartments and villas for his wards at a sucker price.

Here is a typical sample:

Mr. G is an American Government employee. He and his wife have no children. Our Government leases for them a four-room apartment for $300 a month.

By contrast, an American businessman and his wife, paying their own rent, have a slightly nicer apartment in a more convenient neighborhood for which they pay $180 a month—or $1,440 a year less.

Actually, that $300-a-month figure is quite modest. Many American Government families here enjoy homes and villas that cost U.S. taxpayers upward of $600 a month. These rents are not paid with so-called counterpart funds, either, but with piasters purchased by U.S. dollars from the U.S. Treasury.

What rankles the people of Saigon, though—from top-salaried private business leaders to lower middle-income Vietnamese wage earners—is that Uncle Sam's free-spending rental policy has caused a chain reaction that has skyrocketed virtually all rents.

For instance, the couple with the $180-a-month apartment paid less than $100 before the Americans came. A Vietnamese interpreter who used to pay $28 a month for his home now pays a staggering $62 and is in the clutches of the loan sharks as a result.

Unlike the United States, Vietnam has had little inflation in the past 5 years, except for that of rentals. That, however, is a key item in the budget of the average Vietnamese city dweller.

And on the subject of "hardship pay":

A LIFE FRAUGHT WITH PERIL?

Our State Department tells the folks back home that life in Vietnam is so fraught with peril, discomfort, and expense that our brave bureaucrats must have handsome bonuses to compensate for their sacrifices.

The fact is from the moment he boards a U.S. plane, bound for 2 years in Saigon, the average Government worker enjoys more luxurious living and fewer tensions than 90 percent of his taxpaying fellow citizens will ever achieve.

There is, indeed, tension and hardship—among the Vietnamese and espeically outside of Saigon. But at least 90 percent of the Americans never leave Saigon overnight.

For withstanding these "hardships," all our Government civilians in Vietnam receive bonuses amounting to 20 percent of their base pay.

In addition to this, to compensate for a nonexistent "high cost of living," an unmarried civilian receives $400 extra a year, while the family man draws $800 extra.

WHAT "HIGH COST"?

In Saigon a mile's taxicab ride costs about 10 cents, including tip. Or you can travel the same distance in a human-powered pedicab for less than a dime.

Scotch whisky is available at the Navy-operated commissary (for Government employees only) at $2 a quart. Even in civilian stores, it's under $5. Cigarettes at the commissary are 10 cents a pack.

An excellent steak dinner at the city's best restaurant is $4. Two can dine in a better than average cafe for that price.

As for staples: Two bachelors I know each has a Vietnamese cook-housekeeper do all their grocery shopping. Each of them gives his cook the equivalent of $30 a month to buy the grub; each enjoys three delicious meals a day. In other words, food costs them $1 a day apiece—and the cook manages to feed herself out of this, too.

Besides all this, every U.S. employee gets an apartment or home rent free, including utilities.

Here, then, is how the typical civilian employe is doing, financially:

He receives $9,500 a year in base pay.

To that is added $1,900 annually for hardships.

Throw in another $800 for his cost-of-living adjustment.

Thus, his total comes to $12,200 a year—or $1,016 a month plus free rent and utilities.

No wonder many workers remarked to me that, for once, they've been able to put away substantial savings while on duty in Vietnam.

Working conditions are pleasant and often leisurely. There is a 2-hour lunchtime siesta daily. Employees work Saturday mornings, but take Wednesday afternoons off.

And in addition to all the standard Government benefits, there are 20 official no-work holidays annually—including a 3-day layoff for the Vietnamese New Year and a day's rest on the anniversary of Confucius.

Grant by Office of Naval Research to Oregon State College for Oceanography Research Projects

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 24, 1959

Mr. NEUBERGER. Mr. President, in the past year there has come about an increasing public recognition of the vast importance of a field about which little is understood outside the realms of its scientific practitioners—that of oceanography. As a result of a comprehensive and fascinating report, "Oceanography 1960 to 1970," put out last February by the Committee on Oceanography of the National Academy of Science, further attention has been focused on the subject, in this body and elsewhere. It was this week, however, that this field suddenly took on a real, personal importance to me, when it was announced that the Oregon State College Department of Oceanography had received from the Office of Naval Research a $319,555 grant for purchase of a special oceanographic research vessel and expansion of its research and student-training programs. The grant comes to Oregon State College as a part of a national research project, under which funds are divided between 10 schools, located along the Nation's coastlines.

It is therefore surprising that, in this age of reaching outward into space, we should know so little about the fascinating, still faintly awesome depths of salt water which cover two-thirds of the surface of the earth, and the virtually unfathomed landscapes at their bottom. While we spend vast sums of money and energy to keep up with or surpass our rivals in space technology, we often virtually ignore the wealth of information and possibilities for a better, safer life which lie in the seas around us. Valuable knowledge about the forces acting on the earth, shaping its surface; new ways to feed a fast-growing world population; a degree of control by man over his old and oftentimes malicious enemy, the weather; new uses of the ocean and oceangoing vessels in the Nation's enormous network of defense: all these possibilities lie just out of reach, to be grasped and changed into realities by research such as that to be done at Oregon State College and in nine other institutions under the Navy grant.

Commendations are due to the Office of Naval Research for its work in formulating such a program and in securing the funds to put it into practice. They are due, in addition, to Oregon State College, and to Dr. Wayne V. Burt, head of the oceanography department there for their interest in this vital subject as well as for having built the kind of educational institution and department which merit such a grant from our Naval Department.

The information released by Oregon State College following its receipts of this grant follows. I ask unanimous consent, Mr. President, that it may be printed in the Appendix of the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

OREGON STATE COLLEGE GETS $319,555 TO STUDY OCEAN, BUY RESEARCH BOAT

OREGON STATE COLLEGE.—A $319,555 grant has been received by Oregon State College from the Office of Naval Research to triple basic oceanography research on Oregon's coastal waters and to purchase a special $250,000 ocean research vessel.

The boat will be a specially designed and equipped floating laboratory that will permit Oregon State College oceanographers to probe the depths of the ocean and explore the ocean floor off Oregon.

It will be approximately 75 feet long with quarters for 12 to 15 scientists and crewmembers. It will be built to order with the construction contract to be awarded on bids and with completion expected within a year. Newport will be the home port.

Part of the special equipment will include powerful winches that will permit the scientists to take ocean floor samples of sediment and marine life and to take water samples at depths down to 2 miles.

Dr. Wayne V. Burt, head of the oceanography department, said the boat will be the key to unlocking the unknown of Oregon's ocean area.

Up until now, Oregons' offshore region has been left blank on many detailed oceanography maps of the Pacific coast waters because so little research has been done, he pointed out.

Burt himself started the first extensive studies of Oregon's 350 miles of coastal

water—fourth longest coastline of any State—when he joined the Oregon State College staff in 1954. Since then, he has worked on studies of tides, inlets, water temperature, salinity, and oxygen content. In the 6 years, he has received research grants totaling more than $75,000 including $25,000 during the past year.

Next year under the new grant, $69,555 will be used to expand and intensify the research program.

The grant is part of a vast new 10-year national program of research in waters surrounding the United States. Oregon State College is one of the 10 institutions proposed by Office of Naval Research to conduct the studies and to assist in training vitally needed oceanographers. The 10 schools are strategically located along the east and west coasts and the Gulf of Mexico.

The 10-year program is aimed at providing basic information about deep ocean areas, and waters, the coastal shelf, and the ocean floor around the United States.

Observance of Pioneer Day in State of Idaho

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, July 24, 1959

Mr. CHURCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared in connection with the annual observance in a great part of Idaho of Pioneer Day—the anniversary of the arrival of Brigham Young and his Mormon pioneers at Salt Lake.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CHURCH

It is 112 years ago this afternoon that Brigham Young, leading a train of wagons, looked out upon the valley of the great Salt Lake and told his Latter-Day Saints, "This is the place."

These simple words marked the end of a thousand-mile trek across the Great Plains and the Rocky Mountains, as the Mormons moved away from the persecution they had met in the East, and set out to establish their religious community free from bigotry and hate.

Today, in Utah and many parts of Idaho, communities join in the annual observance of Pioneer Day, commemorating the arrival of the Brigham Young party. Major celebrations are being held, including parades, pageants, dramas, special addresses, and even rodeos. These are proper accolades, for the Mormons did more than found a colony in which they could enjoy their religious freedom.

Brigham Young has been called the greatest colonizer in our country's history, because he sent Mormons into all the areas surrounding the Great Salt Lake, pioneering the agricultural empire that now flourishes where once there was only a vast expanse of sagebrush. Indeed, it was Mormon pioneers who founded the first settlement in my own State of Idaho at Fort Lemhi in 1855—and although it was later abandoned, in 1860, they founded the first permanent settlement in Idaho at Franklin. This frontier village was named for Franklin D. Richards, a distinguished Mormon pioneer. During their first year at Franklin, the settlers built a 3½-mile canal, admitting the waters of Maple Creek to their 10-acre farm tracts, and thus also launched the first major irrigation effort in the State.

Not only, of course, had the Mormons moved in and begun the early development of southeastern Idaho, but they also turned the barren area near the Great Salt Lake into a green and prosperous countryside; here, too, they built one of the most beautiful cities in America. The State of Utah was thus being born.

Today, we in Idaho pay our respects to Brigham Young and his valiant western pioneers, conscious that their decision to attain religious freedom in the untamed wilderness brought civilization and progress to much of our State. The words which Brigham Young spoke as he crossed a mountain range and looked down upon an uninhabited and desolately beautiful land, have rung down through the corridors of time as the epitome of discovery and journey's end. Truly, this was the place.

Proposed Exemption of Small Coal Mines From Mandatory Compliance With Federal Coal Mine Safety Act

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, July 24, 1959

Mr. MORTON. Mr. President, the Subcommittee on Labor of the Committee on Labor and Public Welfare held hearings this week on three bills, S. 743, S. 1562, and S. 2403, proposing to amend the Federal Coal Mine Safety Act with respect to the present exemption granted small coal mines from mandatory compliance with certain provisions of the law.

The Louisville (Ky.) Courier-Journal on Thursday, July 23, published an excellent editorial treating an important facet of the proposal to completely repeal the exemption. I commend it to the attention of the Senate.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial, entitled "What John L. Really Wants Is the Death of Small Mines."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT JOHN L. REALLY WANTS IS THE DEATH OF SMALL MINES

John L. Lewis and JOHN SHERMAN COOPER matched wits and lung power in a Senate hearing Tuesday, debating the merits of the Federal mine-safety bill. It was not an especially enlightening discussion. John L., as usual, was louder. Senator COOPER made more sense.

The bill which they discussed is, as legislators love to say, "just a simple little bill" that would do nothing but drive the small mine operator out of business. It would do this by requiring little mines, even those employing 15 or fewer men, to meet the same safety standards as the huge, mechanized mines, including the installation and operation of equipment that large mines need and can afford but which little mines neither need nor can pay for.

A mine extending a few hundred yards into a hillside does not always need the extensive ventilation and electrical equipment of a mine whose openings run for miles underground. And a small family mine that produces a few hundred tons of coal a day cannot support the cost of safety equipment that is easily supported by a large mine.

John L., eyebrows flashing, voice thundering and heart bleeding for the imperiled coal miner, waved statistics before the senators to prove that the small mines are death traps, operated by profit-greedy monsters eager to fatten on the blood of helpless miners. The facts, however, are not so simple, and the statistics of mine safety can be used to show that there are more injuries and fatalities per ton of coal produced in the small mines. But statistics also show that there are fewer fatalities in the small mines per man-hour worked.

But these figures, like the whole argument over mine safety and mine inspection standards, are pretty much a smokescreen. No one wants to permit unsafe mine operation. Certainly John Cooper does not, and when John L. Lewis accuses him of the "crucifixion" of miners' hopes, the mine boss is being ridiculous as well as unfair. And though some Kentucky mine operators do their industry a disservice by their short-sighted attempts to get legislative permission to use black powder in the mines, most of them have long since learned the economic value of modern safety methods, and few of them object to safety procedures that make sense for their operations.

But despite Mr. Lewis's breast-beating, safety for miners is a minor issue in this argument. The object of this bill—and the object of Mr. Lewis, the United Mine Workers of America, and the loose organization of railroads and large coal producers that have joined in the attempt to pass such legislation—is the eradication of the small mines of America. This is what the fighting is really about. It may be that Senator CLARK, who introduced the bill, does not know this. But that is the actual purpose of the bill, and John L. would do himself and his cause credit by admitting it.

John L. has been trying for the past 15 years to get rid of the small mines. He tried it with the wartime measures that required union wage scales of all companies selling coal to the Government. He tried it with the Walsh-Healy Act which restricted governmental coal purchases to companies paying the going wage, which happened to be the union scale. He tried it last year with his new contract that forbids companies holding UMW contracts to handle coal produced in nonunion mines. And he is trying it now with this mine-safety bill that will drive 80 percent of the small mines out of business.

There can be good arguments made for putting the small mines out of operation. Most of them are uneconomic. Few can pay union wages. Few of them can afford all the modern, efficient safety equipment that mines should have. The fact that they hire a lot of men at low wages has an adverse effect on area economy. Few of them can afford mechanization that makes work lighter and safer for the miners.

The big, efficient mines can pay better, operate more safely and still make more profit. It might well be better for the national economy if only the big mines survived. Certainly it would be better for John L. Lewis. Big mines produce a lot of coal using few miners, and that is just what John L. wants. It means that his union gets a 40-cent per ton royalty on the coal produced, and has fewer miners to provide with hospitalization, strike benefits, and pensions from the treasury that the royalty builds.

But this is reckoning without two factors—the miners who work in the small mines and the communities that depend on

them. Today half of all American miners are employed in small operations. Eastern Kentucky, eastern Tennessee, southwestern Virginia, and western West Virginia would be crushed economically if the small mines were abolished. Mechanization and the drop in the coal market have already put thousands of miners in each of these areas out of work, and have produced in all four sections a state of serious and chronic depression. If Mr. Lewis has his way, this safety bill will close more mines, put more miners out of work and deepen the depression of the coalfields.

That is what the shouting is all about, John L.'s oratory to the contrary. And for that reason, it is good to see Senator COOPER fighting for a milder bill that will put the small mine in a separate category when it comes to safety inspections, and grant the small miner at least a temporary lease on life.

Our Commonwealth of Puerto Rico—Seventh Anniversary—Constitution Day

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. LIBONATI. Mr. Speaker, we congratulate Mr. Fernós-Isern, colleague and Resident Commissioner from Puerto Rico upon the great progress effected by the Commonwealth of Puerto Rico in establishing its governmental functions in accordance with public law passed in 1950 by the 81st Congress. Saturday, July 25, is the seventh anniversary of this given right to enter that compact with the United States—an enjoyment of certain self-governing authority with those limits necessary for the functioning of a continuing resposibility of our Government.

The Puerto Ricans were overjoyed to be counted as Americans and have reflected their satisfaction by assuming every responsibility of citizenship.

Her economy has prospered and her people have raised their living standards in conformity with American tradition.

The people have entered occupational pursuits through the expansion of manufacturing and mercantile interests—so that agriculture is no longer the sole activity for employment.

The Puerto Rican Legislative Assembly functions similarly to those of our States operating in the same jurisdictional areas.

We may predict that the next State to be admitted might well be the Commonwealth of Puerto Rico.

I am proud to number among my close friends in Chicago a great number of our citizens of Puerto Rican ancestry. They are outstanding in their activity in all community matters. Their contribution to the economy through industry and other pursuits are stimulating to the common effort of every American to better his or her station in life.

Puerto Ricans would have had to make many more difficult sacrifices to realize their present status if it were not for the zealous activity and persistent efforts of our own Commissioner, Mr. FERNÓS-ISERN. He fought so valiantly for the passage of the public act establishing the Commonwealth.

We are happy to celebrate with our loyal fellow citizens of Puerto Rico this their seventh anniversary of their embracement as a Commonwealth and her acceptance as a governmental unit in the circle of the United States of America. May God preserve us to protect and guard over our cradle of American freedom—Puerto Rico.

Grandeur of the State of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, July 24, 1959

Mr. NEUBERGER. Mr. President, few States have a more colorful and vivid landscape than my native State of Oregon, which this year commemorates 100 years of membership in the Union. The July 12 issue of the Eugene, Oreg., Register-Guard has published a vivid and expressive editorial entitled, "Seeing the 'Out-Backs' in Oregon." I rarely have read anything which so synthesizes the appeal of the Oregon outdoors and of the Oregon people. I ask unanimous consent to have this colorful editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEEING THE "OUT-BACKS" IN OREGON

Oregon, even in the centennial year is more than a big exposition in Portland, more than miles of freeway ribbon and more than the mountains, beaches, and resorts that attract the tourists. Oregon is also miles and miles of land, often inhospitable land, and scores of little towns, struggling streams and reminders of the farm, forest, and mine from when commeth our strength.

To see this the tourist, especially in the centennial year, would be well advised to avoid the highways and to take to the back roads. That way he'll see another Oregon, but a very real one. Such was our opportunity a few days ago, driving from the northeast corner to Eugene on roads that are bypassed by those in a hurry. We found the other Oregon.

Oregon is a ghost town, a town that once had a bright future—before the gold ran out and before the big fire of 1917. Now it's a few houses, a country store, acres of vacant lots and a rusting iron safe, its door agape and its interior empty of the treasure that once poured into the building that burned.

Oregon is a ditch, 100 miles long, built by Chinese hired to grub out gold. Oregon is piles of tailings, rock mounds which will puzzle archaeologists thousands of years hence.

Oregon is scenery right out of a western movie. Oregon is Zane Grey country.

Oregon is a combination restaurant, bar, and card parlor. "What kind of soup is it?" The wife of the proprietor looks carefully into the pot and replies, "Chicken noodle—now." Men in big hats fondle stacks of silver as cards appear and reappear on the green covered table. The dealer wears an eyeshade. The question: "Isn't gambling illegal over here?" and the answer: "Sure, but who's going to make a pinch?"

Oregon is bad road, road with rocks in the middle and road almost barricaded by fallen logs. Oregon is low gear stuff, washboardy, dusty. Beside the road is sagebrush, snakey looking stuff that prompts the traveler to look before he steps.

Oregon is a motel with a missing proprietor. Where is the motel man? "He's out on the firetruck. Barn afire. Green hay. He'll be back after a bit." An hour and a half later he returns, dirty, hot, and mad. "Missed my TV program," he explains.

Oregon is multicolored rimrock rising above brown hills. The hills shade to brown from the rich green that means either a stream or irrigation. And on the green mat are black cattle, healthy looking beasts.

Oregon is two girls at a restaurant in Fossil. "My motto used to be 'See the world,'" says one, "but no more. It's too wild up there, way too wild. Now my motto is 'No place like home.' They can keep Condon." Condon is 21 miles from Fossil.

Oregon is old John Silvertooth at his combination store-saloon-barbership-museum at Antelope. "Centennial? We celebrate the centennial here every day. Have for years."

Oregon is a Cadillac in the driveway of a lonely ranchhouse, a house that must have cost many thousand dollars and that is miles from its nearest neighbor. And Oregon is a deserted hut, long abandoned by a family which was displaced by industrial agriculture.

Oregon is car bodies beside the road, so far from a town that the metal is not worth hauling back for junk. And Oregon is "Jesus Saves" signs.

Oregon is a service station proprietor who notices the rock hammers in the car and who invites the tourists into the backroom to see the pretty rocks he found—an agate as big as a ham and a beautiful limb cast. It's not polite to ask where he found them. But the tourists are welcome to look.

Oregon is TV aerials in the middle of nowhere, schoolhouses in remote valleys, and gas pumps in the most unlikely places. A tourist could lack a bed, lack a meal, but even in the back country he is never more than 20 or 30 miles from a gas pump.

Is there a place without a rodeo? Is there one where they don't elect a queen? Keep looking. Try what the Australians call the "out back." It's a refreshing view of a State too few of us have ever really examined.

Will the United States Have To Shoot Down Zeros?

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. ROBISON. Mr. Speaker, the New York Times of Sunday, July 12, 1959, carried an article concerning the efforts of the present French Government to restore the franc to respectability by the process of dropping two zeros from all old denominations.

This would be almost humorous if the reasons which brought about the action were not so tragic. For those of us who are inclined to smile smugly with regard to this problem, may I say that it is not inconceivable that the American dollar

might one day become so inflated that a similar solution would have to be sought. To those who wish to keep spending, spending, spending, I commend the reading of this article and I ask them: "Will you be the one to trim the zeros when the need arises?"

I might add, Mr. Speaker, that this article was brought to my attention by Mr. Martin T. Purtell, of Elmira, N.Y., who is "Mr. Democrat" in Chemung County, New York, but who is apparently appalled at the wild spending habits which many Members of his party have developed in recent years.

The article follows:

TRIMMED FRANCS—FRANCE TO START ITS CURRENCY REFORM BY DELETING TWO ZEROS FROM NOTES

(By Robert Doty)

PARIS.—The first stage of an operation to slim down the French franc to an elegant, svelte silhoutte one-hundrdeth of its former bloated inflated self will get underway on Wednesday.

At that time the Bank of France will start issuing the first currency overprinted with new denominations with two zeros stricken from the unit value. Thus, the old 500-franc note, for example, will be overprinted and thereby become a new 5-franc note.

The operation is going to demand a good deal of financial flexibility on the part of everyone dealing in French money, and particularly the American tourist in France this summer.

The purpose of the operation is both practical and psychological, with the emphasis on the latter. The principal practical reason for the change is to aline French currency more closely with those of this Nation's most prosperous continental associates and competitors, West Germany, Switzerland, and Belgium.

When the new franc is finally enthroned it will be within hailing distance of parity with the German deutsche mark, and Swiss and Belgian francs.

In nontechnical terms, the operation consists of wringing the water out of French money. The simplest way to picture it is as the division of currency denominations, wages and prices by 100. This means that a worker will earn one new franc for each 100 old francs he now receives, without any change in his total purchasing power.

NEW ISSUES

Thus, present banknotes of 500, 1,000, 5,000 and 10,000 franc denominations, this month will begin to make their appearance—the operation will be spread over several months—bearing a red ink overprint stating that they are now, respectively, worth 5, 10, 50, and 100 new francs.

The U.S. dollar which now buys 485 old francs (the official rate of 493.7 minus bank charges and commissions) will purchase 4 francs, 85 centimes in the new currency. This will put the franc back just about where it was at the turn of the century, worth a little more than 20 cents United States. Successive devaluations over half a century had abased its value to a dismal decimal—.00202 of a dollar at the present time.

Here the psychological factors come in. The older funny money was incompatible with the dignity of the New France that President Charles de Gaulle is trying to lift by its bootstraps. It also was inconvenient in foreign exchange. It smacked of extravagance, both personal and governmental. State budgets were expressed in trillions and bureaucrats would acknowledge nothing smaller than the "milliard," a billion in U.S. terms.

Anyone in France who earned the equivalent of about $2,000 a year—that is, virtually everyone—was a millionaire but nobody had any respect for the unit of currency except in units of thousands.

When the public has become accustomed to the overprinted bills, either at the end of 1959 or early in 1960, the second and third steps of the changeover will take place. The overprinted bill will give way to new ones having only the new franc value. The handsome engraving of Cardinal Richelieu, the present 1,000 franc ($2.05) note, will apear as the 10-franc note. The present 500-franc note, with Victor Hugo depicted, will become 5 francs.

Bearded King Henry IV will look out from a 50-franc instead of a 5,000-franc note and the young Napoleon will preside on the 100-franc (ex-10,000 franc) note. A new piece of currency, engraved originally as a 50,000-franc denomination but never circulated may make its appearance as 500 new francs, with Molière, the great 17th century dramatist, on it.

At about the same time, the new coinage will flow out of the mint. Heading the procession will be a handsome, heavy silver 5-franc piece, 29 millimeters (slightly more than 1 inch) in diameter and weighing 12 grams, that has the feel of real money and the approximate value of a dollar. In descending order will come a silver 2-franc piece, a nickel 1-franc piece and pieces of 50 and 25 centimes (one new centime equals one old franc), in copper and nickel, and 10, 5, 2, and 1 centimes, probably in aluminum.

The implications of all this for French industry and trade are enormous. Every calculating machine and cash register in the country will have to be altered to install a decimal point. Slots and release mechanisms on coin-vending machines will have to be altered to the size and weight of the new coinage. Price tags, theater tickets, stock and bond certificates all must be reprinted.

TOURIST VIEWPOINT

And, as important as anything, tourists must be reeducated.

French authorities see two difficulties and and have taken steps to bypass both. The first is that some of the unscrupulous in French retail trade will try to parlay the overprint on the bills, tourist innocence and lack of French language ability into a profitable con game.

To ward off such incidents, the Finance Ministry will see that visitors, upon entering France, receive a brochure with pictures of ordinary money and the overprinted bills, with text in half a dozen languages explaining that both are of equal purchasing power and validity during the transitional period.

A peril is that a tourist may encounter frustration in trying to pay in "old francs" for merchandise priced in "new francs". He may offer a shoe merchant, for example, a coin worth 100 old francs for a pair of shoes marked "100 new francs." Feeling badly used when the merchant refuses this "bargain" transaction the tourist is likely to return to his hotel to write a letter instructing his congressman to vote against all future foreign aid bills and advocate withdrawal from the United Nations.

To avoid such misunderstandings, the Government has decreed that, during the transitional period, merchants who choose to advertise prices in "new francs" must have, on the same sign or ticket, the price in "old francs" as well.

DIFFICULT PERIOD

In the short but inevitable period at the end of the year when old franc bills, overprinted bills and new denominattion bills, and both sets of coinage are all circulating together, everyone, tourist and native alike, will have to exercise constant vigilance to make sure that they do not pay in new francs, and get their change in old francs.

Finally, one bright young Ministry official foresaw, and foreclosed, a great opportunity for swindlers in the changeover. In many cases, adjectives follow the nouns they modify in French. This meant that, on a check, a paper would normally have written, for example, "Dix Mille Francs Nouveaux" (Ten thousand francs new).

But, the official anticipated, if this were the accepted form, it would be a permanent invitation to crooks to get hold of old checks written in old francs and simply forge the word "Nouveaux" after the word "Francs," thereby increasing the face value of the check 100 times.

The Ministry and the banks slammed the door on this potential racket by decreeing that the legal formula on checks should be "Nouveaux Francs." This will make it impossible to insert the forget word "Nouveaux" between the numerals and the words "Francs" on an old check.

Shortage of Doctors

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. DORN of New York. Mr. Speaker, I have receiver a letter from my good friend Dr. Dominick F. Maurillo, of Brooklyn, which I believe all of my colleagues should read and consider carefully. Dr. Maurillo is a regent of the State of New York and chairman of the committee on licenses, and as such no one can question his authority to speak with knowledge and understanding. He has written as follows:

DEAR FRANK: I read in the New York Times that hearings are being held in reference to create a $50 million Institute of International Research within the National Institute of Health. May I make the following comment.

Today we have millions of dollars (either privately or publicly donated) earmarked for research work in medicine which cannot be used because good, capable research men are not available. Many medical centers especially those in very large cities, are making attractive offers to obtain doctors who can do good research work but so far they have had little success. This dedicated individual is very scarce.

If this $50 million is to be used for the purpose of hiring foreign trained research doctors, that I am in favor of the bill. But I am sure the intent of the bill is to include our own American research men which we do not have.

The people of the United States want a congressional committee to invcstigate. Why?

A. There is a shortage of 25,000 to 40,000 general practitioners.

B. There is a shortage of 10,000 to 15,000 specialists.

C. There is a shortage of 2,500 to 5,000 dedicated research doctors and teachers.

D. More than 8,000 top grade students (in upper third of their class) are refused admission to medical colleges each year.

E. Why 85 medical colleges in the United States limit the number of admissions to less than 8,000 a year.

Therefore why not use $49 million for this International Research Institute and use $1

million for a thorough investigation for our own medical needs.

Sincerely,

DON.

I might add that on April 15, 1959, I reintroduced H.R. 6417, which would provide for the establishment of a commission to study the shortage of doctors of medicine in the United States. In view of Mr. Maurillo's statements, I believe it warrants favorable consideration.

The Congressional Record

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 24, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial about the RECORD itself, which was published in the Oregon Journal of Portland on July 15, 1959. The title of the editorial is "Let It Really Be a RECORD." I heartily indorse and subscribe to the theme of the editorial which emphasizes that drastic changes and amendments should not be permitted in the record of Senate debate after that debate has occurred on the floor of the Senate.

This editorial supports, by inference, a resolution to forbid substantive changes in the record of Senate debate, which the distinguished senior Senator from Colorado [Mr. ALLOTT] and I sponsored during the 85th Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET IT REALLY BE A RECORD

The CONGRESSIONAL RECORD has been the subject of considerable discussion by Oregon's editors in recent weeks and much of the comment has dealt with the Appendix.

According to the UPI's Frank Eleazer, some 17,000 pages have been printed so far in 1959 and of these 6,000 are Appendix. At the present printing cost rate of 5¼ cents per word, this makes a costly Appendix, particularly when the Appendix contains items that are rarely if ever presented on the floor of the House or Senate, and frequently have no bearing on legislation under consideration.

The Appendix, despite the nature of its contents, comes under the heading of "Extension of Remarks" and these remarks may be anything from a farm constituent's favorite cure for nervousness in hogs to a speech made at the opening of the Podunk County courthouse.

The Eugene Register-Guard's remarks that much of this material is "guff" brought a reply from CHARLES O. PORTER, Representative from Oregon's Fourth Congressional District.

He says, in effect, that many of the insertions, while they may be self-serving in some cases, frequently are valuable. PORTER then adds, "If the words make good sense to me by pointing up a new approach or backing me up in an opinion or heralding a beauty of Oregon or the district, I believe it is good Appendix material. * * * Much of what I read I find interesting, helpful, often important. Not 'guff' at all, but the fabric of our legislative process, reflecting both strengths and weaknesses but always demonstrative of the unmatched worth of our democratic processes."

Comment on this statement, the Medford Mail Tribune grants that much of the RECORD may be waste but says, "If the RECORD—unwieldly, verbose, and overweight, as it is, can in some measure assist in the legislating process, and in keeping open the lines of communication between Representatives and constituents, then it is worth its cost, which is, after all, only a tiny fraction of the other costs of Government."

In the main, we go along with the Mail Tribune, and would oppose any drastic cutting. But we do have our own pet gripe. This applies not to the Appendix so much as it does to the RECORD itself.

At best it is tough reading, but there would be consolation if there were assurance that the CONGRESSIONAL RECORD was in fact a record. Too often Capital news reporters' versions of what goes on on the floors of Congress and what the RECORD says have little similarity.

This occurs because Congressmen have the privilege of editing their remarks before they appear in the RECORD. This editing sometimes results in an almost complete change in meaning.

If there is to be a record of congressional doings, then let it be a record in fact as well as in name. Then there would be real justification for the RECORD, despite its high cost.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Successful Firing of the Corvus Missile

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. JOHNSON of Texas. Mr. President, the Navy recently announced the successful firing—on its very first test—of its new Corvus missile.

This report was particularly gratifying to me for two reasons:

As a Texan, I am able to point out that this new missile was developed in the Lone Star State; and successful completion of the test marks another advance in the defense technology of our Nation.

This new supersonic missile was successfully flown at the Pacific Range Test Center, at Point Mugu, Calif.

The Navy describes the Corvus as an "air-to-surface missile to be used by carrier-based aircraft and is designed to attack heavily defended areas, including surface ships."

The Dallas Morning News of July 19, 1959, carried a story, by Clardy McCullar, detailing further information on the Corvus. Because of the Corvus' potential importance to the defense of our Nation, I ask unanimous consent that this dispatch be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW TEMCO MISSILE IS UNVEILED BY NAVY

(By Clardy McCullar)

Temco's Corvus soared to success on its very first test firing Saturday and shot away some of the secrecy shrouding it.

The Navy made public the first picture of Corvus, and following today's rule of thumb that the handsomer a missile the more deadly it is, Corvus is at least as lethal as Ingemar Johansson's right hand.

Also revealed in the picture are little stub wings which show that Corvus is no ballistic (flies like a cannon shell) bird. And the wings are highly swept, showing that Corvus flies at a very high rate of speed indeed. (The Navy-approved news release said Corvus is supersonic, faster than sound.)

Corvus was described in the news release as:

"A liquid propellant rocket powered, air-to-surface missile of a size to be used by carrier-base aircraft. It is designed to attack heavily-defended areas, including surface ships."

Corvus flew its first test from the Navy's A4D Skyhawk, Douglas' speedy, long-range, carrier-based attack bomber, off Point Mugu, Calif., over the Pacific Missile Range Test Center.

I. Nevin Palley, senior vice president of Temco Aircraft Corp. of Dallas, told the News that Corvus' creators decided 2 years ago that the missile's first test would go without a hitch—just as if it were a new airplane.

Although no size figures were given, Corvus is thought to be about as big a load as the Skylark can lift. It is thought to be about 15 feet long.

Its description as an attack missile for heavily defended areas, including surface ships means that Corvus is a long-range missile which can be fired hundreds of miles from the target. Its wings and tail fins, operated by some sort of guidance system, would steer it right to the target.

This would put it in the class with the Bold Orion, which some Air Force strategists say will replace the ICBM (intercontinental ballistics missile.)

Address of Hon. Gale W. McGee, of Wyoming, Before the National Association of State Agencies for Surplus Properties Convention

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech given by my colleague, the Honorable GALE W. MCGEE, junior Senator from Wyoming, on June 24, before the National Association of State Agencies, meeting in Grand Teton National Park, Wyo.

Senator MCGEE has shown, in his short time as a Member of this body, intelligence, foresight, and the ability to cut to the heart of a problem. Perhaps the beauty of the Tetons has inspired him further—for this speech on the vital need for truth and new ideas shows breadth of vision. He brings into perspective the image America must present to the underdeveloped countries of the world.

I hope my colleagues will all find time to read his remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE GALE W. MCGEE, SENATOR FROM WYOMING, BEFORE THE NATIONAL ASSOCIATION OF STATE AGENCIES FOR SURPLUS PROPERTIES CONVENTION, JACKSON LAKE LODGE, GRAND TETON NATIONAL PARK, WYO., JUNE 24, 1959

I didn't realize that you had been in session so long this afternoon that you had to stand for relief. Believe me, I appreciate that. You know that does a freshman's heart a world of good because a freshman doesn't receive great respect back there in this new game in which I am now a participant; and so when I can come out here and live it up and then be accorded a standing ovation, it's great for one's morale.

Indeed I am proud of all the States that you have associated me with, although I began to suspect that you were talking about a sort of interstate bum who was just one step ahead of a dissatisfied employer from time to time. Anybody who is entitled to claim so many States for residence is automatically suspect. We had to leave Nebraska because we couldn't find a climate of opinion there that was receptive to mine. They still don't receive some of my ideas well, although my mother maintains a beachhead there in the interest of the family. But she has to be a Republican Committeewoman in order to do that.

Colorado—Loraine and I did spend our honeymoon in Colorado. It's a very wonderful place. They have beauty but it's commercialized beauty. They don't have the naked, raw, rugged beauty such as you look out upon from the window of this hotel and enjoy.

Unfortunately, the commercialists have invaded our lands in Wyoming, too, and we who truly love the West and love it for its native beauty secretly resent this intrusion of civilization which is changing the face of our country. As a public official, of course, I have a moral obligation to becken to all to come on because the more tourists we can attract in the summertime, the more prosperity we can enjoy. But the hard truth of the matter is that really down inside, where it counts, we wish you'd all stay home and leave our fishing alone.

We have long since, now these last few weeks, discovered the real definition of capital punishment. Capital punishment can be defined as that necessity which calls for some of us to have to live in Washington in the summertime—and it is real capital punishment. You don't know what the contrast is until you make that overnight jump from the hot, steamy streets of Washington, where the humidity is always high, where the thermometer is in the nineties, out here to God's open spaces where the sky is blue and the space is unlimited and the air is fresh. We never come home to this without wondering why in the world we should go back. Yet there is something that draws us back, that electric something which I guess, infects many of us. It has nothing to do with the time spent; it has to do with the commitment to participate in decision making. That, whatever else you may say about it, does make a difference, and I think it is that which buoys you up and keeps you going in the U.S. Senate.

When I was in the teaching business, as I was for 22 years until a year ago just about now, there existed in that profession a sense of rank and seniority. I remember when I was in the graduate school in Colorado and then at the University of Chicago really resenting a little bit the instructors on the staff because I thought they were snobs and looked down their noses at us poor graduate students trying to struggle along. I was determined then and there to get into the professoring business and see what it was like to look down upon the unfortunates below me. I got to be an instructor at Nebraska Wesleyan University and then discovered, only too late, that instructors didn't amount to anything because there were assistant professors, associate professors, and, finally, full professors who towered over them. After a dedicated career of suffering and sacrifice and by outliving

some others, I rose through the ranks and got clear to the top as a full professor. I thought that we had it made then, only to discover that in the educational profession, in which many of us here are interested, there has not emerged a hierarchy over all that we call administration and administrators. That seemed so hopelessly frustrating to me that I thought it was time to get out of the business. I wanted some simple employment that would be a little easier going in which rank played a lesser part, and I applied for a job with the Senate of the United States. For reasons beyond my control and due to the rationale of the citizens of Wyoming, I got the job. Now, as a result, I have gotten into the worst kind of rank situation. I don't suppose there's any institution in the world which is so rank conscious or where seniority plays such a tremendous part in the thinking of the participants.

In the group of us who did descend on Washington last November, there were 18 new Senators, all of them with my political faith. We thought we were so numerous that we'd take the place by storm and that all these fetishes about seniority—who was the oldest and who represented what in what order down the line—would be destroyed by numbers, by mass impact. But we didn't reckon with the Senate of the United States and its traditions, and, upon arrival there, we discovered our best intentions were stymied by the depth of the tradition and the inveterate dedication to seniority. The result was that they had a rule for every one of us. The Senate is sacred in its belief that no two Senators—I don't care which two Senators they are—can ever be absolute equals. There is a niche for each, 98 of them, and each takes his place beneath those who outrank him.

Well, it was then I learned the hard way that in order to break up this gang of 18 new freshmen, they were going to allot us our places, and they had a special place—a special precedence—for all former members of the House of Representatives. That involved 9 or 10 of our gang—quite a portion. And then they had a second order of precedence for anybody who had been a former Governor of his State. That took three or four more, but it still left four of us who stood shoulder to shoulder, exactly the same height, and that's when the resourcefulness of the Senate, naturally, came into play. They resurrected a couple of old precedents which had not been used since before the Civil War which dictated the separation of the remaining four who thought they were equal. They decided they could separate us according to the year in which our State had been admitted to the Union. Well, the passengers aboard the *Mayflower* didn't quite make it to Wyoming. Very little of the sea washed the shores of this wonderful State. In fact, we didn't come into the Union until 1890, and so we were way, way down that list. Even with this ruling, however, the final status of two of us was not resolved. Two States came into the Union in 1890 and that created a tie they couldn't break until they found another old beat-up rule which said that in such a case seniority would be determined by alphabetical order of States. Well, consult the list of States and you'll see that Wyoming is quite a ways down. In fact, there is no whicher than Wyoming in the alphabet. So, ladies and gentlemen, today you are looking at No. 98. One consolation about it is that it leaves us no direction to go but up and that's hopeful. And they assure me back there that the longer I'm around, the better I will think of seniority and that I will temper my views as the years pass.

It is genuinely refreshing to me, under all of these circumstances, to come here and talk to you. You have been having your seminars; you have had your old pros batting away at each other; you are going to have them some more. I don't know anything about surplus property problems except I am for you. I was told to say that so that you'd know I was dedicating my efforts in your behalf and, rest assured, if you tell me what those efforts are, I will. I happen to believe in the people who brought me out here. That's the only reason I'm here. And I firmly believe in the line that you're trying to hold—making available some of the surplus materials for schools and in the educational field. It would be dishonest for me not to say that very bluntly and forthrightly.

I want to talk to you today about an area quite far removed in one way from the professional concern which has collected you here this week and particularly this afternoon—a topic that's quite far removed from the minds of all too many Americans today. It is the parts of the world which we have for generations taken for granted and continually ignore. I am speaking of the so-called underdeveloped regions of the globe. They are not totally unrelated with the problem that you are, on the domestic front, concerned with here—surplus properties. If I were to say to you that tomorrow, not the day after tomorrow, not the 21st century, but tomorrow, the whole vibrance of the world will be coming from the heartbeat of Asia and Africa; not from Washington; not from London; not from Paris or Rome, but from Asia and Africa, it would be sufficient to suggest the new focus which we are very slow to make a part of American thinking.

Take a cross section of the people of tomorrow, the people now that are between adolescence and middle age—that is 10 years older than I am, I always say—take a cross section of all the people of the world who lie between the ages of 12 or 13 and 50 and who make up tomorrow's world. They will be determining our future policies. Take such a cross section and it's made up something like this. On the basis of a sampling of 100 to reflect that cross section, 6 of them would be from the United States and Canada; another 5 or 6 of them would be from Latin America—our neighbors to the south; 7 or 8 of them would come from the Soviet Union—Russia; perhaps 9 from Africa; 15 or 16 of them would come from Western Europe and non-Russian Europe; and 56 of them—56, I repeat—would come from Asia. There is your world of tomorrow. Yet, in our own concept, we don't go much beyond the shores of the Atlantic, and might I say to you very frankly, as a former student of history, that the Atlantic age of history is already on the downgrade. And we pretend to be the leaders of the world. We are talking about a world that we are still fighting over—the world of World War II. That's what got us down in the 1930's when we were still trying to stay out of World War I, wasn't it? Now we are trying to correct some of the mistakes of World War II. All too few of us are asking about tomorrow and worrying about where we are going.

Now, I want to talk to you for the next few minutes about some aspects of the American concept toward the rest of the world which I think are fundamental if we are to create a sound American policy position that will lead not only to our survival but to our survival under circumstances that are amenable to the kind of life which we associate with a free society.

I will say to you then, first of all, that above all the other concepts Americans must learn to believe in and to understand is the fact that people are different. We have undergone a number of exercises in which it has been our apparent intention to make little Americans out of everybody around the world. As President Eisenhower once reminded us, we not only can't make little Americans out of the world, but it would be a bad idea even if we could. Because of the impact of World War II and, more important, because of some of the problems—if I may drag it in by the heels—caused by surplus property left over in some strange corners of the world after that conflict, we began to try to make little Americans out of everyone.

In reality, however, I am talking about people's thinking, about their cultural habits, about their standards of value, about the things they believe are important, the things which make a difference. Not everybody believes in skyscrapers, in jets, or in a bank account. People have different standards.

I always remember the story that James Michener of South Pacific fame still tells. It happened when he was in Seoul during the Korean war, at the time of the second siege of the city of Seoul when the Communists had moved down from the north very rapidly and threatened to trap not only the garrisons but the people of the city. In that emergency, the American commander called in the city officials and said: "We have very little evacuating material or means of evacuation available. We are caught unready. There is only one barge and it will accommodate about 100 people. Pick the 100 most important people of the city of Seoul, get them on the barge, and we will get them out so that they can save the city when it comes time to rebuild. But pick your key people." The city government, the city officials of Seoul, quickly convened and made their decision, and they put on that barge for the evacuation the 100 members of the Seoul Symphony Orchestra. The American commander cussed a blue streak and called them "blankety-blank so and so illiterates."

But people are different. People have contrasting sets of values and we must understand that.

I once heard the then General Eisenhower describe a similar experience in Africa during the north African campaign. When it was about finished, and there was a light weekend ahead, General Eisenhower was flown into the interior of Africa to view a special housing project that one American group had promoted. It was in a tribal area where the tribes had formerly been living in grass huts. General Eisenhower found there in a beautiful clearing in a corner of the Belgian Congo, neat rows of little white Cape Cod cottages that the American benefactors had set up for them, and which had all of the plumbing conveniences that you could desire.

There was only one thing missing—people. The houses were all empty. The general asked the chief escorting him around, "Where are the people?" The chief, a little bit embarrassed said, "Well, General, I think I can show them to you." He then escorted him some distance down to the bank of the nearby river, and there were the people. They were building grass huts and the babble of their talk made quite a din. The chief said, "You know, General, they very much appreciated those wonderful, wonderful houses, but they just didn't think they could live in them, because with all of the conveniences—running water and the like—my people felt that it would deprive them of their one reason for living, the one joy they had every day, and that is the daily trip down to the bank of the river to get water to wash their clothes and to commune with their neighbors."

Well, people are different: They are different in as many ways as there are people. That's why we have sometimes gotten into trouble in America. We haven't been willing to allow for those differences.

At the University of Wyoming, while I was teaching there, we had a great many stu-

dents from Afghanistan. We had these students from Afghanistan because we had opened a sort of branch of the University of Wyoming over in Afghanistan. We had an exchange program. We kept this program very much alive because Afghanistan was a high-altitude country with agricultural and soil problems similar to our own. I had many of these Afghan boys in class and would talk to them at every opportunity about their experiences here. They had a wonderful time in Wyoming.

One of them told me he spent a weekend over near Torrington—which is as far as you can go from here and still be in Wyoming. He had been riding a cornpicker all afternoon. He said it was an exciting thing and he would like to have one to play with. But he said, "You know, Professor, it is no good to me back in Afghanistan. I have wasted my time. In many parts of my country, people are still planting seeds with pointed sticks."

We fail to allow for the fact that some of the world's peoples don't care to use anything else but a pointed stick.

When Loraine and I were in Moscow—and it's nearly 3 years ago now—we got trapped one afternoon in a rainstorm. I should say I got trapped. The women didn't. They were out looking for bargains which they never found. But I stayed in the hotel. I sat in the lobby of the Leningradskoya Hotel until the rain stopped. In that 3 hours, I witnessed the arrival in Moscow of whole delegations from a dozen Asian countries which had been flown there at the expense of the Russians. One of the delegations was from Communist China, and I struck up a conversation with them. I did so because the Chinese speak English very fluently although they can't understand Chinese. This is literally true because there are over a thousand dialects. They speak the English language better than I do. We got along very well in understanding what we were saying to each other. I said to the Chinese, "I suppose you are excited about Moscow." They said, "Very much excited. It's an exciting city." I tried to imagine, in my own mind, why Moscow was exciting to the Chinese because by our standards it is a dreary city, a sort of sprawling slum with the exception of a few showplaces which they display to tourists and the party faithful from Siberia. With those exceptions, Moscow is a very, very dull city. But these Chinese were excited. Then I thought I could understand why they were because, compared to some of the hills of China, this would indeed be a refreshing and new place to them, and I made allowance for that.

So I said to the Chinese, "Gentlemen, you know, I think I can understand why you find Moscow as exciting as you do, but I wish you'd visit my country some day. We have some exciting things, too, which might open your eyes." He said, "I have been to your country. I have visited it four times. I have been in New York, Washington, Chicago, Detroit, New Orleans, San Francisco, and Seattle." Then I did scratch my head. I said, "You have been to all those places and you tell me you find Moscow exciting. Why?" He said, "You know, we in China think you have gone so far and reached so high, and achieved such marvels that we don't even dare dream about them, we are so far behind you. It has no meaning for our people; they couldn't understand it. But here in Moscow we know where these people were 40 years ago. They were just like us and we can see with our own eyes where they have come in less than a generation. And if the Russians can do it," he said, "China can do it. That's why we admire Moscow."

That's something for every American to ponder. There are different ways of reaching people and you can overshoot your target; you can aim too high by trying to make little Americans out of everybody. That's the basic, fundamental concept that all of us have to acquire, have to understand, have to believe. We have to make allowance for the differences of people and do it in ways that they can understand through their insight instead of ours.

The second thing that I would leave with you is the suggestion that we have some surplus property, so to speak, that's surplus property only because we are not using it, surplus property that is begging to be used in meeting this precise problem which I have posed for you here today. That surplus property is of two forms: It is a surplus of ideas and a surplus of truth—ideas and truth. It is strange that we could speak of having a surplus of either one. We happen to have a surplus only because nobody's interested in either one. The people are not demanding either ideas or truth. They don't care. Thus, these commodities exist in bountiful quantities at the present time.

Some few years ago, I was with a private group in New York directing a little study on Soviet intentions. In the course of those long deliberations, we were entertaining, for the purpose of picking her brains, a lady from Asia. I will never forget the very plush banquet which was thrown in her honor. We invited her to the banquet along with 50 very affluent, industrial, and banking leaders of America. They were grouped around the lone lady, and I was included in the group only because I was directing the study.

The chairman for that meeting said: "Madam, before we get underway, I thought you might be interested in knowing something about the men who are here doing you honor tonight." He said, "These 50 men, I suspect, between them and among them, in their own personal wealth, have something in excess of $10 billion." Well I remember the warm glow coming over my face. Fifty divided into $10 billion meant that we were worth $250 million apiece. I never had it so good.

I will never forget her reply. She said, "Mr. Chairman, you know I do appreciate these very, very wealthy men taking time out from their accumulation of great wealth to dine with me tonight. But I hope you won't be offended if I suggest to you that this isn't a new experience for me, that this isn't the first time I have dined with men of great wealth. Just before I left my country on this trip, I had breakfast with eight maharajas whose total wealth was probably that of these men. But you know in India," she said, "we don't brag about that." (Leave it to a woman to put a man in his place.) She went on in a very, very rich way and she said, "May I say to you very fine Americans something that's very blunt but which I hope you will appreciate?" She said, "Let me tell you why the people of the world respect you, why they look to you for leadership, why they revere your history." She said, "It is not because of your skyscrapers; it is not because of your bank accounts; it is not because of your automobiles." She said, "We admire America because of your ideas. We admire America because you stand for truth wherever it may lead. And, gentlemen," she said, "why don't you put your great strength to work as you seek to lead the world?"

Ideas and truth—and I have never forgotten that memorable little occasion. The history of our own time bears out the validity of her observation. Look at our ideas. We have forgotten them long since. The ideas of free government, of the dignity of the individual, of the respectability of ordinary society, of the equality of all peoples, these are the magical, electric ideas that fire men even in this nuclear age.

When the troops moved into what is now Jakarta, Indonesia, but which was called the Dutch East Indies at the time, at the end of the war the Japanese had seized the area and they put up a very fanatical resistance. They destroyed most of the material assets of the region. But the troops which had entered Jakarta reported finding on the bombed-out walls of that ruined city inscriptions scrawled there by these resisting natives who were driving the Japs back out—inscriptions of little quotations from Ben Franklin, from Thomas Payne's "Common Sense," from Abraham Lincoln's second inaugural address, and from Thomas Jefferson's first. Most Americans don't remember these inspiring words.

These are the ideas of America and they have been carried into even the most backward areas. These areas are backward, my friends, only in the American materialistic sense, and that's the basis upon which we have been judging them.

I talked to a diplomat from Ceylon once. He said, "You know the thing that put my country so strongly on the path toward freedom was that we copied your Constitution. It was our inspiration." I heard Nehru say that what kept India from going to pieces, what prevented her from passing through the radicalism that sweeps through any new area during periods of political experimentation was the examples afforded by the American and British systems. Ideas. The Indian Constitution begins how? "We, the people of the United India, in order to form a more perfect union * * *." Word for word. There's the American inspiration; the American idea.

My friends, 1778 is the most electrically inspiring date in human history and everyone knows it except Americans. We have forgotten its significance. The rest of the world knows about it, but we are failing to use the dynamic influence it still exerts. It is one of our surplus commodities. It is stored in the attic collecting cobwebs with the other relics of our Nation's history.

Ideas, and ideas that we invented, not Karl Marx—that we invented, not Mr. Lenin or Mr. Stalin or Mr. Khrushchev. This is what is inspiring the people of Latin America and Africa and Asia. We did it. Yet, with the rest of the world trying to follow us, what do we do? We look down our noses as if there were some foul smell at the other end that offended us. We want nothing to do with it because it might be radical. These people, my friends, would be on the paths of change, they would be in the throes of revolution, if there had never been a Communist on God's earth because all they are craving is human dignity; the integrity of the individual; national independence and national pride. And what else is there in the Declaration of Independence? We don't have to go out and plant revolutionary fires, but we can certainly recognize them for what they are and understand them instead of trying to hold up our hands as though we could stop this floodtide that's sweeping the world. If it be our decision to stop it, to dam it up, to hold it back, what happened to us in China is going to happen to us all around the globe. It will simply pour over us. We will be inundated and we will literally drown in our own ideas because we were too stupid to use them.

But with that surplus of ideas, we have also a surplus of truth. What I am trying to say to you is this, that the search for truth must be eternal. It is the guidelight of any historian and it must be the constant goal of every citizen. It sometimes will lead you into unpleasant paths; it sometimes requires unpopular conclusions. But, ladies and gentlemen, our Republic has been founded on the willingness to risk the truth. It is the Communist who doesn't dare to face the truth. That's why they have censorship; that's why they have the Iron Curtain; that's why they use brutality to impose falsehood. But we are afraid of truth. Oh? We are afraid of it. Go to the Rotary Club some

noon, or to the Lions Club, the chamber of commerce, the women's club—you pick it—and you will discover that they go along talking to each other week after week, saying the things that they like to hear from each other because if they say something different it rocks the boat. It is easier to conform and we are demanding conformity because it is easier to control. I don't mind saying that, as a Senator, I wish all the constituents of Wyoming would conform to one man's ideas—McGee's. It would be a lot easier. There isn't an administrator here or one who was ever an administrator who would not encourage conformity among those beneath him because it would mean an end to his problems. We are afraid of truth.

The truth is unpleasant and uncomfortable and inconvenient. And we have reached the point in this country where we are encouraging half-truth or untruth in government in order to be comfortable, to have time to play golf, or better still, to fish. We have so surrendered our eternal quest for truth that those who merely raise the ugly questions in pursuit of truths are belabored and smeared and twisted and tortured by the public mind and by public pressure because they aren't willing to say what people like to hear or they aren't willing to surrender by leaving well enough alone.

Now this is not what made Americans strong in the past and yet it is this pressure to which we are forfeiting our heritage now.

We have just passed through an extremely painful ordeal in the Senate involving one of the strangest and most difficult personalities, I suppose, in this century—Mr. Strauss—a difficult and strange personality because when he was good there was never a man in all history who was so good. But when he was bad there were some extremely serious complications. He is a man who has perfected a technique that he didn't invent. Democrats and Republicans, long before him, hammered out the perfections of the gobbledygook of words, words without meaning, words of evasion, honeyed words, big words, little three-letter words. These words were aimed at covering up, at hiding, at concealing unpleasantries or mistakes in human judgment; and the mushrooming of the bureaucracy in Washington has aided and abetted this whole practice. Mr. Strauss was not the inventor of this at all. He may have been its victim. Some of us felt very deeply that in the search for truths the time for a reckoning had long since passed. When this man, in a very tortuous process, was stripped of almost a million words; when he stood naked before his committee, he was revealed as a liar.

My friends, these are people living in fear. You live in fear of dictatorship. That's what was wrong with Hitler and Naziism; that's what's wrong with the Communists in Moscow. Yet, under the guise of leaving well enough alone and not disturbing placid waters, we were surrendering to the very dictatorship we feared.

I was personally tortured that my President was very much embittered about the ugliness of this decision because the President's wishes rank very high in my scale of values. But there's one thing that ranks higher than his wishes in my book, and that one thing is the right of the people in a democracy to know, the right to go behind the veil of the so-called executive privilege and secrecy, to strip away from the mistakes that humans are entitled to always make in a democracy the veil of nondisclosure or the camouflage of words. And I say this in the context of my opening remarks for this reason. The one appeal that we have to the rest of the world lies in our willingness to pursue truth, wherever it might lead; and in a record which has stood the test of truth and which can in the future stand repeated reexamination in the light of truth.

I don't know whether or not you have read the little volume "The Ugly American"; but if you do, you will find we are in trouble because people, for whatever reasons, chose to distort the truth, to perpetuate a false front, to assume a mistaken level of power and prestige.

We are all right if we'll trust in the truth, if we will abide by its revelations, if we will conduct ourselves within the limits of its disclosures. This is not alone a problem for Americans overseas or a problem of trying to get foreigners to understand us. It comes right down to the hearts of our understanding of ourselves; what we believe and why we believe it.

If we would only utilize these two surpluses, we would readily discover that they are not surpluses at all, but that they are in short supply. We would discover we haven't enough of either. But if we use what we have, we can hold out to the rest of the world the kind of appeal, the kind of human inspiration that alone should guide the history of man. It is our strength, more so than our scientists, our military might, or our satellites in outer space.

Asia and Africa and other areas are on the move, and they are in the throes of deep change. Let's face it. Let's not only learn to live with it; let's seek to guide it constructively.

I have often thought in this context of the old legend of Rip Van Winkle. You know old Rip got a bit in his cups and fell asleep in 1769; he slept for 20 years. What happened in that 20 years? When old Rip fell asleep, George III was his King. When he wakened 20 years later, George Washington was his President. Old Rip Van Winkle had slept through a revolution. God help us, my friends, if we sleep through this one.

Dedication of the National FFA Building

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. CARLSON. Mr. President, last Friday a very impressive ceremony was held near Mount Vernon on a tract of land that was formerly owned by George Washington, at which time the National Future Farmers of America Building was dedicated.

The Future Farmers of America is an organization composed of 381,621 members in every State in the Union, Hawaii, and Puerto Rico and is a part of the vocational education program under the Department of Health, Education, and Welfare.

The national officers of this organization are Adin Hester, Oregon, president; Bryan Hafen, Nevada; Thomas E. Stine, Missouri, Lee Todd, Tennessee, Richard Van Auken, New Jersey, vice presidents; and Norman A. Brown, Michigan, student secretary.

The chairman of the board is Dr. W. T. Spanton, Director of the Agricultural Education Branch of the Office of Education. Dr. Spanton's many years of dedicated service to this organization has built it to one of the leading youth organizations of the Nation.

I ask unanimous consent that the program and the dedicatory speech I delivered be printed in the Appendix of the RECORD.

There being no objection, the program and address were ordered to be printed in the RECORD, as follows:

PROGRAM AT DEDICATION OF THE FUTURE FARMERS OF AMERICA BUILDING

Music: U.S. Air Force Headquarters Band, Harold Hoyt, captain, USAF, Director.

Flag-raising ceremony: Norman Brown, national student secretary.

National anthem: U.S. Air Force Headquarters Band.

Invocation: Richard Van Auken, national vice president.

Opening remarks: Adin Hester, national president.

Introduction of guests.

Greetings from new farmers of America: Martin Luther Goodson, national president.

Historical background: W. T. Spanton, Director, Agricultural Education Branch, Office of Education, Washington, D.C.

Greetings: Arthur S. Flemming, Secretary, Department of Health, Education, and Welfare, Washington, D.C.

Gathering and spreading of State soil: Tom Stine, national FFA vice president.

Acceptance of State stones: Bryan Hafen, national FFA vice president.

Dedication address: The Honorable FRANK CARLSON, U.S. Senator from Kansas.

Acceptance of FFA Building: Lee Todd, national FFA vice president.

FFA march: U.S. Air Force Headquarters Band.

ADDRESS BY SENATOR FRANK CARLSON AT DEDICATION OF FUTURE FARMERS OF AMERICA HEADQUARTERS, WASHINGTON, D.C., FRIDAY, JULY 24, 1959.

I regard it a distinct honor to be invited to participate in a program dedicating—or setting apart for service—this new headquarters building for the Future Farmers of America supply service and national magazine.

This building will stand as a serviceable monument to the Future Farmers of today who will be the successful farmers of tomorrow.

It is most fitting that this modern structure be located near Mount Vernon, the home of George Washington, and on land formerly owned by him. He was considered first as a great general—our first President—an engineer—but George Washington's first love was the farm he called Mount Vernon. He was one of the first in the Nation to practice contour planting, crop rotation, and other soil conservation methods. It has been stated he might be truly considered as America's first "scientific farmer."

It is also my understanding that he is one of the patron saints of the Future Farmers of America and that his name has a prominent place in the opening ceremonies of the FFA.

Vocational agriculture and the Future Farmers of America constitute a most successful program for training boys to be good farmers and helping them become established in the farming occupation of their choice.

In view of the Nation's need for new farmers it is most fitting that we set apart a new modern building for their headquarters.

It was our third President, Thomas Jefferson, who said, "Those who labor in the earth are the chosen people of God."

It was Gifford Pinchot, the great conservationist, who said, "As the farmer prospers, so prospers the Nation."

Leaders in the field of agriculture, both men and women, are receiving further well-deserved recognition in the establishment of the Agricultural Hall of Fame.

I am delighted that this agricultural shrine is to be located in my home State

of Kansas—just a few miles from Kansas City where thousands of FFA members will have the opportunity to see it each year at the time of their national convention.

Agriculture today is undergoing a drastic change. Capital investment on farms and the cost of production items are at record levels.

Agriculture as a whole is confronted with some very different problems that must be resolved and I know of no one better qualified to tackle these problems than our young farmers who will soon be dominant in agriculture. Your background, your training, give you the qualifications that are going to be needed as we go through this difficult period.

I am not here to paint a dark picture of our situation. As a matter of fact, I am an optimist and I have great faith in the future. I have great hopes for the members of your organization.

I am here to talk about opportunity—about change—about ideals and about making peace in a world that sorely needs it. I want to say to you that I cannot think of a more exciting time to be alive.

Certainly the challenge is more difficult today than it has ever been before in history. But never before in history do we stand to win so much, and when I use the word "we," I am not thinking of Americans alone—I am thinking of the human race.

No previous generation in human history has had finer or more abundant means at its disposal for making this planet serve the ends of man.

For the first time in human history, we have as much potential power as we need to irrigate dry lands—operate the machines that man needs to carry on his work and give man shelter. There seems to be no limit to the new and fascinating discoveries being made in the field of agriculture.

For the first time in human history, we can tap the basic energy of the sun. We can derive new minerals from the oceans. Nuclear energy, properly used, can even help to control weather.

We are on the verge of discovering the answers to the incurable diseases that have blighted the life of man on earth.

I believe we have it within our means to extend the average life of a human being to more than a century—not in some distant age, but within your lifetime.

But one thing is clear, we are not going to get this better world by just wishing it into being. We are going to have to work for it the hard way.

Now, I don't have to be reminded of all the obstacles. I don't have to be reminded that we have to make this planet a lot safer for human life than it is now before we can talk about making it more attractive.

Indeed, it is precisely becuse I am aware of the problems that I say to you that the only thing that is greater than the difficulty is the opportunity.

It is true that the human race has been able to invent war, but has yet to invent peace. This has been true in the past, but it need not be true today or tomorrow. It is within the means and the power of our own generation—and I am thinking mainly of the young people of this country—to do what has never been done before—to find a way to outlaw war and establish peace on the basis of justice in the world.

Is this impossible? The fact that it has not been done before doesn't mean that it is beyond our reach.

They have said for centuries that man is a warring animal and that he will keep at it until he devises the means to exterminate himself.

But I believe in our time we will succeed in doing the seemingly impossible. I believe it is within our power to make the greatest contribution to human progress and safety in history by creating the design of a workable world peace.

This, I believe, is the big opportunity for youth in an atomic age to help create such a design and to put an end to the era of human slaughter on earth.

We want a peace that guarantees the independence and integrity of all nations large and small, a peace in which progress and freedom are possible, a peace which doesn't mean human decay or dry rot, but the growth and betterment of individual human beings throughout the world.

This is the kind of peace we want. This is the kind of peace, God willing, we are going to get.

This kind of peace is not going to be handed on a silver platter to the American people, or to anyone else.

You and I, particularly the young people of this Nation, must dedicate ourselves to working and praying for a program of peace. No greater challenge—no greater opportunity—was ever presented to our youth.

As we build a better world, a better Nation, we must also build a better man, based on the lines of the great poet, Edwin Markham, who wrote:

"We are all blind, until we see
That in the human plan
Nothing is worth the making if
It does not make the man.
Why build the cities glorious
If man unbuilded goes?
In vain we build the work, unless
The builder also grows."

I dedicate this building in behalf of the Future Farmers of America and their successors, and pray that they, too, will grow and build a better farm economy, which is so important to the future of our Nation.

Club Cleanup Idea Catches On

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. GOLDWATER. Mr. President, more and more people in this country are availing themselves of their increasing leisure time to go out into the forests and onto the lakes and streams of this conntry. I am sure all over America people are being confronted with what we are encountering in Arizona—the litter bug—the person who does not care where he throws his beer cans or how he leaves the campsite.

In Arizona recently the Phoenix Sportsmen's Association put into effect a very novel idea which is described in two publications, Outdoor Boating and Wildlife News of the Arizona Game and Fish Department.

Mr. President, I ask unanimous consent that these two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CLUB CLEANUP IDEA CATCHES ON

(By Charley Niehuis and Hal Moore)

As more and more people are going to outdoor living, especially boating, for their recreation, a major problem has arisen—what to do about the litterbug.

Recently an organization of hunters and fishermen, the Phoenix Sportsman's Association of Phoenix, Ariz., decided to do something about it. A group of these outdoor-loving people conceived the idea of having a cleanup day on a certain area. They made their attack on Tonto Creek, one of the most beautiful and uniquely placed trout streams in the Southwest. Tonto Creek had been a wonderful trout stream, but in more recent years it has become a sewage ditch.

The project was so successful and received so much acclaim the club looked around for another place to clean up.

They selected Canyon Lake, one of the more picturesque bodies of water in the State.

Since their first cleanup had attracted so much attention they had offers from several clubs to assist. The idea has snowballed. The cleanup campaign has now been adopted as a statewide project by the Arizona Game Protective Association. Local boating and outdoorsman's clubs affiliated with the statewide organization have selected areas of their own to clean up. The idea—since the Canyon Lake cleanup project was completed—has caught on to such an extent that a skiing club (the snow kind) recently announced they were tackling the San Francisco Peaks in Arizona where a snow bowl is available during winter months and which has been cluttered with debris left by skiers.

Here's how the Phoenix Sportsman's Association does it:

1. Appoint a committee.
2. Select a project—an area that needs cleaning up.
3. Survey the project—to determine what is needed in the way of materials.
4. Organize a campaign and set a date.
5. Do the job.

It's a very worthwhile and rewarding project for any club.

AGPA PAGE

(By Tom Calhoun)

The man with the shovel in his hand stopped and mopped the sweat off his brow. His feet were planted wide apart in the tumbling stream water, little whitecaps trailing away where his blue denim pants legs disappeared in Christoper Creek.

In the bank, where the man has been digging, a big alder log was now being lowered. The notch in the bank was opposite another one in the other bank, so the log was anchored at both ends when it was dropped in place, churning up the clear creek water and a chocolate spray rose like dark lace and spattered coldly on the face of the man with the shovel. He scooped up a palmful of sparkling, liquid diamonds and dashed it on his face and laughed while the chill ran down inside his shirt. The palms of his hands were red as though unaccustomed to a shovel, and he looked at them and laughed again.

The water gurgled under the great log where stubborn boulders held it up from the streambed, and along its dark length other men wrestled with the boulders, the mad race of the stream lifting its cold surface higher and higher around their legs, and men gasping from exertion and from the sharp bite of the cold water.

A man fell, and rose while the others laughed, and then the great log was seated firmly across the stream, and without a word they turned to wrestle huge rocks against the log while the man with the shovel heaved shovel after shovel of mud and gravel between the new placed granite.

Up the slope a man spoke to another observer of the swarming activity in Christopher Creek, "Chain gang?"

"Naw. GPA."

"Gee, Pee Aye?"

"Uh-huh—sportsmen's club."

The curious man snorted. "Gee Pee Aye—you mean they're doin' that for nothin'?"

"Not exactly."

"No man with brains would work like that." The curious man had turned positive.

The observer looked at the men laboring in the cold stream and his voice was gentle. "See that man with the shovel? He's got a law office down in Phoenix where some important people come to talk with him. They think he's got quite a lot of brains, and that fellow out there with the yellow shirt, he's a building contractor. I heard he handled bids on a couple of million dollars worth of construction last year. Now, that fellow that fell down a minute ago—he's in the electrical contracting business." The observer laughed quietly. "Why, my friend—" and his tone was very gentle "at least half of those men are professional men, men with college degrees, in that stream down there. They are capable of pretty sound thinking."

The curious man said, "Then why—?"

The observer interrupted. "They're building trout pools, backing up the water, increasing the habitat capacity which increases the total possible limit catches; they're increasing the recreational potential of every mile of stream and forest in the State of Arizona; they're amplifying the challenge of hook and line to compete with the lure of bars and parked cars. Some folks say they've got AGP'itis, but whatever it is—it's not being done for nothing. It's being done because it's their way of helping to build a great State and a great Nation. It's being done for a purpose—about the best purpose there is, I believe."

The curious man moved down the slope and entered the stream and his eyes brightened a little as the cold water flooded his two-tone shoes. The water surged around his white cuffs as he manhandled a big boulder into position against the log dam. For a minister not accustomed to labor he managed very well. The lawyer with the shovel smiled between shovelfuls of earth. Another fellow with AGP'itis.

Our Bank Reserves

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent that a letter from Congressman HENRY REUSS, of Milwaukee, to the Sunday New York Times of yesterday be printed in the Appendix of the RECORD.

Mr. President, Congressman HENRY REUSS is a brilliant Congressman with a particular competence in monetary policy. He is generally reputed to be the author of the current sense of Congress proposal before the House Ways and Means Committee that would tie a directive on Federal Reserve policy into any change in the 4¼ percent interest ceiling on Government bonds.

The general charge against the Reuss proposal is that it is inflationary. As Congressman REUSS drives home convincingly in his letter, the "sense" amendment is not inflationary because it would not require or direct or even suggest that the Federal Reserve create one nickle of additional reserves or money supply.

It simply provides that should the Federal Reserve in its good judgment decide to expand the supply of money—as it has said it intends to do at a rate of about 3 percent a year, it should do so—when feasible—by buying Government obligations—and thus supporting the Government bond market instead of increasing reserves.

This letter of yesterday, incidentally, constitutes an excellent answer to the attacks on the Reuss resolution by the Chairman of the Board of Governors of the Federal Reserve Board and the Secretary of the Treasury—reported in this morning's papers.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OUR BANK RESERVES—AMENDMENT DEFENDED AS ATTEMPT TO GUIDE FEDERAL RESERVE

(The writer of the following letter is a Representative to Congress from Wisconsin.)

To the EDITOR OF THE NEW YORK TIMES:

In your editorial of July 15, "The Treasury's Problem," you ask the question: "Are there devices by which the Federal Reserve System, without pumping up the Nation's bank reserves and money supply to inflationary proportions, could help solve the Treasury's problem?"

You then look at the "sense of Congress" amendment to the interest-ceiling bill approved by the House Ways and Means Committee and conclude that it will not help solve the Treasury's problem without being inflationary.

The "sense of Congress" amendment which I proposed to the Ways and Means Committee, and which was adopted, states:

"It is the sense of Congress that the Federal Reserve System, while pursuing its primary mission of administering a sound monetary policy, should to the maximum extent consistent therewith utilize such means as will assist in the economical and efficient management of the public debt; and that the system, where practicable, should bring about future needed monetary expansion by purchasing U.S. securities of varying maturities."

MONEY SUPPLY

This amendment, it will be noted, does not require the Federal Reserve to create one nickel's worth more of banking reserves—and thus the money supply—than the Federal Reserve thinks wise. Reasonable men may differ on what the supply of money ought to be, but the amendment does not attempt to sway the Federal Reserve in any way on this. The Federal Reserve has recently testified that it envisages an average annual increase of 3 percent in the money supply. For the 2-year duration of the Ways and Means Committee bill, therefore, the amount of new reserves to be created would be on the order of $2 billion.

The question is: Should the Federal Reserve create these reserves by further lowering bank-reserve requirements, as it has been doing during the last 6 years and as it threatens to continue to do, rather than by purchasing U.S. securities, as the sense amendment envisages.

Using the securities-purchasing method rather than the reserve requirements-lowering method would assist in the economical and efficient management of the public debt in these three ways:

Assuming purchase by the Federal Reserve of $2 billion of U.S. securities in the next 2 years, it would result in a saving to the taxpayers of the interest charge on that amount, since the Federal Reserve earnings substantially revert to the Treasury.

PRICE FLUCTUATIONS

The purchase by the Federal Reserve of these securities would at least moderate somewhat downward fluctuations in the prices of U.S. securities, and thus make them more attractive to investors.

The lodging in the Federal Reserve of a higher proportion of the debt would make Treasury financing more orderly by reducing the amount of attrition—where securityholders refuse to accept exchanges and demand cash repayment.

The sense amendment does not purport to be a universal panacea. But I believe it to be a sincere attempt by the Congress to give some needed guidance to the Federal Reserve, the agency to which the Congress has delegated some of its monetary powers.

It is not inflationary, and it does help solve the Treasury's problem.

HENRY S. REUSS.

WASHINGTON, *July 23, 1959.*

Using Farm Products in International Farm Programs

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1959

Mr. AIKEN. Mr. President, on June 30, our distinguished colleague and agricultural specialist, the junior Senator from Kansas [Mr. CARLSON], delivered before the International Economic Policy Association, at the Mayflower Hotel, an address entitled "Using Farm Products in International Farm Programs." I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

USING FARM PRODUCTS IN INTERNATIONAL FARM PROGRAMS

(Speech by Senator FRANK CARLSON,[1] before the International Economic Policy Association, Mayflower Hotel, June 30, 1959)

The American farmer is the world's largest exporter of food and fiber and for this reason plays an important part in our international economic programs.

The export of these farm commodities means only dollars for farmers, but it has been—and will continue to be—an important part of a program of bringing closer relationships with countries that do not have an abundant food supply. Food for Peace

[1] Senator FRANK CARLSON, of Kansas, is a member of the Senate Foreign Relations Committee, and has a distinguished record of public service, including six terms in the House of Representatives, two terms as Governor of Kansas, and three sessions of the Kansas State Legislature. Noted as an expert in the fields of farm and tax legislation, Senator CARLSON also serves on the Senate Finance Committee and the Post Office and Civil Service Committee. Outside the Senate, he also acts as international president of the International Council for Christian Leadership. First elected to the Senate in 1950, he was reelected in 1956.

must be more than just a slogan—it can and must be a reality.

Our Nation must continue to expand its export market of farm products. We exported the crops from 50 million acres of cropland last year.

I do not like to delve into statistics, but it is interesting to note that slightly less than 20 percent of the total volume of all farm products similar to those produced in the United States entered into world trade.

We exported about one-half of our cotton produced—two-fifths of our wheat and rice—one-third of our soybeans and tobacco—one-third of the tallow produced in this country and one-sixth of our lard output.

At the present time we have a number of surplus disposal programs. Under Public Law 480, the Agriculture Trade Development Act, we have had programs under which we could sell our surpluses for foreign currency—donate them to foreign countries for emergency relief—distribute them to private agencies—to hungry people at home and abroad and barter them for strategic materials.

Thirty-eight countries have participated in the Public Law 480 programs. Under title I, which allows surplus sales for local currencies, India has received $544 million, Yugoslavia $341 million, Spain $276 million, Pakistan $240 million, and Brazil $155 million from U.S. surplus stocks.

Through our mutual security program we are distributing our agricultural commodities at the rate of $175 million per year. This $175 million was continued for another year in the authorization bill which is before Congress.

Many are asking why it has not been possible to make greater use of the ever-increasing surpluses, particularly wheat. I think it should be mentioned that there are three principal reasons:

1. The most important is the problem of competition. This makes a real problem in dealing, particularly, with our Canadian neighbors to the north who also have great surpluses of wheat.

Only last month the Canadian Chamber of Commerce complained that the United States was using subsidized flour as an economic weapon to displace Canada from second place as a supplier to the new West Indies Federation.

2. Another problem we have in moving this food to foreign countries is the inability of many of the underdeveloped countries to handle incoming shipments.

For instance, we send a shipload of American wheat to India every day, but India's ports are so congested that it is impossible to secure immediate handling of our shipments.

Many suggestions have been made that improved unloading and handling facilities at the docks be arranged, but these suggestions have met opposition from the Indian Government because of the great surplus of labor, and therefore, the unloading is done mostly by hand.

In addition to this problem, we have the problem of inadequate storage and distribution facilities in most of the underdeveloped countries.

3. Congress must appropriate money to reimburse the Commodity Credit Corporation for stocks that are removed and distributed for food in needy countries.

Many of us on the Senate Foreign Relations Committee had hoped that we might increase substantially the amount of money available for food through the mutual aid program, but evidence was presented to our committee which indicated that the present authorization of $175 million was about all that could be used, based on the facilities that the underdeveloped countries had for receiving and distributing this food.

From a humanitarian standpoint, I know of nothing we can do as as a nation that will win friends faster and more permanently than getting food and fiber into the hands of the needy.

We had evidence and testimony showing that these gifts through our mutual aid program prevented millions of people from starving to death.

The distribution of this food to underdeveloped countries where there are millions of needy and undernourished people is more than a commodity disposal operation—it has important psychological value. In my opinion, it is one of the most effective forms of foreign aid.

The possibilities of this program have been amply demonstrated in India. Since 1956 the United States has shipped the following farm products to India out of our surplus production: 230 million bushels of wheat, 8 million bushels of corn and sorghum, 4.3 million bags of rice, 235,000 bales of cotton, 5 million pounds of tobacco, and 25 million pounds of dried milk.

These millions of tons of American agricultural products are vital to India for more than purely humanitarian reasons.

This successful experience in India with the constructive uses to which our farm surplus has been put illustrated why the Congress must reenact legislation dealing with this problem. It is a program that we can use to great advantage in other underdeveloped countries.

I, personally, had an opportunity to see the result of these programs in Pakistan, India, Thailand, and Formosa.

While it is essential that we maintain programs of military assistance, defense support, and economic aid, it is, in my opinion, equally important that we continue to build good will and friendship, based on our Nation's Christian teachings and background that we are "our brother's keeper."

Our military strength—our great national production through the private enterprise system—and the humanitarian aspects of our people, by giving aid to those who are less fortunate, have placed us in an enviable position among the nations.

U.S. Economy in Serious Crisis

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1959

Mr. GOLDWATER. Mr. President, I ask unimous consent that a very timely column written by David Lawrence entitled "U.S. Economy in Serious Crisis," which was published in the Arizona Republic of July 22, 1959, be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

U.S. ECONOMY IN SERIOUS CRISIS

(By David Lawrence)

WASHINGTON.—The Nation is in the midst of a serious crisis in the financial and economic sense. Here are some significant facts:

1. Five years ago, the Government could borrow money for 1-year notes at an interest rate of 1⅛ percent. Last week it cost the Government 4¾ percent to borrow 1-year money—the highest rate in 30 years for short-term money. Predictions among bankers are that it will go to an unprecedented 5 percent rate before the end of the year.

2. Interest rates for commercial borrowing are rising. Also tax-exempt bonds of States and cities that just a few years ago used to bear interest at 1¾ percent now pay more than twice as much to attract investors. The State of California borrowed 4 years ago at 2 percent, and last month had to pay 3.94 percent.

3. Because U.S. savings bonds pay too low a rate of interest, many people are cashing them in and investing in something else. In June alone, the public cashed in $470 million and bought only $323 million of the E and H bonds.

4. President Eisenhower is pleading with Congress to raise the ceiling established by law so that Government bonds can compete with other interest rates, but the Democratic Party politicians are blocking action. They are urging the Federal Reserve banks to buy into the market and keep the price up artificially. This is called printing-press money by the Federal Reserve Board Chairman. One wonders whether a catastrophe in the financing of Government securities has to happen before the inflationists will be convinced of the wisdom of the President's request.

5. Mortgage money for house building now requires a high interest rate, and the end isn't in sight. This can squelch the building boom and result in unemployment. Interest rates for mortgages now are above 6 percent in many parts of the country.

What's it all about? The truth is that inflation is in full swing. The Government has been spending more than it has been taking in. The spenders are still fighting against the savers in Washington. Confidence is lacking. The public is being repeatedly told, however, that the Democratic Party is going to win in 1960 presidential and congressional elections, and that's less than 18 months away. So if there's going to be more and more spending and more and more inflation in the next few years, the investor feels he must turn now to the places where he can get a higher return on his money. Also the Government later would have to pay higher prices for the same quantity of things it bought this year. This means more deficits and a further weakening of confidence in the dollar.

As for the economic situation generally, while there has been a business boom for the last few months, now the steel strike has produced a new climax. It could mean a turning point for the Nation in both wages and prices. If the steel unions win, inflation will be encouraged because steel prices will rise. If the steel companies, however, can effect a stabilized settlement that saves money on "working rules," then prices can be held down despice a slight increase in wages next year. Every business and every union in America is watching steel for a clue to the future of the economy. It will do the worker little good to get a wage increase now and pay out more later for living costs. This really reduces his pay.

To illustrate the meaning of inflation, it is necessary to look back only a few years. Thus, in 1946 a new house prices at $10,000 required about $4,000 down and a 20-year mortgage at 4.6 percent. The total cost amounted to $13,202. But today a similar house costs $17,600, and the usual down payment is $3,250 and the interest rate is 6 percent, so the total cost is $27,748.

Until the Nation as a whole becomes aware of the unsound doctrines of the inflationists who steer the Democratic advisory committees and influence a substantial number of Democrats in Congress, there will be little accomplished toward developing a

sound economy. Likewise, the union leaders keep pointing to the profits of corporations, forgetting that surpluses have to be accumulated to buy new plant and equipment at higher and higher prices each year. Profits went down during recession. This deficiency now has to be made up in succeeding years.

The steel strike will itself cost the Nation billions of dollars. One wonders why the leaders of organized labor do not see that this is one time when a wage-and-price freeze would rescue the economy and start a real wave of prosperity.

The facts are just as clear today as they will be after a lengthy strike. The answer is simple: A pledge by the companies that they will not increase prices, and an acceptance by the labor unions of a revised set of working rules that will help the employers to improve efficiency, and increase productivity so that the next wage increase can be absorbed by the companies without a price increase. It would be a salutary lesson to the whole business and financial world and gain a big victory for the champions of stabilization as against the destructive forces of inflation.

Good Union Leader Serves Community

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1959

Mr. YARBOROUGH. Mr. President, the Dallas, Tex., AFL–CIO Council made a wise selection when Allan Maley, Jr., was named its secretary-treasurer.

He works hard at his post and also is active in many other fields of citizenship.

I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article telling of Mr. Maley's good work. It was written by Don Freeman and published in the Dallas (Tex.) Morning News for June 14, 1959, under the heading: "Good Union Leader Serves Community."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Dallas (Tex.) Morning News, June 14, 1959]

GOOD UNION LEADER SERVES COMMUNITY

(By Don Freeman)

What goes into the making of a union leader?

The circumstances vary as much for that calling as for others.

Allan L. Maley, Jr., started life as a farmboy, a football player good enough to be nominated for All South Texas Schoolboy, salutatorian of his high school graduating class, a paratrooper.

Before he was 20, he knew nothing about unions. But he more than made up for lost time.

By the age of 24, he was secretary of a big oilworkers' local in Corpus Christi.

And now, at 31, he is the secretary-treasurer of the Dallas AFL–CIO Council—a key position in the labor movement here.

Despite the change that the years have brought to his station in life, Maley still is chubby-cheeked, regular-featured and athletic looking enough to suggest an All South Texas boy.

In short, Maley is not the stereotype picture—or cartoon caricature—of a union official.

But, he avers, "There is no stereotype. That's an image built up in the minds of people. It's like the image of a fat politician with a big, bulging cigar in a back room."

COUNCIL A FACE CARD

The AFL–CIO Council—of which Maley is the only full-time elected official—is a central body for some 90 local unions and 30,000 union members, in much the way the chamber or commerce is a central body for businesses.

As such, the council is the chief face of the labor movement here in public and civic affairs.

During Maley's administration—he first was elected secretary-treasurer last June—the council has gained face, partly through increased unity.

The organization is taking a deeper interest in public relations, community activities, politics and helping affiliated unions on organizational drives.

"It's tragic, the lack of participation our working people have in politics," says Maley.

Barely an adult when he was a precinct chairman in Corpus Christi, he adds:

"I don't think there's anything livelier than attending a precinct convention. It may not always be pleasing, but it's always interesting."

SHORT FOOTBALL CAREER

Maley was born at Ingleside, near Corpus Christi. There he worked on his dad's small truck farm and for other farmers.

His athletic and scholastic prowess at Ingleside High School landed him a football scholarship at Rice Institute in Houston.

Though his 5-foot-10 frame packed only 150 pounds, he was the starting left end on the team in his freshman year at Rice. But early in the season his collarbone—and his gridiron hopes—were broken in practice.

Maley soon got healthy enough, though, to become a paratrooper in the 11th Airborne Division at the tail end of World War II. He served with the army of occupation in Japan, made 10 noncombat jumps and was discharged with the rank of corporal in 1948.

After bumming around a few months in Corpus Christi, he got a job as a pipefitter's helper there with the Sinclair Refining Co.

RISES FAST IN UNION

Two things soon changed his ignorance of unions into keen interest. First, the union now known as the Oil, Chemical & Atomic Workers got the Sinclair men a 30-cent-an-hour package increase. Second, the union straightened out a grievance for him, even though he was not a member.

So Maley joined and became the kind of member who attends meetings. He served in a procession of posts before being elected the local's secretary-treasurer.

His years as an oil worker remind him of one of the many stereotypes he likes to shatter.

"Everyone talks of unions in terms of strikes, strikes, strikes. I've been out on strike only once in my life—in 1952, when we were out 12 working days in a national oil dispute."

In 1954, Maley got a full-time job as a labor representative with the Texas Employment Commission, through the recommendation of a top officer of the old State CIO Council.

BACK TO UNIONS

The job generally meant being a "troubleshooter" for the TEC on specific cases involving unemployment benefits and other concerns of the workingman.

Convinced that top echelon changes in TEC were making it partial to employers, Maley was glad after 4 years to get the AFL–CIO Council post. Last Februrary he was reelected without opposition.

His office in the Labor Temple at Young near St. Paul is simple, neat, and airconditioned. Its walls are hung with symbols of various causes—pin-stuck precinct maps, for instance, and a picture of the council's big check presentation for the Gonzales Warm Springs Foundation.

On Maley's desk are photos of his three smiling youngsters, who pretty well take up the time of his wife, the former Mary DiStefano, of Lufkin. The family lives at 6737 Patrick Drive in the Hillside area.

And work—late into starlight—takes up husband Maley's time. After a full day's activity, he's more than likely to have a council committee meeting on his hands, or a talk to make to some union.

Also, he serves as a director of the Community Chest and is a charter member of the Texas Society on Aging, which is devoted to geriatrics.

Though work has preempted active participation in fishing and other sports, he occasionally watches a football game or a boxing match.

Political Melting Pots

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1959

Mr. HART. Mr. President, in recent weeks we have witnessed a serious and important debate concerning the appropriate roles which various officials in our Nation's political parties should fulfill in formulating policies for which these parties are to stand. On July 12 the Detroit News printed a thoughtful and interesting editorial entitled "Political Melting Pots" which placed a fresh and useful view on this debate. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Detroit News, July 12, 1959]

POLITICAL MELTING POTS

Democratic liberals and moderates knocking ac othr over the head in a preelection warmup are playing an old political game—as old as the two-party system and necessary to it. Essentially it is the process by which an opposition, always divided, patches up a temporary harmony for the November event on which the party's bread and butter rides.

Much the same thing is now going on among the Social Democrats of West Germany. The surface issue there is not government spending but government policy toward the Soviet Union. But what really worries the Social Democrats, the main opposition German party, is that they are losing ground in the popularity polls.

This fact—this threat to the party members' political livelihood—has set loose the always-present differences of opinion and clash of personalities to be found in any such large grouping. The resulting interparty fight seems to be a struggle of ideas.

In part it is. There are real differences of opinion between left and right, as there are in this country between Northern and Southern Democrats or between "modern" and old-guard Republicans. But the objective of the opponents everywhere is not essentially to make a certain point of view prevail but to find a common and promising ground on which to fight the next election.

Right-thinking people (particularly those belonging to opposing parties) regularly deplore these family squabbles. Yet on them probably depend our liberties. For, contrary to appearances, parties exist to organize agreement, not disagreement.

Our major political battles are waged within, not between parties. Once the Democrats have worked out a formula capable of enclosing Senator BYRD of Virginia, and Senator HUMPHREY, of Minnesota, in the same fold they have of necessity a formula capable of enclosing everybody. And that's the point—the ultimate aim of practical politics.

It is equally apparent that this all-embracing Democratic formula cannot be very different from the one that includes Senator GOLDWATER, of Arizona, and Senator JAVITS, of New York, in the Republican camp. Both parties by stretching to include almost the whole range of American political opinion obviously must come to occupy pretty much the same ground.

This is a good thing, and would be even better if the parties faced frankly the implications. Parties are not the crusaders for ideas; they are the organized support of their candidates. Their attractiveness is in the people they put forward. And that, too, is their usefulness.

Don Antonio and His Friends: New Strength for a Middle Class

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Don Antonio and His Friends: New Strength for a Middle Class," which appeared in Middle America, a quarterly publiaction of the United Fruit Co.:

DON ANTONIO AND HIS FRIENDS: NEW STRENGTH FOR A MIDDLE CLASS

In May of 1958 four Hondurans, longtime employees of the United Fruit Co., met in La Lima to draw lots for a new future. At stake was the division of some 1,200 acres in the Santiago area along the Ulúa River, which flows into that elbow of the Caribbean that seperates Honduras and Guatemala.

Since the floods of 1935 the land had been out of production, accumulating the rich silt deposited by the Ulúa at intervals since then. Now the land was being used to help set up independent farms for four men with 14 to 33 years of experience with the company.

A few things were already certain, no matter how the drawing came out. All four were banana men and would grow bananas on the acreage that chance would allot to them. Each of the four would have a perpetual lease to his land and access to all the technical facilities required by modern banana agriculture: irrigation, electricity and roads, disease control. He would have two tractors and six wagons, a modern home for his family and another for his foreman. Each man would have a guaranteed market for the fruit he raised. He would be his own boss.

But there were questions, too, in each man's mind as Arthur C. Hamilton, UF's assistant manager in the area, passed the hat with the little white slips of paper. From which hill will I look out on the Ulúa? Who will be my next-door neighbor?

Gradually more objective questions came to mind, appropriate to a man of new responsibilities: Will the foreman I want come to work for me? Can we get seeding started by June so as to get a crop before next year's winds?

There were a lot of questions in Hamilton's mind too. Most of them could be boiled down to one question: Will the experiment work?

When the slips of paper were drawn, Antonio Caranza found himself with a farm slightly smaller than the others—just under 300 acres. For him and his wife and two younger children self-employment came like a long-awaited rain: they wanted it, and they knew how to use it.

Born in San Luis, in the Province of Comayagua, young Antonio had managed to finish the first year of commercial high school before going to work in the sugar cane fields that surrounded La Lima in those days. Native ability and a willingness to use it brought him positions of growing responsibility in the company's banana operations.

Today Don Antonio employs an average of 35 men from the nearby villages of San Manuel and Santiago. Although his workers get none of the benefits available to employees of United Fruit, some who had worked with him when he was an overseer for the company have come with him to his new farm. His wife has help in running their airy two-story house and as soon as there is time she will start a kitchen garden in the space available for it. Guy Cantrell, United Fruit's agricultural superintendent in nearly Progreso, stops by at least twice a week to see how things are going and to offer advice.

In seven average years—5 years with luck—they will be free of all the debts incurred in starting their new life. Thereafter a set fraction of the price paid to them by the company for their bananas will be deducted for maintenance of irrigation and disease control services—operations too big for any independent farmer to handle alone.

Fruit harvesting operations began last April. Guy Cantrell now is able to ask, "How many stems can you cut for Thursday? The *Tivives* is loading for New York." Don Antonio cocks his head thoughtfully, gazing into the lush greenery of his bananas as though counting the full stems from memory. He says, perhaps, "Three hundred." Cantrell makes a mental note and those bananas are sold.

They are good bananas and Don Antonio takes pride in them. He hopes that his 16-year-old son, now in school, will decide on an agricultural career and take over some day. (An older son, with the advantages of company schooling, has a job with the National Development Bank.)

Today United Fruit Co. gets approximately 32 percent of its entire banana output from associate growers with whom it is freely contracted, from Guatemala to Ecuador. According to the recent report of the National Planning Association, the average return to the farmer is as much as 50 percent higher than on other croplands where he bears all the costs.

The suspense of that day when the lots were drawn has been replaced by excitement of a different kind. Antonio Caranza and his neighbors at Santiago know that what they are doing is important for Honduras and for all of the Middle America, as well as for themselves. They have recently heard that six more similar farms will be set up on virgin land near the port of Cortés during the coming year.

These independents are proving that Middle America's new middle class can work in a new kind of partnership with foreign enterprise, to the increased benefit of all.

Why the Importance of Water Conservation?

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. ROGERS of Texas. Mr. Speaker, one of the most serious problems confronting the great Southwest is the conservation of underground water. Proper and sound water conservation practices will benefit not only those in areas where they are practiced, but also those far away, whose water table might be adversely affected.

Recognizing the need for informed minds and opinions on this important subject, the Panhandle Underground Water Conservation District No. 3, with headquarters at White Deer, Tex., has again conducted an essay contest, and three high school seniors have been declared the winner, writing on the subject "Why the Importance of Water Conservation?" The first prize was won by Clifford Belcher of Panhandle, Tex. His prize is a $150 scholarship. Under unanimous consent, I include his essay in the CONGRESSIONAL RECORD:

WHY THE IMPORTANCE OF WATER CONSERVATION?

(By Clifford Belcher, Jr., first place winner)

Water has been termed the key natural resource. It sustains life, makes possible agricultural, commercial, and industrial activity, is a source of energy, serves as a medium of transportation and provides opportunities for recreation. On the other hand, water has detrimental attributes: it erodes soil, destroys life and property through floods, impairs the utility of land when drainage is inadequate, and menaces health when it is polluted or when it serves as a breeding place for disease-carrying insects. The overall water problem is that of obtaining the desired benefits from water resources and of minimizing the hazards associated with water. This problem confronts individuals and groups; it is a matter of concern to many levels of government.

There are indications that water problems will demand increasingly greater attention of the Texas Legislature. Important factors are the mounting pressures upon available water supplies by increasing population and growing commercial, industrial, and agricultural activity. It has been estimated recently that water use in the United States will show the following increases by 1975: Municipal and rural use, 50 percent; irrigation, 25 percent; direct industrial use, 170 percent. Comparable figures are not available for Texas, but in view of the relatively greater rate of growth of population and economic activity in Texas than in many other sections of the Nation, it would be reasonable to expect that estimates of the percentage increase of water use in Texas would be still higher.

The growing demands that water problems of the State be solved will not be easily satisfied. A major difficulty inheres in the complexity and range of such problems. Water resources give rise, not to a single problem, but to numerous problems which are different and yet interrelated. Hardly any aspect of human welfare and activity is unaffected by water resources.

Water is like a living thing. Essentially all of it that is usable is in motion. This

vast circulatory system is known as the hydrologic cycle. In this cycle water evaporates, rises into the atmosphere, is condensed when an air mass rises to pass over another or over a mountain range, and falls as rain or snow.

The hydrologic cycle offers a multitude of approaches toward utilization of water resources. Successive stages of the cycle offer unique opportunities for obtaining benefits. Effective control of water while it is in the clouds may soon be achieved. It may be possible to reduce evaporation losses by impounding water in deep reservoirs with minimum surface exposure. In regions where the rate of evaporation is especially high, it may be advisable to seek underground storage reservoirs. Losses due to transpiration can be reduced by destroying useless vegetation consuming huge amounts of water. By means of land use practices designed to retard runoff of water into rivers, the usefulness of water on the land where it falls as precipitation can be prolonged, the harmful effects of erosion can be reduced, and the threat of floods can be minimized.

While methods of controlling water after it has reached rivers are well known, there are also less fully appreciated opportunities for extracting benefits from water underground. Water which has been diverted for use in irrigation and industrial processes can be utilized more efficiently. Even after water has returned to oceans, it may someday serve man's needs for fresh water when economical methods of converting salt water to fresh water are devised.

It is physically possible to increase substantially the capacity of Texas water resources to furnish desired benefits. The only physical limitation is the quantity of usable water in Texas. According to one estimate, not more than one-tenth of the water which could be made available in Texas is being used. With present knowledge about the water resources of Texas and with available professional skills, much more development could be accomplished. It is also reasonable to expect further events of advances along those lines. In particular, the discovery of additional ground water reservoirs and the perfection of techniques for obtaining greater benefits from such reservoirs may be achieved in the future.

Nearly all water now being used in the Texas high plains is pumped from the ground. Most of it comes from the sands and gravels of the Ogallala formation, which contains a vast supply of water except in places where the formation is thin. Perhaps the most significant characteristic of the Ogallala formation is its isolation from other waterbearing formations, which is due to its location in the upper part on the plateau, above the surface of the surrounding land. Consequently, the recharge of this formation is dependent upon rain which falls upon the plateaus. Due largely to evaporation and transpiration, hardly any of the annual rainfall of 20 inches reaches the formation. In the absence of pumping, the natural discharge at the edges of the plateau is about equal to the natural recharge. In view of these hydrologic conditions, pumping withdraws water which is not being replaced by nature. Hence the pumping of ground water in this area is said to amount to mining a nonrenewable resource. It appears inevitable that the recoverable water stored in the Ogallala formation will be exhaused or that water levels will decline to the point where it will no longer be economical to pump. That time may not be many years away.

Various estimates have been made of the amount of fresh underground water in storage in Texas, but all such estimates are likely to be incorrect because of lack of basic data. The major underground water formations have not been studied sufficiently, and most of the minor formations have had no quantitative study.

Except for the depletion of storage accumulated over the centuries, the rate at which underground water can be withdrawn perennially through wells is limited to the amount of natural discharge that can be intercepted—the natural discharge being that water now feeding the base, or low, flows of the streams and being lost from the water table by evaporation and transpiration. Probably a large part of the underground water feeding low flows to the streams can be intercepted, but this of course will deplete the streamflow. It may be justified as a man's means of diverting the water at more convenient places, but does not represent a supply of water in addition to that measured in streams.

It is well known that water resources in their present state of development are failing to satisfy the desires of people in many parts of Texas. Greatest concern is being manifested about the inadequacy of water supplies for municipal, irrigation, and industrial uses. The rapid expansion of the population and economy of Texas in recent years has been accompanied by one of the most severe droughts in history. Many cities have been forced to ration water and to consider methods for obtaining additional supplies. Water has not been readily available to irrigate many acres of land which were irrigated in the past, and much other land could be made productive if irrigation water were furnished. It is reported that water scarcity has kept several industrial concerns from establishing plants in Texas.

Population growth alone, though great, causes only a very small portion of the increased demands. It is not the amount of water the individual uses for himself but the amount he uses in providing goods and services for others that causes the greatest demands. Agriculture and industry use large amounts of water.

Some of the most troublesome Texas problems occur in connection with the production of oil and gas. Salt water extracted with oil is commonly stored in large earthen tanks from which seepage and overflows pollute streams. The physical solution appears to be the return of salt water by injection wells to the underground formations from which it was pumped, but this method of handling the problem is expensive. When both fresh and salt water strata are pierced by oil and gas wells, there is danger of polluting the fresh water. This threat is minimized by proper casing of oil and gas wells and plugging abandoned wells.

The failure of many Texas cities to treat sewage adequately before discharging it into streams is another major source of pollution. While most cities in Texas have facilities for sewage treatment, many of these works have become overburdened as cities have grown. The cost of constructing adequate facilities appears to be the principal obstacle.

Many land and water problems of grave importance confront irrigation agriculture today. In many areas there is more land suitable for irrigation than can be irrigated with the amount of water available. Yet over spread sections less than half of the water applied to the land actually benefits growing crops. Delivery of irrigation water in open ditches contributes heavily to water loss which may be as much as 70 percent. Most of it is due to seepage. On many farms a different method of irrigating is needed. Irrigation systems need to be studied in an effort to improve water delivery and cutting down seepage losses can be reduced by lining canals, using closed conduits, and controlling weeds in the canals and ditches.

Large quantities of water are also used for hydroelectric power, but this water is neither consumed nor polluted, and it use for power generation usually is supplemental to other uses. Industry's use of water is illustrated by the fact that it takes 70,000 gallons to make 1 ton of high-grade paper, 65,000 gallons to process a ton of highly finished steel, and more than 1,000 gallons to slaughter and process a hog. Air conditioning is another new use which makes heavy demands, and in the future these demands will probably increase. Increasing use is not the only difficulty. Hot weather and dry weather usually come together so that irrigation, heavy municipal and industrial use, and air conditioning all occur simultaneously with the critical period for supply. This is also the time of year when streamflow and watershed runoff are usually at their lowest and evaporation is at its highest.

Increased consideration is being given by engineers and geologists to the possible storage of surface water in natural underground reservoirs and especially in areas where heavy pumping is taking place. Two general methods are used, water spreading and the use of recharge wells. Artificial recharge through wells seems to be successful only in direct proportion to the conditioning of the water that is to be put into these underground formations.

Engineers have developed water treatment practices to the point where almost any kind of water, through one or more processes, can be reclaimed for certain uses. Treatment for reuse of water should be the goal. Engineers have developed water treatment practices, but the economics involved may make it impractical for grossly polluted water. Keeping municipal and industrial waste out of streams and absorbing them on land, or evaporating them, may not be the most desirable answer to water-short areas. Land absorption and evaporation of sewage as a means of disposal usually dissipate water as a resource. In order to maintain water supplies, this should not be promoted in water-short areas, even though it is more expedient to evaporate the sewage than it is to build a treatment plant and release the water for downstream users. In Germany the waters of the Rhine River are used and reused many times, the only limit being an ultimate salt concentration that renders the water finally unusable. This practice will come to be used more as demands for water exceed the amount that nature provides.

We shall have to learn to use water more efficiently and economically than we have in the past. We must stop the waste of water in homes, agriculture, cities, industry, and at the points where waste can be prevented. We must bring about reuse whenever possible. An expanded system of storage and flood control reservoirs must be employed. Water can be trapped in times of and used to carry us through periods of low supply. The amount of water actually needed to do a job efficiently may be considerably less than the amount we have been using. Efficiency and economy in use of water will determine Texans' success in water conservation.

Sugar Beets in the Red River Valley

EXTENSION OF REMARKS

OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. LANGEN. Mr. Speaker, because of the great volume of mail that has

come to my office expressing concern for the development and progress of the production of beets and the sugar beet industry throughout the Red River Valley, I take this means of conveying to Congress the significant part that the production of sugar beets plays in the economic stability and opportunity for the Red River Valley.

All of us, of course, are greatly concerned with the agricultural problem that confronts this Nation. In my humble opinion, there is not any crop which has as great a future potential for an improved agricultural economy as that of the production of sugar beets to the Red River Valley. The very fertile soil, climatic conditions and available labor necessary in the production of beets, are all available in abundant quantities. Possibly just as important is the fact that sugar beets is a crop that is raised as a row crop and for this reason, has a real importance to this area in the control of weeds and adds a great deal to the diversity of farming throughout the valley. These are facts that have certainly been well established during the last decade as the sugar beet industry and production have grown and prospered.

The valley now has three processing plants located at East Grand Forks, Moorhead, and Crookston, that accommodate the production of over 90,000 acres. These 90,000 acres, located in northwestern Minnesota and northeastern North Dakota, mean a gross average annual income of well over $13 million. However, this is only a small part of the potential for expanded production of sugar beets, as is so clearly indicated by the continuous desire on the part of farm people in the area to raise additional beets. During the last year there were 3,517 actual signed applications requesting beet acreages totaling 44,916 acres. Of these requests, under present limitations, it was only possible to grant an acerage of 460 acres to 18 new growers. This means that 99 out of every 100 applications had to be turned down. There might well have been requests for an additional 30,000 acres but for the fact that so many of the farmers felt that it would be only a futile effort to complete the applications. There is, as well, a great desire on the part of farmers now producing beets that they might be permitted to expand their acres. For, during the past years they have experienced reductions in their sugar beet acreage allotments. It is somewhat difficult for the farmers to understand this curtailment in the production of a crop in which we, as a Nation, produce only 30 percent of our needs.

May I take just a moment to further point to the significance that this implies to the agricultural and economic future of the Red River Valley. The production, or the growing of an additional 70,000 acres of beets would mean an additional gross income to that area of over $10 million annually. Just as significant is the fact that the production of sugar beets, which has grown to be highly mechanized in the past years, requires a great deal of machinery. The sale of these necessary implements and equipment would be of substantial benefit to the welfare of implement dealers and business enterprises throughout the many small towns. These small towns are presently having a difficult time surviving with the reduced farm income. The job opportunities that would be provided would, of course, add to the strengthening of the entire economy. Surely these are points to which we would want to give our most sincere consideration as we ponder the possible solution to the agricultural problem and the economic future of our States and Nation.

It is my hope that Congress, in its wisdom, may give adequate consideration to the potential of production of sugar beets in the Red River Valley as we direct our attention to the controversy that presently exists regarding the renewal of the Sugar Act. Not only will expanded production of sugar beets improve the gross income of farms in the Red River Valley, but it has the further potential of reducing the production of other crops which presently are in surplus and are depressing the markets.

The Department of Agriculture has just announced an 8 percent reduction in farm income for the first 6 months of 1959. This is a further indication of the need for Congress to consider every possible avenue of approach to deal in a realistic manner with the agricultural problem.

Each of these points have been substantially emphasized by the mail that I have received from so many farm people throughout the Red River Valley.

Navy Correspondence Course Center in Scotia, N.Y., Provides Education for Hundreds of Thousands of Naval Personnel

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. STRATTON. Mr. Speaker, one of the most important agencies of the U.S. Navy is the U.S. Naval Correspondence Course Center which is located at the Navy Supply Depot in Scotia, N.Y., within my district. This highly efficient organization at the present time is conducting one of the most effective and far-reaching educational programs ever to be carried on. As a result of its activities more than 181,000 students throughout the Navy and the Naval Reserve are improving their education. Only 2 short years ago this correspondence course center moved into my district from an area closer to metropolitan New York City. Since coming here, I am informed its efficiency has increased and its effectiveness has been enhanced, a fact which is certainly a tribute to the splendid atmosphere in which naval activities are carried on in the 32d Congressional District of New York.

The announcement last fall that the Navy was planning to close down the naval supply depot at Scotia, with an attendant loss of some 675 jobs, came as a heavy blow to the community of Schenectady, already hard hit by unemployment. Nevertheless, we were gratified to learn that at least this action did not involve any transfer or disestablishment of the naval correspondence course center, which will continue to be located in Scotia even after the formal disestablishment of the depot itself.

Mr. Speaker, I was greatly impressed recently with a summary of the job which the correspondence course center is doing which appeared in the Navy Times for July 18, 1959. I believe that this summary will be of interest to every Member of Congress, as well as to people throughout the Nation. In fact, when they have had a chance to read how efficiently this job is performed in Scotia, I also hope that the leaders of our Defense Establishment will recognize the folly of their decision in closing down an equally efficient operation at the Scotia Navy Supply Depot.

Under leave to extend my remarks, I include this article, prepared by Lt. (jg.) George S. Durland, USNR, of Scotia, N.Y.:

[From the Navy Times, July 18, 1959]

NAVY EDUCATION FOR A STAMP

(By Lt. (jg.) George S. Durland, USNR)

SCOTIA, N.Y.—The new Naval Correspondence Course Center can be found in this small village, just outside the city of Schenectady. From offices in the administration building at the supply depot here, the hardworking staff of 17 officers, 87 enlisted men, and 127 civilians administers courses for more than 181,000 students now enrolled at the center.

The center's learn-by-mail students are varied and scattered around the world. You'll find admirals, seaman apprentices, Army personnel, Air Force personnel, foreign naval officers, reservists, and civilians employed by the Department of Defense, all enrolled in at least one of the many courses offered.

Officer in charge is Comdr. Fred P. McDaniel, USN, and assistant officer in charge is Lt. Comdr. William R. Wright, USN. The center is under the management control of the Bureau of Naval Personnel. However, these officers and their staff are directly responsible for administering the 340 courses offered by the center.

The Navy's correspondence course program deals with professional subjects which are for the most part only of interest to Navy and Coast Guard personnel who also participate in the naval correspondence course program. This is in contrast to USAFI courses, such as history or languages, which are of interest to anyone.

Another contrast is that an entrance fee of $5 is charged for the first course by USAFI, while the center's courses are free.

Because of their specialized nature, naval correspondence courses aren't taken by many personnel of the other services. But despite this, and despite the fact that the Army, Air Force, and the Marines have their own correspondence course programs, 1,397 personnel from these services are enrolled in Navy courses. Most are enrolled in basic courses such as mathematics or electricity, or possibly personnel administration or leadership.

An Army or Air Force man can take any Navy course, such as quartermaster third

class or Navy public information, if he has some special reason for wanting it.

How does one enroll in a correspondence course?

If you are an enlisted man on active duty, see your information and education officer and he will give you an application form (NavPers 231) which is to be forwarded via your commanding officer. When the center receives your application, it will forward the course and all necessary materials, including an answer sheet, to your commanding officer. He will designate an officer to grade your assignments and generally help you with the course.

When the course is satisfactorily completed, your commanding officer will make a notation in your service record. This is what is known as local administration of correspondence courses. Any enlisted man can meet his qualification requirements this way or by taking a naval training course administered by his I and E officer, his training officer or his division officer.

The procedure of mailing assignments back to the center for correction is only allowed for inactive duty personnel men assigned to commands with fewer than three officers or for enlisted men and officers taking officer courses. Enlisted personnel requesting center-administered courses should use NavPers Form 580.

If you are a reservist, you can get applications from your unit commander or district comandant. Upon receipt of a properly endorsed application, the center will forward the course to you and establish an enrollment record. You then forward at least one assignment a month to the center in the envelopes provided.

Officers and enlisted men can enroll in an officer course by forwarding an application form (NavPers 992) to the center whereupon the center will establish an enrollment record and forward all materials necessary for completing the course. Enlisted men must have their commanding officer's permission to take an officer course.

All enrollment applications should be made out carefully and completely, typewritten if possible. Many applications have to be returned for lack of information and on others the name of the student or the address can't be read which means the application can't even be returned for clarification. Remember the center handles hundreds of thousands of courses.

As a matter of fact, during the year from May 1, 1958, through April 30, 1959, over 800,000 courses were mailed out to students.

Let's follow enrollment application and see what happens to it at the center.

The mail room receives about 10,000 pieces of mail daily, not counting book returns. Much of this mail consists of enrollment applications—about 3,000 each day. All applications are routed from the mail room to the enrollments branch. Here they are checked for accuracy and completeness of information.

If an application is for a locally administered course, the 231 form, the course and answer sheet are forwarded immediately and no record is kept by the Center.

If the application is for an officer course or for an enlisted course to be administered by the center the application is stamped with the date that materials are mailed and then routed to the posting branch.

In the posting branch, the application, which is also a student's course status record, is filed on a Simpla-wheel. A Simplawheel is a special type of rotating file made especially for holding large numbers of record cards. Each wheel can hold approximately 10,000 to 12,000 enrollment cards. Each card is filed alphabetically according to course title. Each wheel holds from 3 to 14 courses, depending on the number enrolled in each course.

For example, submarine periscopes has only two enrollees while military justice in the Navy has 12,492 enrollees. This is why it is so important for anyone writing to the center asking about some aspect of a course to give the title of the course so that the center can find the writer's enrollment record. The center receives many letters inquiring about the status of a course with the writer neglecting to mention the course title or number.

After you have submitted your application and it has been processed by the center, the course you have requested will be sent to you complete and free of charge. There are, however, temporary shortages of course materials now and then, so officers are requested to list second choices. When a course is temporarily out of stock, applications are held on file and the courses forwarded as soon as they become available. Cards are sent to all applicants stating that the courses will be sent as soon as they are available.

When you receive your course, you will find a text or texts, an assignment booklet with instructions, and all necessary material for completing the course.

In most courses, the book return receipt (NCCC 86 Form which is returned to the center when books are returned) and all assignment sheets are an integral part of the assignment booklet.

A number of assignments in Navy correspondence course varies from one to 17. Each assignment contains a varying number of objective questions such as multiple choice, true-false and matching. Answers are marked on the separate answer sheets and each marked sheet is returned to either the appropriate training officer or to the center in one of the pre-addressed envelopes provided.

Since correspondence courses are not tests, they can be worked with open texts. Don't let this throw you. Many questions are still answered incorrectly.

Now that we know what happens to an enrollment application and you have received your course, let's find out what happens to an assignment sheet when it is submitted to the center for correction.

The center grades about 1½ million assignments yearly and between 5,500 to 6,000 assignments are received daily in the center's mailroom. Here they are opened and sorted according to course numbers. From the mailroom the assignments are forwarded to the grading branch where they are placed in a rack containing a shelf for each course. An assignment may remain in the rack a few days, depending on the workload at the time. The assignments are removed from the rack chronologically and each assignment sheet is graded by hand, using a template.

There has been a template constructed for each assignment of every course the center administers with the exception of some of the law courses which are essay types. The templates fit directly over the assignment sheets and enable the graders to determine at a glance the questions which have been answered incorrectly and also enable them to write in references next to the incorrect answers and to assign a grade to each assignment. The passing grade is 3.4 for officer courses and 3.2 for enlisted courses.

After an assignment has been graded, it is alphabetized according to course number and forwarded to the posting branch. In the posting branch, assignments are posted to the students' enrollment records and returned.

When a course has been completed (all assignments posted to the enrollment record), the record is removed from the Simpla-wheel and forwarded to the statistics branch which assigns a grade for the course, stamps and returns the last assignment, and counts each card so that an up-to-date record of the number of students enrolled in each course is readily available.

From the statistics branch, the enrollment card goes to the files branch where it awaits a book return (86 form). Upon the return of the course material, the enrollment card goes to the terminations branch where a completion letter is typed and sent to the student.

Completion letters are sent directly to enlisted personnel and USN officers. For Reserve officers, completion letters are sent via the Reserve Officer Recording Activity in Omaha, Nebr.

RORA keeps all Reserve officer training records and is responsible for recording promotion and/or retirement points. For Reserve officers, the assignment of a course which comprises a 12-point unit is forwarded to RORA and points assigned as of the date the assignment was mailed. Officers should allow 4 to 6 weeks for completion letters and assignments which are forwarded to RORA.

Five of the officer courses are classified and a Reserve officer on inactive duty has a special procedure to take one. To enroll he must submit an application via the command holding his service jacket. The center will issue a classified course to this command which can, at its discretion, forward the course to the command nearest the enrollee.

Enrollees should keep in mind that it takes longer for the center to process courses for completion around promotion time and at the end of the fiscal year because of the greatly increased workload at these times.

What happens if you fail a course the first time through? All students are informed of failing assignments and these assignments are retained by the center until the course is completed. If the final course average turns out to be satisfactory, all failed assignments are returned.

If the final course average is unsatisfactory, the center will forward blank answer sheets and the failed assignments can be reworked. Grades assigned reworked assignments are the minimum passing grades (3.2 for enlisted courses, 3.4 for officers), regardless of the actual passing grade which may have been attained.

If upon resubmission, the course is satisfactorily passed, a completion letter is issued. If a course is failed upon resubmission, a letter of participation is issued.

Why are so many students enrolled in correspondence courses? The Navy's correspondence course program was started in 1932 and has been enlarging ever since.

In 1954, the Navy started a promotion plan for officers which greatly increased the program. This plan required Regular and Reserve officers to pass professional examinations in order to be eligible for promotion. They could, however, bypass the exams by taking resident courses at Navy schools or by completing a required number of correspondence courses. This resulted in many officers enrolling in correspondence courses. Enlisted men must take certain training courses to be eligible for advancement in rate. In many cases this training is received in the form of Navy training courses given by I and E officers and division officers. However, the majority of enlisted men receive their training through correspondence courses.

Reservists earning promotion and retirement points also account for many enrollments.

Since July 1, no professional examinations are given for the promotion of officers. Resident courses at a Navy school or correspondence courses will still be required and most correspondence courses will contain an end-of-course examination. BuPers Instruction 1416-1E of March 9, 1959, states:

"(a) End-of-course examinations will be prepared as an integral part of most correspondence courses listed in enclosure (4).

"(b) These examinations will be developed from the correspondence course text material and will be given under closed-book, monitored conditions.

"(c) Officers on active duty who complete a correspondence course subsequent to June 30, 1959, will be required to pass the examination, if available, before the course will be creditable for promotion credit under this instruction.

"(d) Officers who complete a correspondence course prior to July 1, 1959, will be granted promotion credit for that course without completing the examination.

"(e) Instructions for ordering and administering end-of-course examinations will be promulgated with the correspondence courses. Instructions for safeguarding examination material are promulgated in reference (c) or the "Security Manual for Classified Information," as applicable.

"(f) Correspondence courses satisfactorily completed by officers not on active duty satisfy professional requirements as stated herein, and end-of-course examinations will not be required for such courses. Upon reporting for active duty, these officers will continue their professional study in accordance with the requirements outlined herein for their grade and designator.

"(g) Officers receiving an unsatisfactory mark for an end-of-course examination will be reexamined. If an unsatisfactory mark is again received, action will be taken in accordance with the provisions of reference (a).

"(h) Where an end-of-course examination is not offered as an integral part of a correspondence course, course completion without examination will be accepted as meeting promotion requirements. Possession of a certificate of satisfactory completion will indicate that the course was satisfactorily completed."

All of the activities and personnel at the center are organized into four departments—Administration, Student Services, Extension, and Fiscal.

Of the 87 enlisted men in these departments, storekeepers and yeoman rates are the most common, with 16 and 14 men, respectively. About half of the personnel are in pay grades E–5 and E–6.

There are no messing facilities available and housing facilities on the station are limited to a small trailer park and a few quarters. Therefore, most of the men and officers find living quarters in the surrounding community.

The Administration Department performs the services common to all naval units, such as central filing, personnel management, and the control and routing of all correspondence. The Administration Department also has charge of records disposal and forms control. This Department is headed by Lt. Matthew L. Mayer, USNR.

Student Services Department, under Lt. Comdr. Florence L. Erickson, USN, performs the real function of administering courses to the students. This Department enrolls students, makes up the courses, controls the stock of courses, grades assignments, posts assignments, files, enrollment records, and answers all correspondence pertaining to the status of correspondence courses.

The Fiscal Department under Lt. Robert W. O'Conner (SC), USN, prepares the center's annual budget, controls center funds, provides logistic support to the center, and is also in charge of household goods and disbursing.

The Extension Department is headed by Lt. William W. Patterson, USN. Its job is to review new courses, recommend revisions to courses, prepare error analyses of courses, and answer all technical questions written by students.

In an error frequency analysis, for example, if a high percentage of students seem to be missing the same question on an assignment, the Extension Department will analyze the question and the text. Many times this will show that the text was not very clear or that the question was ambiguous. The Extension Department will then recommend a revision to the Bureau of Naval Personnel.

Many students write in disagreeing with answers. Most disputes are caused by a misinterpretation of the text or the misunderstanding of a definition. Also, many disputes are caused by purely mechanical errors in solving problems or the misreading of the text or question.

Most technical queries can be answered simply by citing more references in the text or by working out the solution of a problem; however, some questions become quite involved and the "instructor" and student sometimes get into a very lengthy "discussion by mail."

The center's fan mail from students comes in all shapes, forms, sizes, and languages. Many students just grab the piece of paper nearest at hand and scribble a note. Recently the center received correspondence in Spanish and Portuguese.

Some of the correspondence received reads like this letter from a disgruntled officer: "This is the worst course I have attempted to date. The answers are so intricately involved in the phraseology of a difficult text that it is almost imposisble to keep your mind on the course."

For every one of those, there are dozens that read like this one: "I want to take this opportunity to thank you for the fine job you did in getting my final assignments to me. I was very much surprised to receive them in this afternoon's mail. I never thought the Navy or the postal service moved quite so rapidly. It certainly is gratifying to know that the Correspondence Course Center will help out a person in a tight spot."

Then there was this letter from a chief who was writing about the naval leadership course: "I really enjoyed the course. It will be a great help to me in understanding myself and the men in my crew. I only wish I had known of its existence earlier.

"In my opinion, the Navy would benefit if more enlisted personnel were made aware of this course's availability and content."

This one is from another chief writing about enlisted correspondence course military requirements for petty officer first class and chief: "I wish to congratulate the Correspondence Course Center for the clear and concise manner in which this course has been prepared. In my own experience with this course I found that I was continually engrossed in the subject matter to such an extent that I could not lay the book down for very long at one time. It actually had an appeal to me quite similar to 'Anatomy of a Murder' although of course the subject content is entirely different.

"For this reason I felt compelled to complete this course during this past weekend."

Vice President Nixon's Speech at Opening of American Exhibition in Moscow

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech given by Vice President NIXON at the opening of the American national exhibition in Moscow July 24, 1959. Surely this is one of the finest expositions anyone has ever given anywhere of the true heart and soul and mind of our beloved America. What a pity that the Soviet rulers refused to let it be broadcast in Russian to their people. Our gratitude and commendation go to the Vice President for a splendid job will done.

REMARKS OF THE VICE PRESIDENT OF THE UNITED STATES, RICHARD NIXON, ON THE OCCASION OF THE OPENING OF THE AMERICAN NATIONAL EXHIBITION IN MOSCOW, SOKOLNIKI PARK, JULY 24, 1959

I am honored on behalf of President Eisenhower to open this American exhibition in Moscow.

Mrs. Nixon and I were among the many thousands of Americans who were privileged to visit the splendid Soviet exhibition in New York, and we want to take this opportunity to congratulate the people of the U.S.S.R. for the great achievements and progress so magnificently portrayed by your exhibition.

We, in turn, hope that many thousands of soviet citizens will take advantage of this opportunity to learn about life in the United States by visiting our exhibition.

Of course, we both realize that no exhibition can portray a complete picture of all aspects of life in great nations like the U.S.S.R. and the United States.

Among the questions which some might raise with regard to our exhibition are these: To what extent does this exhibition accurately present life in the United States as it really is? Can only the wealthy people afford the things exhibited here? What about the inequality, the injustice, the other weaknesses which are supposed to be inevitable in a capitalist society?

As Mr. Khrushchev often says: "You can't leave a word out of a song." Consequently, in the limited time I have, I would like to try to answer some of these questions so that you may get an accurate picture of what America is really like.

Let us start with some of the things in this exhibit. You will see a house, a car, a television set—each the newest and most modern of its type we can produce. But can only the rich in the United States afford such things? If this were the case we would have to include in our definition of rich the millions of America's wage earners.

Let us take, for example, our 16 million factory workers. The average weekly wage of a factory worker in America is $90.54. With this income he can buy and afford to own a house, a television set, and a car in the price range of those you will see in this exhibit. What is more, the great majority of American wage earners have done exactly that.

Putting it another way, there are 44 million families in the United States. Twenty-five million of these families live in houses or apartments that have as much or more floor space than the one you see in this exhibit. Thirty-one million families own their own homes and the land on which they are built. America's 44 million families own a total of 56 million cars, 50 million television sets and 143 million radio sets. And they buy an average of 9 dresses and suits and 14 pairs of shoes per family per year.

Why do I cite these figures? Not because they indicate that the American people have more automobiles, TV sets, or houses than the people of the U.S.S.R.

In fairness we must recognize that our country industrialized sooner than the Soviet Union. And Americans are happy to note that Mr. Khrushchev has set a goal for the Soviet economy of catching up in the production of consumer goods.

We welcome this kind of competition because when we engage in it, no one loses—everyone wins as the living standards of people throughout the world are raised to

higher levels. It also should be pointed out that while we may be ahead of you as far as these items are concerned, you are ahead of use in other fields—for example, in the size of the rockets you have developed for the exploration of outer space.

But what these statistics do dramatically demonstrate is this: That the United States, the world's largest capitalist country, has from the standpoint of distribution of wealth come closest to the ideal of prosperity for all in a classless society.

As our revered Abraham Lincoln said "We do not propose any war upon capital; we do wish to allow the humblest man an equal chance to get rich with everybody else."

The 67 million American wage earners are not the downtrodden masses depicted by the critics of capitalism in the latter part of the 19th and early part of the 20th centuries. They hold their heads high as they proudly enjoy the highest standard of living of any people in the world's history.

The caricature of capitalism as a predatory, monopolist dominated society, is as hopelessly out of date, as far as the United States is concerned, as a wooden plow.

This does not mean that we have solved all of our problems. Many of you have heard about the problem of unemployment in the United States. What is not so well known is that the average period that these unemployed were out of work even during our recent recession was less than three months. And during that period the unemployed had an average income from unemployment insurance funds of $131.49 per month. The day has passed in the United States when the unemployed weree left to shift for themselves.

The same can be said for the aged, the sick, and others who are unable to earn enough to provide an adequate standard of living. An expanded program of Social Security combined with other government and private programs provides aid and assistance for those who are unable to care for themselves. For example, the average retired couple on social security in the United States receives an income of $116 per month apart from the additional amounts they receive from private pensions and savings accounts.

What about the strikes which take place in our economy, the latest example of which is the steel strike which is going on? The answer is that here we have a firsthand example of how a free economy works. The workers right to join with other workers in a union and to bargain collectively with management is recognized and protected by law. No man or woman in the United States can be forced to work for wages he considers to be inadequate or under conditions he believes are unsatisfactory.

Another problem which causes us concern is that of racial discrimination in our country. We are making great progress in solving this problem but we shall never be satisfied until we make the American ideal of equality of opportunity a reality for every citizen regardless of his race, creed, or color.

We have other problems in our society but we are confident that for us our system of government provides the best means for solving them. But the primary reason we believe this is not because we have an economy which builds more than 1 million houses, produces 6 million cars and 6 million television sets per year.

Material progress is important but the very heart of the American ideal is that "man does not live by bread alone." To us, progress without freedom to use a common expression is like "potatoes without fat."

Let me give you some examples of what freedom means to us.

President Eisenhower is one of the most popular men ever to hold that high office in our country. Yet never an hour or a day goes by in which critcism of him and his policies cannot be read in our newspapers, heard on our radio and television, or in the Halls of Congress.

And he would not have it any other way. The fact that our people can and do say anything they want about a Government official, the fact that in our elections, as this voting machine in our exhibit illustrates, every voter has a free choice between those who hold public office and those who oppose them makes ours a true people's Government.

We trust the people. We constantly submit big decisions to the people. Our history convinces us that over the years the people have been right much more often than they have been wrong.

As an indication of the extent of this freedom and of our faith in our own system, 40 hours of radio broadcasts from the Soviet Union can be heard without jamming in the United States each day, and over a million and a half copies of Soviet publications are purchased in our country each year.

Let us turn now to freedom of religion. Under our Constitution no church or religion can be supported by the state. An American can either worship in the church of his choice or choose to go to no church at all if he wishes. Acting with this complete freedom of choice, 103 million of our citizens are members of 308,000 American churches.

We also cherish the freedom to travel, both within our country and outside the United States. Within our country we live and travel where we please without travel permits, internal passports, or police registration. We also travel freely abroad. For example, 11 million Americans will travel to other countries during this year, including 10,000 to the Soviet Union. We look forward to the day when millions of Soviet citizens will travel to ours and other countures in this way.

Time will not permit me to tell you of all the features of American life, but in summary I think these conclusions can objectively be stated.

The great majority of Americans like our system of government. Much as we like it, however, we would not impose it on anyone else. We believe that people everywhere should have a right to choose the form of government they want.

There is another characteristic of the American people which I know impresses itself on any visitor to our country. As Mr. Mikoyan and Mr. Kozlov both pointed out after their visits to the United States, the American people are a peace-loving people. There are a number of reasons for this attitude: As this exhibition so eloquently demonstrates, we Americans enjoy an extraordinarily high standard of living.

There is nothing we want from any other people except the right to live in peace and friendship with them.

After fighting two world wars we did not ask for or receive an acre of land from any other people. We have no desire to impose our rule on other lands today.

Our hearts go out to Mr. Khrushchev who lost a son, to Mr. Kozlov who lost two brothers, and to the millions of other Soviet mothers and fathers, brothers and sisters, sons and daughters who mourn for their loved ones lost in defending their homeland.

But while it is generally recognized that the American people want peace, I realize that it has sometimes been charged that our Government does not share the attitude of our people. Nothing could be further from the truth.

For 7 years I have sat in the high councils of our Government and I can tell you that the primary aim of our discussions has been to find ways that we could use our strength in behalf of peace throughout the world.

Let me tell you of the background of some of those who participate in our policy discussions. The Secretary of State lost his brother in World War I. I saw boys as close to me as brothers die on barren islands 4,000 miles from home in World War II. No man in the world today has more knowledge of war and is more dedicated to peace than President Eisenhower.

Those who claim that the policies of the American Government do not represent and are not supported by the American people are engaging in a completely inaccurate and dangerous from of selfdeception. Any administration which follows policies which do not reflect the views of our people on major issues runs the risk of defeat at the next election. When our elected officials cease to represent the people, the people have the power to replace them with others who do. The reason the leaders of both our major political parties are united in supporting President Eisenhower's foreign policy is that they are reflecting the views of a people who are united behind these policies.

The Government and people of the United States are as one in their devotion to the cause of peace.

But dedication to peace, good will, and human brotherhood should never be mistaken for weakness, softness, and fear.

Much as we want peace we will fight to defend our country and our way of life just as you have fought so courageously to defend your homeland throughout your history.

The peace we want and the peace the world needs is not the peace of surrender but the peace of justice, not peace by ultimatum but peace by negotiation.

The leaders of our two great nations have such tremendous responsibilities if peace is to be maintained in our time.

We cannot and should not gloss over the fact that we have some great and basic differences between us. What we must constantly strive to do is to see that those differences are discussed and settled at the conference table and not on the battlefield.

And until such settlements are agreed to, our leaders must exercise the greatest restraint, patience, and understanding in their actions and their statements. They must do nothing which might provoke a war no one wants.

The fact that one of us may have a bigger bomb, a faster plane, or a more powerful rocket than the other at any particular time no longer adds up to an advantage. Because we have reached the point in world history where the Bibical injunction "they that take the sword shall perish with the sword" is literally true today.

The nation which starts a war today will destroy itself. Completely apart from any retailiatory action which might be taken by a nation which is attacked, the deadly dust from radioactive bombs used in an attack will be carried by the winds back to the homeland of the aggressor.

With both of our great nations holding this terrible power in our hands neither must ever put the other in a position where he has no choice but to fight or surrender. No nation in the world today is strong enough to issue an ultimatum to another without running the risk of self-destruction.

The Soviet exhibition in New York and the American exhibition which we open tonight are dramatic examples of what a great future lies in store for all of us if we can devote the tremendous energies of our peoples and the resources of our countries to the ways of peace rather than the ways of war.

The last half of the 20th century can be the darkest or the brightest page in the history of civilization. The decision is in our hands to make. The genius of the men who produced the magnificent achievements

represented by these two exhibitions can be directed either to the destruction of civilization or to the creation of the best life that men have ever enjoyed on this earth.

As I have said on previous occasions, let us expand the idea of peaceful competition which Mr. Khrushchev has often enunciated. Let us extend this competition to include the spiritual as well as the material aspects of our civilization. Let us compete not in how to take lives but in how to save them. Let us work for victory not in war but for the victory of plenty over poverty, of health over disease, of understanding over ignorance wherever they exist in the world.

Above all, let us find more and more areas where we can substitute cooperation for competition in achieving our goal of a fuller, freer, richer life for every man, woman, and child on this earth.

The Wheat Problem

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. SMITH of Kansas. Mr. Speaker, as I have so often pointed out, the basic problem confronting the wheat farmers of the great winter wheat-producing area comprised of the States of Kansas, Nebraska, Oklahoma, Colorado, and Texas, is that of surpluses.

These States are historically, commercial wheat-producing States. Wheat has been their lifeblood since the time they were first settled.

The present farm program has encouraged States east of the Mississippi River to engage in the production of winter wheat, a crop that was never general grown in that section of the United States. This production has in large measure been responsible for the present critical surplus situation.

The present program for wheat will continue to complicate the problems of the High Plains wheat farmers simply because it provides no way of relieving the accumulating surpluses.

The comercial wheat-producing area has been extended to cover most of the United States, thus limiting the acreage that rightfully belongs to the historical wheat-producing areas of Kansas and its neighboring States.

Congress has for many years been trying desperately to find a solution, one that would provide the protection to wheat farmers they justly deserve—especially those in the summer-fallow region where income from wheat is the principal factor in the economy.

I hope all my colleagues, especially those from the States mentioned above, will take a few minutes of their time to read and carefully weigh in their minds some comments made by Mr. Lud Strnad of Brewster, Kans., in an article appearing in the Sherman County Herald of Goodland, Kans., no July 16, 1959, on the wheat problem.

Mr. Strnad is a real wheat farmer who is thoroughly familiar with and highly qualified to comment on the serious situation confronting our agricultural economy. He has, in my opinion, stated accurately the reasons for the failure of Congress to pass satisfactory legislation for wheat.

Mr. Strnad's comments follow:

Lud Strnad of Brewster, Kans., a commercial wheat grower, states:

"I'm going to vote 'No' on July 23 in the wheat referendum. In the past I always voted 'Yes.' This 'No' vote on my part comes about after considerable thought.

"Wheat farmers need some kind of a program, and in the not too distant future, one will be evolved. But before a successful program is worked out, several things must happen. The things that must happen will not be enacted by Congress. Farmers will do this on their own.

"First, before a wheat program can work the now established commercial wheat area must be redefined. The only way to find out what area of the United States really raises wheat and should be called commercial wheat area is to find out what areas can sell wheat cheap. And/or what areas will continue to raise wheat even though the price is 50 cents per bushel.

"My reason for saying this is simple. In 1938, when the farm program was first enacted about three-fourths of the United States was not considered wheat area. Now only nine States are not in this commercial area. Naturally, the Ohio Congressmen, and there are 24 of them, will not vote to take wheat allotments from Ohio farmers. Nor will the 36 New York Congressmen do that. Yet, these States were not considered wheat States in the early farm program days.

"Ohio has more Congressmen than Kansas, Oklahoma, Colorado, Wyoming, Nebraska, etc. combined. What then will keep the eastern farmers from producing wheat. The answer is price.

"Let me explain. Even as close as Topeka, wheat was $1.65 on Saturday, July 13. Brewster price was $1.74. Actually, adding freight, there is a difference of almost 30 cents. The Topeka wheat is not going on the market because the loan there is close to $1.80. The same is true in Indiana or New New York. Some wheat was always produced in the eastern areas, but the price controlled the acres. It was more profitable to sell corn than wheat. Now, the wheat in these areas goes into loans, and the power of Congressmen in those areas keep taking our acres from us. After all, Congressmen from those States are politicians.

"I've talked to hundreds of farmers from all sections of the country. My wife and I travel quite a bit. In Springfield, Ill., last spring, I talked to several farmers. Corn averages 100 bushels per acre. At $1.06, this equals $106 per acre; 30 bushels of wheat at $1.80 is $54.00.

"'Well, why do you plant wheat?' I asked. The answer was, 'I know I make more money on corn, but with wheat loans at $1.80, I get part of my income in July and the rest in November.'

"'Suppose wheat went down to a dollar, would you still raise wheat?'

"The answer was, 'Hell, no. Not with corn at $1.06.' 'If wheat goes down, won't corn do the same?' The answer was, 'Oh no. We voted to peg corn at a good price. We'll keep our corn program.'

"Wheat is a commercial crop only in the High Plains area. Regardless of low price, it would still be raised there. We can't produce anything else. Congress would have no problem with allotment demands from Ohio, or elsewhere, outside of the High Plains, at lower wheat prices.

"We'd have to forget black hull wheat. Only good wheats could be seeded, only those the market demands.

"Sure, a lot of us would get hurt. Yet, we're being cut to pieces anyway, a little at a time. Ohio would get tired of low priced wheat (which would take only 1 year), we could then go to Congress and ask for and get a wheat program for wheat farmers of the High Plains.

"On their own, the eastern farmers must stop producing wheat. Congress will never pass laws to compell them to do so. Price will do the job.

"My remarks are brief, because of newspaper space. I'll answer any and all questions on the above.

"When you vote on July 23, vote any way you please. I'm only telling you why I'm voting 'No.'—LUD STRNAD."

Inflation's Cost to Washingtonians Reported in Study

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mrs. MAY. Mr. Speaker, I feel that if the public is to fully appreciate the danger of inflation, this danger must be spelled out in terms of what it means to each individual pocketbook. Very recently an excellent study of what inflation costs residents of the State of Washington was made by the National Association of Manufacturers, and was carried in the Yakima Daily Republic and other newspapers in the State.

I believe the NAM study has gone a long way toward making the public aware that here is a real threat to our security, a threat that is one we must face now, for later will most certainly be too late. The following is the story:

[From the Yakima (Wash.) Daily Republic, July 10, 1959]

STATE'S INFLATION COSTS SET AT $3½ BILLION IN 8 YEARS

PORTLAND.—Inflation filched $3,602,400,000 in spendable income from pockets of Washingtonians between 1947 and 1955, according to National Association of Manufacturers' researchers.

The multi-billion-dollar after taxes loss to Washington residents in 8 years is reported in NAM's latest study, "The High Cost of Inflation in the 11 Western States."

Washingtonians can view the loss on a very personal basis, as the sum referred to is lost individual income. It does not include sums lost to Government and industrial budgets through inflation.

Difficult to grasp the size of $3½ billion dollars?

The sum, at current construction costs, would build a total of nearly 4,450 new, 30-room elementary schools in Washington, or a total of 1,045 new, 75-room high schools. That would provide 17 new elementary schools or 4 new high schools for each of Washington's 259 incorporated towns and cities.

Such a school construction program exceeds the most grandiose building plans, of course, as only 39 of Washington's 259 incorporated communities have populations exceeding 5,000 and Tenino—population 1,030—is considered median-sized for the State.

The same $3½ billion would build one 600-bed hospital in each of Washington's

incorporated communities, including Hatton—population: 58.

The loss to Washingtonians through inflation is measurable in still another monumental way:

Visualize a first-class highway entirely around Washington's 1,460-mile border. Then, double the highway's width. And finally, add a third parallel highway along the State's southern and eastern borders.

That amount of highway could have been built, at the going rate of $1,098,585 per mile, with the money that Washingtonians lost to inflation between 1947 and 1955.

The schools, the hospitals and the highway projects are strictly imaginary, but inflation's cost to Washingtonians is very real.

In fact, Western Highway Institute says that Washingtonians' spendable income loss to inflation during 1947–55 is 5⅓ times the estimated cost allotted for the State's share of the huge Interstate and Defense Highway System.

The same inflationary theft was 7⅓ times what Washington spent for schools, in capital outlay, from 1947 to the present.

And, it was 23 times the total assets of Washington's non-Federal hospitals in 1957.

So, who's to blame?

Among the environmental factors the NAM study blames for inflation are government and private debt, continuing wage increases surpassing productivity increase and farm support and national defense costs.

Big Federal Government contributes to inflation through deficit spending and taxation excesses. By competing in the marketplace with borrowed money, Government bids up prices of raw materials, equipment, and labor.

Early this year, the NAM study notes, Uncle Sam accounted for 11½ percent of the Nation's goods and services purchased, and had 1 of every 20 employed persons on his payroll.

Private indebtedness is another inflationary pressure due, in some measure, to public debt. Industry must borrow to expand because taxes, which took only one-eighth of corporate profits in 1929, rose to more than one-half of 1958's corporate profits.

Inflationary effects of wage boosts outrunning productivity have been increasingly evident since 1956, the study notes.

As an example, nonfarm workers' pay rose 61 percent between 1947 and 1956. Reducing those payments to real compensation, by adjusting for price increases, the wage boosts amounted to 33 percent. Yet productivity gained by only 26 percent in the same period.

Labor unions, operating as monopolies, force increases in major industries, the study says, even though productivity in those industries (if measurable) might justify them. These basic industry increases tend to spread to other industry groups where productivity might be set at different levels.

Inflation's impact has been felt most acutely by those with fixed incomes. Doubling of consumer prices since 1941 has pauperized millions and created more human suffering than unemployment.

Today's $127 social security check is just about equal in buying power to the $60 check a retired person may have received in 1940, according to a National City Bank letter cited in the study.

Inflation creates the need or desire to supplement family income. As a result, it is a factor in such current labor market conditions as "moonlighting"—multiple jobholding—and the increase in working women.

Plight of pensioners under today's inflationary squeeze in the light of predicted population growth and shifts serves to dramatize what may lie ahead if inflation is not curbed now.

Census Bureau projections indicate that the age 65-and-older group is growing three times faster than the total population increase.

Public insistence on sensible Government spending and for tax rate and labor law reform will, the study concludes, help stop inflation and its total effect of turning a nation of savers into a nation of spenders.

Foreign Service Short of Trained Personnel

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1959

Mr. YARBOROUGH. Mr. President, the U.S. Foreign Service is the window through which our friends abroad see our Nation.

In order to provide more personnel trained in the fine and careful art of diplomacy and to better equip our representatives abroad to interpret America to people overseas, I join in sponsoring a bill to provide a Foreign Service Academy. The State Department opposed the idea. I do not believe their position was a wise or sound one.

Mr. President, to illustrate my point, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Austin (Tex.) American for Friday, July 17, 1959, entitled "Foreign Service Short of Trained Careerists."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Austin (Tex.) American, July 17, 1959]

FOREIGN SERVICE SHORT OF TRAINED CAREERISTS

The question is how to develop a U.S. Foreign Service competent to do its job in an increasingly complex world? It must be truly representative of the best in America without being considered an Ivy League clique or caste.

The State Department has again turned thumbs down on the idea of creating a National Foreign Service Academy—a kind of West Point to train diplomats.

Senators STUART W. SYMINGTON, Democrat, of Missouri, ALEXANDER WILEY, Republican, of Wisconsin, and several Congressmen are this year's authors of bills to set up such a finishing school.

But Loy W. Henderson, Deputy Under Secretary of State for Administration and a career Foreign Service officer himself say, "No." Department of State still prefers to take college graduates just as they come and teach them diplomacy in the school of experience.

A recent check of 670 young people recruited into the Foreign Service in 6½ years showed them to be graduates of 145 U.S. colleges and universities.

Harvard led the parade with 68, Yale was second with 56, Princeton third with 46. Then came the University of California, 32; Chicago, 26; Georgetown, 23; George Washington, 21; Columbia, 17; Stanford and Wisconsin, 14.

This "Big 10" accounted for 47 percent of the personnel in training. The other 135 schools had 1 to 10 graduates apiece in service, from 44 States in the Union.

Well intentioned as this broad base of selection may be, the system still is not producing enough high caliber Foreign Service officers to meet the demand.

As one distinguished FSO remarked recently, "There are only about 25 career people in the State Department to shove around in the top jobs." It was a startling confession. Quantity is short as well as quality.

The U.S. Foreign Service now has only two active, $20,000-a-year career ambassadors. They are Deputy Undersecretary of State Robert Murphy and Ambassador to Austria H. Freeman Matthews. They rank, protocolwise, just above the 27 four-star admirals and generals.

Right through the services, the country is seen to be better equipped—personnelwise—for war than peace.

In the rank below the career ambassadors, the Foreign Service has 71 career ministers at $19,200 apiece. They rank just above the 86 three-star generals and admirals.

Forty-five of these career ministers are serving in foreign countries as ambassadors. The other 26 are shoved around in top State Department jobs.

Ambassador George V. Allen is running the U.S. Information Agency. James W. Riddleberger is running the foreign aid program. Livingston T. Merchant is Assistant Secretary of State for European Affairs. And so on.

In addition to the fact that these career ministers aren't paid enough so they can afford to be sent to the top diplomatic posts, there aren't enough of them.

So, of the 82 U.S. embassies abroad, 26 have political appointees as ambassadors. With the exception of men like David K. E. Bruce in Germany, and Ellsworth Bunker in India, few of these political ambassadors have had diplomatic training or experience.

This is another factor leading to the demand for better Foreign Service training system. The Senate Foreign Relations Committee has been really rough on political appointees this year.

For their diplomatic experience they have to depend on the 195 class one FSO's and the 398 class two's. They rank with the 629 two-star admirals and generals and the 457 one-star brigadiers.

Nearly all of the flag and general officers are educated in the service academies at Government expense. The State Department's 4,333 FSO's, including 815 reserves, must provide their own education before they join the Government.

What Freedom?

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1959

Mr. WILEY. Mr. President, long ago it was wisely said: "The price of freedom is eternal vigilance." This vigilance is essential to protect our Nation from outside enemies. Too, it is necessary to assure protection of rights, beliefs, and privileges of our people—within the framework of our laws and the boundaries of our land.

Since the early days, people have come to the shores of America seeking liberty and the pursuit of happiness—according to self-determined goals as God gave them the light and the understanding to see them.

Those people came from all walks of life, with a wide variety of religious beliefs, creeds, and philosophies.

To the best of its ability, our Nation has attempted to write its laws to accommodate these different people, ideas, and ideals—while preserving the basic

freedom foreseen as essential by our forefathers.

Unfortunately, there have been difficulties in making adequate adjustments in all our laws.

At times, we have been unsuccessful, for example, in accommodating new statutes and programs to minor—though nevertheless significant—groups.

Recently, I received a letter from Mrs. Ernest H. Berger, enclosing a copy of "The Employment Counselor," containing an article entitled "What Freedom?"

Specifically, the article reviewed an instance in which, because of religious beliefs, a group of Amish farmers did not pay social security taxes. In accordance with the law, the Government seized and sold some of their property.

Regretfully, such actions by a Federal agency sometimes appear to be harsh, and in discord with our traditional principles—even though they may be carrying out the "letter of the law."

Recognizing the fact that the price of liberty is eternal vigilance—that laws should, insofar as possible, accommodate the conscience of all our people, I believe the article merits our attention of Congress. I ask unanimous consent to have Mrs. Berger's letter, and the article, printed in the Appendix of the RECORD.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

THURSDAY, *July 23, 1959.*

DEAR SENATOR WILEY: What is happening to our beautiful America that things like "What Freedom" (an article in the Employment Counselor enclosed) can happen.

We are staunch Republicans and were so happy when President Eisenhower was elected, a man we could again respect. I thought that after the Republicans came in again things would be different.

I know law is law but when such things can happen law should be changed. It is an awful blot on our honor and integrity, please do your best to bring it to the attention of everyone possible in Washington. We must give these horses back to them or remunerate them to be able to buy others. I am sure you will agree with us.

I do hope you will be able to do something constructive in this respect.

I am very respectfully yours,

ESTHER H. BERGER.
(Mrs. E. H.)

WHAT FREEDOM?

Having religious scruples against it, the Amish farmers of Wayne County, Ohio, refused to pay their social security taxes. Accordingly, the Government seized and sold their farm horses. These industrious, self-reliant men of high character and integrity watched the sale of their horses in silence. We are pleased to quote the following significant comment in this event, which appeared in an editorial in the Indianapolis Times.

"As the sale began, a young Oberlin College student turned up wearing on his back a crudely lettered sign that read, 'If the Government can take these horses today it could take yours tomorrow—Don't bid.'

"He had hardly walked a dozen steps before two burly sheriff's deputies grabbed him and hauled him off to their car. The Gestapo couldn't have done it more efficiently. The sale went on.

"The Amish farmers cling to a simple and somewhat primitive faith that forbids them to accept anything they have not honestly earned. That includes the so-called insurance or old-age assistance or retirement benefits or social security along with any other kind of charity, gift, subsidy, or welfare handout of any kind whatever from Government. They provide for their own old age by lifetimes of hard work and thrift. They help one another when misfortune strikes as a normal act of brotherly obligation. They consider it, indeed, deeply immoral to get something for nothing.

"There was a time, and not so long ago, when nearly all Americans felt the same way about such things.

"What the Federal agents were doing was in strict compliance with the letter of the law. By its terms, any property of anyone who doesn't make his social security payments as ordered can be similarly seized and sold. There is no choice about it, and no consideration given to anyone who for whatever reason may not want this security.

"Here in Indiana, we have lately watched the unrelenting attempts of Federal agents to confiscate the tractors of an Indiana farmer to punish him for growing—on his land, by his own labor and for his own use—somewhat more grain than a Federal bureau had decided he should grow. Nor is this an unusual case. All over this country fines have been levied, and in general, meekly paid without battle or even the formality of a trial for this offense against the Nation."

The Mallory Bill

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. HART. Mr. President, on July 11 there appeared in the Minneapolis Morning Tribune an editorial entitled "The Mallory Bill," which made such good sense to me when I read it at breakfast in that pleasant city of Rochester, Minn., I ask unanimous consent that it be printed in the Appendix of the RECORD so that others may have the benefit of this sound reasoning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Morning Tribune, July 11, 1959]

THE MALLORY BILL

Last February, when Senator WAYNE MORSE, of Oregon, lectured at the University of Minnesota law school, he made the point that "the difference between detention at the pleasure of the police department while it seeks evidence and a detention with only the necessary elapse of time before formal charges are filed is the difference between a police state and a free country."

We have disagreed with the Oregon Senator on many different issues in the past, but we couldn't agree more wholeheartedly on this point and we said so at the time. The point of bringing it up again is that Senator MORSE's lucid observation is the very core of the objection to the so-called Mallory bill which has just passed the House and is now headed for the Senate.

Andrew Mallory, a Negro sentenced to death on a rape charge in Washington, was freed when the Supreme Court, June 24, 1957, threw out his conviction on the grounds police had held him too long before arraignment and before advising him of his constitutional rights. While Mallory was being held incommunicado and being threatened with a lie-detector test, a U.S. commissioner, before whom police could have arraigned him, sat in the same building. The Supreme Court ruled that Mallory had been deprived of his constitutional rights.

It is important to understand the point that Senator MORSE makes about the Mallory case. It is just this: In a free society men cannot be held as long as the police please but only as long as it takes, reasonably, for the machinery of formal arraignment to function. When this breaks down you have a police state.

The Mallory bill would override the decision of the Supreme Court and would permit police much wider latitude in detaining and questioning prisoners. Although passed 262 to 138, the bill had vigorous opposition on the House floor. Eleven members of the 23-man judiciary committee, including Chairman EMANUEL CELLER, Democrat, New York, fought it bitterly. It is to be hoped that the Senate will defeat the measure.

Jim Hogg of Texas: Man and Legend

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. YARBOROUGH. Mr. President, the late James Stephen Hogg, first native-born Governor of Texas, is known and loved for his outsanding career as an honest, progressivel, liberal, and straightforward public servant. Jim Hogg fought for the people; he fought trusts and monopolies. When they had grown more powerful that the Government. He is regarded as one of the four greatest statesmen of Texas, along with Stephen F. Austin, Sam Houston, and John H. Reagan.

Jim Hogg was a leader in the agrarian reform movement of the 1880's and 1890's in Texas. He championed William Jennings Bryan, sat on the front row during the famous cross-of-gold speech, and nodded encouragement to Bryan during its course.

The University of Texas Press has just published a biography of Gov. Jim Hogg, by Robert Crawford Cotner, a history professor at the University of Texas, being the first full book length biography of Hogg yet published.

Years of painstaking research went into the volume; it is likely to remain the definitive life of Hogg for years to come.

The book was reviewed for the Austin (Tex.) American-Statesman by another well-known Texan, Harry Benge Crozier, a longtime political writer for the San Antonio Express and the Dallas News, later a public officer in Texas. Mr. Crozier's review of Mr. Cotner's book is excellently done and gives a great deal of Crozier's own insight into the character and personality of the beloved Jim Hogg.

I ask unanimous consent to have printed in the Appendix of the RECORD the article by Harry Benge Crozier which was published in the Austin-

Statesman for Sunday, June 7, 1959, entitled "Jim Hogg, man and legend—best remembered of Texas Governors through anecdote and oratory, Hogg now comes into new focus through the University of Texas historian's definitive biography of him."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Austin (Tex.) American-Statesman, June 7, 1959]

JIM HOGG, MAN AND LEGEND. BEST REMEMBERED OF TEXAS GOVERNORS THROUGH ANECDOTE AND ORATORY, HOGG NOW COMES INTO NEW FOCUS THROUGH A UNIVERSITY OF TEXAS HISTORIAN'S DEFINITIVE BIOGRAPHY OF HIM

(By Harry Benge Crozier)

About midnight on March 2, 1906, James Stephen Hogg went to bed and to sleep in the Houston home of Frank Jones, his partner in the practice of law. That evening there most assuredly had been talk of Texas, for it was the 70th anniversary of Texas' declaration of independence from Mexico. Just a little more than a decade before, Hogg had closed out the most exciting and tempestuous 4 years Texas had known from a governor since Sam Houston walked out of the office rather than go along with secession from the Union. Hogg had been the first native-born Texan and the youngest among the 20 who had held the office. Too, there must have been bold, brave talk of many things, for the titanic Texan who had suffered injury in a railroad accident a few months before was feeling better that night and they did not retire until midnight.

In the long conversation Hogg had said to Frank Jones and to Ima Hogg, his daughter:

"Let my children plant at the head of my grave a pecan tree and at my feet an old-fashioned walnut tree."

It was not in prophecy of impending death. When his daughter remonstrated he assured her that he intended to recover his health and remain alive for years.

MAN OF TOUGHNESS

And well he should, for his was a body of uncommon toughness of fiber. As a young man he had survived a rifle bullet fired into his back near the spine by a country east Texas gunman, and the rigors of farflung political campaigns had never fazed him. Too, he was not old; he lacked just 3 weeks of reaching his 55th birthday. Not many years before a hostile Texas newspaper had referred to him as:

"Finished, well-rounded, and symmetrical formed James Stephen Hogg." (Has some cigarette ad writer been peeking into old files?)

In a preceding sentence he had been called: "The completest and most perfect specimen of the demagogue ever produced."

On the morning of March 3 at 8:30 o'clock Frank Jones heard the breathing of a man in peaceful slumber in Hogg's bedroom. At 11 o'clock Miss Hogg went to wake her father. James Stephen Hogg was dead.

That was 53 years ago—almost as long as his life's span, and yet there is about his memory an odd sort of freshness not quite explicated—a sort of redolence reserved for men who charge a people with fervor that carries over to succeeding generations.

Better remembered than other Governors before and since, until now memory of Jim Hogg has not been sustained by recorded history of his life and works but by word of mouth acclaim. Before solemn conclaves and boisterous brawls dedicated men and poltroons alike have invoked the name of Jim Hogg for half a century to stir political fervor. For decades committees of the Texas House of Representatives have caucused for instant decisions at the great picture of Jim Hogg behind the Speaker's dais.

Some of the Hogg saga has been kept alive by anecdote and by quotation of explosive imagery from Hogg speeches. While Teddy Roosevelt was an unheard-of Civil Service Commissioner during Grover Cleveland's administration, Jim Hogg was effecting reforms in Texas government and thundering "By Gatlins" denunciations at the lobby.

And while Teddy was grinningly exclaiming "bully," lashing out at malefactors and putting reforms into effect nationally, Hogg in private life was declining further political preference such as a place in the U.S. Senate, but still inveighing against the corporate lobby and punctuating picturesque speech with his "By Gatlins." These two men had their likenesses and there are those who find good reason to believe that the Texan was the larger, inside and out, his greatness squeezed by the corset of limited geography.

The great drought of written word on the life and works of Hogg is over. Even now the presses are running off the pages of a definitive "Biography of James Stephen Hogg" (publication date Monday) by Robert Crawford Cotner of the history teaching staff of the University of Texas. It is a book that has been in the making 30 years or more ever since Cotner was a boy in Reagan School in Oak Cliff (Dallas) and the principal of the school was Peyton Irving, Jr., a sometime writer for the Dallas Morning News. Father of Cotner's school principal was Peyton Irving, Sr., who had been Jim Hogg's teacher in Rusk.

Schoolboy interest in Hogg mounted with the continued educational schedule of Robert Cotner at Southern Methodist, Baylor, the University of Texas, Harvard and Brown University where in 1929 he acquired an master of arts degree to go with his Baylor bachelor of arts degree. Later there were teaching stints at Henderson College in Arkansas and Stetson University in Florida.

Cotner joined the teaching force at the University of Texas in 1940. There followed a 4-year tour of wartime duty in the U.S. Navy and Cotner returned to the University of Texas in 1946—and to more dedicated research on Hogg.

FACT AND PROBABILITY

Arthur M. Schlesinger, Jr., author of the recently published "The Coming of the New Deal" said recently that in character delineation the dramatist may introduce the element of probability but the historian (and authentic biography is history) must hold fast to fact. There is every evidence that Cotner has painstakingly stuck to the facts and as painstakingly cited authority in all material instances.

Although Hogg had never been the subject of full length treatment and only a few papers and unpublished these had been written about him. Cotner could find more than 50,000 items in the Hogg collection at the Univeresity of Texas along with sundry theses and an unpublished manuscript by the word gifted George Bailey of the Houston Post. Perhaps his greatest lift in the prodigious labors that were to follow came from the gracious and all out cooperation from Miss Ima Hogg. She not only gave assent and cooperation to the use of files but accompanied him on visits to the East Texas haunts of Hoggs' youth and among persons who had known him as a young newspaper editor, lawyer, justice of the peace and prosecuting attorney.

And there were dramatic facts to be discovered among folks who had observed a young man subjecting himself to character forming activities, maturing a code for himself while he was molding public opinion through the printed word with newspapers at Longview and Quitman before he took up the gauntlet of law enforcement. Cotner, scrounging hungrily for facts was able to nail down probabilities with spikes of truth.

Many men have wondered how it was that a young man who had served a brief but most effective tenure as district attorney became attorney general of Texas in 1887 at the age of 36. Cotner's study is revealing of that phase of Hogg's life as it is of many other little known aspects of the man. There were lawbreakers in East Texas in those turbulent after-the-war days and Jim Hogg was bad medicine for law violators. He prosecuted with zeal and relentlessness because he believed in the law as the only way to preserve a government that stood in dire need of preservation.

In those days there were political king makers in east Texas and seat of their council, where they counseled to choose favorites, was Tyler. By force of character and a certain quality of vitality and vim that charmed people Hogg won the favor of the Tyler group. It was the quality of person that was to impel his arch opponent in later years, Judge George Clark of Waco, to say:

"He had a power of dominating his followers that I have never seen excelled in any man."

LEGEND PRESERVED

Hogg came into the office of attorney general somewhat in the same fashion as another district attorney was to make the same transition and go on into the Governor's office under his own power some 35 years later. Dan Moody recalls now that his first urgings to become a candidate for attorney general in 1924 came from a meeting of farmers in Dallas after his prosecution of Ku Klux Klan terrorists had challenged statewide attention. Hogg had had the same kind of support from farmers and rural folk.

For the next rung in the ladder, however, there was a difference. For his first term Hogg had had the support of the retiring Governor Sul Ross. In the celebrated Hogg-Clark campaign, when Hogg won a second term, Ross gave support to his fellow townsman George Clark of Waco whose ingrained conservative views were more in line with those of Ross. Issues that developed during their first 2 years in office made Attorney General Dan Moody an opponent of Governor Miriam A. Ferguson for a second term and Moody won. Moody had taken over Hogg's title as the State's youngest attorney general and his victory over Mrs. Ferguson made him the youngest Governor.

The legend of Jim Hogg has been valiantly preserved in anecdotes of Paul Bunyan tenor. It is only typical that in these very weeks newspaper columnists and letters to the editors are putting ink on paper out of concern about a legendary heroic Jim Hogg (or was it a Sam Houston) bathtub that once had place in the Governor's mansion. It hasn't been long since this reviewer sat in a huge oak chair on a lakeside veranda and listened to its owner proudly describe the chair as once the prized possession of Jim Hogg. There are probably such chairs all over Texas and all pointed out in the same prideful fashion.

Ever since he returned from war service in 1946 Robert Cotner has worked hard in the search for and the compiling of the hard core facts about James Stephen Hogg. The completed work fills more than 600 printed pages and there is little that is dross within the book's covers. It is rich, red meat for reading and the Cotner history does no violence to the folk legend; nor does the legend do violence to the compilation of fact.

Not only does the book run more than 600 pages but Cotner confesses that perhaps more painful than the torture of writing was the editing process that resulted in excision of words and detail without end.

If Cotner seems at times to be needlessly in rejoinder against the charge that Hogg was a demagog, there may be good reason. Politics is a breeder of anomaly. Pol-

iticians and press alike distort, deviate, and indulge in hyperbolics. Hogg, himself was a master hyperbolist. Where could you find finer tongue-in-cheek Texanic hyperbole than this from a Hogg speech at Houston in 1898 after the Spanish-American War:

"Cuba is an island at the mouth of the Gulf of Mexico, formed by the washings of the Mississippi River. By Gatlins, it's ours anyhow."

(The quotation is from a report of William Green Sterett in the Dallas News, later recorded in Sam Acheson's illuminating biography of Joseph Weldon Bailey).

LIVER AND LIGHTS

There are many other instances of this extraordinary exercise of hyperbole as a rapier of speech and usually they were delivered ex tempore. It was employed in perhaps the most famous of all; the "liver and lights speech" delivered before national guardsmen in 1894 encampment in which Hogg was quoted:

"* * * those 14-story buildings in Chicago will be bespattered with blood, brains, hair, hides, liver, and lights, and the horrors of the French revolution will be repeated twofold."

Even then there was fear of Federal usurpation of State's right and Hogg was speaking in denunciation of President Cleveland's dispatch of Federal troops to quell the rioting incident to a railroad strike in Illinois. There were questions about the correctness of the offhand reporting of a newspaperman of an offhand speech by Governor Hogg but Hogg-hating newspapers (and that included nearly all of them) made much of what they called "boorishness" and "truculence." Newspaper derision of the Governor continued day after day. Finally Hogg arranged a public meeting in San Antonio and made answer in a carefully prepared speech, and again Hogg came out victor over a hostile press.

It may be said in review of the brief but action packed career of James S. Hogg that the newspapers in their intemperate opposition provided meat that might have prospered a Caesar. Farmers and merchants restive and feeling oppressed by excessive railroad rates could scarcely be wooed and won when the Dallas Morning News proclaimed:

"Every such measure (to create a railroad commission) points to the final conversion of government into an engine of communism."

It should be noted, perhaps, that the word "communism" did not then carry the connotation of the present Red or Russian variety of that governmental philosophy.

A person who would comment on Cotner's splendid marshalling of Hogg material is under constant inner pressure of temptation to reflect on many or all of the dramatic sequences that called for and got action from Hogg. Cotner develops them well and with commendable restraint. These things are exciting and excitingly revealed:

Hogg's perception of a coming land famine and his battle for land recoveries from the railroads;

Hogg's spurring of an $80,000 Federal sugar bounty for the State's prison farmlands;

Hogg's handling of the delicate situation brought about when the Pacific Railroad sought to leave a remnant of Coxey's army stranded in the desert near Sierra Blanca;

Hogg's crusade against and ouster of fraudulent insurance companies;

The carbarn convention and his greatest battle and greatest victory, the Hogg-Clark campaign of 1892;

Hogg's forthright denunciation of the then Governor of Arkansas, Jeff Davis, for rabble-rousing slander of Negroes before an audience at the State fair in Dallas in 1904. In the course of his answer to Davis, Hogg said:

"* * * I don't want to build up the prejudice of my children against them and let them be murderers of the black race. I don't want the young men of this country to understand that they are to make any attack upon any human being unless it is by due process of law."

Hogg's persuasion of the Reverend John H. Reagan to resign from the U.S. Senate to be chairman of the new railroad commission was high drama.

Of keen interest along with his administration of high office are the accounts of his later days in private life that was distinctly of his own choosing.

LEFT OFFICE POOR

He could have been U.S. Senator for the asking. He left the office of Governor with a bank account of $135. He made money in the private practice of law in Houston and later made a moderate fortune from land acquired at Spindletop and from other lands. That fortune was to be increased after his death from oil-rich lands he had purchased.

Newspapers and political opponents incessantly pounded Hogg with the charge of "demagog" and "radical." He was one of a company of high-minded men, Altgeld in Illinois, La Follette in Wisconsin, Theodore Roosevelt in New York, who became Governors of their States in an era when reform was due—and they by dominance of will effected reforms.

Hogg was in New York and other eastern cities negotiating with capitalists for railroad and other industrial investments in Texas when his successor, Gov. Charles Culberson, vetoed a bill authorizing a Southern Pacific Railroad consolidation on the ground that it was adverse to public interest. Hogg, with a "By Gatlins" exclamation, wrote out a telegram to Culberson:

"I would approve [the veto] if all my financial arrangements got smashed by it."

That would appear in some measure to refute the charge that after Hogg left office he ceased to care for the people's interests, but editorial flogging of Hogg had become an occupational more. The San Antonio Express commended Governor Culberson for the veto and added a gratuitous slur at Hogg calling him "a bond broker and promoter of railroad schemes."

The perennial "demagog" label and libel hurled at Hogg by his political enemies as long as he lived intrigued a young Southern Methodist University professor of history some 30 years ago. Herbert Gambrell, who later was to write an award-winning biography of "Anson Jones, Last President of Texas," did some delving in the records and came up with a lively and diverting essay: "James Stephen Hogg: Demagog or Statesman?" In the essay, published in the 1928 spring issue of the Southwest Review, Gambrell concluded that Hogg was in no degree a demagog, but a sincere and dedicated man who was never suspected of any form of bad faith or malfeasance in office.

WHAT IS EDUCATION?

In appraisal of Hogg Gambrell casts doubt on the quality of his educational and legal attainments. It is true Jim Hogg's schoolroom education was brief and he learned his law as he practiced in the courthouses and at brief writing in his office except for the short while he spent in preparation for admission to the bar. But just what comprises an education? Who has brought forward a definition that is sufficient? After calling education "training of youth" and in another paragraph "animals" Webster's New International Dictionary offers this elaboration:

"The totality of the information and qualities acquired through instruction and training which further the development of an individual physically, mentally, and morally."

Hogg won more than a fair share of his lawsuits and nearly all of the large and important ones. As a printer, country editor, prosecuting attorney, State's attorney, Governor, and businessman he displayed a tremendous thirst for knowledge and information. His pursuit of knowledge ranged far and wide in books and in travel.

In a Labor Day speech at La Porte in 1904 Jim Hogg gave expression to a thought about the mental processes of man:

"Intellect's calcium light turned onto the rugged brain walls of an unlettered man often exposes crude inscriptions of the profoundest philosophy there."

He must have thought well of his words for in one of his intimate, chatty letters to his daughter and sons who were on a visit to Massachusetts he used the identical language.

Hogg's intimate friendly relations with his own children and with other children was a marked characteristic of the man. He loved all kinds of domestic animals and was a dedicated gardener and horticulturist in his yard in Austin and on broader scale at the Varner Plantation where he closed out the latter days of his life.

WAS HOGG FAIR?

One other question demands answer. Was Hogg a fair and reasonable man?

He was rough, volcanic, and ever so ready in conflict, in the courthouse or political arena, but with the legislature as with defendants in law suits, he could reconcile differences and come to reasonable agreement.

One instance offers persuasive evidence of his reasonableness and sense of fairness. One of his first battles as attorney general was against the Southern Pacific Railroad as it was then constituted. Col. E. P. Hill was vice president and general counsel of the railroad and as such was chief negotiator with Hogg outside the courthouse and chief adversary inside the courtroom. Hogg won his battles with the Southern Pacific and won the respect and confidence of Colonel Hill; a victory that had political consequence because the Houston Post, alone among major Texas newspapers, supported Hogg for his second term against George Clark, the champion and attorney of the railroads of Texas. And that somewhat surprising support came about because the Vice President Hill of the Southern Pacific was also Vice President Hill of the Houston Post.

In preface to his work Cotner hails Hogg as a middle-of-the-roader and a leader of the vital center. There are those, both from the right and the left, who will be quick to challenge that conclusion and back up their contention with facts from Cotner's own splendid arraying of them. There is sterility in the center of things political and a vital center quickly becomes stagnant. There was nothing sterile about Jim Hogg and stagnant waters cleared instead of clabbered when he thundered.

LEADER OF PEOPLE

Thought that Hogg was a demagog won credence from some credible historians from afar such as Van Woodward of North Carolina. In the absence of handy records they depended on fragments and perhaps associated him with others of his day for there were abroad in the land then the Sockless Jerry Simpsons of Kansas, the Jeff Davises of Arkansas, and Pitchfork Ben Tillmans of South Carolina along with others of their temper.

Jim Hogg was no demagog except in the original and historical sense. The word derives from two Greek words meaning "people" and "leader" and Hogg fitted that definition. He was a leader of the people as was attested by his greatest rival, George Clark. Along with his sensing of the needs of the mo-

ment, Hogg had rare prescience about things that should be. He opposed prohibition and long, long years before even the medical profession suggested such a course, he advocated hospitalization and treatment of drunkenness. The word "alcoholism" hadn't yet found its place. Hogg was opposed to the poll tax. He persuaded the legislature to provide him a two-member board of pardon advisers and then was enabled to grant freedom to a greater number of prisoners.

Students of Texas history, yea, all people of inquiring mind wishing knowledge of this country's growth, may well be thankful to Robert C. Cotner.

All is serenity out in Austin's Oakwood Cemetery where within a neat privet bound plot are the carefully tended graves of James and Sarah Ann Hogg and their three sons William C., Mike, and Tom Hogg. The pecan trees that Jim Hogg wanted are there at the head of his grave but in that upland soil they lack the robustness of body and limb that was his. There is no walnut tree there. The only hyperbole there issues from the throats of singing birds and from the eye catching vividness of verbena, phlox, and bluebonnet, glorious in spring parade.

Federal Income Tax Yields From 1914 to 1959

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. SMITH of Kansas. Mr. Speaker, Paul O. Peters, the foremost and highly respected statistician circulating on Capitol Hill, has recently compiled these figures with the following statement. The statement and figures tell the story of how American taxpayers have been hit. The proponents of the Federal income tax simply said, at best, this tax will only collect several million dollars. These proponents simply started the approach of little items that grow into mountains.

Here follows Paul Peters' account:

FEDERAL INCOME TAX YIELDS: SELECTED YEARS, 1914–59

With the formal adoption of the 16th amendment to the Constitution on February 25, 1913, the Government of the United States became a partner in the earnings of every individual and corporation in the United States. For the first time in our history the Congress was given the unusual "power to lay and collect taxes on incomes from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration."

At first the rate of the levy was very small and even as late as 1934 the top rate was 4 percent with exemptions of $2,500 for the head of a family and a credit of $400 for each dependent.

Under the strain and stresses of war and the socialistic philosophies which were induced into the American political system, the income taxes grew at an almost confiscatory rate, until in fiscal 1959 the collections amounted to nearly $59 billion.

The table following shows the yields from corporate and personal income taxes for selected years from 1914 through 1959:

Fiscal year:	*Tax yield*
1914	$71,381,275
1915	80,201,759
1916	124,937,253
1917	359,681,228
1918	2,314,006,292
1919	3,018,783,687
1920	3,944,949,288
1921	3,206,046,158
1922	2,068,128,193
1923	1,678,607,428
1924	1,842,144,418
1925	1,760,537,824
1926	1,982,040,088
1927	2,224,992,800
1928	2,173,952,557
1929	2,330,711,823
1930	2,410,986,978
1931	1,860,394,295
1932	1,057,335,853
1933	746,206,445
1934	817,961,481
1935	1,099,118,638
1936	1,426,575,434
1937	2,163,413,817
1938	2,640,284,711
1939	2,188,757,289
1940	2,125,324,635
1941	3,469,637,849
1942	7,960,464,973
1943	16,093,668,781
1944	34,654,851,852
1945	35,173,051,373
1946	30,884,796,016
1947	29,305,568,454
1948	31,170,968,403
1949	29,482,283,759
1950	28,262,671,097
1951	37,752,553,688
1952	51,346,525,736
1953	54,362,967,793
1954	53,905,570,964
1955	49,914,825,888
1956	56,632,508,140
1957	60,560,424,638
1958	59,101,874,000
1959	58,816,444,450

Equal Time Amendment to Federal Communications Act

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. WILEY. Mr. President, we recall that on July 22 the Interstate and Foreign Commerce Committee reported a bill, S. 2424, to the Senate.

In essence, the measure would provide exemption of certain newscasts, including interviews, documentaries, on-the-spot coverage, and panel discussions, from the equal-time provisions of the Federal Communications Act.

As we know, this provision requires that, if a radio or TV station permits a legally qualified candidate for public office to use its broadcasting facilities, it should afford equal opportunity for all such candidates for that office.

We recall that an earlier ruling by the Federal Communications Commission raised some serious questions as to whether or not radio-TV broadcasting facilities could cover what they considered news events, without being subject to providing equal time for any and all other candidates—if a candidate for public office were covered in such newscasts.

The general objective of amending the law to clarify this situation with respect to newscasts, I believe, has merit.

Since the FCC ruling, I have received communications from a great number of persons in the broadcasting and telecasting industry, stressing that, unless legislation were enacted to modify the FCC ruling, they would face serious difficulties in attempting to provide the public with adequate reporting of significant events.

I ask unanimous consent to have a number of these communications printed in the Appendix of the RECORD.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

THE MILWAUKEE JOURNAL STATIONS,
Milwaukee, Wis.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: We are certain you are aware of the recent fiasco in regard to section 315 of the Communications Act as it pertained to a ruling given on behalf of a Chicago mayoralty candidate.

The inadequacy of the act in regard to section 315 has long been apparent to us as broadcasters. The Chicago incident has more than brought that inadequacy to light. We know that a number of bills are being presented in Congress now to correct the situation. We petition you, on behalf of ourselves and other interested broadcasters, to do whatever you can to correct this situation.

Yours very truly,
THE JOURNAL CO.,
GEORGE COMTE,
Vice President and General Manager of Radio and Television.

Senator ALEXANDER WILEY,
Washington, D.C.

DEAR SENATOR WILEY: You are undoubtedly aware of the recent publicity concerning section 315 of the Communications Act, especially the provision concerning "equal opportunity" as applied to news programs. This matter was brought to the attention of the public by the FCC's decision in the Lar Daly case in Chicago. The FCC decided in this case that if a radio or television station covered a news event involving a candidate for public office, that equal time would have to be given to all of the candidate's opponents. I believe you can easily understand that this would make it practically impossible for radio or television stations in the future to report any news information or pictures of candidates for public office.

The results of this case actually regulate every news program handling a political campaign and tells broadcasters the conditions under which they can report campaign information and also the conditions under which they can report activities of candidates during political campaigns even though in some instances these activities

by the candidates might not necessarily have any connection with their running for office.

I would like to urge that you support and vote for this bill or any bill that will correct this very bad situation for the American people and for your people who may be candidates for public office in the future.

Kindest personal regards.

WKBH-WKBT,
HOWARD DAHL, *Manager.*

THE ONEIDA BROADCASTING CO.
Rhinelander, Wis.

U.S. Senator WILEY,
Washington, D.C.

DEAR SENATOR WILEY: May I add my voice to those in the Broadcasting Television industry currently seeking relief from Section 315 of the Communications Act. It is a political broadcasting law that should have been repealed a long time ago because it is absolutely unworkable and discriminatory against our industry. It denies us equal status with the press.

Thank you for any help you can honestly give our industry in this matter. Being well acquainted with Section 315 and the Hartke Bill, I believe you can, in good conscience, support the modifications contained in said Bill.

Respectfully yours,
LEE W. ALLERTON,
General Manager.

MILWAUKEE, WIS.

Hon. ALEXANDER WILEY,
Senate Building,
Washington, D.C.

DEAR SENATOR WILEY: I am taking this opportunity to write you concerning the future of section 315 of the Federal Communications Act.

I strongly feel that you and we have a rather considerable stake in this matter.

In the absence of a direct repeal of the act of the law as it now reads, we will feel compelled to eliminate all political mentions from our programing. This affects a broad area of public and community service which we certainly wish to perform.

I hope you will give the repeal of section 315 your immediate personal attention in the interest of enlightened public service.

Thank you and best personal regards.

Sincerely,
Bill
WILLIAM C. GOODNOW.

MILWAUKEE, WIS.

Senator ALEXANDER WILEY,
Senate Building, Washington, D.C.:

As a Wisconsin broadcaster I urgently ask that you do all in your power to repeal section 315 of the Communications Act. All radio needs relief from the impossible features of this law.

JAMES T. BUTLER,
Station Manager, WISN Radio, Milwaukee, Wis.

Chief Issue—Sound Money

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. SMITH of Kansas. Mr. Speaker, sometimes we get a breath of fresh air from out in the hinterland—or from faraway places such as the High Plains region.

Here is an editorial that points out some basic facts: There can be no security in a bankrupt nation.

Certainly, a 42-cent dollar points the direction we have been traveling.

In the United States—political parties are the sounding boards and listening posts—for the direction of travel. It is to be hoped the Republican Party is listening to the necessity of sound money doctrines.

[From the El Dorado (Kans.) Times]

CHIEF ISSUE—SOUND MONEY

What's the chief issue in the presidential campaign coming up next year?

Among the numerous answers, some say, "sound money."

This phrase has an old-fashioned sound in the midst of the hand springs of the brave New World, but its meaning grows more important and significant every day.

Richard W. Robbins, of Pratt, long an important business and political leader in Kansas, is one who insists that the question of sound money is now paramount for the welfare of the Nation.

Mr. Robbins, in his thinking, goes back over 50 years to the campaign of 1896 for historical precedent.

In a letter to THRUSTON B. MORTON, chairman of the Republican National Committee, he wrote: "In 1896 we elected a Republican President and a Republican Congress on one issue, namely, sound money."

This was the famous contest between William McKinley and William Jennings Bryan concerning the gold standard, with 16 to 1 silver dollar overtones.

"We have the same opportunity in 1960," Robbins told MORTON. Then he continued his argument—which, in this corner, seems an impelling one.

"Obviously inflation affects every man, woman, and child in the United States and their children and grandchildren." Robbins declared that the Democrats, now in congressional power, are reckless spenders who don't seem to care what happens to the purchasing power of the dollar. "They would lead us down the road to destruction as Germany and China were led in the 1920's," he asserted.

Robbins also told MORTON he feels Republicans are not going to get anywhere unless more is done to arouse and unite the people against the reckless spending programs by Congress, and more and more inflation.

"The problem is in your lap as Republican national chairman," Mr. Robbins said.

It's in Mr. MORTON'S lap, of course, but it lies also in the lap of every citizen who cares for orderly, sensible, and economical courses of government. The United States—richest country in the world—is allowing itself to be overcome by the present trend of overspending, of rub on the salve remedies for all economic ills, and of unwise and imprudent fiscal policies in general.

The dollar has now dropped to a value of 48 cents—which can be viewed as little less than a crime on the part of America's statesmen. It is bound to drop further if the present pace of disregard for all sensible business rules continues. Eventually the brutal payoff must come—as inevitably follows all giddy sprees.

No one issue before the public today is so vital and demanding as the one of sound money. Why politicians can't, or won't, perceive it, is an astonishing mystery.

William S. White Heralds House Members Who Fight for Labor Reform Legislation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. NEUBERGER. Mr. President, a thoughtful and significant column by the distinguished syndicated columnist, William S. White, was published in the Washington Evening Star and other papers for July 27, 1959.

Mr. White has paid tribute to five Members of the House of Representatives, all Democrats, who have insisted uopn passage of labor-reform legislation at this session of Congress.

These five are STEWART L. UDALL, of Arizona; CARL ELLIOTT, of Alabama; EDITH GREEN, of Oregon; JAMES G. O'HARA of Michigan; and FRANK THOMPSON, JR., of New Jersey.

I join William S. White in heralding their vision and steadfast position. I am particularly pleased that Mrs. EDITH S. GREEN is included in Mr. White's roster, because she is the Member of Congress from the Third Oregon District, where Mrs. Neuberger and I make our home and permanent residence. We are pleased with her attitude on this vital question, for labor reform is a must before the present session of Congress adjourns.

I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Evening Star, July 27, 1959]

FIVE WHO SHUNNED PARTISANSHIP—RELATIVE UNKNOWNS ON HOUSE LABOR UNIT RESIST PRESSURE IN BACKING REFORM BILL

(By William S. White)

Five comparatively young and comparatively unknown Members of the House of Representatives, four men and a woman, have deliberately leaped from safe cabin berths to a chancy raft that bobs now in a wide and dangerous political sea.

Whether they will come to safe harbor in the next election or whether they will sink will not be the least important of all the tests provided at the polls in 1960. For what they have done is to take a great risk in defense of a principle bigger than all of them or any party. Theirs happens to be the Democratic Party. But the question they embody is not partisan, or even ideological.

They have assumed, these five people on a raft, that at the end the voters will permit politicians to act on tough national issues in the public interest, rather than only in some group interest. They have assumed that in the end Congress has an inescapable duty to perform on such issues, come what may.

These five are Representatives STEWART UDALL, of Arizona, CARL ELLIOTT, of Alabama, EDITH GREEN, of Oregon, JAMES G. O'HARA of Michigan, and FRANK THOMPSON, JR., of New Jersey. It was they who

through 5 weeks of bitter, cursing wrangling, of harsh competing labor union and promanagement pressures within the House Labor Committee, stood steadfast upon an unalterable position:

That the committee must bring out a labor reform bill. That it must be a bill actually doing something to curb labor abuses. That it also must be a bill that would not destroy labor. That, above all, it must be a bill—simply a bill—to prove that Congress was strong enough to legislate, not merely to talk, in an area of extreme prepresidential campaign sensitivity. It is due most of all to these five that the committee has now come through with a measure on which the House itself can act in due time. It was long touch and go as to whether the extremes within the committee would not simply paralyze it beyond any action at all.

The Labor Committee has 30 members altogether. All have in one degree or another their problems of political survival, their convictions, and their prejudices. But it was upon this small band of five that there beat the fiercest and most pitiless of all the pressures of these five weeks. And it was at their heads that the bitterest cries of "betrayer" were flung by labor spokesmen.

For these five are all liberals. Most—if not all—never would have been in Congress without labor support. In the ordinary definition, they were prolabor.

Thus against the violent oversimplification which politics produces on issues of pay and pocketbook, they had to run perils of special poignancy. They knew that the national good, the good of their own party, and the good of Congress itself as an institution of representative government required something more than the simple either-or attitudes of other partisans.

It is easy, as a labor Congressman, simply to say no, no, to each and every proposed restriction upon labor. It is easy, as a "business" Congressman to cry yes, yes, to every one. But it is not easy to draw a middle line which, in a matter such as this, pleases no pressure group on either side.

This, all the same, is where the five took their stand. They said to labor about this: We are still basically for you and not "against" you. We have no intention to destroy you. But you will not even listen to any real change of any kind, even though we know—and you really know, too—that some changes must be made. You will denounce us? Very well, if you must. But we are the people's elected representatives—including yours. We asked for the responsibility to make the laws. We are going to discharge the responsibility we asked for. We are going to do it in everybody's interest—not least, your own interest. And we are going to make the parliamentary process work.

It will be interesting to see, now, what labor does next year to this raft of the five that bobs upon so wide, so dangerous—and so lonely—a sea.

Why the Importance of Water Conservation?

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. ROGERS of Texas. Mr. Speaker, Miss Vaneece Osborne, of Panhandle, Tex., has been selected by the Panhandle Underground Water Conservation District No. 3 as the third-place winner for her essay on the importance of water conservation. Because of her fine performance, and that of the other two winners, other organizations and citizens will surely be encouraged to face up to this problem, and make it possible to bring, for the benefit of all mankind, the talent and intellect of these leaders of tomorrow in the solution of the water conservation problem. Under unanimous consent I insert Miss Osborne's essay in the RECORD:

WHY THE IMPORTANCE OF WATER CONSERVATION?

(By Vaneece Osborne)

The task of finding, developing, and maintaining suitable water supplies has not been limited to modern times. It has had to be faced by men everywhere and especially in semiarid and arid places all down through the centuries. In fact, the story of man's growth could be written in terms of his epic concerns with water. Even where there is an abundant supply of water in an area it must still be conserved if the inhabitants of that land are foresighted and are thoughtful of the generations to come. Even more in an area such as the high plains of west Texas there is needed much thought and careful planning to conserve the water which is stored underground to sustain life for many years.

Modern civilization imposes heavy demands on water. Merely to sustain life takes relatively little water. But even in pastoral or other simple societies, additional amounts are needed in preparing food and washing our bodies and clothes. The total daily requirement for all purposes, including drinking, in ancient villages may have averaged 3 to 5 gallons a person. Now a person uses 60 gallons or more each day for household and lawn-watering purposes in the average electrified farm or urban home in the United States.

But our technological civilization could not have been attained at a level of water consumption geared to requirements of primitive societies, even in our humid sections, where the need for irrigation crops is relatively slight. The steady rise in the consumption of water in industrially advanced countries explains why we now regard our water supplies with great concern.

The impact of new inventions and new developments and growth in population and industry has not commonly been given attention it has merited.

Many critical local water shortages, therefore, have occurred that could have been forstalled. For example, rural electrification has brought about such heavy increases in the use of water for household and production purposes that the limited well water supplies of many farms have been severely strained.

Similarly, factories have been built without prior studies to determine whether water would be available to operate the factories and to provide for the communities around them.

Towns, cities, industries, and farms have kept expanding beyond the safe limits of available water. Often makeshift efforts have been necessary to meet emergencies, especially in years of low rainfall.

Such efforts have often hastened the depletion of the limited reserves in underground reservoirs, generated disputes with other cities or industries drawing on the same sources of water, introduced conflicts with the use of water for recreation, and threatened the permanant flooding of lands valuable for farming, forestry, wilderness, or wildlife.

Still the search for more and better water goes on. Use continues to rise; advancing standards of health and comfort, the application of more intensive farming practices, and the development of new products all impose additional demands. In fact, the proportion of our total economic and recreational activity—both in rural and urban areas—that depends on handy and abundant supplies of clean, safe water is greater than ever before in history.

"Water is this semiarid region's blood of life. Without irrigation crop yields would be cut drastically and the health of the Plains' economy would be seriously impaired," says Jack Porter, reporter of the Amarillo Globe News.

Falling water tables have already increased pumping costs, and some Government water surveyors believe that by 1975 irrigation operations will reach a point of diminishing returns.

Water usage is increasing each year and and there is no appreciable amount of recharge. It has been said that water is the most vital single issue facing the plains people today. There is hardly any recharge from underground streams and little or none from natural rainfall. So every effort must be made to conserve what underground resources there are.

Whatever methods of conservation are used, there must be something done. This problem concerns each and everyone of us. It is not limited to farmers, ranchers, and industries.

We have a duty to pool our efforts if we expect to apply appropriate and durable prescriptions for our water ills. Few activities have so clearly brought out the interdependence of all individuals, communities, and regions, as have our harried concerns with this product of the heavens. How it moves over the land and whether it aids or harms us depend on its behavior during its return to sea and atmosphere.

Planning for the maximum development of our water resources for the longtime developed benefits of all our people, when properly conceived, can bind together individual and the community, farmer and urbanite, as few other conservation activities can do. Conservation has received perhaps its greatest impetus since our dealings with soil, forests, wildlife, recreation, community betterment, and industrial development have come to be viewed in terms of their interrelationships with water. More and more people have become informed and interested in all these fields because our water troubles and our attempts to resolve them on the watershed lands and in the river channels have had a direct impact upon our personal, economic, social, or recreational affairs.

Men have for ages had to settle where the water is deficient, inferior, or eratic and the fact should be established that often the causes lay in the acts or failures of men themselves. Being dependent on water for life itself, men must not underestimate its great value and not only not underestimate it but also spur themselves to action to control, conserve, and use it in the best way possible. We must remember that our actual health, vigor, and social stability depend on water.

Men, women, boys, and girls, in the communities of the plains should study, think, plan, and carry out programs to restore the attractiveness and utility of our local water courses. Water can be considered commonplace, but commonplace things are often the least appreciated and the hardest to understand. However, man can understand the simple statement, "Water is needed for life." Maybe this true statement will prod us all to action and the question, "Why the importance of water conservation?" will never need to be asked again.

The Wheat Referendum

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Grain Terminal Association Daily Radio Roundup for July 23, 1959.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP

President Eisenhower, in his press conference, says that the wheat referendum is a "sorry choice." And in that he is correct. We think wheat farmers deserve more than 75 percent of parity for wheat grown on 30 percent less than normal acreage. But that's not what the President meant when he told newsmen that the Nation needs a "decent farm bill." He declined to explain just what would be in this mythical bill. The President just hints that it is up to Congress to write a farm bill—but it has done that several times and every time it has been vetoed.

But this is really not such a big mystery, after all, when you examine the situation. If you want to know what the administration wants for farmers ask Secretary of Agriculture Benson. He makes administration farm policy. It's really Benson that we hear from the White House.

What does Benson, and consequently the administration and those who back it, want for farmers? That's no mystery, either. It's been said and resaid in the farm Secretary's speeches. It's been printed and reprinted in magazines and newspapers all over the Nation. It is this: Do away with price supports and do away with farm regulations. That's what would be in the "decent farm bill" that the President speaks about. Simple, direct, but deadly as a rifle bullet.

But is that what farmers want? They've got their own ideas about staying in business. They've held the fort year after year with wheat and cotton and rice and peanut referendums, voting to stick with marketing quotas and price supports. Congress won't buy Benson's ideas, either. It passed a wheat bill that died under the President's pen even though it would have trimmed the surplus, saved money for taxpayers, and held the income of wheat farmers steady.

So it's a deadlock, with farmers and Congress on one side and Benson and the administration on the other. As it was summed up by Senate leader LYNDON JOHNSON: "It looks like we won't be able to pass a farm bill that pleases the administration as long as Ezra Taft Benson is Secretary of Agriculture."

Well, that's a very pessimistic view because we think that soon the farm facts will have to be recognized by the administration. If Benson's huge no-control corn crop comes through this fall at 4 billion bushels plus, it's liable to open a lot of eyes to the fact that intelligent regulation and decent prices make better sense than a knock-down drag-'em-out price and production brawl that nobody wins.

And that's what the wheat referendum is all about.

We note in the newspapers that the cost of living has gone up again despite the multi-billion dollar contribution farmers have made toward controlling inflation. The Government's figures, not often repeated by the Department of Agriculture, shows that farm products at wholesale dropped almost 2 percent in the last month and they are now more than 7 percent below what they were a year ago. The prices of industrial commodities, however, rose 2 percent—so the cost of living is up.

This program is sponsored by the farm families that market their grain and buy their livestock feed—GTA, the co-op way.

The Loss of Gold

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. CHENOWETH. Mr. Speaker, there has been a great deal of discussion of the withdrawal of gold from our reserves by foreign countries. I wish to include in my remarks an article by George E. Sokolsky on this subject, which I am sure will be of interest to the Members of the House. This article calls attention to the dangers we face if this depletion of our gold reserves is allowed to continue. The article follows:

THE LOSS OF GOLD
(By George E. Sokolsky)

The New Deal economists did not believe in a gold base for money. They fussed over the question and in a large measure had their way. President Roosevelt had the gold hoard of the country buried at Fort Knox; citizens were not permitted to have gold coins; gold certificates were removed from currency.

For a long time, however, the American dollar was the only stable currency in the world and the American dollar stood firm. Nevertheless, our gold hoard has been reduced by two processes—by export and by earmarking. We prefer to regard earmarked gold as still ours, although our relationship to it is only that of a caretaker who should relinquish it immediately when called upon. Prof. Walter E. Spahr, one of America's greatest authorities on money, gives these startling figures:

"Foreign withdrawals of Treasury gold • • • began during the week following February 19, 1958. On that date Treasury gold stood as $22,785,000,000. For the week ending December 31, 1958, the Treasury's gold was down to $20,526,000,000, a decline of $2,259,000,000 in 45 weeks. For the week ending May 13, 1959, the Treasury's stock was $20,251,000,000, down $2,534,000,000 during he 64 weeks since February 19, 1958."

Actually, earmarking his increased. According to Spahr, earmarked gold stood at $8,664,300,000 on March 31, 1959—an all-time high. One can go into considerable statistical material to indicate what has been happening to our gold. Suffice it to say along with Professor Spahr that the situation is serious. He bases such a statement on the following data:

"• • • The withdrawal of gold in 1958 amounted to 12.3 percent of total foreign short-term dollar claims at the end of that year plus gold withdrawals for the year and involved 9.9 percent of our Treasury gold stock at the end of the year plus gold withdrawals for the year.

"Thus we have 12.3 percent of claims exercised and 9.9 percent of gold stock withdrawn in 1958 as compared with an average of 3.5 percent of claims exercised and 1.3 percent of gold withdrawn during the period 1922–57."

Whereas, in this country we continue to ignore the importance of the gold standard, European countries are clearly preparing for such a restoration. They are strengthening their gold reserves and are seeking to build their own economic facilities by reinforcing the value of their currency.

The question that needs to be answered is how much gold can we afford to lose without the psychological effects setting in which could destroy the value of our currency. The value of the American dollar, as of any currency, must be premised on confidence and confidence is based on a complex of facts and assumptions, upon statistics but also upon rumors.

It is not sound statesmanship or competent banking to wait until it is imprudent to permit further export or ear-marking of gold. Obviously it is too late to wait until an embargo must be placed on gold, as that would destroy confidence in the dollar altogether.

It does not make sense to continue to permit the piling up of foreign claims against our gold, particularly as Americans in the United States are not permitted to have any. But an American in Europe or in Asia can purchase gold certificates and keep them in foreign banks.

It is significant that most earmarked gold remains in the United States which displays confidence in our stability and in our future. There has been no flight of capital in this sense. There has, however, been a steady export of American capital abroad to evade high taxes, high American labor costs and the exclusion of American goods in the areas where preference is shown to products of area manufacture, as in the Common Market, for instance.

When the United States subscribes to the International Monetary Fund or to the International Bank for Reconstruction and Development or to foreign aid, it usually pays in whole or in part in gold. If goods manufactured in the United States are supplied, the payment is made in dollars.

It would not seem provident to permit claims against our gold hoard to pile up at a time when the hoard itself is being reduced. This is a case in which one agency of government is permitting itself the luxury of improvidence while another agency has to count its pennies.

Why the Importance of Water Conservation?

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. ROGERS of Texas. Mr. Speaker, in the second annual Panhandle Underground Water Conservation District No. 3 essay contest, Miss J'Non Urbanczyk of White Deer, Tex., has been awarded the second prize of $100 for her essay on the subject of water conservation. It is most encouraging that this young lady has such a firm and intelligent appreciation of this subject and under unanimous consent I insert Miss Urbanczyk's essay in the RECORD:

WHY THE IMPORTANCE OF WATER CONSERVATION?
(By J'Non Urbanczyk)

Conservation is not only for the farmers and ranchers but for all true Americans who are interested in the welfare of their country.

Conservation should awaken our Nation to the appreciation of a God given resource, without which, life itself could not exist. With continued abuse, eventually, all living things could be reduced.

Here in our blessed land, where water is cheap and plentiful, our people have never learned to appreciate it. To learn to appreciate it would mean to want to conserve, to preserve, to guard, and to protect it.

Early history records 350 major famines, but this record was incomplete because starvation and famine was considered a common thing.

For one who lives in the United States, it is difficult to imagine that hunger and want still prevails over large areas of the world.

Soil and water are recognized as our two basic resources. Conservation of the water and wise use of the soil is the key to keeping our land productive, our people healthy, and our Nation strong.

Modern life requires more water than was ever used before in the history of mankind. Not only because of increase in production but because of our high standard of living, uses of water have been greatly multiplied. Water for homes, farms, factories, transportation, recreation, and generation of electric power are but a few of the uses. It is a known fact, from recent scientific experiments, that plants can be grown without soil but not without water.

It is the responsibility of every human to protect and guard the waters of the Nation, not just to treat it with chemicals in order to purify it, but to avoid waste and contamination of his resource. Little needs to be said for the domestic needs of water, as we are all made aware of these, but much is to be said about water pollution and waste. Water pollution is a problem of modern life. In early days, streams and lakes were sparkling clean, but today with the growth of cities and development of agriculture and industry, bodies of water have become dumps for dirt, filth, and the by-products of labor. Water pollution means adding to water, substances that cannot be eliminated through the processes of nature. There are three types of water pollution: domestic, agricultural, and industrial. Domestic pollution comes from dumping garbage and sewage into bodies of water. Since man canont live by bread alone, it is essential to have a pure supply of water for drinking, cooking, bathing, washing, and recreation. Cities and towns, located along water routes must seek ways to control their people from making dumps and sewers out of rivers and streams.

Agriculture pollution is caused by soil erosion. Irrigation has brought millions of acres of land into agricultural use where rainfall is light. Our natural resources have ben moving toward depletion at varying rates of speed. The depth and fertility of our topsoil is rapidly being reduced. In areas where water supply is normally low, overuse of water has resulted in lowering the water tables. Water conservation and soil conservation go hand in hand. Every step toward the control of water is a step toward conserving of the soil. Conservation of water plus soil is the answer to the eternal struggle for daily bread. Researchers must continue to find the causes of water and soil losses and to teach wise farming practices. Conservation of water and laud is the most imoprtant problem facing American agriculture today.

Industrial pollution, which is the most difficult to control, means the pouring into streams, waste from manufacturing and processing. Factory wastes contain salt of metals. These destroy plant life on which fish are dependent. It, therefore, destroys fish, is not good for human consumption, and is unfit for recreation. Man cannot make over nature but can try to correct his misuse of nature.

Pollution is one type of waste and loss of water another. Control of rainfall is beyond man's power, but there are ways to capture it and thereby reduce floods and runoff waste.

Floods can be brought under control to a large extent, but it takes huge sums of money and much time. Flood waters pour through valleys, cities, and towns, and destroy lives and property. The place to control it is where the raindrop falls. To halt it there, means great value to the land and a stop to water destruction.

It is written that 1,500 cubic miles of water falls on our country every year, an amount that would cover the entire country 2½ feet deep. This falls over a period of 12 months and is not evenly distributed. Since no water is ever lost or destroyed, it is imperative, that we all study this problem, to learn what happens to this water, and to learn to conserve this essential commodity. What is not absorbed by the soil, or evaporated back into the sky, moves downward to streams and rivers and back into the ocean. Many things, such as grass, leaves, roots, terraces, plowed fields, ponds, dams, lakes, and swamps help to capture or hold the water for growing plants and animals. They also help reduce soil erosion, floods, and drought. All this calls for study, research, official care, and supervision.

We must educate the people of the importance in the wise use of this precious resource. Since we are here today and gone tomorrow, why bother? Man's desire to solve the unknown and to guard our resources for unborn generations provide us with a reason. In those of us who are aware of this, and to the youth who inherit this problem of preserving and conserving the water, lies the future of water conservation.

Remarks to the National Strategy Seminar, the National War College, by Allen W. Dulles, Director of Central Intelligence, July 24, 1959

EXTENSION OF REMARKS
OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an address delivered to the National Strategy Seminar for Reserve Officers at the National War College on July 24, 1959, by Mr. Allen W. Dulles, Director of Central Intelligence Agency. I believe this address deserves the attention of the membership and I commend it to them:

REMARKS TO THE NATIONAL STRATEGY SEMINAR, THE NATIONAL WAR COLLEGE, BY ALLEN W. DULLES, DIRECTOR OF CENTRAL INTELLIGENCE, JULY 24, 1959

I appreciate the opportunity to make the concluding remarks to the National Strategy Seminar for Reserve Officers. From the reports I have had of your meetings, and my intelligence on this is good, I realize that you have broadly covered the various elements of Soviet strategy and tactics, the nature of the Communist threat, the relative military strength of East and West, and the face of war in the nuclear age.

In dealing with analyses of the Soviet threat I find that there is often a tendency to go to extremes. There are experts in this field who tend to magnify all aspects of Soviet power and become prophets of gloom. Others tend to discount Soviet accomplishments and unduly magnify their internal difficulties. This could add up to an unhealthy complacency.

The first class of experts is the larger, though recently we have seen the other extreme in some magazine articles which have attempted to discredit, on what appears to me to be the flimsiest evidence, recognized Soviet accomplishments, particularly in the field of outer space.

Certainly it is more dangerous to underrate than to overrate, though the latter can well be expensive in terms of our budget.

In these estimates of where we stand in relation to the Soviet, one of the crucial areas where some tend to underrate the Soviets is in the assessments of the relative economic output of the two great power blocs.

True, the gross national product of the United States alone is over twice that of the U.S.S.R. If we add to U.S. production that of other countries of the free world, while adding to Soviet production that of Communist China and the Soviet satellites, the ratio is still more favorable to us.

But as against this we must recognize that the rate of growth of the Communist bloc is substantially greater than that of the free world, and will probably remain so for some time.

Even more important is the extent to which Soviet present production and investment are keyed directly and indirectly to their military power. In fact, Soviet military outlays are now about equal to ours in terms of what they would cost us. Similarly, their annual investment in industry—vital to military power as well as economic growth—is now equal to that of the United States. To achieve all this from their lower economic base, they have to devote about twice the proportion of their gross national product to military purposes as we do.

Of course, to achieve such goals within their much smaller economy, they are forced to curtail consumers' goods. But by emphasizing guns instead of butter, they have greatly reduced the significance, in the terms of the power struggle of the still great gap between their overall economic strength and ours.

Naturally, Khrushchev would like to have his people believe that the U.S.S.R. has already achieved a state of military parity, if not superiority. While it is not the role of intelligence to attempt detailed net estimates of our relative military position vis-a-vis the bloc, we have good evidence on which to reject any such conclusion.

Furthermore, the theory that either of the great nuclear powers could destroy the other, without the attacker himself being devastated, is not, I believe, subscribed to on either side of the Iron Curtain. The threat of mutual nuclear destruction is a nightmare that cannot be dismissed, but even though international communism expects to gain the world, it does not wish to acquire a world in ashes.

From Soviet statements as well as from other evidence available to us, it seems clear that the U.S.S.R. is placing more and more reliance on the development of ballistic missiles as its chief instrument of strategic nuclear attack. But the Soviets are not immune to the many difficulties inherent in developing new and untried hardware into reliable weapons systems.

Meanwhile Khrushchev and his military aides have done their best to deprecate the manned bomber, both to their own people and abroad. In fact he has called them museum pieces. This may be, in part, to quiet the fears of their people and to bolster their assertions of superiority in one key military field.

Last May, Khrushchev told a delegation of West German Social Democratic editors that, though the NATO countries really possessed a large air force, it was, he said, techni-

cally outdated and it could be shot down by ordinary antiaircraft artillery, and even by ordinary fighters.

"Why, then," said Khrushchev, "do the Western military leaders base themselves on bomber aviation and talk a lot about it? Because their rocket technology is still weak. * * * Therefore it appears that talk about a large number of bombers is being indulged in for purposes of deceit."

From Khrushchev's viewpoint this is undoubtedly good propaganda if he can make it stick, since the U.S.S.R. today is in a position of inferiority vis-a-vis the United States with regard to manned bombers. The tremendous effort which we see the Soviets putting into advanced radar, ground-to-air missiles, and other defenses against aircraft would seem to belie the deprecatory statements of Khrushchev about them.

Obviously both our military defenses and our ability to retaliate by missile and aircraft should together be kept adequate to meet the threat. Here is where the superior industrial capacity of the free world and of the United States in particular can and must play its role.

In the past when a technical, scientific, or industrial problem, such as that we face today in the missile field, has been put up to the ingenuity of our scientists and production experts, we have not long remained in second place. It is certainly incumbent upon us to see to it that we do not fail in this instance.

If we do keep up our military defenses, the most immediate threat to us for the years immediately ahead is not likely to be physical destruction by all-out nuclear war. The danger is rather the slow attrition of the power position of the free world by a combination of political warfare, and economic penetration and subversion.

Despite occasional missile rattling, as at the time of Suez, during the Middle Eastern crisis last year, and more recently in talks with Mr. Harriman and others, we do not estimate that it is the Kremlin's present intention to advance communism by deliberately provoking war.

We cannot entirely discount the risk, however, that the Soviets might miscalculate Western strength or the firmness of our intentions, and adopt positions from which it would be hard for them to find an acceptable line of retreat. The Soviets have miscalculated before, as in the 1948 Berlin blockade and in Korea. We can hope that Khrushchev, after having castigated Stalin for adventurism in the famous speech of February 1956, will not fall prey to the same temptation at Berlin or elsewhere. Aggression by proxy against the newly emerging and less developed countries may be a tempting but it obviously is a dangerous course.

The basic strategy of international communism, with its primary emphasis on measures short of war, has remained remarkably unchanged over the years. So, too, have its objectives.

These were never more bluntly stated than in Khrushchev's ebullient speeches in Poland these last days.

Obviously referring to the phrase attributed to him, "We will bury you," he explained that when he said that communism would be the graveyard of capitalism, he did not mean that Communists would take shovels and start digging: "history," he said, "would take care of capitalists." They, too, he suggested, would become museum pieces, and added that "if there were a God and he could act, he would take a good broom and sweep you out."

Certainly Khrushchev pictures himself as devoted to the task of helping in this burying and sweeping.

The "we will bury you" theme has been the fanatical tenet and credo of communism, sophisticatedly preached by Lenin, brazenly carried out by Stalin, and more subtly practiced by Khrushchev.

If Soviet policy were restricted to building a better Russia for the Russians, we could not object. To the Kremlin leaders, however, the U.S.S.R. is merely the base from which communism is to be expanded to cover the world.

As we are entering a period of greatly increased personal intercourse between the two power blocs, with exhibitions, tourism, cultural exchanges, and the like, it is important not to lose sight of the fundamental nature of this conflict.

This is too often overlooked by the casual visitor to the Soviet Union. To a considerable degree the Kremlin's international objectives are not well understood or necessarily shared even by the Soviet people themselves with whom our tourists and exchange missions come in contact, and with whom as individuals the American people have so much in common.

We should remember that the Soviet Union is a dictatorship, run by the high command of the Communist Party, that the party itself numbers only about 8 million—about 5 percent of the adult population of the Soviet Union and only about 13 percent of the number of actual voters in our own last presidential election.

Furthermore, these 8 million party members have no real freedom even in choosing their local party leaders much less the leaders in the presidium. It is these latter who determine the policies on which the fate of the Soviet people depend, including the policy of the secretly subsidized export of communism on a worldwide basis.

This policy is an insidious interference in the internal affairs of free countries. If the Communist program were advanced in the international field by open and peaceful means as a form of competition between two great conflicting views of how society and the lives of people should be organized, we could well accept this challenge. Let us compete, let the peoples choose and decide which system is the better. Khrushchev claims he is inviting us to such a competition.

But this is a mirage.

Where behind the Iron Curtain have the peoples themselves had a free opportunity to choose? Certainly not in Czechoslovakia in 1948, or in Hungary in 1956, or in East Germany today. And where in the free world would Khrushchev give this choice, if our liberties had once been taken away? And if Khrushchev wants an open competition why does he shield the Soviet people from a full exchange of ideas, of information, and of persons? Why the almost pathological concern to hide things from us and from his own people also?

The answer is that communism, despite its brazen ideological pronouncements, cannot tolerate free competition. Nowhere has a nation fallen under Communist domination and then been allowed to test its choice by resort to free elections.

Instead, peoples are faced with the fait accompli of being taken over before they realize what has happened. In Hungary this was helped on in the immediate postwar days by what I understand has been vividly described to you as the Rakosi "salami" technique—biting off, bit by bit, elements of freedom until the whole structure was eroded.

In Czechoslovakia the popular front technique succeeded in putting a minority party into power. This illustrates the grave danger of a situation in any state where the Communist Party and its allies succeed in gaining even a substantial minority position. Once in power, the voting ends and popular say has no peaceful way of recovering control. In the case of Czechoslovakia the danger point was reached when the Communists gained less than 40 percent of the electorate, with the non-Communist parties, as is so often the case, hopelessly divided.

Today the Communists, with their progress blocked in Western Europe and to a great extent in the Far East, are concentrating a major effort in the newly emergent states of Asia and of Africa. Here they exploit political weaknesses as well as dynamic nationalism and the surge of rising expectations which are not easy to satisfy.

Their weapons include economic penetration, the development of hard-core Communist Parties—underground or above ground—propaganda both open and black, and in the areas around the periphery of the Communist bloc itself, they maintain the overhanging threat of their military power.

Yet there is no reason to adopt an attitude of pessimism as we face this particular challenge of international communism.

We are far better prepared than is generally believed, to deal with the Communist political and subversive threat.

In the last 10 years, after going through far too long a period of naive complacency, this country has been awakened to the danger. We have also learned to understand Communist operating techniques. We know about the orders given in Moscow to leaders of other Communist Parties. This is not too difficult. The security of these parties as they operate in the free world varies from medium to poor. We have ways of covering their activities and we get the basic information we need to gage their strength and tactics. Like too many of the rest of us, they talk too freely for their own good.

Furthermore, the efficiency of the Communist organization in the less developed areas of the world is itself not well developed. In the post-war days they had in many European countries, as in France and Italy, for example, sophisticated old-line Communists of the Thorez-Togliatti school. Throuh death and old age this type of leadership is wearing out in Europe, and it will be a long while, if ever, before such leadership could be developed for Asia, Africa, or Latin America.

In area after area Moscow and Peiping, and their covert spokesmen in their far-flung apparatus, have overreached themselves. Their true hand has been shown in Hungary, Tibet, Egypt, and in many other countries that could be mentioned. It may be that in their overeagerness to promote a Communist-dominated Iraq the Communists have overplayed their hand with the new Iraqui leaders and damaged their position in the Arab world.

Here is an interesting sidelight on Tibet: The agreement of May 23, 1951, between the Peiping government and the local government of Tibet provided that the Chinese Communist army units entering Tibet should not "arbitrarily take a single needle or thread from the people." Eight years later they took the lives of many Tibetans, the liberty of all.

The Communists are fond of saying that the forces of history are on their side. One of the great forces at work today is that of nationalism, particularly in the newly emerging countries of the world. However, not the Communists, with their goal of domination, but the West, with its ingrained respect for self-determination, is coming more and more to be recognized as the ally of the new Afro-Asian nationalism. As anticolonial feeling subsides in the new states, it is being replaced by growing realization that Sino-Soviet expanionism is a far greater threat to their cherished independence.

Soviet economic aid is beginning to run into the same type of problems we face in our own aid programs, including too many Soviet experts and technicians and here and there shoddy goods. Also, the political petticoats of the programs have shown up badly in several instances, notably in Yugoslavia,

where aid was promptly terminated and half-built projects left to the weather, when Yugoslav policy no longer pleased the Soviet.

Here, as in certain other instances, the so-called "aid without strings" has been shown up as "strings without aid."

It is significant that little or no publicity is allowed to reach the Russian people themselves about the Kremlin's loans and aid to foreign countries. This leads one to believe that this use of their assets would not go down well with people who are themselves denied so many of the good things of life.

When things don't go as the Soviets want, they tend to lose their temper in public, as most recently in the cancellation of Khrushchev's Scandinavian trip and in the Chinese Communists' retort to India over Tibet.

Many of the states in Europe, Asia, Africa, and even in parts of this hemisphere, which have tended toward neutralism have markedly changed in their attitude about communism over the last few years. Their former complacent approach to the danger is being replaced by a far greater degree of sophistication. Here some of the initial appeal of communism is wearing off. The uninitiated are becoming initiated.

Finally, there are signs of change within the Soviet Union itself which over the years might bring about some relaxation of the aggressive expansionist policy of the international Communist movement.

The rigid police state of the days of Stalin has been relaxed. Education is being pressed and while special emphasis is being placed on education in scientific, technical, and engineering fields, which would add to their industrial and military strength, there is nevertheless, a general broadening of the educational base in the Soviet Union.

While the Soviet Government is still a closely regulated autocracy, it is not today quite as free as under Stalin to disregard wholly the desire of the people among which the yearning for peace is foremost. As long as the Soviet people are only permitted to hear, to read and to learn what the Soviet Government dictates, progress will be slow. But as long as there is some progress there is hope of gradual evolution. Increasing contact between the American and Russian peoples should contribute to this end.

I would not leave the impression, in concluding, that this listing of favorable trends should in any sense cause us to relax our sense of urgency in taking measures to counter Soviet political, economic and subversive penetration in the free world.

Quite the contrary, the moment a tide shows signs of slacking, then is the opportunity to drop holding operations and press the advantage. Since I appreciate there are many "doubting Thomases" on this score, I can assure you that we are better prepared and better coordinated to deal with this challenge, and are dealing with it more effectively, than many of you realize.

But too much talking about plans and practices would only alert the challenger to our counter measures. Hence silence in face of criticism is better than any bragging about past accomplishment, or programs for the future.

One of the key purposes of this Reserve officer seminar has been to alert a highly selected group to the nature and implications of the challenge which we face from international communism. I would like to give my fullest endorsement both to the objective of the seminar and to the manner in which it has been carried out. But the job does not end here tonight. Each of you in turn can help to give the thinking citizens of your communities the benefit of your own impressions. In a free society like ours an informed public opinion is indispensable to give the backing to those men and to those measures that are needed to meet Khrushchev's challenge to us.

Tribute to Judge Samuel S. Leibowitz

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 27, 1959

Mr. LANGER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Leibowitz Blasts Prisons in United States, Sails Soon To Visit South America," written by Alfred C. Roller, and printed in the New York World Telegram and Sun of July 3, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York World-Telegram and Sun, July 3, 1959]

LEIBOWITZ BLASTS PRISONS IN UNITED STATES, SAILS SOON TO VISIT SOUTH AMERICA'S—JUDGE, WIFE LEAVE FRIDAY FOR 6 WEEKS

(By Alfred C. Roller)

The United States must overhaul its antiquated penal system or give up the war against crime, an outspoken jurist charged today.

This criticism of the prison system came from Kings County Judge Samuel S. Leibowitz. He said that 6 out of every 10 discharged convicts commit new crimes—many more vicious than their earlier offenses.

"We can anticipate," the judge explained, "that of the 175,000 prisoners in our prisons today, 115,000 will return."

The 65-year-old jurist, who has sentenced some 10,000 felons during his 19 years on the bench, lashed out at the prisons.

SYSTEM A FAILURE

"In our country we keep a prisoner caged like a wild animal. When we think he's served his time we give him a $10 bill, some prison-made clothes, and tell him not to get into trouble. But prisons do nothing to help the convict. Our rehabilitation system has been an abject failure. Our prisons are stewpots where the good is destroyed and the bad nurtured and developed."

The judge added, "We must change our prison system or abdicate to the unrelenting war we are waging against crime."

He said one of the biggest frustrations of a judge is that he must sentence at least 500 criminals every year and yet know in his heart that there is very little that he can do for the pitiful creatures.

"They are twisted and need rehabilitation, but I know they won't get it in prison. It is just a waste of time, of effort, and of money."

TO LEAVE ON TOUR

The judge said the United States could take a lesson from some of the "backward" countries of Europe and South America who treat their convicts in an enlightened manner.

To gather further information on penal system in other countries, Judge Leibowitz is taking a busman's holiday in South America. He and his wife, Belle, are leaving Friday, July 10, for a 6-week tour of Brazil, Argentina, Chile, and Paraguay, among other countries.

"Isn't is a strange story that an American from the Empire State should have to go to these countries to learn modern penology," he asked. "It's as if General Motors or Ford sent technicians to darkest Africa to learn the latest ideas of automotive engineering."

"NOT CAGED RATS"

As an example of enlightened penology, Judge Leibowitz mentioned the Penitenciaria Nacional in Buenos Aires which he visited several years ago.

"Outside it looks like a bastille," the judge stated, "but inside it is comfortable, efficiently managed and makes the prisoners feel like they are living people, not caged rats. Why, the prison even has a swimming pool."

Judge Leibowitz said that probably the most important step taken by the Argentine prisons is to teach the criminal a useful trade. He said that he visted modern shops in which the prisoners were learning up to 40 trades.

Another practice followed by both the Argentine prisons and many in Europe is to allow the prisoners a private visit from their wives, the judge said. This helps to boost a prisoner's morale and breaks the prison tensions, he added.

The judge said that the main curse of our penal system is idleness. "Most prisoners loaf away their time," he continued, "because no real work is there to be done or useful skills to be taught. Better than half of the inmates are either idle or engaged in slowmotion boondoggling. In time, metal processes deteriorate and soon the dry rot of prison routine takes its toll."

The antiquated machinery and poorly maintained shops found in prison also came under the judge's attack.

Big Steel Hypocrisy a National Scandal: Controls Prices, Soars Profits, but Would Suppress Workers

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. ANDERSON of Montana. Mr. Speaker, the August 3 U.S. News & World Report has a special report titled "A Boom on in Profits." The subtitle says:

Profits now are surging upward for U.S. corporations in practically every line of business.

For many companies, second-quarter earnings are setting new highs. Among the leaders: steel, autos, chemicals, building materials. Railroads, too, are gaining.

All signs point to the best profits year in history.

The article shows that second-quarter earnings, after taxes, of 395 large corporations have gone up in 1959 by 74.9 percent over 1958 earnings.

It is interesting to see what is happening to the profits of the big steel corporations who have forced unions to strike in order that workers may enjoy even a small share of the prosperity the steel industry enjoys. The second quarterly report shows Jones and Laughlin steel profits up 556.1 percent, Inland steel 100.6 percent, Colorado Fuel & Iron 651.1 percent, and Allegheny Ludlum up 1,110.4 percent.

In another report the U.S. News headlines "Living Cost Up Again, to an All-Time Peak."

Is it not strange that the steel companies should be striving, in the current negotiations with the steel unions, to eliminate the cost-of-living escalator clause in their contract in an attempt to prevent the workers from even maintain-

ing their standard of living while the corporations' profits soar?

In still another article, and despite the soaring profits of Big Steel, the U.S. News predicts another $2 increase in the price of steel when the strike is over.

Let us have done with any pretense that this is a free and competitive economy when it is evident that the major segments of our economy are, like steel, governed by administered prices where price levels are set by a few big corporations at whatever price will yield the greatest profits. In view of the sky-high profits the steel companies have been rolling in, it is evident that the only reason they are considering another raise in the price of steel is so that they can increase their take again while they holler about the inflationary effect of any labor settlement.

The complete table follows:

As corporate earnings move higher

[From U.S. News & World Report, Aug. 3, 1959]

Earnings after taxes	Latest quarterly reports		Change	
	2d quarter, 1958	2d quarter, 1959		
				Percent
Ford Motor Co	[1] −$13,700,000	$151,100,000		
Chrysler	[1] −10,100,000	42,800,000		
American Motors	7,284,000	16,084,000	Up	121.7
Studebaker-Packard	[1] −7,020,000	4,318,000		
General Tire & Rubber	1,357,000	7,895,000	Up	481.8
B. F. Goodrich	8,017,000	9,288,000	Up	15.9
Union Carbide	27,069,000	48,861,000	Up	80.5
Monsanto Chemical	9,134,000	17,991,000	Up	97.0
Jones & Laughlin Steel	4,034,000	26,468,000	Up	556.1
Inland Steel	12,119,000	24,313,000	Up	100.6
Colorado Fuel & Iron	1,063,000	7,984,000	Up	651.1
Allegheny Ludlum	646,000	7,819,000	Up	1,110.4
Johns-Manville	6,509,000	10,274,000	Up	57.8
National Gypsum	3,700,000	7,870,000	Up	112.7
Allis-Chalmers Manufacturing	6,304,000	8,938,000	Up	41.8
Clark Equipment	1,651,000	4,319,000	Up	161.6
Worthington Corp	2,054,000	1,906,000	Down	7.2
General Foods	12,754,000	14,722,000	Up	15.4
United Fruit	10,074,000	5,983,000	Down	40.6
Wrigley	2,065,000	2,583,000	Down	3.1
R. J. Reynolds Tobacco	19,349,000	22,786,000	Up	17.8
Liggett & Myers Tobacco	7,825,000	8,018,000	Up	2.5
Continental Can	9,896,000	13,221,000	Up	34.0
American Radiator & Standard Sanitary	2,294,000	3,870,000	Up	68.7

An Invisible Line That Protects America: The Atlantic Barrier

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my colleagues in the House one of the lesser known, but vitally important defensive roles undertaken by the U.S. Navy. The Atlantic barrier is one of the more expensive current operations undertaken by the Defense Establishment, but, after witnessing the work of the dedicated young men who make the barrier a reality rather than an invisible line across the Atlantic and Pacific, I feel that the expense to date has been worthwhile. Both the Atlantic and Pacific barrier operations are an extension of the defense early warning — DEW line — system across northern Canada. They were inaugurated to prevent an end run by enemy bombers wishing to penetrate to our shores. In a real sense of the word, they were inaugurated to prevent a repeat of the tragedy of Pearl Harbor.

By invitation of the Navy I was recently able to witness a part of this operation, based at the Argentia Naval Station, Newfoundland. I came away impressed by several very important things I saw. The men who are stationed at Argentia regularly or who fly from there on a periodic basis, are dedicated to the protection of the United States. They are operating consistently and effectively under conditions which are hard for those of us in this country to imagine and which can be best described as comparable to the rigors of actual combat. The morale of these men, despite the tedious nature of their work, the isolation of their base and the dangers of their occupation, is extremely high. Most important, they have provided an effective barrier across which no enemy bomber fleet could penetrate without being observed and their course and number tabulated.

Here is how the system operates:

From the tip of Newfoundland to the Azores, and from the Aleutians to Midway and Hawaii, the navy has stationed at intervals radar picket ships to detect the approach of all aircraft to our shores. But due to the nature of radar waves, these ships cannot keep a complete radar watch and their efforts must be supplemented by those of aircraft flying from our bases on a constant, 24-hour air watch. It is the duty of these planes to maintain a vigilant lookout for low-flying aircraft.

From Argentia Naval Station a plane carrying highly effective radar gear is launched once every 3 hours. These planes make a 2,297-mile round trip to the Azores, each in the air from 12 to 13 hours. In good weather this would not be much of a chore; but there is no good weather at Argentia. In fact, there is probably no place on the globe where we have men stationed that the weather is so consistently bad.

Pilot after pilot, crewmember after crewmember, calmly told me of take-offs in weather which not only would find commercial aircraft grounded, but would find very few souls hardy enough to brace the elements. It was not uncommon last winter for planes to take off in winds ranging up to 80 knots—90 miles per hour—or higher with snow so thick the plane's wingtip tanks could not be seen, and with ice on the runways.

Fog is normal. Almost all of the flights that took off while I was at Argentia did so in thick fog or rain. The winds are constant and extremely variable.

Conditions on the Picket ships are not much better. These small destroyer escort craft toss and pitch in some of the most rugged weather to be found in the Northern Hemisphere. They are at sea for 25 days at a time and the crews get a really rough workout during that time.

However, Mr. Speaker, I found the men from Adm. W. I. Martin down to be skilled, effective, and efficient, and dedicated to their work.

Admiral Martin, in the briefing, made one point very clear: There is a real need at Argentia for more adequate housing and recreational facilities for the officers and men. Housing condi-

tions off the base are primitive and extremely costly. Because of the bad weather conditions during much of the year outside recreation is impossible.

It is my feeling that as long as the United States expects young men to live in the kind of isolation and under the conditions that prevail at Argentia, we as a Congress must accept responsibility to provide adequately for their basic needs.

As long as the threat of manned enemy bombers, which up to now has been the major threat to the United States exists, we must maintain the barriers across the Atlantic and Pacific. When that threat is replaced by a greater emphasis on missiles, whether land-based or submarine-launched, the need for this particular operation will decline. However, the threat of submarine warfare is so great, I have the impression that an operation similar to this one must be continued to detect the presence and course of enemy submarines which might be approaching our shores.

Argentia is a permanent base; it should be treated as one. There are also special problems of isolation and weather at Argentia which should be taken into consideration by the Congress in developing future plans for this area.

More Military Waste

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. O'KONSKI. Mr. Speaker, public reaction to waste in our Military Establishments is well reflected in this editorial from the Milwaukee Journal:

MORE MILITARY WASTE

The high-priority, 300-bed hospital that the Air Force finished and fully equipped last year near Evreux, France, at a cost of $5,708,500 stands empty and unneeded. And an Air Force spokesman admits that there are no firm plans for the military to make use of it, ever.

Of course, the Air Force planners and budget makers never revealed their blunder. When probabilities that the hospital would be needed at Evreux began to fade, nobody said, "Let's stop this thing quick, right here, so no more money will be wasted."

That's not the usual military way. Once a multi-million-dollar military project gets congressional approval and a little money to make a start, there seems to be no way to apply the brakes. The military can always conjure up some excuse to push the job to completion. How well we in Wisconsin, who have watched the Bong Air Base project, in Kenosha and Racine Counties, from the beginning know that.

Representative LAIRD, Republican, of Wisconsin, stumbled onto the ghost hospital of Evreux, in France. Otherwise the American public might never have known about it. Representative LAIRD and some other members of the House Appropriations Committee have been doing what they could to curb military waste and extravagance (sometimes in apparent deliberate violation of congressional intent) wherever it can be detected. Revelations of the way tax money has been wasted and overspent on the new Air Force Academy at Colorado Springs are enough to raise any taxpayer's temper to the boiling point.

Punctilious as the military is supposed to be, an Air Force Undersecretary couldn't explain to the Appropriations Committee a mixup about double expenditures for drapes at the Academy. This was a minor item—$4,500—but all he could say was that "strange things happen which are disconcerting."

They certainly are. And the attitude that so often permits these things to happen is most disconcerting. For top men in the Pentagon, so prepossessed with keeping the Nation militarily strong in the cold war, appear almost blind to the necessity for keeping the Nation economically strong, too. They do not seem to understand the danger of wrecking the country financially by extravagance and sheer waste.

Proper Advisory Commission on Intergovernmental Relations

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, the Honorable Sam H. Jones, former Governor of Louisiana, on July 6, 1959, presented before the Intergovernmental Relations Subcommittee of the House Committee on Government Operations what I feel is an unusually fine statement in support of a Proper Advisory Committee on Intergovernmental Relations. Since the former Governor has been working on this matter as a member of the Federal Commission on Intergovernmental Relations and has served as chairman of various local government committees, I believe his views are entitled to great consideration. Under leave to extend my remarks in the RECORD, I include his statement, as follows:

STATEMENT OF SAM H. JONES, FORMER GOVERNOR OF LOUISIANA, TO INTERGOVERNMENTAL RELATIONS COMMITTEE OF THE COMMITTEE ON GOVERNMENT OPERATIONS

My name is Sam H. Jones. I am a practicing attorney of Lake Charles, La., and, by way of identification and qualification, I submit the following:

I served as Governor of Louisiana from 1940 to 1944. Prior to my tenure as Governor I served 14 years in various capacities in municipal, parish (county) and district governments. I was a member of the Federal Commission on Intergovernmental Relations from 1953 to 1955 and served as chairman of the Local Governments Committee.

I favor the legislation embraced in H.R. 6904 by Mr. FOUNTAIN, H.R. 6905 by Mrs. DWYER, and S. 2026 by Mr. MUSKIE, et al, with one modification.

The basic and fundamental reason why I favor this legislation is the language of the last sentence in the letter of transmittal by Chairman Meyer Kestnbaum of the Commission on Intergovernmental Relations to the President on June 20, 1955, wherein he said:

"We are hopeful that this report will be regarded as the beginning rather than the end of a contemporary study of the subject of intergovernmental relations, and that it will stimulate all the levels of government to examine their respective responsibilities in a properly balanced federal system."

Then, too, I agree with Chairman FOUNTAIN when, speaking before the House of Representatives on May 6 on the subject of the "Proposed Advisory Commission on Intergovernmental Relations" he said:

"Building on the foundation laid by the Kestnbaum Commission studies and the work of our subcommittee, I believe it is desirable that we now concentrate on the practical and continuing problem of seeking to improve the operation of our Federal system."

And with his observation that "the most important function of the Commission * * * would be that of bringing together Federal, State, and local officials on a continuing basis for discussion of the problems which concern and affect all levels of government," and that "the Commission would provide a favorable atmosphere for promoting mutual understanding and would help to produce a smoother functioning of our Federal system."

These statements are in agreement with the recommendation of the Kestnbaum Commission that "an Advisory Board on Intergovernmental Relations" should be appointed by the President, and that "provision should be made for a permanent center for overall attention to the problem of interlevel relationships."

Very few people, outside the small circle of professional political scientists, realize how grossly Americans have neglected the study of the functioning of their Federal governmental system. It is well to remember that the 1953–55 study by the Kestnbaum Commission constituted the first official study in 164 years—or from 1789 to 1953. In the light of this fact it is no wonder that we have accumulated a complicated labyrinth of tangled problems that will take years for the best brains of America to set right and place in order.

The strength of the proposed Commission, it seems to me, is that it will result in bringing together representatives of the three levels of government for voluntary discussion of common problems. As Senator MUSKIE so well observed, in his remarks to the Senate on May 21:

"It would serve as a central clearinghouse for information on all aspects of intergovernmental relations; it would serve as a forum for discussion of specific problems and particular programs; it would give specialized attention, on a continuing basis, to particular intergovernmental problems with a view to promoting greater cooperation among the various levels of government and providing a systematic means of encouraging better relations among them."

And, I think, as Mrs. DWYER said in her remarks to the House on May 6, that "the creation of a permanent Advisory Commission on Intergovernmental Relations would help bring order, understanding, careful planning, and more effective control into the complex world of Federal-State-local relations," observing quite correctly that, at the present time, "there is no existing machinery whereby improved relations between the several levels of government can be fostered and encouraged."

To these observations permit me to add, with justifiable pride, that on September 25, 1954, the Committee on Local Governments, of which I had the honor to be chairman, became the first to advocate a permanent, or continuing, Commission such as is now sought to be established by the pending legislation. In our report to the Commission on Intergovernmental Relations, we said:

"Since no final solution, good for all times, can be found to all the issues involved in

the relations between governments, this Committee favors the establishment of a continuing Commission on Intergovernmental Relations with duties generally comparable to those set forth in Public Law 109. Periodic or continuous studies are needed to search out and compromise the points of conflict between the National Government on the one hand, the State and their local governments on the other."

Thus we find that, after exhaustive study and mature deliberation, the following official groups have come to the same conclusion in favor of a continuing Commission on Intergovernmental Relations: First, the Advisory Committee on Local Governments in 1954; second, the Commission on International Relations in 1955; and, third, your Intergovernmental Relations Subcommittee in 1958.

Then, it is proper to observe that there has been wide public acceptance of these views. Chairman FOUNTAIN has observed that "the philosophy and principles of federalism reported by the Kestenbaum Commission were found by our subcommittee to be generally valid and widely accepted.

Mrs. DWYER went further to say that "I should add that the subcommittee found wide support for some such form of continuing examination of the Federal system."

In my opinion there is no validity to the arguments that "this is just another commission" and "it has no power and can do nothing." The wisest thing about our Federal system is that each level of government, is within limitations, autonomous within its own sphere. It is, therefore, within the nature of our system that no one level can completely dominate the other two levels. This legal situation makes an advisory commission the only method by which we can tackle and ultimately solve the accumulated and constantly increasing problems of our three-level system.

And I might add here that, whilst the controversy between the advocates of States rights and those who lean toward national control is very real and highly publicized, there is another controversy that is just as determined. I refer to the battle that is now raging between the advocates of State control and those who sponsor wider latitude for municipal and county governments. This latter controversy is, in many respects, more difficult than the former because local governments are creatures of the State, while the States are not the creatures of the National Government. It is much more important, therefore, that there should be brought about some forum for the discussion of State-local problems than for the discussion of National-State problems.

The proposed Advisory Commission on Intergovernmental Relations would do both.

That there is a trend toward big government and away from the independence and autonomy of State and local governments is illustrated by the growth of Federal grants in aid. From 1900 to 1950 the increase was from $3 million to $3 billion. Even more significant is the fact that Federal grants have increased, since the report of the Kestnbaum Commission, to a total of approximately $7 billion annually.

Then when we realize, while local taxes amounted to 53 percent of the total of all taxes in 1932—and that local taxes, at the present time, amount to somewhere between 10 percent and 12 percent of the total of all taxes—it is not difficult to see the trend away from the grassroots and toward the State and National capitols.

It is probably true that there is some justification for increased reliance upon the superior tax abilities of the State and National Governments, and the subsequent distribution to the lower units in the form of grants. But the movement is proceeding at such a rapid and precipitate speed as to be alarming. The United Kingdom has recently recognized that this probably means the destruction of the strength and influence of the local level of government, if continued. As a consequence the present British Government has gone far, in recent legislation, toward combining all assistance to local governments in one grant.

The least we here in this country can do, in my humble opinion, is to stop and take stock. And that, precisely, is what the proposed legislation would do. As Chairman FOUNTAIN so aptly puts it, the Advisory Commission provided by the proposed legislation "would not * * * be a panacea for eliminating all of the sore spots that arise out of the division of powers in our Federal system. It would, however, be a modest but constructive step in the right direction."

For these reasons and many others which a statement of this kind could not possibly embrace, I wholeheartedly endorse the legislation now pending before the Congress.

I do this with one reservation. I hope that greater weight can be give the county governments on the proposed Commission. County governments in America are, in the main, archaic. They still operate with a system that was born of the horse and buggy days. Only a very small percentage of our counties have an executive officer. Government, on all levels, needs overhauling in this country, but the crying need is on the county level.

Yet the proposals give the counties only 1 representative out of 24 on the Advisory Commission. Four are given to the municipalities. Four are given to the States. On this basis I would say that four should be allotted to the counties, and that, under no theory should less than two members be allotted to county governments. I hope this change will be made.

I thank the committee for this opportunity to make known my view of this important subject.

Cultural Exchange Program

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mrs. KEE. Mr. Speaker, the U.S. and Soviet academies of science have announced agreement on an extensive exchange of scientists between the two Nations.

This is the latest development in the cultural exchange program between the world's two mightiest nations. Personally, I hope that this approach will do much to lead to a better understanding with the Russians.

The Russians are extremely difficult people to negotiate with. Certainly the developments at Geneva bring this point home. And it points up once more just how little the Russians really understand the people in the United States.

Mr. Speaker, all of us know that one of the great dangers facing the world today is that the Russians, because of this ignorance, will seriously miscalculate and touch off another war. Anything that will lead to a better understanding is certainly a step in the right direction.

Under this new agreement, Mr. Speaker, scientists of the two countries will deliver lectures, carry out research and observe scientific progress. The leading scentists of the two nations will learn to know each other and understand each other better. I am sure that the Russians will be impressed by the peaceful intent of the U.S. scientists.

It is appalling to think that very few of the Russian leaders have ever been outside the Iron Curtain. How can we expect them to understand the West as long as they live in such complete isolation?

Under the cultural exchange program, it is hoped to bring citizens of the two nations together. Last weekend, for example, United States and Russian track teams engaged in a dual meet in Philadelphia. These Russian athletes are bound to have a better appreciation and understanding of this country after they return home. We have sent artists of all kinds to Russia. We plan to send businessmen and representatives of other groups to tour Russia. In return, people from that country will visit the United States.

Vice President NIXON is now in Russia. He will have an opportunity to visit many parts of the country and talk with top officials.

The Russians are a suspicious people, particularly on an official level. But surely the Russian people, just like people everywhere, detest war. I am sure they want to live in peace just as we do.

Because of tight censorship and government control of the daily lives of the people of Russia, it is difficult to reach the people. But every contact we can make will be helpful. For example, the Harlem Globetrotters, a very fine basketball team, recently visited Russia for a series of exhibits with Russian teams. About 350,000 Russians saw three games in Leningrad.

Exchanges on these unofficial levels are good things. People with common interests can help bridge the vast gulf separating the two nations much easier than can diplomats.

We have no aggressive intentions in the world. If the Russians could be made to understand this, perhaps much of the tension between the two countries could be wiped out. It is certainly worth the effort to bring this home to Russians on every level whenever we have the chance.

Americans Should Decide Kind of Money They Want

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. MURRAY. Mr. Speaker, I wish to call the attention of Members of the House to a timely, well-advised editorial on unwarranted, excessive spending by our Federal Government which appeared last Tuesday in my hometown daily newspaper, the Jackson Sun. It is a warning to our people against the dan-

gers of inflationary spending and excessive, unwarranted appropriations authorized by Congress. We must keep our economy sound, and if we do not, inflation can destroy its foundation.

Naturally our people are greatly worried and deeply concerned over our tremendous Federal debt, our failure to keep the Federal budget balanced each fiscal year and the excessive appropriations and spending measures approved by Congress. Why should not the general public be aroused over our financial situation when the Federal Government has just ended its fiscal year on last June 30 with a deficit of over $12½ billion for the year. With the tremendous Federal debt of nearly $290 billion indebtedness and with interest payments each year costing the Federal Government over $8 billion annually, why should not the general public be disturbed and alarmed?

It is high time that we drastically reduce Federal expenditures, balance the annual budget, and begin reducing our enormous Federal debt or else ruinous inflation can destroy our economy and the sound value of the dollar.

The editorial in the Jackson Sun of Jackson, Tenn., is as follows:

AMERICANS SHOULD DECIDE KIND OF MONEY THEY WANT

Americans now, perhaps as never before, need to decide what kind of money they want.

That decision can govern what the Congress does in the remaining portion of this session.

The amount of money the Congress votes to spend will help get this Nation back on a sound dollar basis—or it will stoke the furnaces of inflation.

Sound dollar economy can give a sound foundation to the greatest era of prosperity this country has even seen.

Unsound Government spending can help cut the value of the American dollar until it will be no longer buy the necessities.

There are certain essential Government spending programs. For example, the appropriations for national defense require some $40 billion. But what would our lives be worth as slaves of a foreign power?

We have embarked on a social security program which provides retirement and dependents benefits for which covered workers and their employers help pay.

A massive building program is designed to provide this Nation with a network of superhighways capable of meeting the requirements of peace and war.

But there is a numberless array of proposals which might benefit some segment of our population but which, desirable as they may be, cannot qualify as essential to our national safety and prosperity.

There is but one source of money with which to pay for Government's spending, good, bad, or indifferent; the taxes collected from American citizens.

A major source of these taxes is from the income of those who work or have investments.

So many Americans have been doped on the collection of taxes that they fail to realize what a large part of their income goes to Government.

What we mean is that the withholding method of collecting taxes is like an anesthetic—it deadens the pain without saving the patient from the operation.

The point has arrived, however, when huge Government borrowings are draining off available lending money—and driving the interest rates up to where the individuals and private businesses cannot borrow, or must pay large amounts for the privilege.

The vast majority of Americans are affected by this situation. Either they own (through stock, insurance, etc.) a part of one or more businesses or they depend for their living on the work for which they are paid or they have as their sole income the retirement provisions already made.

Some of the reasons for demanding that our Government cut down on its spending where possible are set out eloquently in a series of advertisements carried by the Sun, advertisements which are paid for by local business and professional men for the good of all.

The Sun, in conjunction with other free American newspapers, is trying to show the effect of huge Government spending programs, the dangers of continued appropriations above what the Nation can pay without borrowing.

This situation is not one to affect any one segment of our Nation exclusively. The day laborer is as much involved as the banker, the farmer as much as the dry goods store operator, the railroad section hand as much as the rail president.

All of us depend upon money to buy our needs. The soundness of our dollars controls how much we can buy with what is left us by Government.

We can do much toward obtaining a sound dollar by letting our Senators and Congressmen know we want it.

Communist Youth Festival Illumines West's Gamble in Cultural Exchange Program

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. JUDD. Mr. Speaker, many naively assume that in contacts between us and the Communists, we will, of course, always come out on top. Our system of freedom is better, our living standards are better, and therefore the better will automatically rub off on the less good. This is an unjustified assumption. Many a student from Asian and Middle East countries, who was pro-Western when he came to the United States, has gone home pro-Communist. I am completely certain that we can win, but only if we work harder than the Communists in understanding both systems and learn how to explain and to sell our views and values more convincingly than they sell theirs. That requires deep knowledge, dedication, and persuasiveness, not just curiosity, on the part of those Americans who go abroad in our so-called cultural exchanges. Casual Americans—whether students or professors or businessmen—will be no match for trained Communist agents. Amateurs seldom win over professionals in any contest. We must become professionals in this most important contest of our lives.

Mr. Speaker, the contest is highlighted just now by the so-called World Youth Festival convening in Vienna. The use by them of such a grand name for what is merely a Communist rally is itself a sample of smart professionalism. The pros and cons of cultural exchange are discussed in the following column by Edgar Ansel Mowrer:

YOUTH FESTIVAL ILLUMINES WEST'S CULTURAL GAMBLE

(By Edgar Ansel Mowrer)

By the time these lines are published, some 17,000 young people from a variety of countries will be gathered in Vienna, Austria, attending the Seventh (Communist inspired) World Youth Festival. Some 400 will be Americans, of whom about 300 are to be official delegates, the others spectators and tourists. It is therefore legitimate to ask what can come out of such a Red-dominated propaganda meeting and if Americans do well to attend.

There a difficulty arises. Among the Americans, as well as the young people from other countries, there are bound to be several sorts. A few will almost surely be fellow travelers eager to show their solidarity with the organizers. They will seek to give a dangerously misleading picture of America to the world. But one group of enthusiasts, the American Youth Festival Organization with headquarters in Chicago, has recruited dedicated anti-Communists, eager to carry the word of freedom and democracy to the heathen Communists at Vienna. And most of the American spectators will probably be animated chiefly by curiosity and the desire to meet and swap impressions with people of similar age from so many other countries.

MOSTLY HELPFUL

Most U.S. officials believe that presence of young Americans at a similar youth festival in Moscow 2 years ago, on the whole, was beneficial, even though a few disgraced themselves by their fervid support of openly Communist ideas and causes. Others, however, amply made up for them by eloquently and stubbornly standing up for freedom and decency.

Yet this year, young people from a number of places have refused to attend and lend themselves to a major Soviet propaganda drive.

The Government of India officially disapproved the festival and the Indian Youth Congress voted against participation. The Islamic students of Indonesia urged Indonesian youth to have nothing to do with this Communist enterprise. Nasser's United Arab Republic showed its (at least temporary) opposition to Moscow by declining to send a delegation. The neighboring Sudan simply banned attendance by its citizens.

Pakistan, South Africa, and the Philippines decided to boycott the festival. Ghana expressed disapproval of the Vienna meeting.

In the Western Hemisphere, Peru and Chile refused to attend while Venezuela, Argentina, Cuba, and Mexico showed enthusiasm—as current political developments in those countries might have led one to expect.

Against such a controversial background, it is obvious that those young Americans, delegates or not, who have elected to attend, have assumed a real responsibility. They have overridden a State Department warning, which is their legal right. But one may hope that they will heed the Department's further advice: (1) it warned that the festival is Communist-inspired; (2) it explained that communism would attempt to use their presence to help the U.S.S.R. and harm the United States of America; (3) it suggested that before going, they should acquire full information about what communism is and what its leaders plan to do to the free world.

ALL IT COULD DO

The Department could do no more; contact between American and Communist young people at Vienna is just one facet of the policy of favoring cultural contacts with communism which the U.S. administration, after long hesitancy, somewhat reluctantly adopted a few years ago. That is now a gamble with an outcome nobody can foresee. What can be assumed is that the net result will depend not only upon the superiority of free society over slave society but upon the courage, wisdom, and conviction of those Americans who make the contacts, no matter in what field. This responsibility is heavy.

The young Americans who attend the festival in Vienna all share it.

North Dakota Is Quite a Place

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. BURDICK. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by John F. McLeod, appearing in the Washington Daily News, July 20, 1959, entitled "The News Discovers North Dakota." Had Prospector McLeod completed "digging" he would also have found the oilfields and the friendly western atmosphere of Williston, the busy and progressive Gate City which lies in the center of the fertile Red River Valley, Fargo, and many more hospitable towns and cities lying in between.

The article follows:

THE NEWS DISCOVERS NORTH DAKOTA
(By John F. McLeod)

Ask almost any well-traveled American which of the 48 (pardon, 49) States he's missed, and he's likely to answer:

"Well, let's see, I think I've visited all except Wyoming and North Dakota" or "Rhode Island and North Dakota" or—

Invariably, North Dakota is the least known of all the States to most U.S. tourists.

This fact has become increasingly a cause of State concern, though there is no shortage of tourists—mostly Canadians, who come down for the cheap dollar and to whoop it up in North Dakota's lively small cities.

We took a 10-day tour of North Dakota and we especially recommend:

Jamestown: This area is especially popular for pheasant and duck hunters in the fall, but a nearby reclamation lake also provides good summer boating and fishing and excellent campsites.

Bismarck: Don't miss the beautiful, modern skyscraper capitol and the State museum's collections of Indian relics and guns.

Mandan: From nearby Fort Abraham Lincoln, General Custer sallied against the Indians. An outdoor summer horse opera enacted by college students tells the story of his 7th Cavalry.

Dickinson-Medora: Here's where the real West begins. Plan to stay several days, either at Dickinson's excellent and inexpensive Ray Hotel, managed by Joe Regan, a former Washingtonian, or at one of the campgrounds along the Little Missouri River in Theodore Roosevelt National Memorial Park. See a cattle auction in Dickinson and one of the many rodeos thereabout.

In the park, see the prairie dog town and "ever-burning" veins of lignite coal which actually are forming new Badlands before your eyes. Just outside, visit the Chateau de Mores mansion of French nobleman who tried to set up as a cattle tycoon in the 1880's when Theodore Roosevelt also lived thereabout. "Old Four Eyes," horse opera about those days is set in the Burning Hills Amphitheater.

Minot: With a brandnew, big SAC air base, it boasts the State's liveliest nightlife, and possibly its best hotel, the Clarence Parker. Enroute, see Garrison Dam, which has backed up a 200-mile-long lake.

Lake Metigoshe: This is rolling hill and birch country and is listed in "Bargain Paradises of the World." You can rent a lake cottage for $30 a week. Nearby is the International Peace Garden maintained by Canada and the United States.

Devils Lake: Besides the lake (saltish) and usual resort facilities, visit the nearby Fort Totten Sioux Indian Reservation.

Grand Forks: Don't miss a really wonderful motel, the Westward Ho. It has a heated, glass-walled swimming pool, shaped like a cowboy boot.

A thing we particularly liked about North Dakota: Stopping at a roadside rest area, we noticed a State employe actually scrubbing down the picnic tables. He said there's never much trash to pick up: "North Dakotans aren't litterbugs," he said.

The Next Political Era

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. WOLF. Mr. Speaker, for those people who are concerned about our national problems, present and future, and who are wondering about the vehicle through which the American people will choose to deal with these problems, I commend an article by Roscoe Drummond which appeared in the Washington Post today, entitled "The Next Political Era":

THE NEXT POLITICAL ERA—NEW PROGRESSIVISM FORECAST BY SCHLESINGER
(By Roscoe Drummond)

How would you like a political forecast for the next 8 or 10 years? Not a prediction of who will be President or which party will control Congress, but a preview of a political climate, the political problems, and the trend of the political answers?

This is what Arthur Schlesinger, Jr. has recently submitted, in the form of a most stimulating memorandum, to the New York committee for the Democratic Advisory Council.

Although Mr. Schlesinger has often been identified as a spechwriter for Adlai Stvenson in two presidential campaigns, he is no ordinary "ghost." He is a voice in his own right, a highly respected and intelligent voice, a Harvard professor, a Pulitzer-prize biographer, and author of the scholarly study of the Presidency of Franklin Roosevelt.

It would be idle to dismiss lightly Mr. Schlesinger's forecast of the shape of things soon to come. His views will strike a responsive chord with many people and they need to be looked at understandingly. The principal proposition in his memorandum are these:

That the Eisenhower epoch—the swing to conservatism—is drawing to its "natural end" in light of the rhythm of political change in the United States.

That the new political epoch to be ushered in by the 1960 election will not resemble the New Deal, which took its special character from the depression, so much as it will the progressive period of the turn of the century.

That it is uncertain which party will be the instrument of the new progressivism; that it might well be the Republican Party under Nelson Rockefeller and that it won't be the Democratic Party "if the Democrats are foolish enough to expect to inherit by default."

Mr. Schlesinger argues that the great difference between the politics of the sixties and the politics of the thirties will be that, while the New Deal dealt with the problems of subsistence and survival, the new progressivism will deal with how to improve the quality of life of the American people.

He sees such concrete issues as these most likely to preoccupy us during the next decade:

Improvement of community facilities—cities, suburbs, slum clearance, better housing, urban renewal, etc.; revitalizing our educational system; improving medical care and care for aged; equal rights for minorities; development of natural resources; control of inflation; improvement of social security; elevation of popular culture; adequate foreign aid; prosecution of our weapons effort.

Mr. Schlesinger's prediction that the Eisenhower swing to conservatism is drawing to a close is not just wishful thinking. The 1958 election added to the liberal strength of the Democratic Party both in Congress and in the governorships; it weakened the conservative ranks of the Republican Party. The most decisive Republican victory was Governor Rockefeller's in New York. My own guess is that any change in the political consensus next year will be leftward, particularly since, as I see it, either Mr. Nixon or Mr. Rockefeller would be less "conservative" than Mr. Eisenhower.

The reason I put quotes around conservative is that it is a loose and subjective word. It needs to be understood, I think that progressive and conservative ideas do not necessarily conflict, that a progressive era of political action need not necessarily violate conservative principles. The best example is Theodore Roosevelt, whom Mr. Schlesinger cites as the first great figure of the old progressive movement.

A conservatism which uses conservative principles to deal with the Nation's problems rather than to neglect them would be a haven for a progressive. And I am convinced that if the post-Eisenhower leadership of the Republican Party does not show that it is intent upon dealing with the problems Mr. Schlesinger has cited, the voters will choose the Democratic Party to do so.

The Farm Mess: Stop Subsidies

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. HOSMER. Mr. Speaker, in order to emphasize the fact that the people are sick and tired of farm subsidies, I

have on several previous occasions placed extracts in the RECORD of letters approving my four-point program to end farm subsidies. Here are more such extracts:

I have read with much interest your program "to end the farm mess." The plan you suggest should merit the support and endorsement of a majority of thinking citizens.

I congratulate you on your sound and forthright position, and trust you will find strong and growing support for it.

My father did not expect the Government to give him money for not raising crops. Many farmers buy poor land where they couldn't raise crops if they tried and the Government pays them for not raising crops and they are getting rich on it.

Your recent attacks on the farm mess are in accord with my thinking for over 5 years. Let's hope your outspoken views will be gratefully supported by a huge number of people from all areas.

Farm mess, I agree; no business should be subsidized; give the money back to the taxpayers, who have paid for the $9 billion in surpluses and have paid and are paying the $1 billion a year for storage.

I think your ideas about the farm mess are excellent.

Your idea on a fire sale to get rid of our farm surpluses sounds great. However, what are the possibilities of it coming to pass within the foreseeable future? What can I do as a citizen to help further this wonderful idea? Please let me know.

I agree with you 100 percent regarding the farm subsidies.

I was about to write you about the farm mess which indicates what happens when Federal Government makes funds available for subsidies without controls and pray your efforts will be successful and that all our Representatives will go along with you 100 percent.

Regards this price support have read where the farmers themselves wish it would be removed and allow them to dispose of their products in open market. If ever there was a problem that should be disposed of, once and for all, is this soil bank before it ruins us financially.

I am certainly most pleased with your comment on the farm situation, it is sensible and constructive.

We hope that you are successful in cleaning up the farm mess. All farm subsidies should be eliminated as quickly as possible. Keep hard at it.

I am for it 100 percent and wish you would tell me how we can assist you in getting some action. Will letter writing to Congressmen and Senators help?

We are all sick of the farm mess. Why are the farmers entitled to so much of the tax dollar of other working people in this great country of ours.

The farm mess, is right down our alley. This problem is already preposterous and something drastic is necessary now, not next year or later.

Also, I would commend to reading the following editorial which recently appeared in the Los Angeles Examiner:

HOGS, HAM, AND BACON

When hogs are scarce, the price of ham, bacon, and pork chops runs high in the markets of the big cities.

When prices are very high, speculators get into the agricultural business. They grow corn; they grow wheat; they raise hogs. They overdo the job and produce so much that prices begin to go down.

At that moment the speculators and the honest farmers join forces and begin to bring pressure on Congress to provide subsidies out of taxes.

That means we city folks pay twice for what we get. We pay the high price charged in the meat market and then we pay taxes to subsidize the farmer and the speculator.

The politician, particularly the Members of Congress, know that this is all wrong. They know that, at the present time, if prices found their level in the market, the entire country would be better off.

They know that the greatest menace to the United States is inflation and that every subsidy is a stimulus to further inflation.

Special Pay for Extra Skill

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. PELLY. Mr. Speaker, I am today introducing a bill to provide additional compensation for employees in the postal field service who are required to qualify on scheme examinations.

The purpose of the proposed legislation is to provide remuneration to those loyal and dedicated postal employees who have for years been required to spend their own time learning complex schemes or systems for the distribution of mail.

These schemes change frequently, and postal clerical employees, members of the National Federation of Post Office Clerks, for example, are forced to engage in a constant effort to keep current with changes necessitated by a growing city and consequent expanded delivery service or by changing train or plane schedules.

Every time there is a change in an arrival or departure time for a train or plane, post office schemes are changed to reflect the new schedules. To give some idea of just how difficult it is to learn a post office scheme, I suggest anyone try to memorize any 10 pages of the Washington, D.C. telephone directory. That will embrace some 4,000 items, an approximation of an average postal scheme. Add to this the daily and weekly changes that occur then you have a vague idea of what a post office clerk has to remember for a single scheme period. Many clerks have to know two, three, and even four such schemes.

I believe these schemes are necessary to the prompt and efficient dispatch of mail, but I do not believe we have any right or justification to demand these loyal employees devote their own time to learning such schemes without compensation.

For that reason, I am introducing legislation which I feel will at least provide a token recognition on the problem and furnish a small recompense for the effort and time necessarily devoted by these loyal and faithful employees.

I hope the Committee on Post Office and Civil Service will move promptly to the consideration of this very important legislation.

Labor Reform Legislation

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. BOSCH. Mr. Speaker, it was a rather serious disappointment and in many respects a distinct shock to see the result of the considerations by the House Committee on Education and Labor of labor reform legislation. I am convinced that this proposed bill makes a mockery of the extensive hearings had by the McClellan committee in the other body.

This is very definitely not antiracketeering legislation and is a complete farce as an attempt to meet the outrageous disclosures thus far elicited. The American people should not be deluded into believing that this is legislation which will stop the abuses so forcibly and vividly portrayed for the record.

If we are to meet this problem head on, we must have the courage to stand up and be counted as the responsible representatives of the people of the country.

I, for one, Mr. Speaker, will not bend to the whim and wish of certain labor leaders, particularly when they throw their weight around by threatening to call a national strike creating a national emergency or by threatening to raise $1½ million to use in a campaign to defeat Members of Congress who will not do their bidding, as against what I deem to be the best interests of the American people.

Under leave to extend my remarks, I include a letter received from Mr. D. J. Hardenbrook, chairman of the board, American Creosoting Corp., in which he very effectively points out the shortcomings of the bill reported by the House committee and outlines what the average American citizen expects of us in this field.

AMERICAN CREOSOTING CORP.,
Louisville, Ky., July 24, 1959.

The Honorable ALBERT BOSCH,
House Office Building Washington, D.C.

DEAR CONGRESSMAN: It is my understanding that the House of Representatives will shortly take action on a labor bill and because I feel so strongly that this is one of the most challenging and important issues to come before Congress, I would like to take the opportunity to express my views.

All responsible citizens, including most of those who make up the labor movement, have been sickened by the grim revelations of the McClellan committee. The lawlessness, gangsterism and utter disregard for the public welfare that characterizes some unions is repugnant to the average American's concept of fairness and decency .

It is my fear that neither the labor bill which passed the Senate, S. 1555, nor the bill approved by the House Committee (and particularly the latter) is adequate to deal with the forces in the labor union movement which have been responsible for the extortion, the embezzlement, the arson, the general gangsterism that has been detailed by the McClellan committee.

It seems to me that if Congress is going to come to grips realistically with this problem, a few minimum provisions should be added to the labor bill now before you. These will include a firm and effective ban on secondary boycotts, solid restrictions on organizational picketing, some control over union political activity, restoration of State authority to act in labor matters and provisions for the rank and file union member which will make labor union leaders responsive to the wishes of a majority of their members. It seems incredible to me that Congress will permit a few union leaders to continue to flout the public interest as well as the interests of their members. Yet, it is my firm conviction that that will occur unless the pending bill is vastly strengthened.

It is my opinion that strengthening this legislation would be fully in accord with the wishes of a majority of American citizens who feel that Congress must do something very fundamental in order to curb the wild excesses of certain union leaders, some of whose actions border on anarchy.

Thank you very much for your consideration of my views.

Sincerely yours,

D. J. HARDENBROOK.

The Cure for Mistakes in the Mutual Security Program Is To Correct Them, Not To Wreck the Program

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of July 25, 1959:

[From the New York Herald Tribune, July 25, 1959]

THE ISSUE OF WASTE IN FOREIGN AID

The waste in the foreign aid program as revealed by a House Appropriations Subcommittee is indeed deplorable. It arises from a number of causes, not the least of which is the multiplicity of government bureaus and departments which administer it. Another is the inability of the planners, who must do their work a year ahead, to foresee changes in conditions which occur in various countries—a difficult problem in the best of times. A third is surely the size of the program itself which employs thousands of personnel and distributes billions of dollars annually. Obviously, better discipline and more imaginative supervision are in order immediately.

This said, the worst thing that could happen would be for Congress to use evidence of waste as a pretext for cutting still further into foreign aid funds. And the timing of the subcommittee's release, on the eve of debate on mutual security appropriations, suggests all too strongly that it aims at doing just that.

In a government enterprise on this scale some degree of waste can always be found, and criticism if justified. But, as the Draper committee's latest report on the subject emphasizes, the answer is not to emasculate the program but to continue it and to administer it satisfactorily. Just how this could be done is something the report goes into at length, and its recommendations deserve the careful attention of both the executive and legislative branches. We should remember, however, what we are really after. Reduce the number of iceboxes in use among American personnel in Pakistan, by all means, if there are too many. But do not reduce Pakistan's ability to protect its freedom.

High Time for Action

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. LINDSAY. Mr. Speaker, I would like to call to the attention of the Members of this body, an editorial entitled "High Time for Action," reprinted from the Il Progresso, which appeared on page A6239 of the CONGRESSIONAL RECORD of July 20, 1959. Its thesis is that it is time to take notice of the increasing tendency on the part of some magazines and newspaper chains to link up a handful of irresponsible Americans, who happen to be of Italian descent and who have had bad criminal records, with all Americans of Italian lineage. Referring to the well-known Apalachin meeting, the editorial states that if the members of this group were meeting for some nefarious undertaking, "we not only do not condone them, but we denounce them and their ilk, for this tiny group of 60 furnished the pretext for bringing discredit and contempt on more than 12 million loyal, law-abiding, decent Americans of Italian origin who daily make their valuable contribution to the enrichment of our country in every field of human endeavor."

The editorial commends Senator KENNETH B. KEATING and Senator HUGH SCOTT, for directing letters to the Attorney General and the Secretary of the Treasury asking for a statement of policy designed to protect the civil rights of people mistakenly identified with criminal acts and for an instruction to Federal agents to beware of defamatory public statements about any group.

I was pleased to note the immediate response of the Attorney General to the effect that "to my knowledge there is no nationwide ring consisting of criminals of any particular national origin." The Attorney General stated also "Naturally it is the desire and the duty of the Department to protect the civil rights of any person mistakenly identified with any criminal acts."

He Helped Phoenix Grow

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to insert in the RECORD the editorial of July 21, 1959, in the Arizona Republic, Phoenix, Ariz., entitled "He Helped Phoenix Grow." Mr. Oliver King, business manager of the Arizona Republic and Phoenix Gazette, started his business career with the old Arizona Republic in 1908. His contributions to the newspapers, and the affairs of the city, county, and State have been immumerable and invaluable. His friends are legion, and the respect and admiration which is felt for him is universal. I am sure the people of Arizona join with me in wishing Mr. King the very happiest years of retirement and in thanking him and congratulating him for a job well done.

HE HELPED PHOENIX GROW

Oliver King, who started as newsboy and ended up as general manager, will leave the Arizona Republic and the Phoenix Gazette next month. At a spry 65 years of age, he has decided to take his first real vacation by traveling with his wife and daughter in Europe. There are a lot of other things he intends to do, including seeing more baseball games, visiting historic and scenic places in the United States, and taking a more active part in politics.

Mr. King's long association with the Republic can best be summed up by two figures. The circulation was about 4,000 when he started carrying papers, back in 1908. It now exceeds 120,000 daily, and 180,000 Sunday. No one has been more intimately connected with that growth than Oliver King.

A lot of other things have changed since the young Ohio boy came to Phoenix with his parents. A mighty metropolis has risen from the dusty little desert village. The old flat bed press of his early years has been replaced by huge rotary presses, capable of printing in full colors. Nearly 1,000 employes now work for the organization that could have gathered its entire work force in a small room back in 1908.

Mr. King always worked on the editorial and business side of the paper, but he never lost touch with the news departments. He helped set up the efficient election bureau that has given Arizona readers the election results hours before they would otherwise have been available. He helped direct the publication of extras on such great news stories as the sinking of the *Titanic*, and the bombing of Pearl Harbor.

Mr. King's participation in civic affairs has been extensive. He has been a long-time member of the Phoenix Lions Club, and helped start the club's excellent program of aid for the blind. He is the immediate past president of the Arizona Newspapers Association, and frequently attended West Coast and national publishers' conventions. He helped the Maricopa County Campfire Girls in its early years and for many years was treasurer of the Phoenix Community Chest. He has worked for the Republican Party in various capacities, and has helped the Party recoup from the days when a State convention could almost literally have been held in a telephone booth.

Oliver King's coworkers will be sorry to see him walk out of his office for the last

time, but they know—as publisher Eugene C. Pulliam put it—that "we will still be seeing a lot of Oliver King around the Republic and Gazette plant, because this is where his heart is." Phoenix also will be seeing a lot more of him in the years ahead, for 50 years of active newspaper work have only broadened the outlook and tempered the judgment of the man who remembers when the town ditch ran right through the lot on which the Republic and Gazette building now stands.

Coal-Tar Colors for Butter, Cheese, and Oleo

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. WOLF. Mr. Speaker, in connection with the proposal in the Congress to reinstate coal-tar colors F.D. & C. yellow Nos. 3 and 4, as coloring agents for butter, cheese and oleo, I wish to bring to the attention of the Congress a letter which I have received from the Chr. Hansen's Laboratory, Inc., Milwaukee, Wis., pointing out some very poignant reasons why this bill should not be enacted into law. I think these arguments deserve the thoughtful consideration of the Members of this body:

CHR. HANSEN'S LABORATORY, INC.,
Milwaukee, Wis., July 22, 1959.

Re bill H.R. 6852.

Representative LEONARD G. WOLF,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE WOLF: This bill introduced May 4 by Congressman CURTIS of Missouri would reinstate coal-tar colors F.D. & C. yellow Nos. 3 and 4 as a coloring agent for butter, cheese, and oleo. We hereby voice our opposition to this bill and ask you, in the best interest of the dairy industry, to oppose same.

We wish to point out that our company used to sell more certified butter color (yellow Nos. 3 and 4) than any other company in this country, but we did not voice any protest when yellow Nos. 3 and 4 were delisted by the Food and Drug Administration, because we felt that this step was in the best interest of public health and the dairy industry in general.

Some high-pressure advertising is taking place in order to get H.R. 6852 adopted so we feel you should be acquainted with the following facts, being our reasons for asking you to oppose this bill.

1. There are plenty of oil-soluble pure vegetable colors available to the industry and these colors have already been in use for years—not only in this country, but also in other countries which have long ago banned the use of yellow Nos. 3 and 4 in food, therefore, no hardship was imposed on the industry when Food and Drug delisted yellow Nos. 3 and 4.

2. There are plenty of responsible medical and toxicological reasons why yellow Nos. 3 and 4 should not be permitted in food. Without going into lengthy details, we limit ourselves to quote that at a symposium under the International Union Against Cancer, yellow Nos. 3 and 4 were placed in the category "Colors considered undesirable or potentially dangerous for use in foods" (Acta de L'Unio International contra cancerum 1957 XII N. 2, p. 198):

This designation was the result of a large amount of experimentation which showed that these colors are definitely toxic at a level of 1,000 parts per million for rats as well as dogs. The lowest level fed with no demonstrable effect has been 300 parts per million. Applying the recognized safety factor of 100 to 1 (Federal Register, March 28, 1959, p. 2435), this would be a tolerance level for yellow Nos. 3 and 4 combined of 5 parts per million or far less than the amount regularly used for butter.

Continued use of yellow Nos. 3 and 4 in the oleo and dairy industries would invite much adverse publicity and would leave the United States the only civilized country in the world using these colors in butter, cheese, and oleo.

4. As an example: The Canadian Government just announced that from now on they are not buying any butter which has been colored with yellow Nos. 3 and 4. This measure was undoubtedly dictated partly by health reasons, and partly because of the realization that butter colored with yellow Nos. 3 and 4 may not be salable in foreign markets.

We do not see how the U.S. Government (the Commodity Credit Corporation) could possibly afford to place itself in a position where the butter it buys may not be exportable because yellow Nos. 3 and 4 have been used for coloring.

We hope you share our viewpoint that reinstatement of yellow Nos. 3 and 4 would be dangerous and a step in the wrong direction and, therefore, will oppose this bill. If you require further information on this whole subject, we shall be glad to submit same.

Respectfully yours,

_____,
Vice President.

Poison in Your Water—No. 145

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Riverhead (N.Y.) News of June 4, 1959, entitled "Cites Danger of Pollution."

CITES DANGER OF POLLUTION

Two months ago Congressman STUYVESANT WAINWRIGHT, of Wainscott, issued a warning to the effect that water pollution had become a serious menace in certain areas of Long Island. The Federal Housing Administration has placed a ban on large development building where the builder plans to use shallow wells and individual cesspools. The use of household detergents is the cause of the contamination.

The first cases have now been received wherein a homeowner says that he is unable to sell his house due to the fact that mortgage insurance cannot be obtained because of his contamination. WAINWRIGHT pointed out that the criticisms leveled at the Federal Government were being misdirected. The problem is local in nature. The solution must also lie in county, town, and village decisions. WAINWRIGHT stated, "Unless some solution is reached—possibly in the form of sewerage and water districts—a serious depreciation of property as well as continued health dangers, will become more and more self-evident.

President Eisenhower to the People of the Soviet Union

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the splendid message sent by President Eisenhower to the Russian people transmitted by Vice President NIXON.

MESSAGE OF THE PRESIDENT OF THE UNITED STATES, DWIGHT D. EISENHOWER, ON THE OCCASION OF THE OPENING OF THE AMERICAN NATIONAL EXHIBITION IN MOSCOW SOKOLNIKI PARK, JULY 24, 1959

Because of my inability to be present at the opening of the American Exhibition in the Soviet capital city, I have requested the Vice President of the United States to convey to you and to the Soviet people my personal greetings. I consider this exhibition at Sokolniki a symbol of the United States itself, and in this spirit, I wish to welcome you to visit it as guests of the people of the United States. In the same spirit, I also wish on all occasions to seek the friendship of the people of the Soviet Union. Indeed, I would be most happy if many of you could eventually come to our land and see the reality behind the pictures and displays of this exhibition.

I would like, moreover, to go beyond these words of official greeting and add some personal sentiments. The fact that the Soviet and American peoples were comrades in arms during the great war concluded 14 years ago remains fresh in my memory. At that time, as the Commander of the Western Allied Expeditionary Force, I was afforded the opportunity to meet with your valiant soldiers and to learn firsthand of their bravery. At the end of that war, in August of 1945, I had the privilege of visiting the Soviet Union itself. On that visit I was struck by the devotion and dedication of the people of the Soviet Union to the defense of Mother Russia. The exploits and courage of the Soviet people in that defense are matters of record for all to see.

Nothing that has happened during the interval has dimmed my admiration for the great people of the Soviet Union. Indeed, I have been further impressed by the strides taken by you in science and industry. Last month I greatly enjoyed my visit to the Soviet Exhibition in New York and was impressed by the vigor and the progress which was evidenced everywhere. I returned to Washington with a better understanding of the achievements of the Soviet people and the proud traditions of their land. Let me assure you that I speak for all Americans when I say that we desire nothing but friendship with this dynamic people.

But we must acknowledge that differences in governmental policies have created rifts in our wartime alliance. This fact has saddened me greatly, particularly because it is so unnecessary. Our nations have such a great common interest in world peace that every effort must be made to bring us closer together. I therefore hope that this exchange of exhibitions will be a first step toward a

restoration of the trust and unity that we felt during the recent World War.

I wish that I could have been here to open this exhibition in person. It has long been my hope to return to the Soviet Union to see, not only my wartime friends, but also the great progress you have made in rebuilding your ruined cities and factories. Perhaps the time may come when this desire will be realized.

Until that time, my concluding greeting is this: It is never too late to build a peace with honor and justice. May this exchange of greetings contribute to success in that effort.

Nomination of Frederick H. Mueller

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. CHAMBERLAIN. Mr. Speaker, the nomination of Frederick H. Mueller as Secretary of Commerce has been widely applauded. Contrary to the adage that a prophet is without honor in his own country, Mr. Mueller's home State of Michigan has long been appreciative of his capabilities and enthusiastically endorses his appointment to this high position in the Cabinet.

Under permission to extend my remarks in the RECORD, I include an editorial from the State Journal of Lansing, Mich., commenting upon Mr. Mueller's nomination. The editorial follows:

[From the Lansing, (Mich.) State Journal, July 23, 1959]

NEW HONOR FOR STATE

President Eisenhower again has turned to Michigan for assistance at the Cabinet level.

The President has nominated for the post of Secretary of Commerce Frederick H. Mueller, Grand Rapids industrialist who was called to Washington in 1946 to be Assistant Secretary of Commerce in Charge of Domestic Affairs and who later was promoted to Under Secretary.

The choice of the Michigan man had been expected since the Senate rejected the nomination of Lewis L. Strauss, who had been serving under a recess appointment.

Initial congressional response to the nomination of the former Grand Rapids furniture manufacturer indicated he would have clear sailing when the nomination comes before the Senate for confirmation.

The widespread expectation that Mr. Mueller would receive the nomination was based on the logic of the choice from the standpoint of his experience as Under Secretary and his general qualifications for the highest post in the Commerce Department.

Mr. Mueller, who was graduated from Michigan State University in 1914, would be the third Michigan man to serve in the Eisenhower Cabinet. Arthur E. Summerfield of Flint, Mr. Eisenhower's original choice as Postmaster General, still is serving in that capacity and Charles E. Wilson, former president of General Motors, is now retired after having served as Secretary of Defense.

In addition to the Cabinet posts, several other key places on the Eisenhower team are held by Michigan men, including former Gov. Wilber M. Brucker who is serving as Secretary of the Army.

Michigan citizens can take deep satisfaction in the fact that President Eisenhower has found Michigan a rich source of material for his team and in this State's ability to contribute to the effective functioning of the Federal Government.

Puerto Rican Constitution Day—The Seventh Year

SPEECH
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. SANTANGELO. Mr. Speaker, within a short 4 to 5 hours flying time from Miami, any one of us can be transplanted to one of the most beautiful islands of Antilles. The island I speak of is Puerto Rico.

Today I am happy to express the privilege I feel in commemorating Puerto Rican Constitution Day. On the third of July 1950, President Harry S. Truman signed into law a bill which authorized the people of Puerto Rico to draft their own constitution. A constitutional convention met during the following two years; a document was drafted that was met with enthusiasm from all quarters; and after minor changes, on July 25, 1952, the Governor of Puerto Rico proclaimed this constitution in force.

By this measure, Puerto Rico and the United States are bound together by a unique Commonwealth basis. Unique is a well-advised word. No two nations in the world have a relationship such as exists between our two governments. The Puerto Rican people—when speaking of themselves in correlation to the United States—refer to the island as an Associated Free State. This is a very apt description.

Under the present relationship, Puerto Rico has prospered, its industries have boomed, its standard of living has improved, and its vision has looked upward. In recent years I have had the privilege of visiting this beautiful island in traveling from San Juan into the mountains and around the shores to the southern part of this thriving community. The residents of the mountains and the countryside no longer live in isolation, but form an integral part of a community. A visual inspection of the children with their schoolbooks and the parents with their expectations of more prosperous days and a better standard of living reflects the achievements and accomplishments of a sturdy people under this unique form of government.

Puerto Rico is a showcase in which the relations of the United States and Puerto Rico are open to inspection for the world to see, especially in Latin America. This showcase reveals harmony, understanding, and cooperation. Puerto Ricans on the island feel a kinship to Puerto Ricans on the mainland, and together they take pride in being recognized as citizens of the United States and Americans all.

Within a very short period of time, Puerto Rico's growth and progress has been amazing. At a minimum, Puerto Rico has a per capita income of 353.6. This figure, next to Mexico, is the highest in all of Middle America. Moreover, the spirit of the Puerto Rican people, under the excellent and able leadership of Governor Muñoz-Marín, has produced new and vital art and literature, along with a net national income of well over a billion dollars.

Examples of all types of progress abound: Life expectancy has almost doubled since the thirties; illiteracy rates are half of what they were before World War II, well-planned housing projects are reducing slum areas by ever-increasing margins. "Operation Bootstrap," begun in 1948, has proved to be exactly that: a bootstrap of strength, durability and rising standards of living for all.

All this means that Puerto Rico is a living symbol of intelligent democracy at work. The people feel this in their hearts and see it in the tangible rewards of their island. It can be truly said that a rich port leads a visitor to a rich island.

In behalf of countless Americans of every race, creed and color, I wish to extend congratulations to the Government of the Commonwealth of Puerto Rico, and to our fellow citizens on that Caribbean isle. May your well-earned successes on all fronts long continue in the future.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Daily Press, St. Mary's, Pa.:

[From the St. Mary's (Pa.) Daily Press, July 20, 1959]

FOREIGN AID

The matter of foreign aid is much in the foreground of governmental affairs again at this time as the administration insists on spending more money for this venture into uncharted seas than Congress is willing to give him.

It has been estimated in the past few years since foreign aid has become a silent partner of the U.S. Government over $70 billion have been sent abroad, no small amount to Russia when that nation was considered a warm friend in World War II days.

The truth of the foreign-aid program, according to some of its opponents, is that it impedes the welfare of this country.

The Marshall plan, forerunner of these vast spending plans, proposed a maximum expenditure of $13.5 billion on foreign aid, launched in 1948, with the definite promise of the then President it would be wound

up in 4 years. That first year, it has been noted, some 450 persons were employed by the Government to administer and distribute foreign economic aid. Ten years and $41 billion later, the staff has grown to 12,000 employees directing 2,000 projects. In addition, some 9,000 persons are engaged in the military assistance program that already has totaled $23 billion.

It has grown, like a centipede develops new legs for the ones cut off, to the point where it has become a permanent tax burden on the shoulders of the American people who often wonder what value the program has developed.

Many Members of Congress, including the Representative from this district, feel this financial aid should be sharply reduced, as many beneficiaries of the program have reached such a high stage of economic recovery they are competing for world markets to the detriment of American manufacturers.

And those "Go Home, Yankee" signs seen here and there in the lands most helped by American money sour the taste and make one wonder what has been gained after all these years.

Gaps in Guarding Health

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. COHELAN. Mr. Speaker, 30 million Americans are today without protection against disease by professionally staffed public health agencies. Elsewhere in our Nation, functioning agencies are understaffed. As our population grows, our ability nationally to train sufficient personnel to meet our public health needs has diminished. Still, this national problem does not seem to be widely recognized.

Dr. Howard A. Rusk, in an article in the July 26 edition of the New York Times, again calls attention to these facts. He points out that legislation drafted by our distinguished colleague, Congressman GEORGE RHODES, of Pennsylvania, is a realistic measure which would set up a sustained Federal program of sufficient proportions to meet this need for trained public health workers. Under permission to extend my remarks, I wish to submit this article so that all Members of Congress may take note of the facts and direct their attention to the Rhodes bill, H.R. 6871, and to companion measures introduced by Congressmen WILLIAM MOORHEAD, KENNETH ROBERTS, ISIDORE DOLLINGER, TORBERT MACDONALD, ROBERT GIAIMO, and myself:

GAPS IN GUARDING HEALTH—TOO FEW WORKERS FOUND AVAILABLE TO STAFF PUBLIC AGENCIES IN UNITED STATES

(By Howard A. Rusk, M.D.)

In one of our largest Military Establishments in the South, a secret by very large number of highly skilled personnel are constantly on the alert as a part of the military mobilization essential to our national defense.

Almost weekly, new classes are started in the many highly specialized and technical aspects of modern defense, and graduates of these classes leave to take assignments throughout the free world.

These are the minutemen and vigilantes the 20th century. But in sharp contrast to their Revolutionary War and western frontier counterparts, they are not volunteers. They are highly trained and highly skilled professionals in every sense of the word.

We in the United States have recognized the importance of defense and the necessity for paying taxes to maintain our national defense. But today 30 million of our citizens are without protection against another enemy—disease.

HAVE NO PUBLIC HEALTH AID

These are the 30 million persons who live in areas of the Nation without organized public health services. They are reasonably sure that the water and milk they drink and the foods they eat are pure and that help will come to them if they are faced by an epidemic of communicable disease. Even this protection, however, comes largely from volunteers rather than from professionally trained public health workers.

The traditional responsibilities of controlling epidemic diseases and keeping food, milk, and water clean are the best known but by no means the only functions of public health. Public health workers also safeguard us against radiation hazards, promote healthful housing, conduct school health programs, protect the health of workers, and carry on many important functions.

In contrast to the work of the medical practitioner, the job of the doctor in public health is primarily preventing what are or might become hazards to health. To meet his responsibilities the public health doctor heads a team that includes a wide variety of coworkers: biochemists, nurses, bacteriologists, engineers, veterinarians, and other specialized, trained personnel.

ABILITY TO MEET THE NEEDS DROPS

Unfortunately, as the importance of public health services and the size of our population have grown, our ability nationally to train sufficient personnel to meet our needs has diminished.

Currently our 11 schools of public health graduate approximately 1,200 workers each year. This is an increase over the number of graduates of a few years ago, resulting from the initiation of a Federal program of traineeships that pay part of the expenses of the students.

This program was further strengthened by legislation in 1958 that provides grants for public health schools to extend and improve their training. Grants totaling $450,000 were made under this new legislation.

Helpful as this is, it is not enough.

There are now about 2,500 budgeted vacancies in our Federal, State, and local health agencies. Many public health jobs in voluntary agencies are unfilled. The number of jobs in both public and voluntary agencies would increase substantially if there were any prospects of such jobs being filled after they were created.

SOME NEED FURTHER TRAINING

In addition to the need for more trained personnel, more than half of the currently employed workers in Federal, State, and local health agencies need additional postgraduate training. Many have had no formal training in public health. Others had their training long before the development of the modern problems with which they must deal, such as air pollution, radiation, rehabilitation, and community mental health.

Our current professional training program in public health now provides us with but 6.4 percent of the trained personnel we need for public health agencies. Meeting our current and future needs for such personnel would require expanding our present program by five times. Even if we did this, it would take 10 years to meet current and future needs.

Last month, Representative GEORGE M. RHODES, Democrat, of Pennsylvania, introduced realistic legislation in the House of Representatives to meet these needs. His bill would provide $5 million a year for 5 years to public health schools to construct additional facilities; $1 million annually to train public health nurses; and $3 million each year to the States to train public health personnel.

By its very nature as reflected in its name, public health is primarily the job of government. Defense against disease is just as basic as defense against military attack. Modern technological and social development have increased the complexity and scope of this basic responsibility.

Today we do not have enough trained public health workers to meet this basic responsibility.

Added to these basic needs is the increased necessity for maintaining an adequate mobilization base in health as long as the cold war persists.

It is the responsibility of government to insure an adequate supply of public health workers as much as to insure that we have a sufficient number of highly skilled personnel to staff our military defense.

Hog Marketing Premium Payments Bill

EXTENSION OF REMARKS
OF
HON. EARL HOGAN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. HOGAN. Mr. Speaker, I am introducing for appropriate reference a bill to prevent any further drastic drop in the price of hogs. The average price received by farmers for hogs over the United States has dropped by over $6 during the past year. This is a drop of about one-third. In terms of parity, the price of hogs in June of this year had dropped below 70 percent.

Forecasts published in private trade journals as well as in U.S. Department of Agriculture bulletins indicate that unless something is done soon the prices received by farmers for hogs will continue to drop throughout the rest of this year and most of 1960.

The bill I am introducing today is an attempt to stop further decline in hog prices by working directly upon the cause for the weakness in the market, an oversupply of pork. The proposal provided in my bill is designed to slow the rapid buildup in hog numbers and bring about a quick adjustment in pork production before farmers' income from hogs becomes critically low. My bill seeks to reduce the total production of pork by making marketing premium incentive payments on lightweight hogs. The small payment involved would help directly, of course, to make up for some of the lowness in price. But the major effect of the payment on lightweight hogs is not the direct income effect but rather its supply-reducing effect which should help prevent the prices of hogs from dropping to an extremely low level

as they did at the bottom of the cycle in 1955 and 1956.

Various methods could be used to help bring about more orderly marketing and managed bargaining on the part of hog producers. But as a short-run program to stop the hog price decline that is already upon us, it is felt that direct payments to farmers would have more success in bringing about rapid adjustment than any other type of Government action.

Following is the program designed to deal with the short-run problem as provided in my bill:

First. The marketing premium payment would be applicable to all slaughter hogs marketed at live weights between 180 and 200 pounds.

Second. Producers presenting invoices of sales of lightweight butcher hogs could collect their marketing incentive payment at the county office.

Third. The payment would vary in accordance with how low the price of hogs should become. My object to make the incentive large enough so that the market supply of pork will be reduced.

The program proposed in my bill is not a longrun solution to the hog marketing problem. It is frankly a stopgap program to meet an emergency situation. It is aimed at encouraging a more orderly adjustment of volume of hogs slaughtered and to supplement hog farmers' income for a short period until the hog cycle can right itself. The program would remain in effect for a maximum of 1 year at a time. It should be extended for greater periods. Its purpose is to prevent the bottom or the hog price cycle from becoming so low.

The cost of the program can be estimated only approximately since no one knows for sure how low the price of hogs might go in the absence of the program. But in no event may the program provided in my bill require payments of more than $150 million in any one year. The program provided by my bill is self-limiting. If the price goes down owing to large marketings, the value of the premium payment on sale of lightweight hogs becomes more important relative to total return, this encourages larger numbers of farmers to sell at the lighter weights and qualify for the premium payment. This means that hogs would be marketed at 190 pounds, instead of at, say, 240 pounds per head. This would be a reduction per head of as much as 50 pounds less pork being placed on the market. This reduction in market supply would cause the market price to rise, thus reducing the volume of payments that would actually have to be made.

Mr. Speaker, it is an old saying that great minds often run in the same channels.

I have been working on this proposal for some time. I had been waiting to introduce it until it seemed like the proper time to catch hog prices before they drop too far.

I was surprised and gratified to note in the newspaper the other day that others had been working on a similar proposal. Among others who have been giving thought to this proposal has been the agriculture committee on the National Planning Association, which just recently put out a policy statement advocating premium payments on sale for slaughter of lightweight hogs.

I should like to read excerpts from the policy statement of the National Planning Association. While the specific mechanics of the proposal they have recommended is slightly different from that provided in my bill, the proposals are very similar:

TOO MANY HOGS

Heavy hog supplies in 1960, and resulting low prices, are likely to create a problem which will seem all the more acute because 1960 is a presidential year. Under these circumstances, there will be many pressures for Government intervention. There are likely to be proposals submitted which will not stem from a thorough analysis of conditions but from political expediency and which, if put into effect, might be detrimental to hog producers.

In this situation it is desirable that prompt attention be given to the problems before they become acute, in the hope that conditions can be carefully appraised and the best course of action determined. * * *

It should be emphasized that the type of Government action which we believe would be most appropriate and which is set forth below is designed to slow the rapid buildup in hog numbers and bring about a quick adjustment in production before farmers' income from hogs becomes critically low.

PRESENT FEED GRAIN SITUATION

For 7 consecutive years, the stocks of feed grain have increased and by October 1, 1959, will be nearly four times the level of 1952 which was considered to be about a normal carryover. This has occurred during a period when the number of grain consuming animal units was relatively large and the quantity of feed per animal unit was at an alltime high. It has occurred during a period when the population of the country was expanding at the rate of nearly 3 million persons per year, and the consumption of meat and poultry, per capita, averaged above any other 7-year period since the turn of the century. Yet, surplus stocks of feed grain have accumulated at a rate of about 8 million tons per year.

The present feed grain carryover will amount to about 75 million tons by October 1, 1959. Practically all of this carryover is owned or under loan by the Commodity Credit Corporation. The annual excess production of feed grains and the magnitude of present storage stocks have become major problems.

The production of feed grains for each year from 1955 through 1958 was higher than for any previous year except 1948 (and the last 2 years were alltime records). Despite the fact that the Government, through its price-support programs, has accumulated record surpluses, prices of grains have fallen rapidly. The price of corn fell from about $1.72 per bushel before the new crop was available in 1952 to about $1.16 during the same period of the year in 1958. The price of oats fell from about 80 cents per bushel in the summer of 1952 to 56 cents in 1958. The price of sorghum grain fell from $1.61 per bushel to 97 cents during the same time.

OUTLETS FOR FEED GRAIN

Over 80 percent of domestic feed grains are used for feeding livestock. The demands for feed grains for food, seed and industry normally account for about a tenth of total utilization. Exports which account for the remainder have varied from 0 to 7 percent. * * *

Cattle feeding is at an alltime high. However, the current buildup in cattle numbers will mean that there will soon be a greater supply of lower grade cattle on the market to compete with fed cattle. Under free market conditions, it is unlikely that cattle feeding will increase very fast in the face of rising pork output and later, rising total beef output. Cattle feeding remained practically constant from the end of 1952 (5,762,000 head), when large marketings of lower grade cattle began, until the end of 1957 (5,867,000 head), after the cattle and hog cycles had turned downward, despite the fact that the supply of feed grains was large and increasing during this period.

Poultry production is also at an alltime high after a rapid increase during the last 4 years. However, with increasing red meat production, it is unlikely that the rate of expansion in poultry will be maintained over the next few years. * * *

One of the most probable outlets for part of the present large feed grain supply is the hog industry. This industry is already a big user of feed grains. About 80 million hogs are produced for sale in this country each year. Usually about 450 pounds of feed concentrate are fed for each 100 pounds of live hogs, or about one-half ton per hog marketed. This amounts to about 40 million tons of feed grain per year.

During the past year, under conditions which favored an expansion in hog production, numbers have increased rapidly. It is almost inevitable that the increase in hog production will result in an even larger percentage decrease in hog prices.

Large price reductions at retail are necessary to stimulate consumers to purchase the increased production. These price reductions are so large that the farmers actually receive less total dollars from the marketing of a large crop of hogs than they do from a small one.

Recent estimates indicate that a 10-percent increase in hog production is associated with about a 25-percent decrease in hog prices. The likely income depression resulting from the current increase in production is one of the big problems currently facing the hog industry.

NO QUICK SOLUTION FOR GRAIN PROBLEM THROUGH HOG EXPANSION

However, any sharp buildup in hog numbers could give consolation in one respect: it would mean larger disappearance of feed grains. The thought might be entertained that at a reasonable cost, a hog program could be established with the object of using up the surplus feeds within a short period of time. But there is little hope of this, even if production of feed grains were held in close check.

The two problems, one of huge grain surpluses, the other of low and cyclical incomes to hog producers, are diametrically opposed. Any attempt to quickly feed a substantial amount of the grain surplus through hogs would severely depress the hog industry, disrupt resources in the industry, and would likely be very costly to the Government because of political pressures to assist the distressed producers. On the other hand, any attempt to reduce hog production to raise prices in the short run would add to the grain surplus.

The carryover on feed grains on October 1, 1959, will be about 75 million tons or 55 million tons more than a normal carryover. The approximately 80 million hogs which are now produced each year consume about 40 million tons of feed. This rate of production has grossed the farmer an average of about $17 per hundredweight during the last cycle.

If hog production were increased an average of 25 percent to about 100 million hogs per year, usage of feed would be increased about 10 million tons per year. But if the recent relationship between hog production and prices continued, prices of hogs on a free market basis would fall approximately 60 to

65 percent to average about $7 per hundredweight. This would reduce annual gross farm income from hog marketings on the free market from the $3.2 billion which it has averaged recently to about $1.6 billion, a reduction of about $1.6 billion per year. And even at this rate of hog production, it would take about 5½ years to reduce the present feed surplus to a level of 20 million tons, assuming that the production of feed grains, beginning with the 1959 crop, were successfully adjusted to other demands so that there were no new additions to surplus. During these 5½ years, gross income to hog farmers from the free market would be reduced about $9 billion relative to the average hog income over the past few years.

To look at the problem from another angle, suppose the current surplus grain stocks were insulated from the market, that is, frozen at their present size of 75 million tons. If this were done and if production continued to outrun utilization by about 8 million tons a year, what would be the effects if the excess output were fed through hogs? This excess production would feed about 16 million more hogs per year, increasing hog output 20 percent. Prices of hogs would probably drop about 50 percent, or from $17 to $8.50 per hundredweight, and cause gross farm receipts from hogs to decline from about $3.2 billion to about $1.9 billion per year.

THE HOG PROBLEM

From the year ending June 1954 to the year ending October 1956, federally inspected hog slaughter increased from 50.3 million to 67.6 million hogs. This was a 34-percent increase in 28 months and occurred under peacetime conditions. It occurred with a feed grain carryover less than half the present size, during years of average feed grain production with grain prices above present levels and during years of relatively high beef production which furnished strong competition against pork. Under present conditions of record large stocks of grains, record large current grain production, record hog-corn ratios in 1958 (average 18.6; previous record was 17 in 1926), and less competition from beef, the ingredients for a rapid buildup in numbers exist.

Production changes of the magnitude indicated above can bring violent changes in the free market prices for hogs. The annual average price received by farmers for hogs dropped from about $23 during the year ending May 1954 to about $13 during the year ending July 1956. Thus the price was nearly halved in 26 months. When the cyclical effects are compounded by the seasonality of production, even more fluctuation is observed. The farm price of hogs varied from a monthly average of $26.40 in April 1954 to only $10.60 20 months later. Cash receipts from sales of hogs fell from an annual level of $3,455 million in 1954 to $2,628 million in 1956.

LIKELY EVENTS WITH NO GOVERNMENT INTERVENTION

Under free market conditions, the present expansion in hog breeding which began about January 1958 will likely continue through at least part of 1960. Under conditions which did not appear to be any more favorable, if as favorable, to increasing hog numbers, the expansion in breeding during the last cycle continued for 26 months.

Marketings will likely peak during the winter and spring of 1960–61 and prices are likely to be near, and could slip below, prices of the 1955–56 winter low. A more level seasonal pattern of marketings may help keep prices from going extremely low during any particular month. But it is also possible that such a pattern could result in prolonged low prices for several successive months. At the bottom of the previous price cycle, the farm price of hogs was below $12 only in December 1955 and January 1956. It is possible that in the current cycle prices will be below $12 for several months. * * *

The instability of production which tends toward cyclicality not only has adverse effects on farm incomes, but it creates problems for market agencies, packers, and consumers. Fluctuations in hog production undoubtedly cause the establishment of excess marketing and processing facilities. It probably results in such facilities being operated at other than optimum levels of efficiency much, if not most, of the time. It tends to cause earnings of packers and marketing agencies to vary rather widely, as they are presented with problems in trying to merchandise a perishable product with resources which cannot be made as flexible as pork production. A highly variable supply for retail distribution is also undesirable because of the possible effects it has on the demand for pork. The high prices which tend to follow unduly low prices cause consumers to turn to alternative foods with the probable result that pork has to again fall to unduly low price levels to attract back some of its former consumers.

Even though the outlook for hogs during the next 18 months is not bright, there will be strong and well-reasoned arguments to let the situation run its course without Government interference: "The cure for 10-cent hogs is 10-cent hogs." Nevertheless, as numbers build up and prices decline, pressures for Government action will probably intensify. The peak of production is likely to come during the 1960 election campaign and it is only realistic to expect wide discussion of the problem. Careful thought needs to be given now to the question of what the objectives of Government action should be, and to the program which might best accomplish these objectives.

Governmental buying and surplus disposal programs are almost certain to be proposed as hog prices skid. These are essentially transfer payments from taxpayers and consumers to hog producers. However, it is difficult to find outlets for such purchases. Any large amount of disposal in the domestic market would probably have some adverse effect on the normal demand for pork. It is difficult to dispose of any large amounts in foreign markets without creating diplomatic problems. Such a program would not be effective in bringing about an adjustment in hog production; nor could it likely be of such magnitude as to have any material effect on producers' incomes. However, it should be used to the extent that it is feasible. * * *

DIRECT PAYMENTS

If governmental action is to be taken, it would appear that direct payments to farmers offer the best promise of dealing with the currently developing short-run hog problem. A direct payments program on lightweight hogs, properly conceived and administered, could accomplish the primary objectives. It would supplement producers' incomes; and by being applicable to only lightweight hogs, it would reduce the total potential pork which would normally be marketed from the available hogs, and thus of itself tend to raise prices and reduce the amount of subsidy. It would allow the free market forces of price differentials for quality, location and such factors to operate. It would reduce lard production, and provide leaner pork to consumers which could result in an increased demand for pork. It could be set up and be put into effect in a relatively short time, and would be readily understood by those involved. While it would lower the utilization of feeds in the short run, by tending to smooth the fluctuation in production, the amount of grains consumed over the entire cycle should be as high as if the free market were allowed to run its course. * * *

It is our thought, however, that this would be a stopgap program to meet an emergency situation. It is aimed at encouraging a more orderly adjustment in hog numbers and supplementing hog income over a short period. It would not appear that a seasonally adjusted base price or restriction of payments to meat-type hogs would aid in either of these objectives in the short run, but would only complicate the administration of the payments. It might be argued also that the payment should be triggered by the hog-corn ratio rather than by a fixed base price; or at least, that the hog-corn ratio should be used in conjunction with a base price in determining when payments should be made. However, most of the corn fed to hogs is fed on the farms where the corn is produced, and if the price of hogs goes to a low level, hog farmers would probably need assistance even if the hog-corn ratio were above a prescribed level. Also it appears that at the turning point of the last cycle, the adjustment in numbers was more closely tied to the prive level of hogs than to the level of the hog-corn ratio.

The cost of the direct subsidy program can only be roughly estimated. If 90 million hogs are marketed and this causes hog prices to decline to $11 per hundredweight, the total gross income to hog producers on a free market basis would be about $2.1 billion. Assuming that the cost of raising hogs, exclusive of the cost of labor and management, was $10 per hundredweight, the net return to farmers would then be $200 million. If hogs were supported at $12.50 and two-thirds of the hogs were marketed under 200 pounds so as to be eligible for the subsidy, nearly $200 million would be spent during the year in direct support of hog producers' incomes. This would about double the next return to producers.

Letter From Admiral Leahy

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. JUDD. Mr. Speaker, there have been endless efforts to cover up or divert attention from the fateful decisions taken somewhere in the executive branch right after World War II, to make no real effort to give proper and effective aid to those resisting Communist expansion in China. Our people believed we were doing everything that could be done. Many knew that was not the case. One such was the late Adm. William D. Leahy who served so long and brilliantly under Presidents Roosevelt and Truman as their Chief of Staff.

The following letter, of which he sent me a photostatic copy, confirms that tragic fact. Unfortunately, the sympathetic change toward the Government of China which, at the time he wrote, just after Secretary of State Marshall had recommended "certain economic aid and assistance" to China, he felt might be developing, did not materialize. The forces in our Government who had decided to back the Chinese Communists won. The United States and the rest of the free world lost. We will be paying

dearly for many more years for the mistakes which Admiral Leahy, even though he was right on the inside himself, described as "completely beyond understanding."

The letter follows. Anyone who wishes to see it with his signature may do so.

DECEMBER 1, 1947.

CHIEF OF STAFF TO THE COMMANDER IN CHIEF, *The White House, Washington.*

DEAR COLONEL HOGAN: Thank you for your kind thought in sending me Freda Utley's "Last Chance in China," which I have read with much interest.

It is such a well-written story of China as to deserve a wide circulation in the reading public of America which I hope it will get.

It does not appear to contain much information that is not known to you and me and a limited number of others who have some understanding of the importance of a friendly China to the future welfare of our country, and one may hope that the book will stir up a sympathetic interest in our ally of the war years.

Our postwar attitude toward the Government of China is completely beyond understanding, but I am happy to have a feeling that the attitude is now undergoing a sympathetic change.

Anything that we may do now is late, but we may hope that it will neither be too late or too little.

With expressions of appreciation,

Most sincerely,

WILLIAM D. LEAHY.

You Can't Keep a Good Town Down

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. CHAMBERLAIN. Mr. Speaker, like many another American city, Flint, Mich., has had its ups and downs. Because of difficulties in the automobile industry—difficulties aided and abetted by the discriminatory excise tax on automobiles which I have repeatedly pointed out to this House—the past year or two has been one of Flint's rough periods.

There is still much unemployment, but no spirit of resignation. The citizens of Flint are confidently working and planning toward reaching the top again.

To show what they are up against, the New York Times of July 5, 1959, carried an article describing the efforts being made by business and union leaders to cushion the hardships of the unemployed. At the request of my labor friends, I am including herewith excerpts from the Times article.

As the article observes in its conclusion, Flint is not down and out. The encouraging figures cited in the article have since been updated through June, and show an even greater trend toward improvement. Unemployment edged down to 9.2 percent. New car sales, general retail sales, bank deposits and bank debits continued to climb. Building permits in June were 109.4 percent above June 1958, and for the 6-month period had increased by a third. Nonfarm employment went up to 121,500; families on welfare dropped to 1,738.

Other newspaper stories out of Flint underscore the city's optimism and determination. Edward D. Rollert, who became Buick's general manager on May 1, has outlined his company's plans to return laid-off workers to their jobs through finding uses for plant capacity not needed for current production and through a concerted effort to return Buick to its former share of the car market with emphasis on steady growth instead of sporadic gains and losses.

The Flint Chamber of Commerce announced appointment of G. Robert Nicholson as manager of its new Forward Flint Department, whose program will be to create a better business climate for existing industry and to attract smaller business firms in such lines as the service, wholesale, and retail trades.

Those are some of the ways in which Flint is fighting back. Meanwhile, the problems of the present are being faced up to as indicated in the following excerpt from the New York Times:

[From the New York Times, July 15, 1959]

BUSINESS AND UNION CHIEFS SEEK WAYS TO AID JOBLESS

(By Damon Stetson)

FLINT, MICH., July 4.—On a hot, humid afternoon recently a labor union leader, a credit union official, and several prominent Flint businessmen met in the directors' room of a credit union office on North Saginaw Street here.

They were solemn and serious as they discussed a plan to save the homes of unemployed Flint workers forced to default on their mortgage payments.

In the last 3 months alone, the labor leader reported, 160 homeowners had been faced with foreclosures proceedings and about 500 more might find themselves in the dire situation in the next few months.

In a small office about 2 miles away a retired businessman was going through a list of requests from some of the more prosperous Flint residents who were seeking workers to do handyman jobs.

WORKERS DISPATCHED

Meanwhile, at Local 599 of the United Automobile Workers on Leith Street, near the sprawling Buick plant, jobless members, who had exhausted their unemployment benefits, were dispatched to do the work as fast as the requests were relayed to the union offices.

At the headquarters of the Michigan Employment Security Commission at Payne and East Fourth Streets, a group of men in work clothes sat quietly on benches in a small room near the entrance. They were waiting for any odd job that might provide a few dollars.

In another office of the commission, an Illinois manufacturer was recruiting unemployed Flint workers for jobs on his assembly line in Illinois.

While such symptoms of Flint's economic unhappiness were evident behind the scenes, the sidewalks on Saginaw Street in the downtown section bustled with shoppers. Farther out, gaudy paint-splashed signs advertised special summer sales. Except for the UAW's thermometer of unemployment in front of City Hall, there were few outward indications that Flint was still one of the most critical cities in the Nation so far as unemployment was concerned.

Essentially, Flint is a dynamic, vigorous city—second in Michigan only to Detroit as a manufacturing center. It is the home of the General Motors Corp., which has Buick, Chevrolet, Ternstedt, AC Spark Plug, and Fisher Body plants here.

Some other factories are those of Standard Cotton Products; Anderson Tank & Manufacturing Co.; Michigan Central Airlines, Inc. (makers of Michigan Arrow trailers); Ottawa River Paper Co.; Pfeiffer Brewing Co.; E. I. du Pont de Nemours & Co., and Dinsmore Instrument Co.

Flint has a population of 198,000, many of whom came as transient workers and stayed because they liked the city and the rates of pay. Despite its industrial emphasis, the city has an unusual array of cultural activities, with greater adult participation than in most municipalities of its size.

Like Detroit, however, Flint's economy is extremely sensitive to fluctuations in the durable goods market and the ups and downs in auto sales, in particular. Last year was a bad year for autos and for Flint.

ELEVEN AND TWO-TENTHS PERCENT UNEMPLOYED

When Buick sales proved disappointing again this year, after last year's fall to 262,000, production was cut back and in March 4,500 Buick workers were laid off.

Last month Buick checked off the dues of only 8,426 production workers, compared with 15,000 last December, 22,000 in late 1957 and a peak of 27,772 in February 1956.

In many respects, these Buick employment figures are the measure of what has happened to Flint in the last year and a half. There used to be a saying to the effect that "as Buick goes, so goes Flint."

This is not as true as in the past, because Chevrolet and AC Spark Plug now employ more workers than Buick.

The United Auto Workers thermometer in front of city hall now shows 11.2 percent of Flint's labor force—15,500 persons—out of work. That is a dip from the 18,000 out of work a month ago. It is also a considerable improvement on the total of 25,500 jobless—17.7 percent of the labor force—a year ago.

For many months those out of work received State unemployment benefits and supplementary benefits from their companies. But more than 16,000 unemployed workers have exhausted their benefits in the last 18 months.

Although economic tragedy has unquestionably stalked many thousands in Flint in recent months, nevertheless, it would be unfair to portray the city as down and out. It is not.

Retail sales for the first 5 months of this year were 9.4 percent above the 1958 level; new-car registrations were up 51.2 percent for the 5 months; bank debits have increased 25.7 percent; bank deposits are up 14.4 percent, and nonfarm employment in the metropolitan area in May was 120,700, compared with 115,000 in May 1958. The number of families on relief in May was 1,822, a drop of 29 percent from the May 1958 total of 2,569.

Twenty-third Annual Conference of National Association of County Officials

EXTENSION OF REMARKS

OF

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. EVERETT. Mr. Speaker, I have just returned from Detroit, Mich., where the National Association of County Officials is holding its annual convention. This association has as its officers and

directors: W. H. "Pat" Johnston, president, Georgia; William E. Dennison, first vice president, Michigan; Dan Gray, second vice president, Alabama; William O. Druffel, third vice president, Washington; Lawrence M. Lear, fourth vice president, New Jersey; G. A. Treakle, treasurer, Virginia; Bernard F. Hillenbrand, executive director, Maryland.

Board of directors: Norman A. Peil, chairman, Pennsylvania; Mark Johnson, Utah; Francis J. Pritchard, Connecticut; C. Arthur Elliott, Iowa; James H. Aldredge, Georgia; Marion Fogleman, Louisiana; Lester R. Gopp, Wyoming; Donald M. Neff, New York; Lloyd Rea, Oregon; Lemuel R. Johnson, North Carolina; Merle K. Anderson, Illinois; Herman C. Kersteen, Pennsylvania; C. L. Swenson, Idaho; David Bird, California; Keith McBurney, Colorado; Hurshel Jacobs, Indiana; Judge C. Beverly Briley, Tennessee; Earl W. Simmons, Florida.

Western regional district: Lester Gopp, president, Laramie County, Wyo.; M. James Gleason, vice president, Multnomah County, Oreg.; William R. MacDougall, secretary treasurer, Sacramento County, Calif.; Keith McBurney, national director, Colorado; Cleo Swenson, national director, Idaho.

National Association of County Recorders and Clerks: William P. Gable, Jr., Tulsa, Okla., president; Thomas P. Chapman, Jr., Fairfax, Va., first vice president; Hazel T. Chase, Salt Lake City, second vice president; D. H. Sloan, Jr., Bartow, Fla., third vice president; Mrs. Gertrude McCain, Celina, Ohio, secretary-treasurer; Mrs. Lucille Dunn, Hutchinson, Kans., historian.

National Association of County Engineers: Leighton O. Hester, Florida, president; Donald L. Smith, Alabama, regional vice president, southeast; Rufus Kirk, Kansas, regional vice president, south-central; C. Arthur Elliott, Iowa, regional vice president, north-central; Walter E. Rusk, Ohio, regional vice president, northeast; John A. Lambie, California, first vice president; L. T. DeBardeleben, Alabama, secretary-treasurer.

National Association of County Treasurers and Finance officers: Sharp M. Larsen, Salt Lake City, Utah, president; William A. Bell, Girard, Kans., first vice president; Howard L. Dietrick, Rock Island, Ill., second vice president; Lucille Woofendale, Indianapolis, Ind., third vice president; Robert Fitzsimmons, Minneapolis, Minn., secretary.

Conference of State Association Executives: C. L. Chamberlain, New York, chairman; William B. Speck, Virginia, immediate past chairman; Jack Lamping, New Jersey, secretary.

The staff of this association is composed of: Staff of National Association of County Officials: Bernard F. Hillenbrand, executive director; Alastair McArthur, assistant director for research and field operations; Jack Merelman, assistant director for Federal affairs; Philip B. Warren, Jr., assistant director for publications; Sally Ann Johnson, office manager; Elizabeth Loughlin, production manager; Sue Skillcorn; director of finances; Jacquelyn Pritner, administrative assistant.

More than 2,000 elective and appointed county officials are attending this 23d annual conference of the National Association of County Officials.

This meeting is one of the largest and most important national assemblies ever held on local government. The theme is "The Rebirth of the American County," and plays up the tremendous strides made by these local government units within the past few years. Counties are now assuming an everbroadening list of municipal-type services and are taking over many area-wide functions either alone or in conjunction with other agencies. Among these projects in key metropolitan areas are sewage, water, air pollution control, and airports.

Seven panel sessions are being presented during the conference, three are running simultaneously today and three more the following morning. These are: "How To Save Your County Money," "Improve County Administration," "A Successful Bond Sale," "Counties and the Press," "Massive Cooperation," and "How To Conduct Studies of Local Government." Each will feature a board of knowledgeable and nationally known experts in the fields under discussion.

The third general session, that same afternoon, will be devoted to adoption of resolutions, changes in the association's policy statement, the American county platform, and the election of officers and directors.

Following a custom started last year at the association's 22d annual conference in Portland, Oreg., Federal officials responsible for administering grants-in-aid and other U.S. programs of direct concern to localities are at the conference. They are answering questions concerning their programs and are giving personal advice and afford personal contact, for the county officials have from year to year to meet with the Federal officials responsible for many of these programs.

During the meeting the three affiliated functional groups, the National Association of County Recorders and Clerks, the National Association of Engineers, and the National Association of County Treasurers and Finance Officers, as well as the State Association Executives, are holding separate programs within the framework of the NACO meeting. Another fast-growing group within the national organization, the County Executives, will be informally organized during the conference. Some State associations are holding breakfasts and other functions on their own.

Each of NACO's nine standing committees are meeting during the conference. They are hearing leading Federal and other authorities within their areas of concern and are passing on policy statements for consideration by the membership.

I know that Members of the Congress will be pleased to know that these county officials, their constituents from over this great Nation of ours, are holding this meeting to help improve county government, exchange ideas, and to render a greater service to their people.

A Bill To Insure an Adequate Return on Social Security Trust Funds

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. REUSS. Mr. Speaker, I have today introduced H.R. 8407, a bill to remove the Secretary of the Treasury as managing trustee of the social security trust funds, and to substitute for him a person without conflicting interests; and to require a return on the social security trust funds as near as possible to the return being realized by regular investors in U.S. Government securities.

The old age and survivors insurance trust, and the Federal disability insurance trust, have been built up over the years since 1936 by the contributors of employees and their employers. As of May 31, 1959, the funds had assets of $20.4 billion, all of it invested, by law, in U.S. securities. Of this $20.4 billion, $3.2 billion are in assorted notes and bonds of public issues, whereas $17.2 billion are in so-called "special obligations."

The $17.2 billion of special obligations earned an average interest rate of only 2.556 percent as of May 1959. On the other hand, the average yield on marketable U.S. bonds for May 1959, was 4.08 percent. This means that the social security funds were and are being forced to accept a return of 1.53 percent less than they would have received if their investing trustees had been obtaining in the long-term U.S. securities market the going rate of return. At this rate, the participants in the social security funds will lose more than $260 million worth of interest in this year alone. In some degree this has been going on since 1953, when money first started to get tight, and the interest rate on U.S. securities began to climb. Unless checked by Congress, this shortchanging of the old folks will continue.

The interest yield is an important part of the total of the social security funds. The official publication, "Social Security Financing," by Ida C. Merriam, published by the Social Security Administration in 1952, assumed that "ultimately roughly one-third of benefit outlays will be met by interest earnings"—page 41.

This interest, compounded, is what keeps the fund actuarially sound. Together with current contributions, it is necessary to pay retirement benefits, aids to widows and dependents, and disability benefits. To the extent that the fund is depleted because its managers accept less than the going rate of interest for U.S. securities, extensions of benefits, both in amounts and in coverage, that would otherwise be possible consistent with actuarial soundness, are prevented.

The history of social security legislation reveals how this shortchanging of participants has come about. Under the original Social Security Act of 1935, the social security funds drew interest at the

rate of not less than 3 percent a year, which was perfectly fair to the participants, since 3 percent was above the going long-term rate of interest.

In 1939, the present trust fund management agreement was set up, consisting of the Secretary of the Treasury as managing trustee, together with the Secretary of the Labor and the Chairman of the Social Security Board—later the Secretary of Health, Education, and Welfare. The 1939 act also authorized the investment of the social security funds in any U.S. marketable securities, and also in special obligations, which were to bear interest at a rate equal to the average coupon rate of interest on the entire national debt. In 1956 came a slight amendment, changing the rate on special obligations to the average coupon rate on obligations of 5 years and over. This result in the inadequate 2.556-percent yield, now that yields of old outstanding U.S. bonds greatly exceed their coupon rate.

The present $17.2 billion holdings, of special obligations is almost three-fourths concentrated in certificates or notes callable in this year, 1959—a total of $12,374,300,000. $4,825 million are in bonds callable in 1963. The average return on the entire $17.2 billion, as I have indicated, is 2.556 percent.

To make the Secretary of the Treasury managing trustee of the social security funds as Congress has done, is to place him, as trustee, in an impossible conflict-of-interest situation. He is being made to serve two masters, which no man, particularly a trustee, can do.

As guardian of the social security trust funds, he and his cotrustee are duty bound to invest that money in U.S. securities so as to yield the highest possible return consistent with sensible administration. There is nothing in the law which requires the trustees to buy 2.556 percent special obligations, rather than outstanding U.S. securities yielding 4½ percent or more.

As Secretary of the Treasury, his duty is to administer the national debt at the least possible cost to the taxpayer. Here arises a square conflict—in this year a $260-million conflict.

Under the Treasury-Federal Reserve debt-management policies of the last few years, most holders of the national debt have never had it so good. Banks have made record-breaking profits out of their holdings of U.S. securities. Institutional and individual investors have likewise profited very substantially. For example, within the last few weeks the Treasury had to pay investors 4.728 percent for 1-year money.

But the joke—and it is a wry one—is on the old folks. While other money lenders were getting 4.728 percent for a 1-year loan to the Treasury, the social security funds were compelled to struggle along on 2.556 percent.

Last January the Treasury issued a 21-year 4-percent bond. If you or I, Mr. Speaker, had been trustees of the social security funds, surveying our portfolio yielding only 2.556 percent, we would have jumped to invest hundreds of millions in this 4-percent issue. Instead, the Treasury allowed the funds to purchase only $18 million.

The law of trusts is clear that a trustee must use the utmost care to invest trust property in the most productive manner possible without risking the loss of principal—Scott, "The Law of Trusts," 22d edition, volume III, section 277. Where trustees permitted money owing them by a corporation of which they were directors and officers to remain unpaid, they were held personally chargeable with the loss to the trust—*Matter of Keane* (95 Misc. 25, 160 N.Y. Supp. 200 (1916)).

Where the trustee lent trust funds to a corporation of which he was president, which later failed, he was held liable for the resulting loss. *Humpa* v. *Hedstrom* (345 Ill. App. 289, 102 N.E. 2d 686 (1951)). See also *In Sparks Estate* (328 Pa. 384, 196 Atl. 48); *In Matter of Whitmore* (172 Misc. 277, 15 N.Y.S. 2d (1930)); *Parsons* v. *Wysor* (180 Va. 84, 21 S.E. 2d 753 (1942)); *Carrier* v. *Carrier* (226 N.Y. 114, 712, 123 N.E. 135, 858 (1919)).

I am not suggesting that Secretary Anderson should have to restore to the social security funds the $260 million or so which will be lost this year to participants because of his failure to obtain for his beneficiaries the same yield on U.S. securities which other trustees are obtaining for their beneficiaries. I am suggesting that the Secretary of the Treasury should be removed from his conflict-of-interest situation. To this end, H.R. 8407 removes the Secretary of the Treasury as managing trustee of the fund, and instead provides for the selection of the managing trustee by the two other trustees, the Secretary of Labor and the Secretary of Health, Education, and Welfare.

The bill further provides that the reconstituted Board of Trustees shall within 4 months submit to Congress a comprehensive report, including recommendations for changes in the law, whereby the interest yield on social security funds "can be made most nearly equal to the yield earned by private investors of insurance funds from investments in securities of or guaranteed by the United States." Last January the Advisory Council on Social Security financing recommended that special obligations should have a yield equal to that of outstanding U.S. 5-year obligations—currently above 4 percent. This would be a vast improvement over the present yield on special obligations. Even this new rate, however, may be inadequate in view of the callable character of special obligations. And the Treasury, it should be noted, opposes the advisory council's recommendations.

To prevent Congress to act intelligently we need this advice of a managing trustee without a conflict of interest.

H.R. 8407 specifies that the managing trustee, in addition to not having any conflicting interests, shall be a person of recognized integrity, and shall have a thorough knowledge of the insurance program established by this title and its problems. Surely there are numerous able Americans who could act as managing trustee.

The text of HR. 8407 follows:

A bill to amend title II of the Social Security Act to change the composition of the Board of Trustees of the Social Security Trust Funds, and to require a comprehensive report to the Congress with respect to the investment of such Funds

Be it enacted by the Senate and House of Representatives of the United States of America assembled, That (a) section 201(c) of the Social Security Act is amended by striking out the first two sentences and inserting in lieu thereof the following: "With respect to the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund (hereinafter in this title called the 'Trust Funds'), there is hereby created a body to be known as the Board of Trustees of the Trust Funds (hereinafter in this title called the 'Board of Trustees'), which Board of Trustees shall be composed of the Secretary of Labor, ex officio, the Secretary of Health, Education, and Welfare, ex officio, and a third member who shall be selected jointly by such two Secretaries in the manner provided in subsection (i) and shall be the Managing Trustee of the Board of Trustees (hereinafter in this title called the 'Managing Trustee')."

(b) Section 201 of such Act is further amended by adding at the end thereof the following new subsection:

"(i)(1) the Managing Trustee shall be selected from among individuals in private life who are persons of recognized integrity, and shall have a thorough knowledge of the insurance program established by this title and its problems, with no conflicting interests which would hinder the performance of disinterested public service either in the investment of the Trust Funds or in the other functions and duties vested in the Managing Trustee.

"(2) The term of office of the Managing Trustee shall be four years.

"(3) The Managing Trustee shall receive compensation at the rate of $100 a day for each day he is actually engaged in the performance of his functions under this Act, and shall in addition be reimbursed for the actual and necessary expenses incurred by him in the performance of his duties.

"(4) The Secretary of Health, Education, and Welfare shall make available to the Managing Trustee, from the personnel, facilities, and services of his Department, such secretarial, clerical, technical, and other assistance, and such information and data, as may be necessary or appropriate to the performance of the duties of the Managing Trustee."

SEC. 2. (a) The first sentence of section 201(g)(1) of the Social Security Act is amended by striking out "estimated by him and the Secretary of Health, Education, and Welfare" and inserting in lieu thereof "estimated and certified to him by the Secretary of Health, Education, and Welfare and the Secretary of the Treasury".

(b) The first sentence of section 201(g)(2) of such Act is amended by striking out "estimated by him" and inserting in lieu thereof "estimated and certified to him by the Secretary of the Treasury".

(c) Section 205(i) of such Act is amended by striking out "through the Fiscal Service of the Treasury Department," and inserting in lieu thereof "in such manner as may be appropriate".

(d) Section 218(h)(3) of such Act is amended by striking out "through the Fiscal Service of the Treasury Department" and inserting in lieu thereof "in such manner as may be appropriate".

SEC. 3. Upon the selection of the Managing Trustee of the Board of Trustees of the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Trust Fund under section 201(c) of the Social Security Act as amended by the first section of this Act which shall be accomplished within thirty

days after the date of the enactment of this Act, the Board of Trustees as constituted under such section as so amended shall assume, continue, and carry out all of the functions and duties which were being performed by the Board of Trustees as constituted before such amendment, and the Managing Trustee so selected shall assume, continue, and carry out all of the functions and duties which were being performed by the Managing Trustee provided for by such section as in effect before such amendment.

SEC. 4. Within four months after the date of the enactment of this Act, the Board of Trustees provided for by section 201(c) of the Social Security Act as amended by the first section of this Act shall submit to the Congress a comprehensive report, including its recommendations for changes in the law, with respect to the investment of the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund, with particular reference to the ways in which the interest yield to such Funds can be made most nearly equal to the yield earned by private investors of insurance funds from investments in securities of or guaranteed by the United States. Such report shall include recommendations on the maturity of obligations subscribed by or issued to such Trust Funds; the proportion of such Funds which should be held in short-term obligations; the relative desirability of subscription to public issues of securities to the Trust Funds or to special issues of such securities; the desirability of establishing a statutory minimum interest rate on special issues of obligations to such Trust Funds; and any other matters deemed by the Board of Trustees to be appropriate or relevant.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Tribute to Weldon Tabor, of Quanah, Tex.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. JOHNSON of Texas. Mr. President, aside from the standards of good-sense economics, the development of effective and realistic farm programs is important to us in one other way—the preservation of the family-size farm.

There is no better example of what life on a farm can mean for a young man than the case of Weldon Tabor, of Quanah, Tex. Weldon has been selected by the Texas Future Farmers Association as its outstanding Lone Star Farmer. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Dallas Morning News of July 18, outlining the extent of Weldon Tabor's achievements.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOP FUTURE FARMER

Those who lament that ambitious youths are fleeing from the farms and ranches to the cities haven't looked in on a convention of the Texas Future Farmers Association. There they could find several thousand trained youths whose ambition is to stay on the land and to increase its yield.

Typical is young Weldon Tabor, son of a Quanah ranch family. Still a student, he has raised Hampshire swine, range heifers and wheat on his own. He has leased 1,900 acres of rangeland, bought 12 registered Santa Gertrudis heifers and a bull and rented 170 acres for wheat. With holdings already valued at more than $11,000, he plans to return to ranching after he completes a college course.

The Future Farmers have named Weldon Tabor as their star Lone Star Farmer. Likely Texas will be hearing more about him in the years ahead.

Oregon Shakespearean Festival Opens Centennial Event on New Stage

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. NEUBERGER. Mr. President, there will be no cannon salutes or brass band fanfares, but tonight will mark the opening of one of the most important and popular features of Oregon's centennial year celebration. This is the Oregon Shakespearean Festival in Ashland, a small community near the California-Oregon border.

The Oregon Shakespearean Festival, which is one of the few such events in the world with a record of having produced all 37 Shakespearean plays, will celebrate Oregon's 100th birthday and its own 24th year by opening on a new stage, modeled after the Fortune Theater of 1599.

The dedicated people of Ashland and the Oregon Shakespearean Festival, led by Founder and Director Angus Bowmer, deserve much credit for this outstanding annual contribution to Elizabethan drama. I ask unanimous consent that an article by Dorothy Nichols from the Sunday New York Times of July 26, 1959, entitled "New Stage for Shakespeare in Oregon," be printed in the Appendix of the RECORD, together with an editorial from the Medford (Oreg.) Mail Tribune of June 18, 1959, entitled "Will Would Like It."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, July 26, 1959]

NEW STAGE FOR SHAKESPEARE IN OREGON

(By Dorothy Nichols)

ASHLAND, OREG.—The Oregon Shakespearean Festival here, dedicated to the production of the playwright in the form for which he wrote—swift, continuous action—will have a new Elizabethan stage this summer. In its 19th season the festival successfully faced a $275,000 fund-raising campaign. A grant of $10,000 from the Ford Foundation to Angus Bowmer, founder and director, has made it possible to bring back many of the festival's finest actors.

The opening play, "Twelfth Night," on Tuesday, will be preceded by an Elizabethan-style masque in honor of Oregon's centennial. A visitor can stay 4 days and see four plays. With the other three, "King John," "Measure for Measure," and "Anthony and Cleopatra" in rotation, the plays will run through September 5.

GOOD AUDIENCES

Ashland is now one of the few places in the world where the complete Shakespeare canon of 37 plays has been produced. The festival has maintained itself without subsidy, on admissions and private gifts. Last summer it attracted close to 30,000 spectators, yet the setting is a small town just over the border from northern California, a long day's drive each way from centers of population, Portland and San Francisco.

The festival has resisted the temptation of big names; its actors are young, drawn largely from college faculties and graduate students; some go on to careers in the theater, or teach and direct, spreading the Ashland ideal.

The stage at Ashland, built to the specifications of the Fortune Theater of 1599, with its many playing areas, upper inner, inner below, balcony, and curtained center, permits the original rush of action when plot was the element that held the audience, and, what we now revere, poetry and character were extras. On this stage there are no breaks in action; one scene begins as another ends. Everything falls into place; the abrupt shifts of mood, comedy relief, soliloquies, processions, battles.

The histories, in heraldic costuming, have been Ashland's most consistent artistic achievement. In these authentic productions the evolution of Shakespeare's form comes clear: from the juxtaposition of violent comedy with violent tragedy in Falstaff and Hotspur, to the emerging theme drama of the second "Henry IV." "King John" this season is the first of the chronicle plays to be repeated.

Except for the chronicle plays, Ashland permits a latitude in costuming only from Tudor to James. The stage is bare; the costumes make the color. But even in "A Midsummer Night's Dream" this becomes an advantage, for the focus was on the poetry, the true scene painting in Shakespeare.

FESTIVAL FOUNDER

The festival was founded in 1935 by Angus Bowmer of Southern Oregon College. On a bluff overlooking a canyon park which opens out of the town plaza, there was a walled oval left from chautauqua days. Here the theater was built and audiences sit under the stars—even through occasional thunderstorms. By day Ashland is any small town, though in Lithia Park visitors will be reading the evening's play by the pond with the Avon swans, and madrigals may float down from rehearsals in the theater on the bluff above.

The actors, who have been unpaid except for 15 scholarships, come recommended from every part of the United States. Nearly 500 applications were received this year from all over the world. Scholarship is taught from a theater point of view in the affiliated Institute of Renaissance studies. Elizabethan dances and music are part of the spectacle and the dueling is expert.

With no tailoring to fit stars, without novelty angles of period or imposed interpretation, productions at Ashland, the less successful as well as the most impressive, have a way of lighting up some special value; each one illumines Shakespeare's form and intent.

[From the Medford (Oreg.) Mail Tribune, June 18, 1959]

WILL WOULD LIKE IT

If advance signs are any criteria, the 1959 season of the Oregon Shakesperean Festival is going to be the best one in its 24-year history.

The big new stage house is nearing completion, and is recognizable for what it will be opening night, July 28, despite the litter and debris of construction still surrounding it.

It is an impressive structure, and a credit to its designer, architect, and builders—to say nothing of the thousands of people who gave generously so that it might become a reality.

The grounds have been changed considerably, but with taste and good sense. For instance, the tiers of seats in the rear are on a much sharper rise than before, making them far better for viewing and acoustical purposes than the former somewhat flat seat bowl.

The greensward in the rear is slightly smaller in area than in past years, but still

will be ample for the preperformance entertainment. New, attractive booths, built in the Tudor manner, will add to the rear-area atmosphere.

The two big light poles, which in the past stood amidst the seats and blocked the view of many patrons, are being removed. They will be replaced by light towers off to the side. (It is hoped this will be a temporary expedient; it is planned, eventually, to have all the nonstage lighting come from the new control booth in the rear.)

The new stage itself towers higher than the old one. And (at least to the untutored eye) it appears to capture the spirit of the Elizabethan age better than did the former stage.

The technical crew members are certain that it will be far more flexible and usable and convenient, thus adding to the excellence of the plays, not only through its own presence, but by improved technical facilities.

By opening night, landscaping will be completed, lighting in place, and, barring a few last-minute bobbles (which insist on plaguing any theatrical opening, new stage or not), it will open impressively and on time.

(Parenthetically, and in a thoroughly practical vein, it should be mentioned that for the first time the theater will be equipped with toilet facilities. This has been a much-complained-about deficiency.)

Complementing the physical plant, the festival has assembled for this year what may well be—should be—the best acting company ever.

Special grants from the Ford Foundation and the Oregon Centennial Commission have made it possible to arrange for the return of a number of actors and actresses who have been favorites in past years—men and women who have accumulated experience not only in Ashland but in all parts of the United States and Europe.

These, together with the finest young talents of actors, new to the festival, and with the veteran direction of Angus Bowmer and James Sandoe, and the untested but promising directing of Richard Risso, promise good things.

The festival production is a tremendous undertaking—one which cannot be entirely grasped except by watching the behind-the-scenes work, and the organizational and planning work which goes on the year around, as well as the show itself.

It involves the trained skills of hundreds of people in dozens of different fields. Much of it is performed by volunteers, and more by people who do their jobs more for the love of it, and for the experience, than for the small financial returns they receive.

It was more than interesting, it was to a degree inspiring, the other night during the casting dinner, to watch the faces of the young company—most of them in their early twenties—as they renewed acquaintances, or made new ones, or animatedly discussed previous festivals, or the forthcoming one.

One could sense excitement, anticipation, veiled worries, and determination as they faced this new summer adventure.

How the directors can take their young casts and, in little more than a month, turn them from an assortment of individualists (many of them quite obviously nonconformists) into an integrated, trained, disciplined, and polished acting company, is beyond the comprehension of the mere bystander.

But do it they do.

Tensions and problems will mount between now and opening night; differences of opinion, arguments, disputes will arise and be settled. Lines will be memorized, actions drilled, technical problems solved.

And, on opening night, following the festive dinner in the park, the 19th session will begin with color, pageantry and excitement.

William Shakespeare should be around to see it. He'd approve.

Education: Instrument of National Policy

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of an address by John A. Hannah, president of Michigan State University, at the commencement of the National War College and Industrial College of the Armed Forces on June 9, 1959. In his remarks, President Hannah stresses the important need for an educational system adequate to serve as an effective instrument of national policy to meet the challenge of Soviet Russia.

The address follows:

EDUCATION: INSTRUMENT OF NATIONAL POLICY

(Address by John A. Hannah, president, Michigan State University, commencement of National War College and Industrial College of the Armed Forces, June 9, 1959)

General Harrold, General Mundy, graduates of the National War College, and of the Industrial College of the Armed Forces, ladies, and gentlemen, let me begin by extending congratulations to the members of these graduating classes of the National War College and the Industrial College of the Armed Forces, not so much upon completing the rigorous courses of study successfully as for being qualified to undergo this intensive training. You are men who give every promise of attaining important positions of leadership entailing heavy responsibility in the years ahead. You will have this Nation's security in your keeping, and you well deserve our confidence and our prayers.

This is an appropriate occasion to repeat what I have said many times: On the basis of by relatively brief experience in the Department of Defense and other agencies of Government, I believe that the American people are greatly fortunate in the integrity, intelligence, and devotion of those who serve them in positions of trust, in both the military and civilian professions. Most of these men could leave the service of their country tomorrow and find employment in business and industry, in colleges and universities, in the professions and vocations. They would receive far more by way of material rewards in their services than they now receive or can hope to receive in the future. That they remain in their country's service speaks more eloquently than can I of their sense of values and their dedication to the welfare of their fellow citizens. Gentlemen, I wish you well in all the years to come.

Since the purpose of these colleges is to enrich the educational background and experience of specialists in the military and civilian services, it seems appropriate on this occasion to discussion education as an instrument of national policy.

Not many of us consider education in this role. There is good reason for real concern because many of our political leaders and others in positions of great influence seemingly fail to recognize the fundamental importance of education to the preservation of our system of government. And because they fail, the general public fails to sense its importance. Lipservice is paid in plenty to education, but it is painfully clear that education does not receive, and that our educational institutions do not receive, the consideration and respect their importance to our national well-being deserves.

Thanks to Soviet Russia's recent alarming advances in scientific and technological fields, and its less startling but no less serious economic and political inroads, there has been a partial awakening to some basic truths which once were plain to us as a people, but that have been obscured in recent years by indifference and preoccupation with other matters.

One of these truths is that education is, and long has been, a primary instrument of national policy to atain our stated goals as a free people. We find this set forth in a hundred documents—the Ordinance of 1787 creating the Northwest Territory contains these words: "Religion, morality, and knoweldge being necessary to good government and the happiness of mankind, schools, and the means of education shall forever be encouraged"; in the Morrill Act, creating the land-grant colleges and universities; in the constitutions of our States; and in the charters of scores of private colleges. We find it set forth in the writings of Jefferson and a long succession of national leaders.

In all of these source materials, we find plain evidence that schools, colleges, and the means of education were to be encouraged that the American people might work out their rightful destiny.

Education was to be used, first, to prepare for the wise and proper exercise of their roles as citizens in a democracy where the vote of the unlettered was to count for just as much as the vote of the doctor of philosophy. The founders of our country had confidence in the judgment of the common people, but they understood full well that such judgment would have to be an informal judgment, else the system of government they had laid down simply would not work. They understood that in preparing to give the vote to all they were taking a calculated risk, but they knew also that only by giving each man his say could they insure that political stability which has ben one of our great strengths as a nation.

Education was to be used, second, to insure that equality asserted in the Declaration of Independence, because political equality would be only a mockery unless there was equality of oportunity as well. They intended, through education, to give every man an equal chance to better his lot in life; they intended, through education, to remove the artificial barriers of birth, and wealth, and privilege which fenced in those of lower rank in the Old World they know so well. They intended, in short, to provide for social mobility—to make it possible for a man to rise or to fall acording to his own talents, and ambitions, and willingness to work.

That they planned wisely and well is attested by the position of eminence to which our country has risen among the nations of the world. Political stability and social mobility are the warp and woof of our national being, and education is the loom on which it is woven.

Another basic fact of which we are just becoming fully aware is that Soviet Russia

has deliberately set out to surpass us in education. Reading our history coldly and analytically, their leaders came to the conclusion years ago that they could not hope to challenge us successfully in any field unless they could first match and then excel us in education, both quantitatively and qualitatively. This they determined to do—and they were away to a flying start before we even realized that we were in a race.

A fact of which we have not yet become fully aware is that in our struggle with Soviet communism, the outcome will depend not as much upon weapons systems as upon educational systems.

In this new contest of strength and will, the short-sighted have urged that we adopt the salient features of the Russian system, particularly its heavy emphasis upon science and technology, its long school hours, its closely directed study. They would throw away the educational system that has served us so well and set up in its place an imitation of the Russian system.

There are some features of the Russian system which recommend themselves to educators: The salaries paid to college professors, the respect paid to them, the social position accorded to them, for example. But I know of no responsible qualified critic who advocates that a system intended to serve the needs of a monolithic political and economic dictatorship would serve the needs of a free people.

In this crisis, we must adapt our system to our needs of today and tomorrow, not turn to a hybrid imitation of the Soviets.

To my way of thinking, an educational system adequate to serve as an effective instrument of national policy would have these essential characteristics:

1. It would place increasing stress upon development of greater professional and vocational competency in all fields, not just science and technology alone;

2. It would encourage a far better understanding of the people of other lands, including knowledge of their languages and appreciation of their cultures;

3. It would stimulate greater pride in the United States and the principles for which it stands, and greater loyalty and devotion to the great Western traditions;

4. It would aim to toughen our young people physically, mentally, and morally, for the trials and perils through which they must pass in the years ahead.

5. And most importantly, it would be open equally to all who could benefit, at little or no cost to the individual.

Whether we will face up to the urgent necessity to develop such an educational system or one much like it, and pay the price it would cost, remains to be seen. But it is painfully clear that we cannot hope to meet the challenge of Soviet Russia with today's policies and facilities; they simply are not equal to the task.

There is ample evidence that we can afford what it would cost. Consider just this alone: In 1956, Government at all levels expended a little over $14 billion on education. That same year, the American people spent $13.8 billion on recreation, and another $5.3 billion at State and private liquor stores.

Now let us turn briefly to an examination of one concrete example of the use of education as an instrument of national policy in international affairs.

History is sure to single out as one of the most remarkable developments in the period following World War II the generous giving of American money, goods, and human resources to help struggling nations in all parts of the world. Discounting self-interest to the fullest, this outpouring of American wealth is certain to be counted as a gesture of human consideration for the needs of others beyond all comparison.

American universities are rightfully proud of the contributions they have made in the technical assistance phases of this vast program. The sums of money involved in their activities are small by comparison with the total investment, but the potential dividends are tremendous.

The secret of their success, it seems to me, lies in the fact that their efforts are directed at the heart of the problem, which is how to help other peoples in other lands achieve richer and fuller lives for themselves. The offensive of the universities has been aimed at the historic enemies of mankind: Hunger, disease, and ignorance. They have been welcomed in foreign lands because their motives have not been suspect, and therein lies their tremendous potential for good. It is difficult to suspect the motives of a man who comes to teach you how to grow more rice, how to eliminate malaria, how to read and write your native tongue. To the common man—and it is to millions of common men that we must direct our appeal—electric power, steel plows, and penicillin count for more than planes and tanks and artillery.

With no intention of being critical of military aid, it is interesting to speculate what the results would have been had we diverted some of the billions expended on military material and training to activities touching the lives of ordinary people more closely. I refer to such activities as industrial production, those stimulating the formation of capital, and above all, educational programs to utilize the knowledge and intelligence of native peoples in developing the agricultural and industrial potential of their own countries.

Many of you members of these graduating classes will at times in the future be stationed at posts in lands in which programs of technical assistance are being carried on along with programs of military aid and assistance. In my opinion, it is absolutely essential that you understand the relationships between them.

Gentlemen, military security is not and cannot be our final objective, at home or abroad. This is not the road to world peace. Military security is a first prerequisite to peace in a world such as that in which we live today, to be sure. But an invulnerable defense can never be more than the wall behind which we seek to bring about those conditions which are the ingredients of peace.

The role of the military in those foreign lands is to help the native governments and their peoples to build a military force with which they can defend themselves. The role of the technical assistance programs, in which education plays a leading part, is to help the native governments and their peoples rid themselves of the unfair handicaps under which they struggle in far too many instances. Intolerance, ignorance, disease, hunger, and rigid caste systems have for far too long weighed down upon the bodies, minds, and spirits of millions upon millions of our fellow men. To talk to them of democracy and freedom is to talk of things beyond their interest or comprehension. But offer to show them how they can stand upright like men, and look up toward the stars rather than down into the mud, and we will find ears eager to listen, minds eager to learn, spirits ready to meet in harmony with our own. These things education can do.

This is not to say that education—at least formal education—is the panacea for all social, economic, and political ills. It would be naive so to claim. It is a powerful force, but not all-powerful.

Despite all that education has done for the American people, we still have economic, social, and political inequality and injustice in the United States, and formal education alone cannot possibly effect their eradication. But education considered broadly as any change for the better in the mind and spirit of an individual is the key to the solution of these problems, and many social intrumentalities other than schools and colleges participate in education of this kind.

For example, in education in this broad sense lies our greatest hope for the elimination of those violations of fundamental civil rights based on race, creed, or national origin which handicap us so grievously in our relationships with the people of so many other countries.

This is a matter of the utmost seriousness in the development and implementation of national policy in international affairs. It must be remembered that roughly one-third of the peoples of the world are not now firmly allied with either the Communist bloc or with those nations who stand with us as examplars of freedom and democracy.

The struggle between these two opposing forces could be lost on the battlefield, but it will never be won there. It will be won in the hearts and minds of millions of men and women who are nonwhites, and for whom differences in skin color constitute the single greatest barrier to rapproachment with what we call the free world. They hold the balance of power, and they look with mingled emotion upon all efforts to win their adherence and loyalty. They listen to what we say about equality and justice and the dignity of the individual, they look at Little Rock and Poplarville and at the crowded slums of our great northern cities, and at many kinds of discrimination everywhere. They listen, they look, they ponder—and they wait to see whether we will practice what we preach.

The terrible necessity to effect what is a minor social revolution under the pressure of time and in the spotlight of world attention emphasizes more strongly than any words of mine that missiles, planes, atomic submarines, and moon satellites will not determine the ultimate destiny of mankind. In the end, all will be reduced to terms of human values, because human beings are all that really matter.

They crave, and we can help them attain, security in the military sense; but that will not be enough. We must give them hope for better lives and confidence in their own ability to attain their legitimate goals. We must persuade them that their chances for success will be greater under the banner of peace and freedom than under the red flag of communism.

A distinguished Filipino alumnus of Michigan State University wrote in a recent letter to me from Manila:

"The distinctive feature of great nations is not their ability to behave well or righteously at all times, but their capacity to produce greatness at a vital moment."

Many times in history, America has produced greatness at a vital moment. The ability to do so has been one of our strengths as a people.

This is such a moment in world history. Can we produce that evidence of greatness again? If we are to do so, then education must produce much of the leadership, much of the moral strength, most of the trained intelligence so necessary to the task.

I conclude with the assertion that education is, long has been, and must continue to be a primary instrument of national policy both at home and abroad if we are to attain our stated goals as a free people.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. BRIDGES. Mr. President, the paradoxical aspect of one of this country's most pressing domestic problems, the farm program, is that the situation is apparently going to get worse before it gets better.

While the Government continues to initiate new and expensive methods for reducing scandalous farm surpluses, technical aids, better fertilizers, and other advances in farming continue to produce greater and greater yields each year.

The extent of this serious problem is outlined in an editorial which appeared in the July 9 edition of the Nashua (N.H.) Telegraph, one of New Hampshire's leading daily newspapers. I ask unanimous consent that this commentary be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DILEMMA

Drive through many parts of the east, the Middle West and the plains States and you'll see golden wheat bending in the wind. It's a beautiful sight, captivating to the eye and suggestive of America's rich, natural bounty.

Yet there's a side that's not golden. This staple of our diet is grown today in such abundance that we cannot find outlet for it. Each passing year since World War II and its aftermath seems to heighten rather than ease the problem of surpluses.

Nearly everything has been tried: restrictive quotas, acreage limitations, special efforts to find foreign markets, rewards to farmers for putting land into a soil reserve.

All those together have done little to reduce the groaning, costly weight of excess output.

Today the U.S. Government has more than $3 billion invested in wheat for which there is no immediate market.

All assaults on the problem have been largely thwarted. To some extent the luck of the weather has been responsible. In 1958 the crop benefited heavily from good weather, to reach bumper proportions.

But a steadier factor is farmers' increasing use of fertilizer and many other technical aids to boost their yield per acre.

Acreage limits mean little in the end when farmers can apply a host of new techniques to get more wheat from a given patch of soil.

Being in the business of trying to get the most from what they have, they cannot be blamed for maximizing their chances to earn a decent return from their land. But acknowledging this doesn't get rid of the problem.

The blunt fact of the matter, plain to anyone who will read the long-range forecasts of the farm specialists, is that supply both in wheat and certain other major crops may continue to outrun demand for many years to come.

Countless farmers have barely tapped the available technical reserve which could help lift their yields. As they dip in, output will rise, and rise again.

On top of this prospect, science is sure to go on bringing still newer technical advances which may be translated into still larger production gains.

Everybody knows we have a dilemma. The problem is to learn how to live with it without producing for the storehouse, at immense charge to the taxpayer.

Answers are not even dimly seen.

Safety in Small Coal Mines

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. MORTON. Mr. President, last Friday I invited the attention of my colleagues to an editorial from the Louisville (Ky.) Courier-Journal commenting on the economic motive underlying the efforts to completely repeal the provisions of the Federal Coal Mine Safety Act which exempt small coal mines from mandatory compliance with certain safety recommendations.

Subsequently, I read another editorial discussing the same subject in the Louisville (Ky.) Times, another leading Kentucky newspaper, which I commend to the attention of the Senate.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, entitled "The Real Problem Behind Mr. Lewis' Rhetoric," published in the July 23, 1959, edition of the Louisville (Ky.) Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE REAL PROBLEM BEHIND MR. LEWIS' RHETORIC

"Widows and orphans are being created; death is coming to strong men before their time."

The author of this cheerless observation was the venerable president of the United Mine Workers, John L. Lewis himself. If we are to believe him, the principal agent in creation of widows and orphans, and of cutting down strong men before their time, is Kentucky's gentle Senator JOHN SHERMAN COOPER.

This is such a preposterous suggestion that it deserves closer observation, and closer observation convinces us that Mr. Lewis, in fine form, was putting on a show.

The occasion was a hearing by a Senate Labor Subcommittee on the subject of mine safety bills. The bill which Mr. Lewis favors would require mines employing fewer than 15 miners underground to employ the same safety equipment that present law requires for mines employing more than 15 underground. Senator COOPER has introduced a bill that would allow Federal inspectors to shut down any mine where danger is imminent, but it would exempt the small mines from complying with certain safety provisions.

MORTON BACKS COOPER

Last week Senator COOPER introduced a second bill, proposing a study of safety problems in small coalfields. It was this on which Mr. Lewis turned his angriest glares. Obviously, he said it "is intended to delay longer any possible affirmative action by the Congress—obviously it is designed to prevent this from becoming a political issue until after the next election." Senator COOPER mildly retorted that he is interested in mine safety too, and that he introduced the safety study bill only after the subcommittee reported there was no authoritative information on the subject.

Yesterday Senator THRUSTON B. MORTON lined up with his Kentucky colleague, Senator COOPER. He declared the bill Mr. Lewis favors would "inflict grave consequences on the small mining industry."

Small mines resemble big ones only in that they both produce coal. The small ones work small seams with hand labor, often on a family basis. The big ones work deep seams with powerful mechanical equipment. The big ones are efficient. The small ones are inefficient; often they are marginal as to profit. The big ones produce far more tons of coal per man-hour than the small ones.

Because of these factors, the big mines can afford to pay higher wages—wages demanded by Mr. Lewis' UMW—than the little mines. At the same time the little mines provide jobs for men who would be jobless if the mines were closed. Kentucky has about one-third of all the Nation's coal mines employing less than 15 miners.

NEW JOBS: WHERE?

Mr. Lewis gets on very well with operators of the big mines, which are solidly unionized. It is the little mines, where men would rather work for less money than go jobless, that UMW runs into trouble. One may only guess that Mr. Lewis would be well pleased to see the marginal mines shut down permanently, and all the working miners safely inside UMW.

Indeed this would be fine except that it would take away the livelihood (admittedly not a very good livelihood) of hundreds of Kentucky miners. It might be argued that these men would find jobs elsewhere, but the miners themselves surely would want to know exactly where. The new jobs simply do not exist, certainly not in east Kentucky.

Considering all this we must conclude that Senators COOPER and MORTON are more interested in keeping men at work in Kentucky's small mines than they are in seeing these men cut down in their prime.

Ike and Johnson Make Divided Government Work

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. SMATHERS. Mr. President, in many respects we are living through a very unusual period in American history. One of the most unique of the factors involved is that we have had a period of divided Government—with the Executive under control of one political party and the Congress under control of another.

For many decades, historians have predicted that such a period would mean a real debacle for the American form of government. They havesaid that it would not work. They have said that government would be paralyzed.

But this Government has not been paralyzed under such circumstances.

This is largely due to the statesmanship and the determination of the Senate majority leader, LYNDON B. JOHNSON, that this Government shall work.

This situation was graphically illustrated by the distinguished and perceptive columnist, Roscoe Drummond. In a column on July 20, he said—and I quote—"But the historians will find, I am sure, that it is largely because of LYNDON JOHNSON'S special brand of leadership that divided government is producing good legislative fruit." Mr. Drummond went on to say that JOHNSON'S great contribution during this unprecedented period "is that he is choosing to transact the public business" instead of seeking to make issues.

I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, July 20, 1959]

IKE AND JOHNSON MAKE DIVIDED GOVERNMENT WORK

(By Roscoe Drummond)

We don't have to wait for the history books in order to render two important verdicts on an unprecedented period in our political history—the second term of the Eisenhower presidency and the second and third terms of the LYNDON JOHNSON Congress.

These 4 years, from 1957 to 1961, are an unprecedented period because we have been testing for the first time the effect of the anti-third-term amendment upon the functioning of the Presidency. Never before has a President been automatically on his way out of office the day he was elected to his second term.

This 4-year period is also unprecedented because for the first time a President has been confronted through the entirety of his second term with a Congress controlled by the opposition—a Democratic Congress thrice elected with increasing majorities during a Republican Presidency. It had never happened before.

The unusual character of this period is compounded by the fact that both unprecedented circumstances—the first impact of the 22d amendment and the continuous opposition-party control of Congress—occurred at the same time.

Most predictions were for a political cold war and a perilous legislative stalemate.

And what has actually been happening—and why? It seems to me already amply evident that when the historians come to write the history of 1957 to 1961 they will almost unanimously agree:

1. That Dwight D. Eisenhower has proved that a constitutionally lame duck President does not have to limp to the exist of his second term, that he can grow in power and political effectiveness, and that in so conducting himself Mr. Eisenhower has helped future Presidents faced with similar circumstances.

2. That, simultaneously, Democratic Senate Leader LYNDON JOHNSON—invaluably aided by Speaker SAM RAYBURN of the House—has himself made an original, courageous, and incalculable contribution to the functioning of divided government by insisting upon making divided government work and by setting the maximum area of compromise between a Democratic Legislature and an opposition party President. JOHNSON has had no precedent to work by; he has made his own precedents and I believe that history will call them good ones.

Mr. Eisenhower has said that it is "no bed of roses" dealing with an opposition party Congress. It is equally true that Senator JOHNSON finds it "no bed of roses" dealing with an opposition party President, particularly since some of the thorniest patches are being planted by some Democrats, particularly the Democratic national chairman, Paul Butler.

But the historians will find I'm sure, that it is largely because of LYNDON JOHNSON'S special brand of leadership that divided government is producing good legislative fruit. Senator JOHNSON has proved himself a constructive realist. He knows that Mr. Eisenhower won the Presidency, not Adlai Stevenson, and that Mr. Eisenhower's 9 million majority did not enthrone the Democratic platform.

It seems to me the difference between JOHNSON and Butler is that Butler wants to use divided government to make issues on which to try to win the White House next year and that JOHNSON wants to use divided government to get the best attainable legislation. The decision LYNDON JOHNSON faced was whether to paralyze the government or transact the public business.

JOHNSON'S great contribution during this unprecedented period is that he is choosing to transact the public business.

Fire Prevention Funds for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. BARTLETT. Mr. President, in 1957 over 5 million acres of forested public land in Alaska were destroyed by fire. This represented vast losses in natural resources, and in recognition of the need to do all possible to halt such a devastating force, the Congress appropriated for the 1959 fiscal year an additional $250,000 above the budget request of $387,900 to start a realistic and long-needed fire prevention program in Alaska. The fire loss last year was less than a million acres.

The President's budget this year went back to the wholly inadequate figure of $387,900. In the face of this inadequacy and because fires are again raging throughout many areas of Alaska, the Alaska delegation is seeking an additional $250,000 in the Supplemental Appropriations Act for the 1960 fiscal year. If this money is not made available, practically all the new program, inaugurated last year with the additional funds provided by the Congress, will cease.

This problem is a grave concern to Alaskans and to many others outside Alaska who are familiar with the situation. The gravity is related in an excellent editorial which appeared in the July 26 issue of the Milwaukee Journal. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

[From the Milwaukee Journal, July 26, 1959]

EIGHTY PERCENT OF ALASKA'S FORESTS BURNED; LITTLE PROTECTION

Forest fire losses in Alaska are staggering.

The new State has some 125 million acres of forest land and nearly 80 percent of it has been burned over in the last 70 years, according to R. G. Lynch, of the Journal staff, who visited Alaska last year.

Most of the timber burned is on Federal lands, so the loss is borne by the American public generally. But it is distant and few people feel the impact directly, so there is little protest or pressure to reduce this waste.

Perhaps that is why Washington has been so niggardly in appropirations for suppression of forest fires in Alaska. In a dry season, when lightning may start scores of serious fires simultaneously in remote, roadless areas, the small corps of firefighters is overwhelmed. For only 2 years have they had planes and smoke jumpers for effective operation but they are hopelessly too few and now there is danger that there won't be money to carry on.

For next year the Budget Bureau recommended only $387,900 for forest fire control in interior Alaska, writes Senator BARTLETT, Democrat, of Alaska. That's to protect 125 million acres of forest and another 100 million acres of open ranges where the fire control is most difficult, while Wisconsin spends around $1.8 million a year to protect 16 million acres of quite accessible forest land.

Supplemental funds are made available to meet costs of fighting Alaska forest fires when emergencies actually arise. But lack of adequate specific appropriation prevents training the professional crews and acquiring suitable equipment in advance, to prevent emergencies or to cope with them efficiently if they cannot be prevented.

Here is an example apparently of very shortsighted efforts at economy in dealing with a situation that doesn't generate great political pressure. If the same situation prevailed in one of our populous States it wouldn't be tolerated, and should not be tolerated in our 49th and biggest State.

More Waste in Foreign Aid

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial published in the Richmond (Va.) Times-Dispatch, on Sunday, July 26, 1959, entitled "More Waste in Foreign Aid."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Richmond (Va.) Times-Dispatch, July 26, 1959]

MORE WASTE IN FOREIGN AID

Here we go again. Another congressional subcommittee, this one headed by Representative PASSMAN, of Louisiana, points to the grossest waste and extravagance in the foreign aid program.

What are we to think when we are told by this House subcommittee that in Pakistan a staff of 271 Americans has been supplied by U.S. taxpayers with 229 passenger

automobiles, 529 refrigerators and 1,027 native helpers?

Much worse, however, is the situation in Korea, where the looting of military supplies for sale in stores seems to have been elevated into a gigantic racket.

The House subcommittee in question did not say in which country it learned of a 20-year supply of WAC clothing, along with a 45-year supply of .30 caliber carbine ammunition. The country turns out to be Korea. Also in Korea no fewer than 70,000 sets of new tire chains were left outdoors without storage, along with more than a million new carbine and submachinegun clips.

As for the diversion of military supplies furnished by us to civilian retail outlets, a Defense Department report, made last November, and now released to the public, says that in Korea there were "critical shortages of almost all items of supply" in forward areas, caused by these diversions. The shocking report goes on:

In the large centers of population, the quantity of military goods of all types that has entered the civilian economy is beyond belief. This activity is so extensive that an adequate description is impossible. Items such as tires, hand tools, clothing, flashlights, construction material, spare parts, food, wire, petroleum and oil and lubricants, and in fact virtually every commodity required to support a military machine, with the exception of equipment such as tanks and artillery pieces, is displayed openly for sale by private enterprise.

Incredible as this is, the report goes on to say that shortages affecting the Armed Forces had been rendered so acute by this thievery and pilferage that the military had to go into the civilian market and buy back the materiel stolen from it.

Witnesses for the Defense Department stated that a strenuous effort was being made by Korean officials to control this orgy of looting, and that high-ranking officers were being discharged and court-martialed.

How do such things happen U.S. Senator ERNEST GRUENING of Alaska has shed considerable light on the question in a letter to the New York Times. That newspaper had charged him with "irresponsibility" because he and 19 other Senators unsuccessfully sponsored an amendment designed to tighten up the Mutual Security Act, with a view to preventing gross waste.

Senator GRUENING stated that he had seen the vague and largely meaningless illustrative budgets submitted in support of this year's foreign aid program. He went on to say:

"These volumes contain no firm commitment that any of the funds requested will be spent for any of the projects listed in these wordy yet vague documents. * * * In effect, Congress is being asked to give a blank check made out to the executive branch to spend in any way it sees fit wherever it sees fit throughout the world for loosely defined purposes.

"Our amendment provided only that 90 days after the Congress appropriated the funds for these four foreign aid programs the Federal agencies involved would be required to submit budgets showing exactly on what they intend to spend the taxpayers' money. The amendment would require the agencies to spend the funds for the stated purposes only, or to permit the funds to go unspent."

Senator GRUENING added that in order to give the program flexibility the sum of half a billion dollars was exempted from the bill so that the Executive could spend that amount in unexpected or emergency situations. He said, with much justice, that he thinks half a billion dollars' worth of flexibility is enough.

The amendment he sponsored got only 38 votes in the Senate and, hence, was defeated. Its defeat was a tragedy. This becomes increasingly evident as official inquiries reveal scandalous waste and extravagance in the foreign aid program.

Some foreign aid is vital to the security of the United States, but unless the whole system is sharply tightened up there will be grave danger that in the future Congress and the people will insist on cutting out this needed aid, along with the rest.

How much longer are sloppy supervision, loose controls, and shocking inefficiency to be tolerated in the distribution of our foreign aid?

Labor Unions

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following comments I have received from a constituent of mine on the subject of labor unions. I believe the writer's reference to the application of the right-to-work law in Canada will be of special interest to Members of this body:

LABER UNIONS

I do not think that organized labor can become too powerful, at least until organized labor becomes the minority of the people of this country. If we are to have a democratic form of Government, the majority must rule, otherwise we have aristocracy, plutocracy, and many of the other forms of government which to me are anathema, but which can generally be collected under the name facism. It seems to me and has since the discussion became so bitter that the largest majority in this country is composed of working men, labor. Therefore I do not see how they can become too powerful. The American people have given lipservice to democracy during their entire history but have actually been under an aristocratic-plutocratic form of government until the past 20 years. The minority who have controlled this country throughout its early life are now the ones who are so vociferously demanding that the unions be stripped of power. The only legislation needed it seems to me is to compel the union itself to be democratic internally, such as compelling supervised elections so that each man shall have the right to a secret ballot and also that the funds members contribute to their union must be audited by independent auditors so that no funds can be misappropriated without sure penalty to the wrongdoer. In regard to so-called right-to-work laws, I am ashamed that my country is so dim-witted that it can't follow the example of Canada. As I understand it the Canadian Supreme Court has ruled that no man can be compelled to join a union. But if he works for an employer who has made concessions to an organized group of his employes and the individual has profited by the achievements of the union, he must pay dues the same as any union member. He doesn't have to belong to the union and be limited to union rules. But he cannot be a freeloader and profit without cost to himself from the efforts of the union. I have never belonged to a union and can't imagine myself ever a member. I could never accept anyone telling me I could do only so much work in a given period of time. But if an cessions such as higher pay, better working cession such as higher pay, better working conditions, etc., I should feel like a cheap skate if I didn't bear my share of the expense in gaining such concessions.

The Townsend Clubs and Dr. Francis E. Townsend

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

Tuesday, July 28, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Those Townsend Clubs," from the Pendleton (Oreg.) East Oregonian, of July 21, 1959.

The editorial pays tribute to the pioneering vision of Dr. Francis E. Townsend, who set in motion the fundamental and basic idea that America had a duty to help care for its elderly citizens during their declining years.

The programs resulting from the Townsend plan and its impact upon public opinion have included such advances as social security, State and Federal programs of old-age assistance, improved retirement benefits for Federal employees, and many other gains.

Mr. President, I ask unanimous consent that the editorial entitled "Those Townsend Clubs," from the Pendleton (Oreg.) East Oregonian, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THOSE TOWNSEND CLUBS

One of the hardest nostrums ever urged upon Congress is getting another round of publicity this week as the Townsend Clubs of America hold their annual convention at Portland. For a quarter of a century the Townsend movement has been selling one version or another of its familiar universal pension plan on Capitol Hill.

The scheme called originally for pensions of $200 a month for all citizens 60 years of age or over, the payments to be financed by a 2 percent transaction tax. The 1959 version is more modest, despite the inroads of inflation. One of its legislative sponsors, Representative JOHN A. BLATNIK, of Minnesota, estimates that it would provide primary benefits of $130 to $150 a month.

This would be accomplished by repealing or suspending various provisions of the Social Security Act in regard to old-age and survivors and Federal disability insurance. In their place would be instituted uniform benefit payments to all U.S. citizens over 60 years of age, to all totally and permanently disabled persons between 18 and 60, and to female heads of families with dependent children under 18.

The program would be financed by a Federal gross income tax of 2 percent on all monthly personal incomes over $250 and on gross receipts of companies and corporations. The monthly tax collections would

go into a special Treasury account. After deduction of administrative expenses, the remainder would be divided equally among beneficiaries.

There are certain other refinements. For example, above the amount of $75 a month, adult beneficiaries would lose $1 for each $2 per month earned in excess of $50 in employment or self-employment.

The Townsend plan, depression-born, is advocated not only as an old-age security measure but also as a business stimulant and stabilizer. The idea is to increase the buying power of the aged and thus to encourage increased production. Opponents insist that the scheme would have no effect on buying power but would merely take a substantial part of the income earned by people under 60 and transfer it to people over 60.

In any event, the Townsend plan has proved to have heavy-duty, long-mileage political sex appeal. Twelve House Democrats and nine House Republicans are members of the Townsend plan executive committee. Dr. Francis E. Townsend, founder of the movement, claimed the 1958 congressional elections a tremendous Townsend victory with 82 percent of Townsendites—candidates recommended by Townsend State and congressional district councils—elected.

Dr. Townsend was, we think, unduly exuberant. Almost no candidates run any longer either for or against the Townsend plan. That the plan has managed to survive for so long is, however, quite a tribute to its author.

Results of University of Detroit Political Poll

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following results of a political poll sponsored by the Young Republicans and Young Democrats of the University of Detroit Political Union. Returns were received from 435 students at the university.

UNIVERSITY OF DETROIT POLITICAL POLL SPONSORED BY UNIVERSITY OF DETROIT YOUNG REPUBLICANS AND UNIVERSITY OF DETROIT YOUNG DEMOCRATS UNDER THE UNIVERSITY OF DETROIT POLITICAL UNION

Please check answer which corresponds with your own thinking or opinion. Sign your own name, home address, age, and college at the bottom.

1. Do you believe that continued prosperity requires continued inflation? Yes 10 percent; no, 90 percent.

2. To combat inflation, would you favor price, wage, and rent controls? Yes, 40 percent; no, 53 percent; 7 percent no opinion.

3. Do you think the Federal Government should spend more for welfare pensions? 75 percent, yes; schools, 65 percent, yes; housing, 75 percent, no; hospitals, 60 percent, no; agriculture, 80 percent, no; vets, 95 percent, no.

4. If tax reduction becomes possible where should it come first? More liberal treatment for small business, 56 percent, yes; cut individual rates, 52 percent, yes; cut corporate rates, 80 percent, no; cut excises, 67 percent, no. Do you believe any present rates should be increased? 71 percent, no.

5. Would you favor a national sales tax collected at the manufacturer's level (except food, clothing, and medicine) if additional revenue is needed? Yes, 59 percent; no, 32 percent. 9 percent, no opinion.

6. Do you agree with those people who say taht organized labor is becoming too powerful? Yes, 78 percent; no, 22 percent.

7. Do you favor extension of coverage and increase in the minimum wage? Yes, 71 percent; no, 27 percent.

8. Do you favor hospital and surgical care for the social securities beneficiaries with an increase in the wage base for social security taxes to $6,000? Yes, 46 percent; no, 53 percent.

9. Do you favor Federal aid to education in school construction, grants, and teacher pay? Yes, 64 percent; no, 36 percent.

10. Instead of a Federal aid to education program, would you prefer permitting taxpayers to take a credit against their Federal income tax for new or additional school taxes paid? Yes, 56 percent; no, 31 percent; 13 percent, no opinion.

11. Do you feel that the small businessman needs more and bigger loan programs, protection and benefits to aid him to compete? Yes, 73 percent; no, 27 percent.

12. Do you feel that Federal action is needed in these fields? More guarantees of larger mortgages at lower interest rates? 59 percent, no; 30 percent, yes; 11 percent, no opinion. Public housing for middle as well as low income families? 91 percent, no; 8 percent, yes. Problems of social delinquents in slum areas, 61 percent, no; 37 percent, yes. Aid to the elderly, 56 percent, yes; 41 percent, no. Aid to the handicapped, 51 percent, no; 47 percent, yes.

13. Do you think that support prices on farm commodities should be tied more closely to market prices? Yes, 76 percent; no, 9 percent; 15 percent, no opinion.

14. In foreign aid, would you favor more emphasis on economic and less on military assistance? Yes, 82 percent; no, 16 percent. Do you favor gifts and sales of surplus farm commodities to underdeveloped countries? Yes, 73 percent; no, 24 percent.

15. In the field of public versus private power would you favor the expansion of TVA? 43 percent, no; 24 percent, yes; 33 percent, no opinion. Large scale Federal construction of power projects, 42 percent, no; 25 percent, yes; 33 percent, no opinion. More public projects in the development of atomic energy, 74 percent, yes; 26 percent, no. Would you favor legislation to relax Federal controls over independent natural gas producers? Yes, 20 percent; no, 78 percent.

16. Do you think that more federally administered programs should be turned back to State control? Yes, 42 percent; no, 46 percent; 12 percent, no opinion. Do you favor more Federal grants-in-aid? Yes, 54 percent; no, 39 percent; 7 percent, no opinion. Do you believe that the State and local governments should have more powers? Yes, 22 percent; no, 69 percent; 9 percen no percent; no, 61 percent.

17. Do you favor repeal of section 14–B of the Taft-Hartley Act which permits the States to enact right-to-work laws? Yes, 39 percent; no, 61 percent; 9 percent, no opinion

18. Do you favor Federal spending programs such as long-term, low-interest Federal loans for local public works or Federal aid to centers of chronic unemployment for plants and public works to attract new industry? Yes, 51 percent; no, 46 percent.

19. Did you vote at the time of the last election? (Only answer if you were 21 years of age at that time.) Yes, 61 percent no, 39 percent. (Of the 435 returns, 39 percent were over 21 years old.)

20. Would you vote for a Catholic presidential candidate primarily because of his religion? Yes, 3 percent; no, 97 percent.

Rear Adm. George J. Dufek, Navy's Top Polar Expert, To Retire

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. THOMPSON of Texas. Mr. Speaker, a pre-date special news feature of the United Press International of July 28, 1959, contains an informative biographical sketch of Rear Adm. George J. Dufek, written by Harry W. Frantz, a distinguished foreign correspondent of that news organization.

Under leave to extend, I quote the indicated story:

[UPI Newsfeatures, United Press International predate special, July 28, 1959]

NAVY'S TOP POLAR EXPERT TO RETIRE

(By Harry W. Frantz)

WASHINGTON.—Rear Adm. George J. Dufek will retire September 1 after a naval career distinguished by notable achievements in the polar regions.

Long a devoted associate of Rear Adm. Richard E. Byrd, Admiral Dufek has worn the mantle of "Mr. Antarctica" since Byrd died in 1957. No other American officer has been identified more closely with the peaceful exploration and scientific conquest of the southernmost continent.

The present worldwide attention to Antarctica has resulted in a large degree from Dufek's application of modern technology to the problems of transport and human habitation in that continent.

A member of two U.S. expeditions in the Arctic and six in Antarctica during a 20-year period, Dufek is now unchallenged as the foremost American authority in the planning and command of maritime, air and land operation in the icebound polar regions.

On April 15 at New York Dufek turned over the command of the U.S. naval support forces, Antarctica, to Rear Adm. David M. Tyree. Tyree also has been appointed by President Eisenhower as U.S. Antarctic projects officer, succeeding Dufek as adviser on political, scientific and legislative activities affecting Antarctica.

Dufek was commander of Operations Deep Freeze I, II, III, and IV, which planned and conducted the logistical support for the U.S. Antarctic program during the International Geophysical Year. He sent more ships, men, and airplanes to the southern continent than had been there through all history.

Eleven other countries with Antarctic programs benefitted directly or indirectly from the Byrd-Dufek demonstration that the scientific conquest of Antarctica and permanent human habitation were practicable enterprises.

Apart from his physical tasks in Antarctica, Dufek is likely to be remembered as one of the great diplomats of the U.S. Navy.

Before the International Geophysical Year there was considerable uneasiness that the activities of expeditions from 12 nations in that region might lead to unforseen antagonisms and incidents. Actually, the international cooperation for advancement of science was accomplished without a single unpleasant episode. There were many instances of extraordinary assistance in emergencies, and a general atmosphere of international friendship was maintained.

Admiral Dufek's efforts thus contributed to the continuation of international scientific cooperation in Antarctica following the International Geophysical Year. In Octo-

ber, delegates from 12 nations will meet in Washington to negotiate a treaty which may establish Antarctica as a vast scientific laboratory for peaceful enterprises.

Although Presidents Roosevelt, Truman and Eisenhower all turned to Dufek as a master of ship and air operations in polar regions, it is a curious fact that he was not a member of a seafaring family and in his youth he thought of an army career.

The admiral's father, Frank, was born at Prague, and emigrated to the United States about 1885. The father was a cabinetmaker and founded a piano factory at Rockford, Ill. His mother, Mary Wachuta, was born in Prairie Du Chien, Wis., of Czech ancestry.

George Dufek, was born at Rockford, Ill., February 10, 1903, far from the United States seaboard.

In high school he was captain of cadets and he thought about entering West Point. Instead, he was given an appointment to the Naval Academy at Annapolis, where he was graduated in 1925.

His early interest in Antarctica was accidental. While he was serving as a lieutenant at San Diego in the spring of 1939, the Navy Department called for volunteers for Byrd's expedition to Antarctica, Dufek's application was accepted. In September 1939 he became navigator of the ship, Bear, which was flagship of a Navy Antarctic Development project ordered by President Franklin D. Roosevelt.

During the 1939–40 season Dufek made exploratory flights over parts of Antarctica and was given a medal.

In World War II he served as U.S. Naval observer for aviation at London, as senior naval aviator at Oran and Mers El Kebir during the North African invasion, as staff officer in command groups which planned the invasions of Sicily, Italy, and Southern France. His numerous citations all remarked of his skill at planning and coordinating operations.

He was commander of the aircraft carrier Bogue which, with escorting vessels, sank the last German submarine sunk in World War II. After the war he was commanding officer of the former Japanese Naval Air Base at Ominato, Japan, and later commanded the Naval Air Transport Service Terminal near Tokyo.

In 1946 Dufek was sent to the Arctic as chief staff officer on a U.S. Navy-Coast Guard expedition to establish weather bases in the polar regions. He returned to Washington to help plan Operation High-Jump in Antarctica, and as a captain sailed with 13 ships of the task force under direction of Admiral Byrd.

Dufek's group of three ships in 1947 traced the coastline between Little America and the Palmer Peninsula. He made the first flight over the Thurston Peninsula. He also was acclaimed for rescue operations of a fallen airplane. Admiral Byrd said that his rescue of six survivors was in many ways unequalled in all the history of polar rescues.

In 1948, Dufek went back to the Arctic in command of a task force to establish new weather stations near the North Pole. His vessels went farther north under their own power than any other ship had.

In 1949–50 Dufek worked with the Logistic Planning Section of the Joint Chiefs of Staff. In 1951–52 during the Korean conflict he was commander of the U.S.S. *Antietam* which set a new safety record for aircraft carrier operations under combat conditions.

In August 1954 he was designated as head of the Special Antarctic Planning Group in the Office of the Chief of Naval Operations.

In March 1955 he became commander of task force 43 for Operation Deep Freeze. In July 1957 President Eisenhower named him U.S. Antarctic project officer, in which post he succeedde Byrd as senior U.S. adviser on activities affecting the American Antarctic program.

Since then he has been the key figure in Antarctic plans and projects.

After retirement he will continue to write and lecture on polar topics, with special emphasis on their importance to the dawning space age.

What Is Wrong With the "Double Dip"?

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. CARTER. Mr. Speaker, I have introduced in the House a bill which proposes to repeal the present provisions in our laws which prohibit a retired military man from being employed by the Federal Government if he receives retired pay. This bill is prompted in large measure, of course, by the hearings presently being conducted before the Hébert subcommittee.

There will undoubtedly be extensive information and recommendations forthcoming as a result of the Hébert hearings bearing on this matter of civilian employment of retired military personnel by military contractors. I, of course, will reserve any opinions on the propriety of this matter until such time as the subcommittee makes its report. However, I would state at this time that it seems rather unfair to be critical of retired military personnel who enter civilian employment when the Government has laws in force which prevent them from making their services available to the Government. A number of these officers, some of them who retired with the rank of general, have stated that they would have preferred Federal employment to civilian employment, had a choice been available to them. Needless to say, their services would undoubtedly have been of great value to the Government due to their broad background of knowledge and experience in all phases of the military service and governmental activity.

During this time when our Government definitely needs the very best talent it can get, it seems rather shortsighted to prevent the full utilization of the capability of some of our most able professional, technical and managerial people after they leave the military service.

This, in brief, Mr. Speaker, is the theory that lies behind the introduction of this bill. I fully realize that amplifying legislation will probably be in order upon the conclusion of the Hébert subcommittee hearings, but I definitely feel that the repeal of present statutes prohibiting the so-called double dip will be a vital step in corrective legislation and will also make available to the Federal Government some very capable personnel whose services would be of tremendous value.

The text of the proposed bill is as follows:

A BILL TO REPEAL THE DUAL EMPLOYMENT LAWS INSOFAR AS THEY ARE APPLICABLE TO RETIRED MEMBERS OF THE ARMED FORCES

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 212 of the Act of June 30, 1932 (47 Stat. 406; 5 U.S.C. 59a), as amended, is repealed.

SEC. 2. Section 2 of the Act of July 31, 1894 (28 Stat. 205; 5 U.S.C. 62), as amended, is amended to read as follows:

"SEC. 2. No person who holds an office the salary or annual compensation attached to which amounts to the sum of $2,500 shall be appointed to or hold any other office to which compensation is attached unless specially authorized thereto by law. This section shall not apply to retired officers, warrant officers, or enlisted men of the Army, Navy, Air Force, Marine Corps, or Coast Guard."

SEC. 3. Section 7 of the Act of June 3, 1896 (29 Stat. 235; 5 U.S.C. 63) is repealed.

SEC. 4. The proviso in the paragraph under the center heading "Bureau of the Budget" in the Act of February 17, 1922 (42 U.S.C. 373), is repealed.

Erosion at Geneva

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a very interesting editorial entitled "Erosion at Geneva" appearing in the Washington Post of July 22, 1959. I agree with the editorial that—

The danger now, however, is that in the search for some sort of face-saving agreement that would make possible a summit meeting, the western allies may be pressured into compromising their own basic interests to further an illusion of peace.

Unfortunately, as the editorial also well stated:

Democracies by nature are ill-prepared for prolonged negotiation with totalitarian regimes.

I am fearful that a summit meeting at any price would be most harmful to the free world, and that it might well be the starting point of the road of appeasement. The events before World War I, if we will only remember them, show that the road of appeasement is the road to war.

The editorial follows:

EROSION AT GENEVA

It is timely for the West to consider seriously whether an end to the Geneva Conference of Foreign Ministers would be preferable to further attempts to negotiate with the Soivet stone wall. If a proposal to conclude the meeting will not induce any last-minute cooperation from the Soviet Union, then the conference can just as well disband before there is real erosion of Western unity or prestige.

So far there has been no major or damaging Western concession in fact, either on Berlin or on the larger German issue, although the West has offered many conciliatory proposals contingent upon Soviet reciprocity. The Soviet Union, however, has conceded not one single practical point beyond hazy postponement of an ultimatum

which it had no right to pose in the first place.

Mr. Khrushchev began the crisis last November with a demand which patently was aimed at the absorption of West Berlin and then at making permanent the division of Europe along present lines. Although the West has resisted any formal de facto recognition of East Germany, to all intents and purposes it has acknowledged that it cannot change the situation. But even this will not satisfy Mr. Khrushchev. Despite Western offers to modify the arrangements in West Berlin, he wants to dilute the Western position even further. He will not make any firm commitment to abandon his threat; he seemingly reserves the right to raise a new crisis 18 months hence. When this is coupled with understanding that to the Communists the status quo means merely an opportunity for continued subversion, the Soviet Union has yielded nothing.

To its great credit, the Eisenhower administration has been very clear on the essentials. Apart from his statement in March implying that there could not be a limited war over Berlin (which might be an invitation to Soviet nibbling in a gamble that the United States could not afford to engage in large nuclear war), the President has been a model of correctness and restraint. He has been firm on the principles, but conciliatory on method.

The danger now, however, is that in the search for some sort of face-saving agreement that would make possible a summit meeting, the Western Allies may be pressured into compromising their own basic interests to further an illusion of peace. Democracies by nature are ill-prepared for prolonged negotiation with totalitarian regimes. Time and patience are the most abundant Soviet commodities, and Mr. Khrushchev may well hope to win by erosion what he cannot get by an outright grab.

Well, a breakoff of the talks at this time would not be fatal; indeed, it probably would not make war any more likely than it now is. It would merely confirm what is becoming evident—that there is no reasonable hope of productive negotiations with Mr. Khrushchev so long as he is in a bullying and missile-happy mood.

But there will be a very important lesson for the West if a breakup becomes inevitable. That is that the only possible satisfactory basis for negotiations with the Soviet Union is one of equality; Mr. Khrushchev is unlikely to talk seriously so long as he thinks he is winning the competition through internal prowness and external harassment. The lesson is that the West needs not only greater unity than ever, with more military, economic, and scientific strength and the money to provide it, but also the spiritual and phychological effort to make its position meaningful to the Kremlin. There is lamentably little evidence that this lesson is yet fully understood.

Hoosier Watermelon To Be Brought to Capitol

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BRAY. Mr. Speaker, I have the pleasure to announce to my colleagues a forthcoming treat. From the experience of the past 2 years, I know they will be glad to know that the day of the Indiana Watermelon Festival is approaching again. The best watermelon in the world is grown in southwestern Indiana. And, again, through the courtesy of the Southwestern Indiana Watermelon Growers Association, and the cooperation of the Baltimore & Ohio Railroad, we will serve Hoosier watermelon in the House dining room on August 6.

At that time I will be playing host to the Indiana Watermelon Festival Queen, who will come to Washington after her inaugural at Vincennes, Ind., on July 31. She will be my guest in the dining room that day, so we will offer you a treat for the eyes as well as the palate.

The watermelon was first grown commercially in Indiana about the turn of the century in Knox County. A typical summertime scene thereafter was wagons drawn by mule teams coming into Vincennes loaded with ripe melons to be sold house to house. In the early 1900's, one of the first melon growers began to broker the melons raised by his neighbors. The production soon outstripped local consumption and the melons were shipped by rail to Indianapolis and elsewhere.

The industry has grown in southern Indiana into a million-dollar business, encompassing 8,000 to 9,000 acres of watermelons and 3,000 to 4,000 acres of cantaloups. The production of seedless watermelons is also receiving increased attention in the State. In addition, millions and millions of melons headed for northern markets are brokered through the historic city of Vincennes.

With this special gustatory delight we will salute the third annual Indiana Watermelon Festival and the growers of this important Indiana product.

The Brusch Medical Center of Cambridge, Mass.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. McCORMACK. Mr. Speaker, in reading recently the Tufts Medical Alumni Bulletin of June 1959, I read a most interesting and inspiring article about the Brusch Medical Center of Cambridge, Mass., and its founder, Dr. Charles A. Brusch, M.D., and of the fine cooperational work done by his brother, Dr. Joseph A. Brusch, M.D.

The article which I include in my remarks is a deserved tribute to Dr. Charles A. Brusch, in particular, and also to his brother, Dr. Joseph A. Brusch.

The medical profession is a great profession. Everywhere there are members of the medical profession dedicating and devoting, in many fields of medicine, their lives for the benefit and progress of mankind. When one such member of the medical profession is recognized and honored, they are all recognized and honored.

The dreams and hopes of Dr. Charles A. Brusch of many years ago—his brother cooperating—has come to fruition. I am proud to number them among my most valued friends.

The article appearing in Tufts Medical Alumni Bulletin of June of 1959, is further evidence of the efforts even against great odds, of members of the medical profession, in the dedication of their lives to mankind, to help suffering human beings:

BRUSCH MEDICAL CENTER

The medical class of 1934 celebrated its 25th reunion on April 6 to 8, 1959. The members, having come from scattered locations, were thrilled by the ceremonies. During a quarter of a century of devotion to medicine, the careers and accomplishments of the classmates have been quite varied. Illustrations of these have been noted. However, a somewhat different example is that of Charles A. Brusch, medical class of 1934, of Cambridge, Mass. His story is quite interesting.

When he started practice with his brother, Joseph A. Brusch, medical class of 1923, in Cambridge nearly 25 years ago, they had in mind starting a medical center and they gradually worked toward that goal. In 1950, they broke ground near their offices to erect a building, and in November 1951 they opened the Brusch Medical Center at 831 Massachusetts Avenue, within the shadow of Cambridge city hall.

This steel and castone building, the architecture of which is Grecian in style, is air-conditioned throughout, and has been so constructed that additional floors may be added as future needs indicate. There are approximately 7,000 square feet of space on each of its three floors. This was a private venture and the cost of the center was approximately a half million dollars. The existing facilities could not be duplicated today for less than a million dollars.

The purpose is to provide medical care of highest quality on an economical and efficient basis by specialists in the various branches of medicine, surgery, orthopedics, dentistry, radiology, physiotherapy, research, and laboratory work. Its staff membership numbers more than 60 of the area's leading professional men, each a specialist in his particular field.

The Brusch brothers worked out a plan of cooperative medicine. The center was set up as a diagnostic and treatment unit with the purpose of working along with the family physician. Patients are referred for diagnostic tests and the results are reported directly to the referring physician. In many cases this saves the patient the expense of hospitalization and a quicker diagnosis is obtained. The patient may have appointments at his convenience without loss of time from work. There are advantages to the physician of the staff since he can use the facilities, consult with others, and can have other men cover for him when necessary. Now, in their ninth year of operation, the record discloses that the yearly registration of new patients ranges between 2,000 to 2,200 and the annual number of visits is 26,000.

It is also of interest, too, that a separate nonprofit organization has been established for medical research, particularly in the field of instruments and new preparations. For example, this organization has produced the new camera-gastroscope which was sponsored by the Bristol-Meyers Co., research division.

Now the clinic has advanced to the stage where additional facilities are needed in the field of rehabilitation. Plans are in progress to add in the near future two more stories to the present building for a rehabilitation hospital at a cost of approximately one-half million dollars. Here a person will be able to be studied as an inpatient.

University of Oregon Team Establishes University as Part of ICA Project in Nepal

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. NEUBERGER. Mr. President, the setting for the book, "The Ugly American," which, unfortunately, has given the public a distorted picture of our foreign-aid program, is a small, mythical country in southeast Asia. It is a pleasure for me today to call attention to the outstanding success of an American foreign-aid project in a very real small country in southeast Asia.

I refer to the Kingdom of Nepal, a tiny nation squeezed onto the slopes and summits of the Himalayan Mountains, between India and Communist China. A special team from my alma mater, the University of Oregon, has worked for the past several years, under contracts negotiated through the International Cooperation Administration, to develop and improve the educational system of Nepal.

Representatives of the University of Oregon in Nepal have established an adult literacy program and have set up a teacher training institute. Each year, Nepalese students have come halfway around the world, to Eugene, Oreg., for graduate study at the University of Oregon.

The administrator of the project, Dean Paul B. Jacobson, of the University of Oregon School of Education, has just announced fulfillment of the most ambitious of the Oregon-Nepal goals: A national university has been established in Kathmandu, capital of the mountain kingdom of Nepal.

The new Tribhuvan University, named in memory of the late king who overthrew the tyrannical Rana family, now has colleges of liberal arts, science, commerce, education, law, and Sanscrit. Additional colleges are planned.

Mr. President, because it describes the successes of a foreign-aid project in one of the critical nations of southeast Asia, I ask unanimous consent that an article entitled "University Established With University of Oregon Help," from the Eugene Register-Guard for July 21, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNIVERSITY ESTABLISHED WITH UNIVERSITY OF OREGON HELP—DEAN ANNOUNCES NEPAL INSTITUTION

The establishment of a national university in the Kingdom of Nepal, the result of years of work, including aid from the University of Oregon, was announced this week.

Paul B. Jacobson, dean of the University of Oregon School of Education, said the new institution would be known as Tribhuvan University, in memory of the late king. This ruler led the revolution that overthrew the century-old tyrannical rule of the Rana family.

The university will be located on a new site in Kathmandu, and will administer all higher education in Nepal. As a first step, the existing colleges will be brought together under its single administration.

COLLEGE WILL MOVE

As soon as buildings can be constructed, Jacobson said, the college in the Kathmandu Valley will move to the university site. Colleges outside the valley will be affiliated with the university.

Jacobson noted that the system of branch colleges was similar to Oregon's State system of higher education, with several institutions under a common administrative body.

Several Oregon faculty members have, at various times, worked in Nepal to help establish the university, and have helped in other phases of the country's education. A three-way contract with the U.S. Government, the Kingdom of Nepal, and the university, provided funds and set out administrative procedure.

Dean Jacobson administered the details of the program. Charles D. Byrne, former chancellor of the Oregon State system of higher education, devoted 2 years to advising Nepalese educators. Hugh B. Wood, professor of education, was adviser to an earlier national commission that drafted the general framework and determined the need for the university.

OTHERS IN PROGRAM

Others who have worked in Nepal are Francis E. Dart, associate professor of physics, now en route home; James Tuley, a Washington, D.C., architect, placed temporarily on the Oregon staff to design a campus plan; Thomas O. Ballinger, assistant professor of art and education, and Clarence Hines, professor of education, and former superintendent of the Eugene public school system.

The new Tribhuvan University now has colleges of liberal arts, science, commerce, education, law, and Sanscrit. Planned are colleges of agriculture, home science, and engineering. Eventually, it will also include a college of medicine and a hospital.

Are Congressmen or Taxpayers Responsible for Spending Attitudes?

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. DERWINSKI. Mr. Speaker, I was pleasantly surprised in reading an editorial of July 23 in the Palos Regional, a weekly newspaper in my district, to find that the editor had written an excellent editorial complimenting the distinguished gentleman from Florida, Hon. CHARLES E. BENNETT.

I believe the editorial which I am submitting for the RECORD contains not only a sound analysis of the budgetary problems of our Federal Government, but is also a deserving tribute to a sound, conservative, conscientious Member of Congress:

ARE CONGRESSMEN OR TAXPAYERS RESPONSIBLE FOR SPENDING ATTITUDES?

A great many people, in this era of super taxes and outer-space Government spending believe, understandably enough, that Congress is largely made up of spendthrifts—men and women with a compulsive urge to get rid of as much of the taxpayers' money as possible.

But an insider, writing in Nation's Business, presents a very different view. He is CHARLES E. BENNETT, an economy-minded Representative from Florida with 10 years of congressional service behind him. He sets the tone of his article with this incisive opening sentence: "Members of Congress are in a constant struggle to keep from becoming spendthrifts."

Two primary factors, Mr. BENNETT has found, frustrate the Congressman who seeks economy. One is loose fiscal practices within the Government itself. The other is the ironic prospending attitudes of much of the public. Both, he is convinced, can be corrected—and urgently need correcting if we are to avoid more inflationary deficits, and are to maintain both our economic and military strength.

It's true, of course, that the vast majority of people are in favor of economy—as a vague general principle. But when it comes down to specific matters in which they are interested a great change takes place. For instance, Mr. BENNETT tells of his experience some years ago, when the mail from his constituents expressed a fervent desire for economy. At that time a multimillion-dollar bill was before the House. It had popular appeal, but Mr. BENNETT felt that the appropriation wasn't necessary and he voted against it. Then came the deluge. In the following weeks "scores of letters criticized my vote and not a single one recognized my action as a vote for economy." And this is a common, not an unusual, situation.

A major trouble, Mr. BENNETT adds, is that "in the eyes of a large segment of the public, progress has become synonymous with more and larger Federal programs and benefits. Each new program is excitingly and attractively presented. In the dazzle, the ultimate cost to the people in taxes is obscured." The Federal Government is deep in personal and local matters coming under the categories of health, education, and welfare. Then, once a Federal program is started, it is virtually assured of immortality. Mr. BENNETT can recall only two programs that have been terminated during his long service. One had to do with the breeding of cavalry horses, and the other with rum-distilling in the Virgin Islands.

Mr. BENNETT deals with "a sort of budgetary sleight-of-hand which the Treasury practices and which, in many instances, is used to finance programs while dodging annual Appropriations Committee review. This happens with some of the most expensive programs—housng and farm price supports among them. He is convinced that steps must be taken to give Congress greater control over the handling of the purse strings.

He proposes a three-part program which would encourage and give aid and succor to the economy-minded people in Congress. First, economy efforts would be recognized

through a system of thrift-ratings and awards, to be handled by a private nonpartisan organization of a caliber that would engage national respect and attention. Second, there should be more emphasis on pay-as-you-go principles whenever possible. Third, procedures should be tightened to provide better control of Federal spending. For instance, the way money bills are now handled on a piecemeal basis, "we never know whether more has been appropriated than there are revenues to pay the cost until the last bills are voted on."

Finally, Mr. BENNETT is a firm supporter of the item veto, whereby the President could veto parts of appropriation bills without killing other parts. As matters stand now, it is whole hog or none—each bill must be signed or vetoed in its entirety. So the President must approve wasteful and undesirable legislation in order to save the essential.

Blaine's Diamond Jubilee

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. WESTLAND. Mr. Speaker, among the communities in my district of Washington State that are celebrating key dates in their histories is Blaine, which is 75 years old. I want to take this opportunity to point out the importance of this celebration and the hard work that is being done to make it a success.

The city of Blaine is situated at the Canadian border where there is an arch bearing the words, "Children of a Common Mother." It is fitting, therefore, that Blaine is known as the Peace Arch City and that each year thousands of adults and schoolchildren from the United States and Canada meet on common ground at the arch to commemorate the 145 years this boundary has existed without border guards.

It is fitting, also, that Blaine's Diamond Jubilee will be celebrated in conjunction with the annual Peace Arch celebration. The Peace Arch parade on Sunday, August 2, will herald both the jubilee and celebration. The parade will end at the Peace Arch, where Miss Jeanne Sewell, 15, of Langley, British Columbia, and Merle Overland, who was graduated from Bellingham High School this year, will deliver the traditional student speeches.

President Eisenhower's personal representative to the Peace Arch celebration will be the Honorable Richard B. Wigglesworth, U.S. Ambassador to Canada. Following his address, the student speakers will receive Rotary Club plaques for their schools.

During the week of August 2–9, Blaine will have an historical pageant, daily program, street dancing and a spectacular fireworks display. On August 8, the diamond jubilee parade will pass through Blaine's streets. Our neighbors from British Columbia will contribute military marching units, floats and drill teams will join in the festivities.

Mr. Speaker, hundreds of Blaine residents have contributed many hours of hard work to make this week-long celebration one to remember. It would be impossible to name every person who has contributed so much, but I shall name those who have been entrusted with the leadership and administration of both the Diamond Jubilee and the Peace Arch celebration.

President of the International Peace Arch Association is Miss Nellie Browne Duff. Committee chairmen include Dr. Theodore J. Rasmussen, Clarence M. Beal, Joe Imhof, Mario Pagano, George Marus, Walter Grant, Ted Hovde, Herbert Viereck, Roy A. Howard, C. T. Gardner, Jerry Thorne, Mrs. Marvel Smith, Mrs. Harold King, Mrs. Walter Collins, Mrs. Leila Kagey, and Capt. Walter Hunter.

Members of the diamond jubilee are Mel Hollinger, general chairman; Fred Kerns, Mrs. Lance W. Dillworth, Robert Bainter, and Richard A. Nelle. Division chairmen include Al Dohner, Randy Ramstead, Wayne Parrish, Gertrude Goodman, Vernon McDonald, Wynn Haws, Harold Dodd, Bill Hay, and Traverse Skallman.

Mr. Speaker, the history of Blaine is filled with stories of industry and courage. The citizens of this border community can be proud they reside and work in such a beautiful, growing city, and I predict they will continue to bring prosperity throughout the years to come.

Our Nation's Natural Resources Have Helped Make Possible the Unparalleled Richness of Life of Our People

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. NATCHER. Mr. Speaker, it was almost 100 years ago that a former railroad conductor, Edwin L. Drake, completed drilling the first commercial oil well, and this year the centennial of the oil industry is being observed.

In 1854 the American whaling industry was on a decline. That year the 700 ships in our whaling fleet brought home more than 12 million barrels of oil. Such a catch would never be made again, for whales were becoming scarce in all the oceans of the world. But in a crisis the best often comes to the fore, and it was in 1859 that Edwin L. Drake drilled his well at a depth of 69½ feet. Little did our citizens realize the impact that this gentleman's feat would have upon their lives, and the lives of generations to follow. Indeed it was providential that an abundant supply of kerosine came along to replace the vanishing fuel from the sea. And certainly this is another proof that our Nation's natural resources have helped make possible the unparalleled richness of the life of our people. Mr. Edwin L. Drake carved a truly creative and enduring niche in American history.

The State of Kentucky has occupied an integral role in the oil industry's 100 years of development. The importance of this industry to Kentucky's economy is apparent by the fact that approximately 14,000 Kentuckians are employed in some phase of the petroleum industry, and in 1956 petroleum payrolls in Kentucky approximated $43 million. Motor fuel tax collections provide our State with almost 30 percent of its tax revenue. Also approximately 35 percent of all freight traffic on Kentucky rivers consist of petroleum and its products.

Mr. Speaker, on July 17, 1959, an editorial, in appreciation of the oil industry's contribution to the economic strength of our State and Nation, appeared in the Messenger, of Madisonville, Ky. The editorial, entitled "Oil Celebrates First Hundred Years," is as follows:

OIL CELEBRATES FIRST HUNDRED YEARS

Oil is celebrating its first century as a servant of mankind—1859 to 1959—and among the celebrants is Kentucky Petroleum Council, which has its headquarters in Louisville.

On August 27, 1859, the council relates a former railroad conductor named Edwin L. Drake, who had been sent to Titusville, in western Pennsylvania, by a New England company founded for the purpose of producing petroleum, completed drilling the first commercial oil well in history.

Colonel Drake, as he was familiarly known, found oil at a depth of 69½ feet, thus becoming not only the first commercial oil producer but the first shallow well operator.

With oil all about us, and some in our own county, Hopkins Countians are in position to appreciate some of the progress which has been made in the industry in the last 100 years.

Kentucky has in fact played a large and important role in the oil industry's 100 years of progress. A lot of people may not be aware just how big the oil industry of Kentucky really is, and how far-reaching is its importance. What petroleum means to our commonwealth is highlighted by the following:

1. Approximately 14,000 Kentuckians are employed in some phase of the petroleum industry.

2. In 1956, petroleum payrolls in the State approximated $43 million.

3. About 35 percent of all freight traffic on Kentucky rivers consists of petroleum and its products.

4. Motor fuel tax collections provide Kentucky with almost 30 percent of its State tax revenue.

5. Sixty-seven of Kentucky's 120 counties have either oil or gas production.

The celebration of oil's centennial this year affords the industry the opportunity to show how it has served the people of State and Nation. And American Petroleum Institute, for its part, has prepared a handsome edition of its quarterly, a centennial issue devoted to the age of mobility.

As for the future of oil, we saw a statement the other day which said:

"The industry is not running out of oil, but instead has a good prospect for continuing to develop new supplies at the rate needed, provided no actions are taken to discourage exploration and development."

The oil industry is proud of its performance to date, and is taking occasion on its centennial to tell the public about it.

Zones of Black Darken the Map

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by the well-known columnist Marquis Childs appeared in today's Washington Post and Times Herald.

Mr. Childs brings out a most interesting point, which we are prone to forget, namely that in this age of advanced technology we know less and less about one-third of the earth's people who dwell behind curtains, iron, bamboo or silk, and are hidden from the outside world by the heavy hand of the censor and the muzzle worn by a controlled press.

While freedom of the press is always relative, it is a fact that even a so-called free press is controlled, at best, by the advertisers and, at worst, by editorial prejudices. Still it remains a fact that today the means of communication have deteriorated to the point where the "Black Zones" on the map, that Mr. Childs refers to, are becoming larger and more impenetrable each day.

ZONES OF BLACK DARKEN THE MAP
(By Marquis Childs)

It can scarcely have escaped the most casual newspaper readers that news of areas where day-to-day events may tip the balance between peace and war is coming at second or third hand. The map of the world is beginning to show as many black patches, marking territory unknown, as it did before the age of exploration and expansion.

This is pointed up by the struggle going on in Iraq between the forces of Gen. Abdul Kassem and the Communists. The news of that struggle, which can have decisive consequences in the Middle East, is being reported from Lebanon.

Just a year ago, with no warning whatsoever and apparently to the complete surprise of Western diplomats, a pro-Western regime in Baghdad was erased. First-hand reporting has since then been made difficult, if not impossible.

On the information map the blackness is almost total in the vast land mass of China, in Tibet, and in the Chinese dependencies of North Korea and North Vietnam. One or two British correspondents function under severe restraints in Peking, and occasionally Canadian, Indian, or other free-world journalists are allowed to make carefully guided tours. The press within China is a completely controlled propaganda press.

In Soviet Russia and the satellites, the last few years have seen some improvement insofar as travel and other facilities for Western journalists are concerned. But censorship of all outgoing dispatches—an exception is made for reporters accompanying Vice President RICHARD NIXON—is rigidly imposed. Access to news sources is difficult. The Soviet press is a disciplined arm of government.

The satellites, conspicuously Poland, have seen some relaxation. But the pattern is still that of tight Communist Party control.

The shading from dark gray to light gray takes in a lot of geography. Under Turkey's stern press law, editors have been given criminal sentences and criticism has been throttled. The press in Spain, Portugal, and most of the Middle East is completely controlled or "guided." Nearer home, in the Dominican Republic, the press is the sycophantic servant of the Trujillo dictatorship.

In Formosa, South Korea, and South Vietnam freedom of information is, to say the least, relative. Troubled and uncertain governments use persuasion or coercion to guide the press. And, as in other areas, if you want to survive, you accept the guidance.

Especially disturbing to those of us directly concerned with the free flow of information are the signs in the West of doubt and distrust. In France, the Assembly has had before it several bills to curb the press. Since the upheaval of May 1958 that brought Gen. Charles de Gaulle to power, the tone has been subdued, if not muted. Weeklies, such as L'Express and L'Observateur, that continue to be critical of aspects of the Algerian war are occasionally suppressed. A book, La Gangrene, purporting to give details of torture of Algerians imprisoned in France, was seized on orders of Premier Michel Debre.

The cold war has had a blighting effect. The tendency is to ask not what is news but what is good news for our side. America's allies are to be treated tenderly, and to expose their mistakes is less than good form.

Too often the West has shown itself ready to accept the barriers that have been put up. Far too little effort has been made to inform the public on what is going on inside China. Third-hand reports out of Tokyo are no substitute for what persistent analysis at second-hand might show. Reporting in many areas is inadequate.

Here at home critics have pointed to the way in which the news is increasingly molded by shrewd manipulators who consider it a commodity for political or financial advancement. With the techniques of Madison Avenue transposed to government, information becomes a matter for reward or punishment to those who are for you or against you.

It is only because there is still a vigorous free press—in Japan, India, the West—that this catalog of sins of omission and commission has significance. But no one aware of what freedom of information means to the survival of all the freedoms—perhaps to survival itself—can be in the least complacent after looking at today's somber information map.

Takeoff or Brushoff?

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. FRIEDEL. Mr. Speaker, when I heard Mr. John McClay's recent broadcast over WJZ–TV—channel 13 in Baltimore—I was very much impressed. Mr. McClay and WJZ–TV have been rendering an excellent public service in presenting to the people of Baltimore full information and constructive suggestions on issues of local and national importance.

Mr. McClay's most recent editorial entitled "Takeoff or Brushoff?" deals with a subject very close to my heart—Friendship International Airport. For the first time since the completion of its fine airport, Baltimore is now enjoying a few first-class flights because no other airport in the Baltimore-Washington area can accommodate jet aircraft.

"Takeoff or Brushoff?" candidly deals with Baltimore's airport problem and especially with the obligations of the Federal Government to Baltimore in the development of Friendship as a Baltimore-Washington terminal. One of the most pressing of these obligations is the need for a prompt decision by the Civil Aeronautics Board on the adequacy of service case which has been pending for 8 months.

Under leave to extend my remarks, I am including Mr. McClay's excellent editorial:

TAKEOFF OR BRUSHOFF?
(Aired by John L. McClay, general manager, WJZ–TV)

Hello, I'm John McClay, general manager of WJZ–TV. If you were running a grocery store and the Federal Government put up a much fancier store across the street, you would justifiably cry out that this was unfair competition. You would be especially irked if the Federal Government had used a lavish supply of the taxpayers' money—including yours—in its effort to compete with you. This is almost exactly what is happening to Baltimore in the competition to lure the commercial airline traffic of the Baltimore-Washington area.

In recent weeks we have all felt a surge of civic pride in the inauguration of daily jet airline service between Friendship International Airport and the west coast. After years of being a whistlestop on the airlines, Friendship is now the terminal for the best transcontinental flights to and from the Baltimore-Washington area.

Baltimore won this service because of the foresight of its airport board and the sacrifices of its taxpayers. Friendship was built to handle jet airliners. Washington National Airport was not. Hence all jet flights to the Washington area must use Baltimore's airport.

The lack of good service to Friendship has been a serious economic liability to Baltimore for many years. When the poor people of France begged for bread, Marie Antoinette said, "Let 'um eat cake." When the businessmen of Baltimore pleaded for better air service, the airline officials said "Let 'um go to Washington."

In terms of coldblooded business economics, the airline officials were right. Instead of serving Baltimore and Washington separately, it is far more efficient to persuade Baltimoreans to travel 44 miles to Washington National Airport to board a plane. Having no choice, this is what Baltimoreans have been doing, at the rate of nearly 1,000 a day. Nowhere else in the United States are the travelers of a large city asked to endure such an inconvenience.

But with the coming of the jets, a great opportunity is at hand, if Baltimore is ready to meet it. There are many problems to be solved as Baltimore attempts to establish Friendship as an important terminal. One of these problems is overwhelming; the Federal Government is, in effect, setting up business across the street.

In Chantilly, Va., 28 miles southwest of Washington, the Federal Aviation Agency is building one of the world's most lavish airports. The total cost of the project may run as much as $100 million including the highway from Washington. You don't have to guess who is supplying the money: The taxpayers of the United States, including you.

If Friendship could attract its own service, irrespective of what happens in Washington,

the building of Chantilly would pose no threat to Baltimore's economy. But the airlines, judging from their past performance, have no intention of voluntarily serving both cities separately. Therefore, a flight transferred from Friendship to Chantilly may well be a flight lost forever to Baltimore.

This brings us to the crux of the matter. Baltimoreans, as Federal taxpayers, are contributing their money to Chantilly Airport, even though that airport poses a threat to their own economy. To put it more bluntly, we are being forced to slit our own throats.

We at WJZ believe this situation is grossly unfair to Baltimore. However, there is a remedy, readily available.

Baltimore's immediate task is to prove to the airlines that Friendship is the best terminal for a majority of the flights in and out of the Baltimore-Washington area. As we pointed out in a WJZ editorial 7 months ago, a 30-mile circle around Chantilly embraces about 1,600,000 people. A 30-mile circle around Friendship embraces about twice that number. But this advantage will not be important unless Friendship can expand its facilities.

To keep up with the developments of the jet age there is an immediate need for specific improvements at Friendship. The terminal building must be enlarged. Taxiways must be widened. Most important, an existing runway must be lengthened to provide an additional jet runway. All of this will cost close to $10 million. Unlike the Federal Aviation Agency, Baltimore does not have that many millions to spare.

However, Congress has just passed a bill that, when signed by the President, will provide $126 million in Federal funds for airport construction. Some $30 million of this money can be allocated as the Federal Aviation Agency sees fit.

We at WJZ believe that Baltimore's unique position in relation to Washington justifies its receiving a large share of these funds. If nearly $100 million can be allocated for Chantilly, certainly a small fraction of this amount is justified for Friendship. No other city is in such a position that Federal competition can threaten its public convenience and its economy.

We are not opposed to the building of Washington's Chantilly Airport because in the distant future there will be a need for all three terminals—Friendship, National, and Chantilly. But, as Baltimoreans, we bristle at the thought that the completion of Chantilly at Federal expense will leave Baltimore as barren of air service as it has been in the past.

There are two other problems in connection with Friendship Airport that we want to touch upon briefly.

First is the question of airport promotion. In our editorial in December, we told you how Philadelphia's promotional efforts reaped rewards of better service. Philadelphia shares the costs of promotional advertisements with the airlines; the airport furnishes a continuous stream of news stories for television, radio, and newspapers; the city employs a consultant in Washington to represent its interests before the Federal Government. We strongly urge Mayor Grady to join forces with the Association of Commerce and the Greater Baltimore Committee in a real effort to promote Friendship's improved service. This promotion must be carried out in Washington as well as in Baltimore, especially in the Capital's northern suburbs close to Friendship Airport.

Second is the question of the airlines' legal obligation to provide better service to Baltimore. Last November, arguments were concluded in the Washington-Baltimore adequacy of service case before the Civil Aeronautics Board. This case was initiated by the Greater Baltimore Committee in an effort to force the airlines to offer better service on the grounds that they were illegally discriminating against Baltimore. The Civil Aeronautics Board has been 8 months deliberating and there has still been no decision. Since much of Baltimore's planning depends on this decision, there should be no further delay on the part of the CAB.

These three things: Promotion, a decision from the CAB, and, most important, special Federal funds, are the principal needs of Baltimore in the dawn of the jet age. The Federal funds are the foremost need because they offer Baltimore a chance at fair competition with the vast resources of the Federal Government. If we are to regain our rightful place on the airline map, every businessman, every traveler, must make his voice heard to city, State, and Federal officials.

Steel Strike and Economy of Country

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a letter dated July 16 I recently received from a resident of Michigan transmitting certain views and observations of a Chrysler employee and union member on the current steel strike:

JULY 16, 1959.

The Honorable ALVIN M. BENTLEY,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BENTLEY: A Chrysler employee and union member came into my office today to ask if I would write a letter for her to the Republican Members of Congress from Michigan. She is well read, and has studied the UAW–CIO economic warfare against the people of the United States thoroughly and over a long period of time. She has talked to us before and her reasoning and judgment on the activity of the Communist Party through the UAW–CIO is frighteningly logical.

From her observations and knowledge as a factory worker and union member, she believes the motive behind this present steel strike squeeze is to deliberately ruin the economy of this country, either for the union bosses' own ends or directly for the Communist Party, for two reasons: hoping to ruin the American economy to improve their foreign investments and/or to discredit the the Republican Party by using caused business recessions as a reflection on the job the Republicans can do. She knows the unions to have huge foreign investments in manufacturing, and the union bosses want Russia through Germany, to rule the economy of the world. She also feels they are succeeding.

After this steel strike starts "the first 2 weeks won't cost the unions any expense at all; it is the second 2 weeks that will use up the union's strike funds." She feels "it is imperative for the welfare of this country that the strike be allowed to continue the second 2 weeks in order to weaken the union's strike fund. But then, at the end of the fourth week, the President must commit himself and force the employees back to work, without a fund or wage increase, which would only increase prices and inflation. After the fourth week, if the strike is allowed to continue, foreign countries will get all the sales, and they will use it against the Republican Party when the buying power starts down."

This action—"using up the union's strike fund and saving the buying power"—are of paramount importance. She wants very much to get this word to the President. She feels "he was voted into office without the help of the average union member or union boss, and the same people who elected him will elect his Republican successor." She feels he owes it to the people who did elect him to save them from their own stupidity in not realizing the horrible threat this country faces.

Thanking you for your attention and cooperation, I am,

Very truly yours,

JANE H. STOCKING.

Education in Foreign Service

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address delivered by the distinguished junior Senator from Tennessee [Mr. GORE] before the 14th Institute of Higher Education, Board of Education, the Methodist Church, Nashville, Tenn., on July 28, on the subject "Education in Foreign Service":

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EDUCATION IN FOREIGN SERVICE

(Remarks of Senator ALBERT GORE before the 14th Institute of Higher Education, Board of Education, the Methodist Church, Nashville, Tenn., July 28, 1959)

It is a privilege and honor to participate in this significant conference on higher education.

In presenting to you some views on "Education for Foreign Service" I use the term "foreign service" in its generic rather than its political sense.

The field of foreign service is broad and is broadening by leaps and bounds. Moreover the challenge and the necessity of foreign service in the political, social, the religious, the economic, and other fields surges evermore appealingly and vitally.

We see that truth, a key to the Christian concept at home and abroad and the most effective weapon of freedom anywhere, is locked in a dramatic battle with propaganda, distortions and prevarication. We see that truth needs the service of more and better trained people and improved methods of communication.

We see that in the mortal cold war challenge to our way of life the ultimate target is the minds and the hearts of mankind. The most appealing and revolutionary political ideal that the world has known is democracy, described so eloquently by Lincoln as "of the people, by the people, and for the people." I hold that it is far more appealing, and perhaps in many parts of the world more revolutionary today, than even the theoretical concept of communism, let alone the vulgar, gangster distortion current in Russia.

Yet this idea and ideal, this system, however glorious and glittering it may be in the United States, eventually loses its appeal to

people who can find no reasonable basis for aspiration for attaining it or any share of its benefits and glories.

We see the Soviet efforts at economic penetration of underdeveloped areas and for political subversion, particularly among the politically unsophisticated peoples.

I say these things only by way of identifying both the scope and urgency of education for foreign service.

One of our national weaknesses is our deficiency in linguistic capabilities. This point has been made plain to me through somewhat excruciating experiences at international conferences. Within the last month, for instance, I was a member of the U.S. delegation to the conference on nuclear weapons tests suspension which invited the Russian and British delegates to dinner. Each of our Russian guests spoke English reasonably well, sufficiently to communicate intelligibly without aid of an interpreter. Not one of the American hosts could utter or understand one intelligible sentence in Russian.

American business representatives abroad are finding themselves handicapped because of the superior facility of communication by their competitors.

No longer, it seems to me, can we depend solely upon the isolated missionary to adequately an deffectively carry the message of Christian faith and ideals in competition with shrewd articulation of materialistic ideology.

In the past Americans have shown comparatively little interest in the study of foreign languages. Perhaps this was a natural consequence of our geographical position. It may be a consequence also of our complacency and self-satisfaction, which our position is world affairs will no longer permit.

This deficiency can be attached by institutions of higher education, but higher education alone cannot provide a satisfactory solution. The development of a national linguistic capability sufficient for the challenge of world leadership will require elementary language training in the primary grades and high school and supplementary study in higher education. In the field of higher education new methods of language teaching are evolving, influenced particularly by necessities for concentrated language studies by the Armed Forces during World War II and since.

Language, however, is not an end in itself. I shall never, never forget the withering experience I had when I undertook to matriculate for a public speaking course as a freshman at the University of Tennessee. The dean took one look at my matriculation card, quickly drew a line through the public speaking course, and looked at me as if to say, "You must first learn something to talk about." I am not sure that the dean was right. In fact, I was not sure then, and by some persistence persuaded him to let me take the course. Nevertheless, the facility to communicate is only a tool. Its effectiveness depends on how it is used, not merely on its possession. I would not, therefore, wish to overemphasize training in languages, necessary and important though it be.

One can be "fluently arrogant" in several languages and yet be a poor representative abroad of his country, of his business, of his mission, of his church.

Although this may be overlooked by some, it is most important that anyone going into foreign service in any field of endeavor be well informed about his own country.

Upon my daughter's return to Vanderbilt University as a student after working at the World's Fair at Brussels and completing a trip around the world, I heard someone ask her the following question: "What lesson did you learn in your travels around the world?" Nancy answered: "I have just registered for four history courses."

Not only is knowledge of the history of our country important in education for foreign service, but a knowledge of its people, of its geography, of its industry, of its business, of its social and political institutions, its religious life, its welfare programs, its labor organizations, its social customs, is strong points and also its weaknesses.

Moreover, a faith in our system and a dedication to its causes is essential to effective foreign service. I think it is reasonable to presume this faith and dedication. The more education, the more knowledge, the more understanding that our foreign service personnel possess, the more valid will be the assumption.

The need for qualified individuals educated for foreign service in various fields is acute. This problem concerns all. With the relatively new position of free world leadership which has come to us through the inexorable march of events and our own great good fortune has come the responsibility of dealing effectively and in all fields and at all levels with peoples all around the world. We are sending more people abroad than ever before and keeping them abroad for longer periods of time. This applies, I believe, to religious undertakings, as well as to economic, business, political, and military personnel.

I must not overlook, nor indeed must I minimize, the importance of American tourists abroad as representatives of our way of life. Here, too, we could stand a little more educational preparation for foreign service.

Through education, we can solve a great many of our difficulties. There must be preparation for any service, but unfortunately we do not have the facilities for proper foreign service training. Neither do we have, at the present time, a large pool of people with an interest in foreign service from which to select people for training. I would say, along with Alfred North Whitehead, however, that "the race which does not value trained intelligence is doomed." The country which does not value trained intelligence and which does not take steps to select and train its intelligent people is doomed to failure. Perhaps this caveat is pertinent to the important field of foreign service.

Education for foreign service, as I have said, has many facets. Before such education can begin, there must be some process of selection of those to be educated. How are they to be selected? Who should select them? At what point in the educational process should specialized training for foreign service be undertaken?

When these questions can be satisfactorily answered, and it is determined that a qualified candidate for education for foreign service is in hand, one must then face the task of deciding how to educate him. What should be the specific objectives of his education, and how extensive, as a practical matter, should the curriculum be?

Finally, then, one is faced with the question of the best type of institutions for educating this candidate for Foreign Service. Should existing educational institutions be utilized, or should specialized institutions be established? In the Foreign Service of the Government, this is, and has been, a much discussed matter.

Now, I have raised a lot of questions. I don't propose to furnish easy answers. Essentially, I seek to identify the problem. Perhaps some of these questions can be resolved in the course of your further discussion and study.

It may be needless to point out that Americans abroad are subject to a great deal of criticism, much of it, I am afraid, justified. All things considered, however, the picture is probably not as bad as it has been painted. The recent bestseller, "The Ugly American," has popularized a type of American abroad who is not in my view typical of our State Department, Information Agency, or other related Government services. On the other hand, it certainly is true that our representation abroad, particularly in Government, is not what it should be.

There are three basic reasons for the criticism of Americans abroad. First is poor selection and training of personnel. This is what we are talking about now, and it is something we can correct. Second is the lack of a proper foreign policy. As educators, you cannot do too much about that right away. Third is the simple fact that unpopularity is the price of power. There is not much any of us can do about that.

Some experts in the field list another cause of friction, and that is the fact that there are just too many Americans abroad, and the mere fact of numbers will give rise to friction. This may be a factor. At the present time, almost 1 percent of our population is abroad, including members of the armed services and their dependents. But, before we draw any hasty conclusions about this, it should be mentioned that about one-fourth of all Americans abroad are living in Germany, and that country is probably the one place abroad where Americans are most appreciated and where there is a minimum of friction between our people and both government officials and private citizens.

Perhaps friction at any particular place revolves around what we are doing and how we are doing it, rather than the numbers of people involved. Certainly, whatever we have to do in various countries, and whatever numbers may be involved, the proper selection and training of our representatives will go a long way toward getting the job done in the best possible way.

In a democratic society, the selection of individuals for work, as well as the choice of avocation, is and must be on a voluntary basis. It is not possible for the Government, church, or company desiring representation abroad to designate individuals and earmark them for any particular task, except in the armed services. We must rely on incentives such as monetary income, improved status, interest, or the opportunity to be of service.

Our chief foreign competitor, Soviet Russia, has a big advantage in the matter of selection. The Soviets can and do select people at an early age and keep them in a specified program of training as long as the government feels such training is profitable. We do not desire such control. We abhor it. But we must recognize its challenge. It has been reported, for example, that the Soviets have, for several years, been training large numbers of selected individuals for service in Africa south of the Sahara and giving them intensive training in the languages and dialects of the area. We know as well as do the Russians that this is a critical area, but we are not able to mobilize our efforts so readily. I doubt that there are many people in this country who are undergoing training in Swahili or Ruanda, let alone the less well known languages and dialects of that section of the world.

As a practical matter, it appears to me that we will not be able to select young people for foreign service training at an early stage in their educational process. We will probably have to allow them to get through most of their college training before any real specialization can be undertaken. Even so, linguistic aptitudes can be discovered, encouraged, and developed at an early age.

It is often not decided by a college student that he wants to go into any given type of foreign work until he is in his junior or senior year. In such a case the bulk of the specialized training must be given at the graduate level. Our educational system, of course, does a great deal of selecting for us. A student often starts out in a liberal arts course, then shifts to prelaw or premedical studies. If he survives, he goes on into law school or medical school. What we do not

have now, and what we badly need, is a large pool of undergraduates who are foreign service prone. This would give us something to work with. We could then begin the weeding out and specialized training.

Regardless of the manner in which our candidates for service service training are selected, I think there are certain characteristics which these people should have, or which they should be capable of developing.

Dean Harlan Cleveland, of the Maxwell Graduate School of Citizenship and Public Affairs of Syracuse University, recently discussed these characteristics with the Senate Foreign Relations Committee. The Maxwell Graduate School has done a good deal of work in this field, and Dean Cleveland has concluded that there are five major elements in effective overseas performance. These are technical skill, career dedication, a sense of politics, cultural empathy, and organization ability.

By technical skill is meant, simply, that a man must know his job. He must know it as if he were doing the same work at home. Career dedication will, of course, carry anyone over a great many obstacles. A sense of politics is vital when working among foreign nationals who may be more politically conscious than Americans. Cultural empathy is dicult to achieve, but likewise necessary. We must be able to put ourselves, when we are representing America abroad, into the other fellow's political, economic, and social shoes. Organization ability is necessary largely because of the fact that the American overseas has to work through an organization back home, and the long line of communications will invariably cause difficulties.

I am not sure that everyone would agree on these qualifications. Most of us would agree, however, that a person possessing, or capable of developing, all of these would certainly perform well in representing his country, his church, or his company in a foreign field.

It appears to me, however that it will be extremely difficult to test an individual for these qualifications prior to his having undergone a good part of his training. We must probably, then, merge selection and training to a great extent. We must begin to train a great many people. As I have said, one of our first tasks is to get a large number of students to become conscious of the need and the opoprtunities of foreign service.

Knoweldge of the area in which one is to serve, its language, its customs, history, geography, and its hopes for the future is a bedrock essential, second only to a knowledge of one's own country.

Since we live in an age of change, it is important to know the movements which are underway in a given country. One must know as much about the group or government which is on the way up as he does about the group or government currently in power. We must realize that the dynamics of political and social life in other countries may now be in the process of producing changes similar to those which our own country has undergone during the past 100 years.

Having covered in a very general way some of the areas in which a candidate for Foreign Service should receive special training, let us now consider the type of institution which can best give this training.

At this point, the question of some sort of national academy for Foreign Service training arises. Is there a need for such a specialized institution, operated by the Federal Government, especially for the training of a Government Foreign Service Corps?

All together, there are some 1,800 colleges and universities offering some sort of higher education. Many of these institutions, whether they be operated by church groups or other types of public spirited and civic minded boards or trustees on the one hand, or by States or other governmental agencies on the other, could do a much better job in Foreign Service training if they had some guidance and perhaps financial assistance from the Federal Government. I think it is upon these institutions that we should principally depend for higher education. Their structure and curriculum will require strengthening. So will our elementary and high school systems.

I feel that it would be in the national interest for the Federal Government to give financial assistance and encouragement to established colleges and universities in setting up programs for Foreign Service training, especially at the graduate level. A good program at the graduate level would have some effect on the undergraduate programs of these institutions. This would assist in making available to us a large body of Foreign Service minded students. Whether such individuals ever entered Government service or not, the Federal Government would profit. Our national welfare is involved in the competency of our Foreign Service, from the tourist to the trader, from the technician to the ambassador.

I would go further and say that I also think we need a national academy to specialize in this type of training. Here I would draw a parallel with our college military training programs. Perhaps some of the educational institutions represented here have ROTC programs. Those of you who are familiar with these programs know that a large proportion of the officers serving in the Army or Air Force, and to a lesser degree in the Navy, are ROTC graduates.

At the same time, I believe most of us would agree that, over the years, West Point and Annapolis have done a pretty good job of setting standards and providing a nucleus of trained personnel around which larger forces can be organized. I believe a National Foreign Service Academy would go a long way toward leavening the whole loaf of our Foreign Service personnel.

Last year, when it was obvious to me that our science education program needed strengthening, I introduced a bill to establish a National Science Academy and to set up a program of scholarships in existing institutions for the study of the natural sciences and mathematics. Congress passed the national defense education bill but it is too modest and restricted.

I am preparing a bill to establish a National Foreign Service Academy. The Federal Government can be, as it is in other fields, a pace setter. I find it disturbing, and I believe dangerous, that we spend only about seventh-tenths of 1 percent of our gross national product on higher education. We must place greater emphasis upon intellectual achievement.

In considering specialized educational institutions, we should not overlook the advantages to be gained from giving some of our people at least a part of their education abroad. We are accumulating large amounts of local currencies in many foreign countries which could well be used for educating our students in those countries. Furthermore, in the underdeveloped areas where higher education is not flourishing, we could use some of these funds to establish American-type universities. I have introduced a bill this year to do just this, and hope very much to secure its enactment early next year.

The United States has, willingly or not, entered upon a new era of international activity. No longer can we afford to live in semi-isolation. No longer can we afford to consider the rest of the world as something separate and apart from our own national life.

Our international relations are of such importance that we need an increasingly large number of trained people who know how to get along with other peoples of the world and who know how to represent our institutions abroad, whether they be political, religious or commercial.

Participation in U.S. Exhibition at Moscow by Oregon Manufacturing Firms

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 28, 1959

Mr. NEUBERGER. Mr. President, at the U.S. exhibition in Moscow, recently visited by Vice President NIXON and Premier Khrushchev, two great Oregon manufacturing firms are represented. These are Jantzen Knitting Mills and the Pendleton Woolen Mills. Their products are outstanding in the Nation, and thus they have been chosen as among only eight major sponsors participating in the American Fashion Industries' presentation.

All of our State is proud of these two notable and successful firms, which manufacture products of outstanding quality. Jantzen is famous for female swimming garments of real originality. Pendleton Mills for fine blankets and other woolens. We rejoice that the people of Russia can see for themselves the excellence of these Oregon manufactured goods.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Oregonian of July 27, 1959, entitled "Oregon's Pitch in Moscow," which describes the participation of Jantzen Knitting Mills and Pendleton Woolen Mills in the U.S. exhibition at the capital of the Russian Government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OREGON'S PITCH IN MOSCOW

Portland's claim that it is now the sportswear manufacturing center of America is getting international attention.

At the U.S. exhibition in Moscow, with Vice President NIXON representing President Eisenhower, and Nikita Khrushchev representing himself, the products and personnel from two Portland firms have leading recognition.

The Portland firms are Jantzen, Inc., and Pendleton Woolen Mills. They were chosen among only eight major sponsors of the entire Nation for participation in the American Fashion Industries' presentation. Typical American girls will show the Russians what is being worn in sports this year under the Jantzen and Pendleton labels.

Also helping to carry the message to Moscow are Paul DeKoning, president of Jantzen, and C. M. Bishop, Jr., secretary of Pendleton, who were named to the executive advisory council of the fashion industries' presentation.

These home-State industries may be counted on to outshine the fashion display the Russians put on in the New York exhibition. Oregon's propaganda pitch: The Soviets may pack their missiles bigger and better, but let's see 'em compete with Oregon girls in swim suits.

Schools Are Not So Lousy

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. WESTLAND. Mr. Speaker, the name Adm. Hyman G. Rickover is synonymous with the development of the nuclear-powered submarine. Because of him, more than any other person, we have nuclear submarines as part of our defense system.

He is highly respected for his contribution to this technical and complicated field, but some people are beginning to question his excursions into areas where he is not an expert—particularly education. Recently the admiral visited Seattle, Wash., where he made some remarks about our system of education. Under leave to extend my remarks I want to include in the RECORD an answer to Admiral Rickover's statements.

This answer was written by Donald L. Kruzner, chief deputy superintendent of King County schools. It appeared in the July 7, 1959, issue of the Seattle Post-Intelligencer.

The letter follows:

NOT SO LOUSY

(By Donald L. Kruzner, chief deputy superintendent, King County Schools)

First, let me qualify myself for speaking on the topic Admiral Rickover refers to as our "lousy schools." I am a commander in the U.S. Naval Reserve. (I will probably be a retired commander when this is printed.) I have spent the past 21 years as a teacher and a school administrator. For the past 13 years I have worked at the improvement of education as the chief deputy superintendent of schools in King County. In preparing for this work I have spent approximately 9 years as a student in college. I have earned three degrees—a bachelor of arts, a master of education, and a doctor of education. Two of our five children have graduated from Roosevelt High School; the other three are in Nathan Eckstein Junior High School.

CHALLENGES

I have read Admiral Rickover's comments about the quality of education on the national scene and suffered in silence. But when he comes into my hometown and talks this way about schools he has never even visited, I have to challenge his unwarranted observation.

On the day the admiral spoke at our chamber of commerce, I was visiting three classrooms in one of our school districts in King County. I was observing first, second, and fifth grade classes learning mathematics. These classes were part of a pilot experiment to teach mathematics concepts instead of numbers to children in the lower elementary grades. I wish Rickover had been with me observing these children and their teachers at work in what he refers to as our "lousy" schools. I would have known if he was really sincere in his expressed efforts to improve the quality of education.

HONEST EFFORT

I wish the admiral had been with me during the past week when I visited accelerated classes for gifted children in many junior and senior high schools throughout Seattle and King County. At Mercer Island and Bothell High Schools, for example, the admiral would have seen gifted high school juniors and seniors in advanced college mathematics classes. At Asa Mercer and Nathan Eckstein Junior High Schools in Seattle he would also have seen gifted students doing advanced work in languages, mathematics, and history under special programs sponsored by Yale University and the University of Chicago. I also wish he had seen some of our honest efforts to help less gifted children find their places in school through special classes.

If Rickover is sincere in his efforts to improve education in America, I respectfully suggest that he get busy in a field where he has some competency, or that he utilize his great knowledge in scientific matters to provide specific, realistic, and constructive suggestions to help improve the quality of education. As a Navy commander, I could say considerable about the need for improvement of training in the Navy. But I am working at this too, you might say as a hobby, 1 night a week without pay because there is a job to be done. I am one of hundreds in the Naval Reserve trying to improve the training of our young men who may shortly be charged with the defense of our country.

So, Admiral, what I am trying to say is, let's be honest with ourselves and the American people, or at least with the people of Seattle and King County where I know we are really working constructively, even with the help of our destructive critics, at this business of improving education.

Representative Roosevelt Speaks on "The Key to Small Business Survival"

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. PATMAN. Mr. Speaker, under the chairmanship of Representative JAMES ROOSEVELT, Subcommittee No. 5 of the House Small Business Committee recently opened a series of hearings on the problems of small business in the food industry.
